What does it mean to live in global history?

NEW

bedfordstmartins.com/smith/catalog

Crossroads and Cultures: A History of the World's Peoples incorporates the best current cultural history into a fresh and original narrative that connects global patterns of development with life on the ground. As the title, "Crossroads," suggests, this new synthesis highlights the places and times where people exchanged goods and commodities, shared innovations and ideas, waged war and spread disease, and in doing so joined their lives to the broad sweep of global history. Students benefit from a strong pedagogical design, abundant maps and images, and special features that heighten the narrative's attention to the lives and voices of the world's peoples.

Also available as an e-book and Budget Books loose-leaf editions.

Cover Illustration: *Le serment des ancêtres* (*The Oath of the Ancestors*, 1822), by the prominent French artist Guillaume Guillon Lethière, a free man of color born in Guadeloupe who lived and worked in Paris. The painting, which Lethière secretly sent to the Haitian government as a gift, represents the October 1802 union of Jean-Jacques Dessalines and Alexandre Pétion, representing the alliance between black and mulatto forces that paved the road for the French defeat and Haitian independence on January 1, 1804. At the feet of the two men are the broken chains of slavery and a stone tablet, on which are engraved references to the nation, liberty, and the constitution. In "Haiti, Free Soil, and Antislavery in the Revolutionary Atlantic," Ada Ferrer argues that early Haitian leaders affirmed, and projected internationally, what they conceived as an essential link between antislavery, sovereignty, and the law. Lethière's *Le serment des Ancêtres* provides a stunning visual representation of that link. The painting, which was on permanent display in the Presidential Palace in Port-au-Prince, was severely damaged in the January 12, 2010, earthquake and is currently undergoing restoration in Paris.

The American Historical Review is the official publication of the American Historical Association and appears in February, April, June, October, and December of each year. The journal is published by The University of Chicago Press, 1427 E. 60th Street, Chicago, IL 60637 on behalf of the American Historical Association, 400 A St. SE, Washington, DC 20003 (phone 202-544-2422). Our editorial offices are located at Indiana University, where our mailing address is 914 E. Atwater Ave., Bloomington, IN 47401. Phone: 812-855-7609; fax: 812-855-5827; e-mail: ahr@indiana.edu. Our web address is www.americanhistoricalreview.org. The *AHR* is sent to members of the American Historical Association and to institutions holding subscriptions.

Membership dues: Contributing Member, \$300 annually; for incomes over \$150,000, \$215; over \$100,000, \$185; over \$70,000, \$158; over \$45,000, \$117; over \$25,000, \$86; under \$25,000, \$47; for students, \$40; for Early Career Members, \$50; for teachers of K-12 (AHA/SHE) without the *AHR*, \$72; for K-12 with the *AHR*, \$103; for joint members or spouse/partners, \$50; for associate members (nonhistorians), \$89. A life membership is \$3,500. Non-U.S. members add \$20 for postage. The proportion of dues allocated to the *AHR* is \$17. Members also receive *Perspectives on History* and the program of the annual meeting.

Further information on membership is available at <http://www.historians.org/>, or at the back of the journal on page 1(a), immediately preceding the advertisements.

Institutional subscription rates: Institutional print + electronic and electronic-only subscriptions to the *AHR* are available in 2011 through JSTOR's Current Scholarship Program and include unlimited online access to current issues as well as the *AHR*'s full back run. Rates are tiered according to an institution's type and research output: \$327 to \$655 (print + electronic), \$279 to \$560 (electronic-only). Institutional print-only is \$327. Additional taxes and/or postage for non-U.S. subscriptions may apply. Single copies of individual issues published within the past three years are available from the University of Chicago Press for \$79 per copy; copies of issues older than three years may be purchased from Periodicals Services Company, 11 Main St., Germantown, NY 12526. For more information, please visit <http://www.journals.uchicago.edu/AHR/order.html>.

Manuscript submissions: For basic information on the submission and publication of manuscripts, see p. 1(a) at the back of the journal, immediately preceding the advertisements. Full guidelines and policies can be found at <http://www.americanhistoricalreview.org> or will be sent upon request. **Unsolicited book reviews are not accepted.**

For permission to reprint: Contact Permissions Coordinator, Journals Division, University of Chicago Press, 1427 E. 60th Street, Chicago, IL 60637 USA. Fax: 773-834-3489; e-mail: journalpermissions@press.uchicago.edu.

For inquiries about advertising: Contact Journals Advertising, University of Chicago Press, 1427 E. 60th Street, Chicago, IL 60637. Phone: 773-702-7361; fax: 773-702-0172; e-mail: j-advertising@press.uchicago.edu.

In This Issue

The February issue opens with the 2012 AHA Presidential Address, followed by an article on antislavery in the Atlantic world and an *AHR* Forum on “Liberal Empire and International Law.” There are also three featured reviews, followed by our usual extensive book review section. “In Back Issues” draws attention to articles and features in the *AHR* from one hundred, seventy-five, and fifty years ago.

Presidential Address

In “The Republic of Letters in the American Colonies: Francis Daniel Pastorius Makes a Notebook,” outgoing AHA President **Anthony Grafton** introduces us to a man of many parts, whose work and life both exemplify a transnational intellectual community and highlight the curious position of a humanist, steeped in venerable European traditions, living in colonial America. Pastorius was born in Germany but migrated to America, settling in Germantown, Pennsylvania, in 1683, where he lived for the rest of his life. Although he came to the New World in search of a simpler existence, his life was happily burdened by intellectual and scholarly endeavors that took him deep into the culture of antiquarian erudition that still flourished at the end of the seventeenth century. Posterity remembers him for his commonplace book *Bee-Hive*, which, as Grafton points out, was only one of the “magnificent information-retrieval machines” he produced among a vast storehouse of notes, bibliographies, commentaries, marginalia, and the like that reflect his ceaseless curiosity and intellectual appetite. In looking at Pastorius’s activities, Grafton shows us how seventeenth-century scholars read, and especially how they valued books. “Pastorius’s ways of using . . . books,” he notes, “mark him off as an inhabitant of a world we have lost: a world of relative textual scarcity.” But in other ways it is a familiar world, where even the most energetic and capacious minds were challenged by the ever-increasing volume of information. And despite his antiquarian bent and deep commitment to traditional scholarship, Pastorius was, as Grafton argues, an exemplar of an overlooked source of the Enlightenment, with “roots deeply set in an older world of European learning and Christian belief.”

Article

The Haitian Revolution has, in recent years, moved from a peripheral event to a central concern for historians of the eighteenth and nineteenth centuries. In “Haiti, Free Soil, and Antislavery in the Revolutionary Atlantic,” **Ada Ferrer** looks at the impact of that emancipatory movement on neighboring societies that were still very much invested in slavery. Focusing on a little-known case in 1817, the article explores the ways in which notions of freedom among slaves were shaped not only by the example of the Haitian Revolution but also by the actions of the Haitian state after independence. Historians have tended to argue that an independent Haiti did not intervene to promote antislavery in the region. Indeed, in its early years, every Haitian constitution explicitly disavowed such foreign intervention. Ferrer argues, however, that the 1817 case reveals an important form of engagement on the part of the government of Alexandre Pétion that has gone largely unexplored. With this case, she demonstrates that the early Haitian republic, drawing on both Old Regime attempts to restrict slavery geographically (such as “free soil” policy) and revolutionary notions of total emancipation, did in fact project its antislavery influence abroad, thus participating in the international debates on both slavery and freedom.

AHR Forum

The history of empires and imperialism has long been a prominent theme in history of all periods, but with the advent of transnational history, its centrality is greater than ever. For the most part, however, the emphasis has been on the dynamics of conquest, colonization, exploitation, and the modalities of imperial rule. And yet, despite the fact that coercion fundamentally characterized the relations between the agents of imperial power and subject peoples, Western nations with imperial ambitions were also committed to the rule of law, or at least were sensitive to the contradiction between lawless conquest and constitutional rule.

This *AHR* Forum, “Liberal Empire and International Law,” confronts aspects of that contradiction from three perspectives. In “The Liberal Traditions in the Americas: Rights, Sovereignty, and the Origins of Liberal Multilateralism,” **Greg Grandin** begins by suggesting that one aspect of the much-celebrated “exceptionalism” of the United States is rarely noted: its unique relationship to Latin America. Other world powers, such as France, Holland, and Great Britain, ruled over culturally, racially, and religiously distinct peoples, whom, moreover, they regarded as such. The settlers who colonized North America, by contrast, looked to Iberian America not as fundamentally “other” but as a competitor in a struggle to define a set of nominally shared—and also contested—values and political concepts: Christianity, republicanism, liberalism, democracy, sovereignty, rights, and, above all, the very idea of “America.” After the republican revolutions of the late eighteenth and early nineteenth centuries, the relationship between the U.S. and the new nations of Spanish America was characterized by both contention and intimacy—a rivalry over a shared republican legacy. To be sure, England’s rule over its “Celtic fringe,” especially Ire-

land and Scotland, produced a somewhat similar relationship, which ultimately generated the legal basis for the latter British Empire. But in the Americas, the relationship between the U.S. and Latin American nations was played out over a longer period of time and across much vaster spaces, yielding a unique and complex history. Grandin's essay compares and contrasts the two sides of this rivalry, focusing especially on the contested notions of rights and sovereignty.

In "Empire and Legal Universalisms in the Eighteenth Century," **Jennifer Pitts** looks at various figures who commented critically from a legal perspective on European imperialism. She notes that throughout the modern period, the law of nations has been both distinctively European and universal in its aspirations. Its possible or practical universality, however, has been a vexed issue, with significant moral and political implications. Over the course of the nineteenth century, the consensus among all but a few Western European jurists was that international law, though exclusively European in origin, was authoritative for all: Europeans could and should dictate the terms of legal interaction to so-called backward peoples. For a brief period in the eighteenth century, however, there flourished largely forgotten critical approaches to the question of the scope of the European law of nations and the nature of legal relations between European and non-European states and peoples. These approaches regarded a global legal order, or a network of orders, as a constraint on the exercise and abuse of European states' power. Pitts focuses on the writings and interventions of a range of European figures, including Edmund Burke, the French orientalist Abraham Hyacinthe Anquetil-Duperron, and the influential Admiralty Court judge William Scott, Lord Stowell.

In "Liberalism and Empire in Nineteenth-Century International Law," **Andrew Fitzmaurice** continues along the lines of demonstrating the critical possibilities of liberalism and law in relationship to imperialism. For the most part, he notes, international law was employed to justify the domination of European states over the rest of the world. And it is assumed that the liberal apology for empire reached its apotheosis in the nineteenth century to carve up the globe. His article examines the debates over the justice of empire in international law and diplomacy in just this period. The debates focused on the Berlin Conference of 1884–1885 over the partition of Africa in general and the colonization of the Congo in particular. In this context, liberal international lawyers developed a new legal vocabulary to justify the expansion of empire. But some also opposed empire, giving rise to an opposition that only strengthened as the race for empire gathered pace. The opposition was based not on humanitarian sentiment (which, in fact, often served as an apology for imperial rule), but rather on self-interested concerns about the security of liberal reforms and revolutionary changes within Europe. Evoking the concerns about empire and imperialism in the present, Fitzmaurice concludes by reminding us that while the liberal tradition has often justified expansionism, it also contains the resources to oppose it.

In his Forum comment, "Empire and Its Anxieties," **Anthony Pagden** provides a learned survey of the history of imperial rule and empires with an emphasis, in keep-

ing with the theme of this forum, on both the law of nations and international law. He plays on the distinction, brought out in Pitts's and Fitzmaurice's articles, between European empires before the nineteenth century, where cosmopolitan attitudes, moral concerns, migration from the metropole, and the potential for mutuality characterized overseas settlements; and those of the later period, where international law legitimizing the right to occupy and colonize prevailed over all other considerations. The key to this difference, he argues, is to be found in the liberal revolutions of the late eighteenth and early nineteenth centuries, which joined rights with citizenship in the nation-state, for it was sovereignty that conferred the legal status by which non-European peoples were found lacking and thereby were subject to conquest. As products of those revolutions, the new nations of the Americas had even less claim to empire than their European counterparts. Nevertheless, they still were confronted with peoples and lands that had to be incorporated into the nation-state, although not through the kind of imperial conquest that would have entailed shared sovereignty. Instead, the U.S., at least, has either relied upon *de facto* justifications for intervention or foreign occupation, or "fallen back on robustly Roman declarations of political and cultural superiority in defense of supposedly universal political values." The result, Pagden concludes, has led us to the present, where "the old anxieties about the consequences for the metropolis of what its citizens do in its name beyond its frontiers have become even more acute today than they were for Edmund Burke."

April's issue of the *AHR* will include articles on the cultural history of scholastic disputation, the colonization of North America, the "Mexicanization" of American politics in the late nineteenth century, the Mediterranean slave trade in the nineteenth century, and Parisian modernism and African sculpture in the twentieth century.

In Back Issues

In the hope of encouraging readers to dip into the long history of scholarship contained in the pages of the *American Historical Review* (now in the 117th year of its publishing history), and to take advantage of the digital availability of this archive to most readers, the *AHR* editors offer a look back at issues from one hundred, seventy-five, and fifty years ago. What follows is not a comprehensive survey of the contents of those issues, but rather a glance at some of the articles and other features that might be of interest, or even of use, today.

Volume 17, Number 2 (January 1912)

Traditionally, the first issue of the year leads with the annual address of the outgoing president of the American Historical Association. In 1912, it was delivered by William M. Sloane, who taught at Princeton and Columbia after receiving his doctorate from the University of Leipzig and serving for a time as private secretary to George Bancroft, second president of the AHA. Sloane's piece, "The Substance and Vision of History," is one of those high-minded meditations on the state of history common from presidents of the association in the early years of its history. Written in an aphoristic style that strikes the modern reader as somewhat affected and mannered, if not downright pompous, it takes on the question of the relationship of history to science, and especially the new social sciences that were then challenging the primacy of the humanities in academic scholarship. There is a note of triumph in Sloane's address; for him, the scientific model as embodied in Darwinian biology or the quest for causal explanations in human affairs had lost its appeal: "the rather noisy inventors of systems and doctrines have had their day." And he gleefully notes that the present-day turn in the social sciences, from political science and sociology to archaeology, anthropology, and social psychology, was toward both more modest claims and a more historical approach. Like many, then and now, Sloane adamantly asserts that history is not a science: "The latest criticism of history as a scientific discipline is identical with the earliest: it is that history cannot predict; it can establish facts and not laws." But his sense of what history is not goes beyond the scientific model; indeed, he proclaims a series of "renunciations" that eschew not only causation, prediction, exactitude, and excessive specialization but also an interest in ordinary people ("these rude forefathers of the village"), "antiquated concepts and catch-phrases," and anything that is not "memorable," meaning "for the emulation

of posterity” or in service of understanding the present. As for what history should be, Sloane is a partisan of its belletristic features. “The historical writing which is not immediate, concrete, poignant, direct, proportionate, and clad in stylistic, attractive garb,” he proclaims, “may have some present vogue but it is foredoomed to quick oblivion.” As well, however, he seems to embrace a kind of hermeneutic approach to historical understanding, sneering at the claim to objectivity or an open mind as “not much different from a claim to idiocy.” In more measured terms, he asserts, “We go forth, every one of us, with a mind furnished . . . either with positive purposes or negative prejudices. And according to that equipment, we seek what we want and we find what we seek.”

Volume 42, Number 2 (January 1937)

Like Sloane’s, the address of Charles H. McIlwain, the English constitutional historian who taught at Harvard and Princeton as well as Oxford, Miami University, and Bowdoin College, was a big-picture discussion of the role of historians and the purpose of history in the context of the present. “The Historian’s Part in a Changing World” begins by asking “whether we, as historians, have anything practical to offer to our own country and to the world in times of crisis like the present, and if we have, how we can make our particular contribution most effectively.” Unlike Sloane, however, McIlwain pursues this question not with aphorisms or pronouncements but rather by exploring the field of history he knows best, medieval and Tudor England, and demonstrating what “lessons” its study has to offer. Despite the high expectations raised by his opening statement, however, his advice is cautious. He is clearly uncomfortable with the very notion of “lessons of history,” and suggests that our main message should be that history is “a lesson in humility.” But while acknowledging the limits of historical understanding, at the same time he aggressively pushes back against current fashions challenging the validity, value, or objectivity of historical knowledge, either from the social sciences or relativism or from those growing political forces exploiting history for ideological ends. He refuses to concede that distortion, or prejudices, or simply every generation’s need to rewrite history somehow prevents us from knowing the past “as it was.” Indeed, he insists that true historical understanding comes only from sufficient commitment and prolonged immersion in the sources, to the point where we come to realize that our present-day assumptions and ways of thinking are not only unnecessary but also irrelevant. True historical understanding comes not from a “reading in of modern modes of thought or action, but a reading out.” McIlwain demonstrates this assertion by making several brief excursions into early English history, including a discussion of what has been called “Tudor absolutism.” He discards this term as fraught with modern preconceptions and crisply lays out the basis for understanding that Tudor monarchs, despite their vast powers often abusively deployed, were still governed by constitutional limits. Our failure to understand the proper nature of Tudor rule comes from our modern tendency to confuse autocracy with despotism. These monarchs were autocrats, “absolute in the sense of having no superior,” but their rule was still limited by constitutional restrictions on its exercise. And what “lesson” does McIlwain want

us to take away from this? Aside from some rather cryptic remarks hinting at the virtue of viewing strong governmental authority as not necessarily antithetical to constitutional rights—a prescient point in the face of the growing threat of European fascist movements—he is unwilling to prescribe. “If there are any practical inferences to be drawn from this jumbled survey,” he concludes, “I leave them for you to draw.”

Volume 67, Number 2 (January 1962)

Samuel Flag Bemis, president of the AHA in 1961, likewise pitches his address to the circumstances of the present, a time too, in his estimation, of great crisis. For Bemis, however, the conditions are not those of economic depression or philosophical relativism, as they were for McIlwain, but rather the threat of communism and the twilight struggle of the Cold War. A diplomatic historian who taught at several colleges and universities, winner twice of the Pulitzer Prize, Bemis specialized in the early national period in U.S. history; he also was the editor of the eighteen-volume series *The American Secretaries of State and Their Diplomacy*. His address, “American Foreign Policy and the Blessings of Liberty,” is indeed a Cold War document. Starting with the assertion that the “freedoms of the individual are the values for which the United States has stood throughout its history in the shifting configurations of power and politics in the world of nations,” he proceeds to render a sketch of U.S. foreign policy from the colonial past to the Cold War present. Despite this gesture toward a narrative account, his real concern is with the actualities of the day, which he views with alarm. In his view, the post-World War II era has nothing to offer the United States but unprecedented challenges to its heretofore unshakable “Blessings of Liberty.” He cites not only the specter of international communism, “Red imperialism,” and the advent of the “atomic age,” among other woeful developments, but also “the risen tide of color” and “the great population explosion of the pululating peoples of this globe” as a catalogue of dangers that confront the U.S. in the world. The velocity of change is itself a problem: “Things are changing so rapidly—just look at the moon!—that I have been worried lest they should change to stultify these remarks since they were submitted to the *American Historical Review*, in September, for publication in the January 1962 issue.” The question, Bemis asserts, is whether Americans have the resolve and the strength to meet these challenges. He has his doubts. Even the academic world exhibits a failure of nerve. “Have not our social studies been tending overmuch to self-study—to what is the matter with us rather than to perils and strengths that test our liberty?” And when he turns to the wider citizenry, his doubts are only magnified. There he sees an inclination toward comfort rather than strength, a populace “debauched by mass media of sight and sound,” “fed full of toys and gewgaws.” “Massive self-indulgence and massive responsibility do not go together,” he proclaims. “A great nation cannot work less and get more, with fun for all, in today’s stern posture of power.” In the penultimate paragraph of his address, Bemis quotes another, that of John F. Kennedy at his inauguration just a year previous—the famous passage “we shall pay any price, bear any burden . . .”

Anthony Grafton

Presidential Address

The Republic of Letters in the American Colonies: Francis Daniel Pastorius Makes a Notebook

ANTHONY GRAFTON

FRANCIS DANIEL PASTORIUS LOVED to make jokes.¹ Once he had made them, he tried to preserve them—even at the cost of defacing the beloved books in his library. Among his favorite writers was the Leiden University historian Georg Horn (1620–1670), who attracted attention in the 1650s and 1660s for his polemical works on the origins of the American peoples and his surveys of European history and politics.² In 1666 Horn brought out a typically short textbook on a typically big subject, the history of nature and God’s relation to it. He gave it the catchy title *Arca Mosis, sive Historia mundi* [*The Ark of Moses, or the History of the World*]. The engraved title page depicts Pharaoh’s daughter as she discovers the infant Moses. Turning toward a bare-bellied companion while her servingwomen watch, she holds the baby up in what the British still call a Moses basket. A small, grumpy-looking crocodile walks toward her, its intentions unclear. Pastorius’s copy of the 1669 edition, like a number of his other books, is in the Library Company of Philadelphia.³ Writing in a sinuous

Warm thanks to Peter Stallybrass, who introduced me to Pastorius and encouraged my interest in him with great generosity; to Brooke Palmieri and Andrew Thomas for sharing their unpublished work and for their expert advice; to Ann Blair, Natalie Zemon Davis, Laurie Nussdorfer, Nancy Siraisi, Jacob Soll, and Bethany Wiggin for comments and criticism; and to the staffs of the Rare Book and Manuscript Library of the University of Pennsylvania; the Library Company of Philadelphia; the library of the Historical Society of Pennsylvania; the Bodleian Library, Oxford; the British Library; the Department of Special Collections, Princeton University Library; and the Herzog August Bibliothek, Wolfenbüttel. An earlier version of this article was presented as a paper at “The Industrious Bee: Francis Daniel Pastorius, His Manuscripts, and His World,” a conference sponsored by the McNeil Center for Early American Studies and the University of Pennsylvania Libraries, October 23–24, 2009.

¹ On Pastorius (1651–1719), the standard study is still Marion Dexter Learned, *The Life of Francis Daniel Pastorius, the Founder of Germantown* (Philadelphia, 1908). See also Marian Wokeck, “Pastorius, Francis Daniel,” American National Biography Online, www.anb.org; Christoph Schweitzer, “Introduction,” in Francis Daniel Pastorius, *Deliciae Hortenses; or, Garden-Recreations and Voluptates apianae*, ed. Schweitzer (Camden, S.C., 1982), 1–6; and Margo M. Lambert, “Francis Daniel Pastorius: An American in Early Pennsylvania, 1683–1719/20” (Ph.D. diss., Georgetown University, 2007).

² Georg Horn, *De originibus americanis libri quatuor* (The Hague, 1652); Horn, *Dissertatio de vera aetate mundi* (Leiden, 1659); Horn, *Arca Noë* (Leiden, 1666); Horn, *Orbis politicus* (Zwickau, 1667); Horn, *Orbis imperans* (Leiden, 1668).

³ Georg Horn, *Arca Mosis, sive Historia mundi* (Leiden, 1669), Library Company of Philadelphia [hereafter LCP], Rare | Am 1668 Hor Log 798.D.

loop that follows the highlighted section of the Egyptian princess's legs and then moves onto the surface of the Nile, Pastorius has entered a line of Latin:

"Est mihi namque domi pater, est crocodilus in illo / et ipse"

(either "For I have a father at home; there's a crocodile in it" or "For I have a father at home, and he's also a crocodile").

The remark seems mysterious. But its obscurity was deliberate: it was an allusion, designed to challenge the reader. In the third of Virgil's great pastoral poems, the *Eclogues*, the shepherd Menalcas refuses to bet one of his sheep against the rival piper Damoetas, who offers a heifer. As he explains:

est mihi namque domi pater, est iniusta noverca,
bisque die numerant ambo pecus, alter et haedos.

(For I have a father at home, there's a mean stepmother,
and they both count the flock twice a day, and one of them counts the kids).⁴

Evidently something about the illustration reminded Pastorius about the ancient Roman epic poet. Perhaps, as a good Christian humanist, Pastorius meant to suggest that Virgil's imaginary shepherd and Pharaoh's daughter both struggled with problematic families. Each had a harsh father, the one counting sheep and kids and the other mistreating Jews. Perhaps his thought was simpler: while Menalcas had to deal with a wicked stepmother, Pharaoh's daughter confronted a sharp-toothed reptile. It is hard to find a more convincing punch line. Possibly you had to be there.

Yet Pastorius's bad joke is more than a tiny, learned puzzle. As cultural historians such as Robert Darnton and Carlo Ginzburg taught us long ago, it is precisely when historical actors say or do strange and paradoxical things that we need to work hardest at interpreting their actions and sayings.⁵ Our bafflement may mean that we have encountered a genuinely strange belief or practice—a clue that may help us to experience the true foreignness of the past. Pastorius was an eminently practical man. He founded Germantown, drew up its legal codes, compiled its register of properties, and served the settlement in several legal and political capacities. Why, then, did he amuse himself with erudite Latin games like this one? What did they mean to him and to others?

The decades around 1700, after all, witnessed a renewed globalization of European intellectual life. Citizens of the Republic of Letters carried out religious and scientific missions around the world. Both they and their informants also held positions in embassies, trading posts, and factories. Letters flew among them, and so did data and material objects. Astronomical observations and medical simples, botanical images and geological specimens moved around the world, from colony to

⁴ Virgil, *Eclogues* 3.33–34.

⁵ Robert Darnton, *The Great Cat Massacre and Other Episodes in French Cultural History* (New York, 1984), makes this point explicitly. Carlo Ginzburg gives marvelous demonstrations of how to turn the strangest of sayings and actions into history in *The Night Battles: Witchcraft and Agrarian Cults in the Sixteenth and Seventeenth Centuries*, trans. John and Anne C. Tedeschi (Baltimore, 1983), and *The Cheese and the Worms: The Cosmos of a Sixteenth-Century Miller*, trans. John and Anne Tedeschi (Baltimore, 1980).

Smith and Paula Findlen, eds., *Merchants and Marvels: Commerce, Science, and Art in Early Modern Europe* (New York, 2002); Daniela Bleichmar, Paula De Vos, Kristin Huffine, and Kevin Sheehan, eds., *Science in the Spanish and Portuguese Empires, 1500–1800* (Stanford, Calif., 2009); Daniela Bleichmar and Peter C. Mancall, eds., *Collecting across Cultures: Material Exchanges in the Early Modern Atlantic World* (Philadelphia, 2011); Daniela Bleichmar, *Visible Empire: Botanical Expeditions and Visual*

to take part in these exchanges, as his friend James Logan regularly did, and as we will see, he supplied European readers with strikingly vivid reports about his surroundings. For the most part, though, he stuck to traditional ways of gathering and assessing information.

Pastorius saw no fundamental conflict between the Latinate scholarship that he practiced as a reader and the life that he led in Pennsylvania. In fact, the learned practices he brought with him from Europe remained central to his day-to-day work, helped him deal with the personal and intellectual challenges with which the New World presented him—from deciding whether Christians could hold slaves to working out how to describe the Lenape Indians near whom he spent much of his adult life—and enabled him to build communities. And that is less surprising than it may seem. Erudition still mattered, after all, in the late seventeenth century. Reading and writing, in particular, highly skilled ways, were intimately connected with membership in the intangible but powerful community known as the Republic of Letters, which stretched across the Atlantic as it did across political and religious borders in Europe.

From the start of Pastorius's time in America, knowledge of Latin literature cemented relationships that mattered deeply to him. He met William Penn and Thomas Lloyd on the ship that brought him to the New World. He and Lloyd began what became a lifelong friendship—Pastorius became a mentor to Lloyd's children and grandchildren as well—while speaking Latin. (Pastorius and Penn spoke French.) What really won Penn's affection for Pastorius, however, was the slightly grandiose Latin inscription that the German placed over the door of his first small house in Pennsylvania: "thirty shoes long, fifteen wide, with oiled paper windows for lack of glass." "Parva domus sed amica bonis, procul este prophani," wrote Pastorius: "It's a little house but welcoming to good people: profane men, keep your distance."⁷ The second part of this inscription was a quotation from Virgil's *Aeneid*. In book 6 of the epic, Aeneas comes to Cumae, where the Sibyl explains to him how he may descend to the Underworld. As priests perform sacrifices to the chthonic gods Pluto and Proserpine, the sibyl cries: "procul, o procul este, profani . . . totoque absistite luco" ("Keep your distance, profane men . . . and shun this whole grove") (*Aeneid* 6.238–239). Apparently the incongruity of the high sentence over the low doorway of a naïve domestic house charmed Penn. According to tradition, he even laughed when he saw it—one of two occasions in his life when he laughed.⁸

When Pastorius showed off his Virgilian learning in what now seems a curious way, he was declaring his allegiance, as he did in many other ways, to a world of

Culture in the Eighteenth-Century Hispanic World (Chicago, 2011); Harold J. Cook, *Matters of Exchange: Commerce, Medicine, and Science in the Dutch Golden Age* (New Haven, Conn., 2007); Florence C. Hsia, *Sojourners in a Strange Land: Jesuits and Their Scientific Missions in Late Imperial China* (Chicago, 2009); Neil Safier, *Measuring the New World: Enlightenment Science and South America* (Chicago, 2008).

⁷ Rüdiger Mack, "Franz Daniel Pastorius: Sein Einsatz für die Quäker," *Pietismus und Neuzeit* 15 (1989): 132–171, here 140. Pastorius also inscribed similar sentiments in Latin and English above his table, on the chest that held his manuscripts, and on doors and windows. See Learned's extracts from the *Bee-Hive* in Marion Dexter Learned, "From Pastorius' Bee-Hive or Bee-Stock," *Americana Germanica* 1, no. 4 (1897): 104–106.

⁸ Mack, "Franz Daniel Pastorius," 140. According to Beatrice Pastorius Turner, "William Penn and Pastorius," *Pennsylvania Magazine of History and Biography* 57, no. 1 (1933): 66–90, Penn laughed only once.

bookish traditions in which he had been formed, and which he continued to draw on and use throughout his life in Pennsylvania. Doing so, as Penn's response shows, was a practical as well as a spiritual exercise: a way to reinforce a friendship. He and Pastorius used their walks and rides to explore their common interest in such questions as maintaining peace with the Indians and building a godly society. Yet as we will see, the practices of erudition that Pastorius knew were neither uniform nor unchanging. The German Enlightenment emerged, in large part, from the same learned world that produced Pastorius, and his ways of reading texts, for all their seeming quirkiness, in fact identify him as a characteristic figure of a particular cultural landscape, and even a characteristic member of one intellectual generation.

BORN A LUTHERAN IN THE Franconian town of Sommerhausen, Pastorius came from a well-off family and studied law at Altdorf, Strasbourg, and Jena. Inspired by the Pietist Philipp Jakob Spener, he sailed to America in June 1683, in pursuit of a simpler, more pious life. But simplicity proved elusive. Like most of us these days and like many of his contemporaries, Pastorius spent his life working hard at his various professions and trying to keep his head above the surface of a flood of information. His legal and political work as agent of the Frankfurt Company and bailiff, committeeman, clerk, and burgomaster at Germantown required him to master the laws of Pennsylvania.⁹ His passionate religious convictions inspired him to find, read, and excerpt every Quaker text he could—especially in his early years in America, when Quaker works in English were more accessible than other books.¹⁰ Much of Pastorius's note-taking and writing served immediate, practical ends. His *Young Country Clerk's Collection* collected the details of the Pennsylvania legal practice that he knew at first hand, and his primer reflected his experience as a teacher in Germantown and Philadelphia.

Yet Pastorius read far more than his practical duties required. As the supply of books available in Philadelphia gradually expanded, his irrepressible curiosity pushed him to explore everything from Renaissance works on world history and natural philosophy to contemporary discussions of the diseases prevalent in his part of the world and the therapies that might be available for them. He made a special study of alchemy, which fascinated him as much as it did Governor Winthrop of Connecticut, one of the few earlier inhabitants of the colonies who had been Pastorius's match for cosmopolitan erudition.¹¹

Pastorius's mind—or at least his books—buzzed with poetry and prose, proverbs and biblical verses, edible legumes and rules for surveying, bibliographies and stories about authors. He stored all of this material for use, by himself and his sons, in the margins of the books in his library and in magnificent information-retrieval ma-

chines, the grandest of which is his *Bee-Hive*, the immense commonplace book that is one of the glories of the Van Pelt Library at the University of Pennsylvania.¹² If Pastorius's books reflect complex patterns of reading and sociability that seem unfamiliar in the age of the Kindle, his commonplace books are even more disorienting. Reading one of them is like entering a carnival funhouse, where texts of all kinds—excerpts and stories, jokes and reflections, history and alch  my, stories about horses and dogs—take the place of distorting mirrors. Subjects and languages blur into one another in a continual process of metamorphosis. Associations served Pastorius very much as hyperlinks serve us, both tempting and enabling him to leap from one text or subject to another. Every small tag from a great text had associations for him, which spurred him to call up and write down passages from other texts.

The marginal notes and manuscript compilations on which Pastorius lavished so much time and effort challenge modern disciplinary boundaries. How are we to map this extraordinary unknown territory? Scholars have taken two paths in recent years, and found gold at the end of each. Historians, legal scholars, Germanists, and others have read their way into Pastorius's manuscript compilations and finished writings, tagged and identified many of their sources, and re-created the larger social and cultural worlds within which he lived, worked, and read. Thanks to Alfred Brophy, Patrick Erben, Margo Lambert, and others who have illuminated Pastorius's thought in these ways, we know how he explored the magnificent labyrinths of Quaker thought and spirituality, how he developed his ideas about language and other central themes, and how he practiced as a lawyer, served his community, and taught.¹³

Historians of the book have also begun to look seriously at Pastorius's books and at his magnificently weird devices for textual storage and retrieval. Edwin Wolf collected the evidence for Pastorius's own library, showing that it was probably the largest in Philadelphia before James Logan built his collection.¹⁴ More recently, Brooke Palmieri has laid out, in gritty, granular detail, exactly how Pastorius made and expanded his notebooks and sorted and indexed his excerpts. She has revealed how Pastorius, as he worked, updated and personalized the methods for commonplacing that Renaissance humanists such as Erasmus had laid out in textbooks that reached a vast readership.¹⁵ The digital version of the *Bee-Hive* made possible by the

National Endowment for the Humanities, which is now available on the website of the University of Pennsylvania Libraries, will for the first time enable many more scholars to make direct excursions into this difficult intellectual country.¹⁶

Much remains to be done. One major task is simply to describe Pastorius's ways of reading and to connect them with their sources in learned tradition. In recent years, historians and literary scholars have re-created the practices of the passionate, dedicated readers who taught, preached, and filled government offices in the late Renaissance and after. For generations, the learned humanists of Europe had covered the title pages of their books with everything from signatures that declared their ownership to mottos in learned languages—not to mention allusive comments on the texts that followed. The sublimely erudite Huguenot Hellenist Isaac Casaubon filled his printed working copy of the Greek historian of Rome, Polybius, with so many handwritten notes that the Bodleian Library classifies the book as a manuscript.¹⁷ He too made jokes on the title page—in his case, jokes that reflected serious thought about his author. Casaubon described the Greek historian's frequent digressions on historical method as a bug, rather than a feature, of his style: "Note: one thing we do not like in this author is that he repeats, and sets out, his plans, his goals, and his ends, so many times. Why bother to do this? Did he think he was going to be read only by Greek soldiers and centurions who smelled like goats?"¹⁸

Gabriel Harvey, the Cambridge professor of Greek and counselor to Philip Sidney and other great men, was not simply eccentric when he used the title pages of his books to record his autobiography as a reader, or when he wreathed the texts of Livy, Guicciardini, and many others with notes reminiscent of Pastorius in their obsessive concern with detail, their pedantic playfulness, their multiple languages, and their wonderfully legible handwriting.¹⁹ He was carrying on a tradition of annotation deeply rooted in the world of manuscript books. Different versions of it had served Francesco Petrarca, Angelo Poliziano, and Niccolò Machiavelli in their turn when each of them set out to master texts and make them his own.²⁰

Notebooks were also traditional. Some experts argued that marginal summaries took less time to make than massive excerpts, and were more useful. By careful visual

(Paris, 1907); and Carol Everhart Quillen, *Rereading the Renaissance: Petrarch, Augustine, and the Language of Humanism* (Ann Arbor, Mich., 1998); for Poliziano, see the materials gathered in Paolo Viti, ed., *Pico, Poliziano e l'Umanesimo di fine Quattrocento: Biblioteca Medicea Laurenziana, 4 novembre–31 dicembre 1994. Catalogo* (Firenze, 1994); for Machiavelli, see Alison Brown, *The Return of Lucretius to Renaissance Florence* (Cambridge, Mass., 2010).

coding—placing the most important points in the upper margins, for example—the annotator could make it easy to go back through his book and find its main points, readily outlined.²¹ Most expert humanists, however, held that even wide margins could not contain everything that annotators wanted to record, in an age when books were the prime sources of knowledge about life, the universe, and everything. Ann Blair and other historians of information management have shown that many of those who seriously wanted to survey a province of the world of books did so by keeping either *adversaria*—random notebooks in which they entered extracts as they read—or commonplace books—systematic notebooks in which they organized extracts under topical headings.²² Some, including Casaubon, kept both. When the young Sir Julius Caesar—like Pastorius, a humanist and a lawyer—set out late in the sixteenth century to master the humanities and the law, he bought a ready-made commonplace book—a set of blank pages with categories already printed on them and a preexisting index, published by the martyrologist John Foxe in 1572. Caesar showed a patience and a clear handwriting that matched those of Pastorius as he filled 1,200 large pages.²³ Like Pastorius, Caesar both collected passages from many languages and traditions and assembled materials of practical use to a British lawyer and statesman. He thus created, in William Sherman's words, “a powerful tool that anticipated the kind of indexed archive now being delivered to anyone with a computer by Google and its associates”—an information-recovery machine that, like the *Bee-Hive*, used verbal associations as its hot links.²⁴

Each of these men turned reading into a formal craft and practiced it with articulate self-consciousness. Each of them stated the rules of the game of interpretation and note-taking, in advance, as he saw them. Each of them documented his own life with books with great precision, and in a highly legible form, embracing with muscular willingness a vast effort of personal and physical self-discipline. For each of them saw reading as a deeply serious enterprise: vital for the practical affairs of everyday life and for the forging of a religious identity, for the amassing of a kind of cultural capital and for the making of links to other passionate readers. Each of them knew, and stated, that he was doing more than memorialize an apparently fleeting experience: he was carving a niche of his own in a humanistic tradition. These men dramatized reading as an act to be carried out in conditions of strenuous attentiveness, preceded by rituals and attended by elaborate equipment. Casaubon made a point of combing his hair every morning before he went upstairs to his study to speak with the ancients; Jacques Cujas worked with a book wheel and a rotating

barber's chair so that he could whirl from project to project.²⁵ And they valued their readings and the notebooks in which they recorded them. One of the standard handbooks for early modern readers, the *Aurifodina* (*Gold Mine*) of the Jesuit Jeremias Drexel, shows two sorts of mining on its title page. On one side, three literal miners dig for material gold in a cavern. On the other, a lone scholar mines gold from his book by taking careful notes. Drexel left his reader in no doubt as to which sort of mining yielded the greater and more lasting riches.²⁶

Pastorius's prized copies of several books by Georg Horn, now in the Library Company of Philadelphia, reveal how closely he adhered to these traditions. True, these books are usually not festooned with notes, as Harvey's were. But they show every sign of engaged reading in the fullest traditional style—one that combined marginal annotation with commonplacing in a single, complicated system of information storage and retrieval. Pastorius regularly entered Latin mottos—appropriate to a student reader proud of his knowledge—on their title pages. By the image of a ship in full sail at the start of the *Orbis imperans*, he wrote “Quo me Fata trahunt: retrahuntque” (“Wherever the Fates drag me, and then drag me back”), very likely a saying he had found in an earlier collection.²⁷ He also provided guidance to their contents—as in the note that summed up in advance the providential natural history that underpinned Horn's *Arca Mosis*.²⁸

Above all, Pastorius maintained an active dialogue with his books. Sometimes his comments took the modest form of dry Latin jokes and puns. When Horn mentioned Charles V's reform of the Imperial Chamber Court, which he moved to the city of Speyer, Spira in Latin, Pastorius noted: “in qua plurimae lites spirant, sed non expirant” (“here many lawsuits breathe, but never breathe their last”).²⁹ Sometimes he responded directly to the text—as when he came across a passage in the *Orbis politicus* in which Horn described Quakers, Shakers, and Fifth Monarchy Men as sectaries of essentially the same kind. Pastorius crossed out this passage and commented, at the end, “haec ultima falsa” (“this last bit is false”).³⁰ Here he put himself in a tradition that stretched all the way back to Petrarch, who regularly discussed

matters with the ancient authors he read, and even sent formal letters to Cicero and Virgil, in which he rebuked the former for his involvement with politics and expressed his regret that the latter had lived too early to be saved by Jesus.³¹ Yet Pastorius was not finished with these books once he had marked his progress through them. He listed some of them among his special favorites and planned to make excerpts from them in the *Bee-Hive*.³² Horn noted, for example, that “the skin of the Ethiopians is soft and porous, because the sun has consumed its stiff grains.”³³ Pastorius put a line beside the passage, and later copied it into the entry titled “Negro” in the *Bee-Hive*.³⁴ Pastorius’s ways of using his books suggest that he saw himself as an inhabitant of a world we have lost: a world of relative textual scarcity, in which each book was a precious possession that must serve multiple functions—and in which someone who lived in a slave society and could have examined black men and women directly still found information that he saw as useful in a Latin compendium written decades before his time.

The evidence of Pastorius’s surviving books makes it clear that he reveled in the multiple uses of print. The title of a Jesuit encyclopedia stimulated him to set off a fireworks display of Latin jokes and quotations, as well as a fancy version of his signature.³⁵ A satire on scholars and their ways by the Utopian Johann Valentin Andreae provoked sardonic remarks about the spread of both belief and deceit in an age when new inventions such as the telescope, which called perception and knowledge itself into question, were multiplying.³⁶ And a wry remark about the way that medical men’s rivalry spurred them to offer competing remedies, regardless of their utility to the sick, inspired a paradoxical reflection: “So many are helping me that I am quite overwhelmed.”³⁷ As Pastorius read one book after another, he turned them into something like tiny chapters of his autobiography as a reader, each of them

³⁵ Michael Pexenfelder, *Apparatus eruditionis tam rerum quam verborum per omnes artes et scientias* (Nuremberg, 1670); LCP, Rare | Sev Pexe Log 626.O, title page: [top:] “Mundus non alio debebat nomine dici: / Nomen ab ornatu convenienter habet”; [right margin]: “Quisquis amas mundum, tibi prospice, quo sit eundum / Est via qua vadis, via pessima, plenaque cladis”; [bottom]: “Inservio studiis Francisci Danielis Pastorij”; “Rebus in humanis omnia sunt dubia, incerta, suspensa; magisque veritati similia, quam vera. Minuc. Felix.”

³⁶ Johann Valentin Andreae, *Menippus* (Cologne, 1673); LCP, Rare | Sev Andr Log 359.D, 194. Here, between cap. 79, *Nova reperta*, and cap. 80, *Perspicilia*, Pastorius has written: “Multiplicata fides numero decrescit ab ipso, / Nunquam plus Fidei, Perfidieque fuit.”

³⁷ Horn, *Arca Mosis*, LCP, Rare | Am 1668 Hor Log 798.D, sig. ** 3 recto. Horn writes: “Nec dubium est, omnes istos famam novitate aliqua aucupantes animas statim nostras negotiari. Hinc illae circa aegros miserae sententiarum concertationes, nullo idem censente, ne videatur accessio alterius. Hinc illa infelicis monumenti inscriptio turba se medicorum perisse.” Pastorius marked the passage throughout and commented on the bottom of the same page: “Quod morbus non potuit, fecerunt Medici, / Illorum turba me peremit: / Multorum Auxilio oppressus sum.” The first phrase alludes to a famous pasquinade from seventeenth-century Rome, directed against the harm supposedly done to the city by the Barberini family: “Quod non fecerunt barbari, fecerunt Barberini” (“What the barbarians have not done, the Barberini have done”).

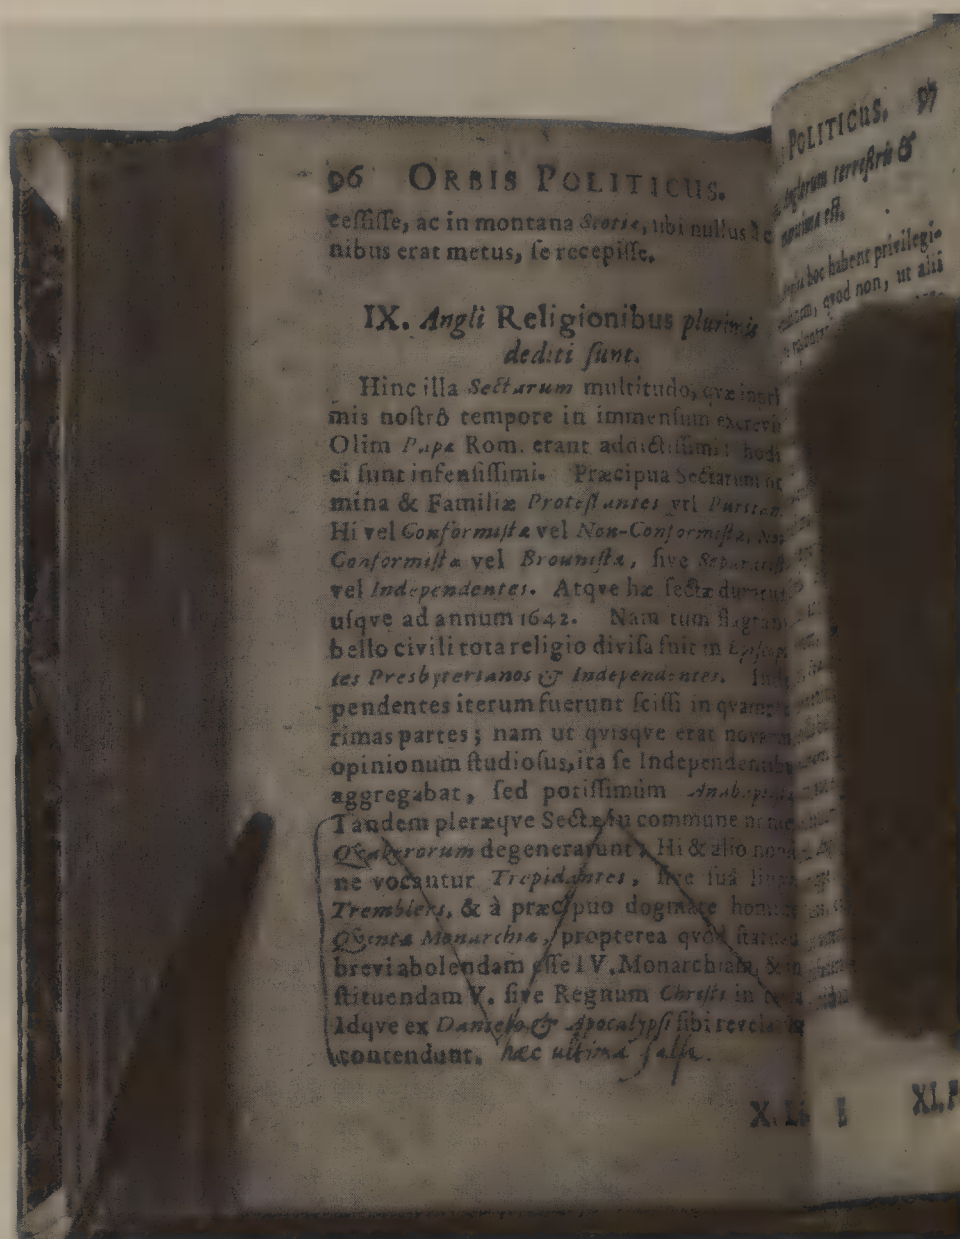

FIGURE 3: Georg Horn, *Orbis politicus* (1668), with annotation by Francis Daniel Pastorius. Library Company of Philadelphia.

distinctive, and each of them—at least for those who knew and appreciated him and his learning—potentially valuable.³⁸

These considerations were not purely theoretical. Pastorius's circle of friends included James Logan, the ruthless trader and fantastically erudite scholar who, in the face of considerable practical obstacles, built up the largest library in the English colonies, twice the size of that of Harvard College.³⁹ Logan loved obtaining rare books, such as the early printed edition of Ptolemy that a German friend gave him, and in return for which he sent his benefactor a buffalo skin.⁴⁰ He took pleasure in

³⁸ Compare Pastorius's remark about borrowing books: "Grata mutuo datorum librorum recordatio." Quoted in DeElla Victoria Toms, "The Intellectual and Literary Background of Francis Daniel Pastorius" (Ph.D. diss., Northwestern University, 1953), 151.

³⁹ See Frederick B. Tolles, *James Logan and the Culture of Provincial America* (Boston, 1957).

⁴⁰ Edwin Wolf 2nd, *The Library of James Logan of Philadelphia, 1674–1751* (Philadelphia, 1974).

the fact that some of his books came, directly or indirectly, from Pastorius, and recorded it with precision. On the flyleaf of one of them, Logan wrote: "I bought this book from Phillip Monckton, to whom it was sold by the son of my great friend Francis Daniel Pastorius of Germantown, 15 November 1720."⁴¹ In his turn, Pastorius seems to have liked borrowing books from Logan—at least to judge from the epigram in Latin and English that he addressed to Logan when he returned his friend's copy of the political emblem book of Diego de Saavedra Fajardo, with its impressive vision of a Christian prince.⁴² It seems quite likely that Pastorius thought with pleasure about a time after his death when friends and later scholars would collect and examine his books, and remember him and these transactions.

Not all such exchanges were commercial. By giving or lending a book, or indeed by borrowing one, one acknowledged the other party's citizenship in the Republic of Letters. Pastorius arranged his friendships deliberately so that only those who deserved to become his intimates could do so.⁴³ This did not mean that he bonded only with other males. Like a number of his contemporaries, he saw women as eminently capable of citizenship in the Republic.⁴⁴ He made this view clear when writing to a younger friend, Lloyd Zachary, in Latin, to excuse himself for having held on for far too long to a female friend's copy of volume 4 of the *Spectator*: "I humbly beg for the forgiveness of the owner, who is quite right to be annoyed, and I hope your intercession will keep her from denying me volume 5."⁴⁵ Evidently Pastorius, his correspondent, and the book's owner all belonged to a world of learned, skeptical readers, who helped one another keep abreast with the newest arrivals from London.

If Pastorius cared about the printed books that he customized, he cherished his commonplace books. A graphomane, he copied everything he could, including the journals of friends, whom he reprimanded when he felt that their diaries included so much boring, repetitive detail that it taxed even his patience: "now a days most Readers loath Superfluities in all sorts of Writings, and much more those to whose Task it falls to copy or transcribe them."⁴⁶ When a friend fell ill, his first thought was

⁴⁶ Pastorius to Lydia Norton, Germantown, June 14, 1710; HSP, Pastorius Collection, MS Am 475.

to copy out the perhaps valuable remedies that he had stored up over the years: "I heartily sympathize with thy lameness, and forasmuch as I collected out of several experienced authors many good Remedies agt bodily distempers let me know, if thou please, what you properly call it, and I shall very willingly transcribe what I find in my book."⁴⁷ Pastorius literally believed that the results of all his toil were priceless. He urged his sons not to part with the greatest of his notebook-making feats, the *Bee-Hive*, for anything in the world.⁴⁸

IT IS NOT EASY TO KNOW what to call the results of Pastorius's active and multiple ways of reading: certainly not a textual interpretation in any simple sense—far less the sort of simple, straightforward reading of texts that early Quakers had preferred to the subtleties of the learned.⁴⁹ An analysis of one phrase will give a sense of how reading and writing, tradition and the individual talent interacted as Pastorius sat over his books and his excerpts from them, crafting not only a body of notes, but a classical identity. When he began to copy out *The Young Country Clerk's Collection*, he reflected, in a nicely characteristic mixture of Latin and English, that "Ingenuum est fateri per quos profeceris, according to Plinius"—"It is honorable to acknowledge the sources through which you have derived assistance, according to Pliny."⁵⁰ Here he quoted the preface to one of the largest and most diverse compilations in classical literature, the *Natural History* of the elder Pliny. This Roman lawyer, official, and military commander, who died while inspecting the eruption of Mount Vesuvius in 79 C.E., completed his vast rag and bone shop of ancient learning, a compendium in thirty-seven long books, shortly before his death. Early modern printers often called the book *History of the World*, a title that gives some idea of its scope.⁵¹

The author's nephew, also named Pliny, described his uncle's masterpiece as "a massive and learned work, as crammed with incident as nature itself."⁵² In fact, it was something like a classical *Bee-Hive*: a massive work of compilation. The elder Pliny, as his nephew explained, laid the foundations of his own scholarship by an ascetic regime of reading. He rose at midnight or a little later, visited the emperor Vespasian before dawn, did his official job in the imperial administration and the law—and then lay in the sun and ate his meals while books were read to him. "He made extracts of everything he read, and always said that there was no book so bad that some good could not be got out of it."⁵³ At his death in the eruption of Vesuvius, he left his nephew "160 notebooks of selected passages, written in a minute hand

Nauert, Jr., "Humanists, Scientists, and Pliny: Changing Approaches to a Classical Author," *American Historical Review* 84, no. 1 (February 1979): 72–85; Arno Borst, *Das Buch der Naturgeschichte: Plinius und seine Leser im Zeitalter des Pergaments* (Heidelberg, 1994); Mary Beagon, "Pliny the Elder," in Anthony Grafton, Glenn W. Most, and Salvatore Settis, eds., *The Classical Tradition* (Cambridge, Mass., 2010), 744–745.

⁵² Pliny the Younger, *Epistolae* 3.5.6: "opus diffusum eruditum, nec minus varium quam ipsa natura."

⁵³ Ibid., 3.5.10: "Nihil enim legit quod non exciperet; dicere etiam solebat nullum esse librum tam malum ut non aliqua parte prodesset." On the portrait that this letter paints of the elder Pliny, see John Henderson, *Pliny's Statue: The Letters, Self-Portraiture and Classical Art* (Exeter, 2002), 69–103; Aude Doody, *Pliny's Encyclopedia: The Reception of the "Natural History"* (Cambridge, 2010), 14–23.

on both sides of the page, so that their number is really larger than it seems. He used to explain that when he was serving as procurator in Spain he could have sold these notebooks to Larcus Licinus for 400,000 sesterces [an ancient Rome coin], and there were far fewer of them then.”⁵⁴ To mention either Pliny, in the context of reading and note-taking, was to call this story to mind. No wonder that Pastorius wrote early in the *Bee-Hive* that he wanted “my Two Sons, . . . not to part with them for anything in this World, but rather to add thereunto some of their Own, &c. Because the price of Wisdom is above Rubies.”⁵⁵ When he called attention to the value of the notebooks, he made his reference clear. Eighteenth- and nineteenth-century Americans, as master historians have taught us, liked to imagine themselves as ancient Greeks and Romans not only when they wrote their political treatises, but also when they designed their houses, wrote their novels, and even when they chose their furniture (to the discerning eye, the sofa revealed the presence of a classical taste).⁵⁶ In a similar vein, Pastorius portrayed himself as an American Pliny, and his commonplace book as the American counterpart to those marvelous notebooks that the original had compiled.

For decades, modern scholars criticized Pliny for relying on books rather than the informants with practical experience whom Aristotle and Theophrastus had regularly consulted.⁵⁷ In fact, Pliny made no bones about the fact that his work consisted chiefly of facts extracted from texts. He insisted on the value of information of this kind, and remarked that his predecessors had not read and commonplacéd with his meticulous integrity.⁵⁸ As he remarked in his preface:

You will be able to judge my taste from the fact that I inserted at the beginning, the names of my authors. For I consider it to be pleasant and to indicate an honorable modesty, to acknowledge the sources whence we have derived assistance, and not to emulate the majority of those whom I have examined. For please be aware that when I compared authors with each other, I discovered that some of the most grave of our recent writers have transcribed the ancients word for word, without mentioning their names.⁵⁹

⁵⁴ Pliny the Younger, *Epistolae* 3.5.17: “Hac intentione tot ista volumina peregit electorumque commentarios centum sexaginta mihi reliquit, opisthographos quidem et minutissimis scriptos; qua ratione multiplicatur hic numerus. Referebat ipse potuisse se, cum procuraret in Hispania, vendere hos commentarios Larcio Licino quadringentis milibus nummum; et tunc aliquanto pauciores erant.” Many details of the elder Pliny’s methods of reading, annotating, and excerpting remain obscure. For some of the possibilities, see the careful, detailed analyses of Tiziano Dorandi, “Den Autoren über die Schulter geschaut: Arbeitsweise und Autographie bei den Antiken Schriftstellern,” *Zeitschrift für Papyrologie und Epigraphik* 87 (1991): 11–33, here 13–15; Valérie Naas, *Le projet encyclopédique de Pline l’Ancien* (Rome, 2002), 108–136.

⁵⁵ UPL, MS Codex 726, I, 1.

⁵⁷ For a classic and influential critique of Pliny’s bookishness, see G. E. R. Lloyd, *Science, Folklore and Ideology: Studies in the Life Sciences in Ancient Greece* (Cambridge, 1983), 135–149.

⁵⁸ On the nature of Pliny’s scholarship, see Sorcha Carey, *Pliny’s Catalogue of Culture: Art and Empire in the “Natural History”* (Oxford, 2003); Trevor Murphy, *Pliny the Elder’s “Natural History”: The Empire in the Encyclopedia* (Oxford, 2004), 52–73; Mary Beagon, *The Elder Pliny on the Human Animal: Natural History, Book 7* (Oxford, 2005), 20–38.

⁵⁹ Pliny the Elder, *Naturalis Historia*, *praefatio* 21–22: “Argumentum huius stomachi mei habebis quod in his voluminibus auctorum nomina praetexui. Est enim benignum, ut arbitrator, et plenum ingenui pudoris fateri per quos profeceris, non ut plerique ex iis, quos attigi, fecerunt. Scito enim conferentem auctores me deprehendisse a iuratissimis ex proximis veteres transcriptos ad verbum neque nominatos, non illa Vergilianae virtute, ut certarent, non Tullianae simplicitate, qui de re publica Platonis se comitem

Contemporary scholarship on Pliny is duly appreciative of the richness of the material he had collected, and its appropriateness to the tastes of his contemporaries. Pastorius would certainly have agreed.

In practice, Pastorius emulated Pliny in two ways: he not only identified the primary sources that he used, but also cited Pliny as his warrant for doing so. At the same time, he changed Pliny's words even as he quoted them, shortening "est enim benignum, ut arbitror, et plenum ingenui pudoris fateri per quos profeceris" ("For I consider it to be pleasant and to indicate an honorable modesty, to acknowledge the sources whence we have derived assistance") to "Ingenuum est fateri per quos profeceris, according to Plinius" ("It is honorable to acknowledge the sources through which you have derived assistance, according to Pliny"). In the section on letter-writing that appears later in the *Collection*, Pastorius cited Pliny's thought again, repeating his condensed version of the original Latin while adding a further suggestion for elegant variation later on: "it indicates an ingenuous modesty, to acknowledge the sources whence you have derived assistance. Pliny. From which you have copied."⁶⁰ In this practice of deliberate variation, Pastorius followed a standard precept of classical rhetoric. The well-educated man should take care to misquote, slightly, when he brandished a quotation from an older text: to practice elegant but apparently inadvertent variation. By doing so, he showed that he quoted from memory—the proper way for a gentleman to access his texts—even as he admitted that in practice he took extensive written notes.⁶¹

Even when Pastorius compiled an eminently practical book, in other words—a collection of model legal documents and passages from letters—he played the elaborate, self-conscious games of humanism, and assumed a classical persona. He borrowed his description of the proper way to borrow from the ancient whose note-taking prowess inspired him, and then made it his own by altering its form. In the *Bee-Hive*, he used the same tactics even more elaborately, creating a colorful patchwork of sayings about indebtedness and note-taking:

I acknowledge, with Macrobius, that in this Book all is mine, & Nothing is mine. *Omne meum, nihil meum*. And though Synesius says, It's a more unpardonable theft, to steal the labours of dead men, than their garments, *Magis impium mortuorum lucubrationes, quam Vestes, furari*, Yet the wisest of men concludes, there is no new thing under the Sun, *Nihil novi sub Sole*, and an other, that nothing can be said but what has been said already, *Nihil dicitur, quod non dictum prius*. Seneca writes to his Lucilius that there was not a day in which he did not either write some things or read & epitomize some good author.⁶²

This whole passage on acknowledging what one has borrowed is, appropriately enough, a series of borrowings. In this case, Pastorius drew the sayings he ascribed

profitetur, in consolatione filiae Crantorem, inquit, sequor, item Panaetium de officiis, quae volumina ediscenda, non modo in manibus cotidie habenda, nosti." For Pliny's understanding of intellectual property and scholarly integrity, see Eugenia Lao, "Luxury and the Creation of a Good Consumer," in Roy K. Gibson and Ruth Morello, eds., *Pliny the Elder: Themes and Contexts* (Leiden, 2011), 35–56.

⁶⁰ UPL, MS Codex 89, 301: "Ingenuum est fateri per quos profeceris. Plin. ex quibus scripseris."

⁶¹ John Whitaker, "The Value of Indirect Tradition in the Establishment of Greek Philosophical Texts or the Art of Misquotation," in John N. Grant, ed., *Editing Greek and Latin Texts: Papers Given at the Twenty-Third Annual Conference on Editorial Problems, University of Toronto, 6–7 November 1987* (New York, 1989), 63–95.

⁶² UPL, MS Codex 726, I, 2.

to Macrobius and Synesius not from their own writings but from the address to the reader, signed Democritus Junior, in Robert Burton's *Anatomy of Melancholy*, itself one of the seventeenth century's masterpieces of compilation.⁶³

The source of the last saying, which Pastorius attributes to Seneca, is especially revealing. At the end of this passage, most of which is in English, appears a phrase in Latin: "Vide omnino Spectator num. 316" ("See generally Number 316 of the *Spectator*"). Here Pastorius cited an article by John Hughes, a poet, musician, and librettist, in Joseph Addison's periodical. Hughes denounced his contemporaries for their idleness and offered the commonplace book as a remedy:

Seneca in his Letters to Lucilius assures him, there was not a Day in which he did not either write something, or read and epitomize some good Author; and I remember Pliny in one of his Letters, where he gives an Account of the various Methods he used to fill up every Vacancy of Time, after several Employments which he enumerates; sometimes, says he, I hunt; but even then I carry with me a Pocket-Book, that whilst my Servants are busied in disposing of the Nets and other Matters I may be employed in something that may be useful to me in my Studies; and that if I miss of my Game, I may at the least bring home some of my own Thoughts with me, and not have the Mortification of having caught nothing all Day.⁶⁴

This passage is suggestive in more than one way. It shows that Pastorius—like most commonplacers—took his quotations from intermediary sources as well as from originals. It indicates that one could conceive of commonplacing not only as an artificial memory—the way in which Pastorius himself described it—but also as an ascetic discipline, a way of forming a moral, hardworking self. And it reminds us that in the late seventeenth and early eighteenth centuries, the methods and meanings of commonplacing continued to evolve, and that cutting-edge intellectuals played a role in that process. No less a modern than John Locke devised a new method for making commonplace books.⁶⁵ They were so trendy, in fact, that self-proclaimed traditionalists who proclaimed their own independence of such aids to learning denounced them. In the preface to his 1711 *Tale of a Tub*, Jonathan Swift joked that he had planned to expand his satire with a panegyric to the present and a defense of the rabble, "but finding my Common-Place-book fill much slower than I had reason to expect, I have chosen to defer them to another Occasion."⁶⁶ When Pastorius used Seneca to support his view that reading and writing, excerpting and composition were closely connected, he was not harking back to the Latin works of Erasmus, much less his classical sources, but citing a current periodical.

The Young Country Clerk's Companion and the *Bee-Hive* were both meant to serve practical purposes: the former was a guide to legal practice in Pennsylvania, the latter an aid to full mastery of the vast vocabulary of English. Yet both of them also offered

Pastorius opportunities, of which he took exuberant advantage, for the same sort of humanistic play in which he engaged on the title pages of his Latin books. To some extent, as we have seen, his ways of playing would have been familiar to others well read in the English literature of his day.

Still, in the English-speaking world around 1700, Pastorius stands out as a compiler for his riotous polyglot learning and his manically associative habit of mind. To enter the *Deliciae hortenses* (*Garden Delights*) or *Voluptates Apianae* (*Beekeeper's Pleasures*), a collection of sayings and poems that he assembled late in life, is to be swept away by his virtuosity. A skillful gatherer-hunter-collector of others' phrases, he was equally deft at ringing multiple changes on them. He could turn one tag into rhyming or rhythmic phrases in multiple languages, and find in all of them food for contemplation of God's ways in nature. A single thought—"Only the bee stores up honey"—could pass through seven languages as Pastorius worked his way to the maxim that God's word is even sweeter than honey:

Μόνη ἡ μέλισσα τιθαιβώσσει

Sola Apis mellificat. Die Bien allein trägt Honig ein.

Het honigh komt alleen Van Biekens by een,

Solamente le Pecchie fanno Mele. Seulement les Abeilles font du miel.

The Bees alone bring home Honey and honey-Comb.

The Bee is little among such as flie, but her Fruit is the Chief of sweet things.

Syrac. 11:3.

Qu. What is sweeter than Honey? Judg. 14:18.

Answ: God's Word. Psal. 119:103. etc.⁶⁷

Marc Shell and Werner Sollors did not exaggerate when they canonized Pastorius as the first of America's multilingual writers.⁶⁸ His collections, with their complicated games of variation and their pursuit of symbols and messages, were astonishingly cosmopolitan.

PASTORIUS'S PRACTICES CAME WITH HIM from Europe to Pennsylvania. The best way to understand more precisely what he hoped to accomplish through this vast accumulation of texts and sentiments is to follow him back into the intellectual territories in which his mind was formed—the deeply bookish world of German schools and universities in which he formed his culture, and developed his particular passions. Pastorius grew up in Windsheim, where he attended the local gymnasium. From 1668 he studied at a whole series of German universities, before he took his degree in law at Altdorf in 1676. Like so many German males from the urban patriciate, in other words, he joined the *Gelehrtenstand*—the social order of the learned. Doing this meant mastering a foreign language and culture, since the learned used Latin as their primary language in academic exercises and publications.⁶⁹ "In Winsheim," Pastorius

recalled in the autobiographical narrative in the *Bee-Hive*, “I had good Schooling, and mostly twenty or more young Earls, Baronets, & Noble mens Children for School fellows, there being then an excellent Rector of the Gymnasium by name Tobias Schumberg, a Hungarian by birth, who could speak almost no Dutch, so that it was not allow’d, to use any other Language but the Latin.”⁷⁰ Though he studied French, and perhaps other modern languages, at Strasbourg, he had to defend his dissertation—and the set of theses appended to it—in public in Latin.

Fluent Latin was not easy to attain. In theory, as Erasmus advised in his ever-popular textbook *On Copiousness*, the young student should simply read all Latin and Greek authors, entering excerpts in a commonplace book until he had made a rich vocabulary and a wide range of allusions his own and could deploy them deftly.⁷¹ In practice, though, as Erasmus knew perfectly well, most students would never even attempt this. The very work in which he explained how to make notebooks, *On Copiousness*, offered sprawling lists of examples that readers could plunder as they wished: hundreds of ways to say “Thank you for the letter” in good Latin, for example, and dozens more for saying “So long as I live, I shall remember you.” Erasmus’s *Adages*, which appeared in 1508, offered potted essays on thousands of subjects, each inspired by a pithy and quotable ancient saying.⁷²

These books became bestsellers, on a pan-European scale. Learned men and women across Europe used Erasmus’s words as they assured one another that the friendships they had made and hoped to sustain across the vast distances and uncertain postal services of a warring world would last forever. Ambitious writers emulated Erasmus’s magnificent effort to command a vast vocabulary, to weave a tissue of words, myths, and allusions that allowed—as Erasmus himself had shown—for play of many kinds.⁷³ And even the less ambitious majority, who harbored more modest literary goals, put on the Erasmian language of allusion, much as modern individualists wear black, as a straightforward way of asserting their membership in a literary world.⁷⁴ Pastorius’s creatively configured quotation from Pliny may well have come from Erasmus or another popular compiler, for it appears, in a similarly

simplified form, in Cotton Mather's *The Christian Philosopher* and in a letter of July 25, 1744, from the Dutch scholar J. F. Gronovius to John Bartram.⁷⁵

To set Pastorius's work of compilation before this background is to see it in a clearer light. He actually set out to do what Erasmus had recommended and later Central European scholars had practiced: to read his way into a vast body of literature in many languages and make it his own, as Erasmus had eloquently advised, by excerpting and organizing it under his own categories. As always, though, Pastorius updated and reconfigured what he borrowed from others. The Baroque poets of the Germany that Pastorius knew as a young man had cultivated many languages at once, producing verse in set forms, such as the emblem book, in Latin, Italian, French, and other languages, especially in their youth, because their poetry could serve as their ticket of admission to academies or courts.⁷⁶ Pastorius focused especially on English, the language of his new community, in which his sons would live, and decanted his other languages into it. He made this clear when he described his immense—and multilingual—*Bee-Hive* as “the largest of my Manuscripts, which I in my riper years did gather out of excellent English Authors,” and left it to his sons as a precious possession.⁷⁷ Like the clear-minded late-humanist pedagogues who were inspired and informed by Erasmus but set their own sights lower, Pastorius offered young lawyers in the New World not a straight replication of the rich humanistic and legal education he had enjoyed in Germany, but something more practical, designed for his new world: model letters and contracts for replication and adaptation, and a mass of tags and anecdotes, recipes and remedies in English that could serve both their practical needs and any literary ones that might arise. His compilations mirrored his own exuberant success at transposing his own legal and notarial work from the German and Dutch languages into English—a task that some others found cripplingly difficult.⁷⁸ Yet he never abandoned his love for polyglot wordplay in the Erasmian spirit or for the sorts of riddles that had filled the emblem books.

The dominant figures in the intellectual world of the Holy Roman Empire that Pastorius saw in his youth were known, in their own time, as polyhistorians. They look nowadays like scholarly dinosaurs, especially when they appear next to nimbler contemporaries such as René Descartes, whose ideas, we know in hindsight, had the future on their side. They took all knowledge as their province: past and future, nature and culture, history and astronomy. The Jesuit Athanasius Kircher, for example, traced the history of the world's peoples from before the Flood to his own day, deciphered Egyptian hieroglyphs, clambered into the crater of Vesuvius to study the mechanism of volcanic eruption, adhered to the Copernican system at a time when Catholics were forbidden to advocate it, and played football against the Dominicans. And he presented his discoveries not only in a stately series of Latin folios, but also in the magnificent material form of the museum housed in his rooms in the

Jesuit Collegio Romano.⁷⁹ This made a splendid stage on which Kircher and visitors could play out the rituals of greeting, and he could show off the giant's shinbones and other antiquities that made his collection so memorable.

The polyhistor's reach often exceeded their grasp. The Hamburg scholar Peter Lambeck, for example, never managed to complete the "history of literature" that he outlined and planned to compile, in some thirty-eight volumes, and no wonder. This enormous work would have collected information about the lives and works of all significant authors from the Creation down to his own time, as well as about the institutions of intellectual life—from the contests at which ancient Greek poets competed, through the universities of the Middle Ages, to the academies of his own day.⁸⁰ But Lambeck's failure did nothing to dissuade others from attempting the same enterprise—down to Nicolaus Gundling, who in the 1730s published a history of erudition that was almost 7,700 quarto pages long. The index alone stretched over 900 pages.⁸¹

As one might expect, methods of compilation interested these men greatly. Vincentius Placcius (1642–1699), professor of rhetoric at Hamburg, published an extensive manual on making notes in 1689. This included the first publication of a design for a *scrinium litteratum* or note closet—a piece of study furniture equipped with hooks on which the reader could fix and arrange excerpts on thousands of slips of paper. Though the plan was actually drawn up by Thomas Harrison, an English member of the circle of Samuel Hartlib, it is characteristic of the German world Pastorius knew that it was published there—and that Leibniz actually owned and used one of these *scrinia*, "though it apparently had little impact on the messiness of his papers."⁸²

Other German savants specialized in bibliography rather than straightforward compilation. But the ways in which they gathered, processed, and displayed their materials have a clear kinship with Pastorius's methods. In Germany, impoverished after the Thirty Years' War, few students could afford many books. (This was the world in which the writer Jean Paul Richter imagined an impoverished little schoolmaster, Maria Wutz, who would compose the books he imagined when he read their titles in the Frankfurt Book Fair catalogue, but that he could not afford to buy.)⁸³ Professors offered formal courses on "literary history." They would reprint the in-

ventory of a major library, or print a list of writers, distribute it to their students, and then dictate comments on it. These courses—a Baroque counterpart to Pierre Bayard's *How to Talk about Books You Haven't Read*—offered a rich mix of basic bibliographical information, critical judgments, and literary gossip, much of it unreliable.⁸⁴ The influential Wittenberg professor Conrad Samuel Schurzfleisch, for instance, told his pupils of a rumor that the great philologist Joseph Scaliger had been castrated by his father, in order to ensure that he not marry and discredit his illustrious family. There is no further evidence in any source to support this story.⁸⁵

Students copied out what teachers told them. Sometimes the teachers then recycled their students' notes as printed textbooks, which other teachers in turn made the objects of their own lectures. Compilation and excerpting, recompilation and commentary followed one another in a seemingly endless cycle.⁸⁶ Christoph August Heumann of Göttingen surveyed all of the knowledge that counted in a *Conspectus*, 500 pages of Latin thrilling enough, or useful enough, that the book went through seven or eight editions.⁸⁷ Gottlieb Stolle of Jena offered courses in which he used Heumann's book as the textbook and dictated comments on it. Then he published his own lectures. Some student readers had their copies of Stolle on Heumann interleaved so that they could add still more information of their own.⁸⁸ The texts of these compilations grew as slowly and inevitably as glaciers, with a thin crust of slick textual ice covering a deep, dark, rocky mass of footnotes.

Biographical evidence identifies two of the ways in which Pastorius may have encountered these methods, and one of the teachers who may have helped him master them. Pastorius's own father, the jurist Melchior Adam Pastorius, was a compiler on a grand scale and a versifier almost as obsessive as his son. In 1657 he issued a study of the election and coronation of the Holy Roman Emperors. Here he amassed not only a great amount of information about the preparations and ceremonies that had attended the most recent election in 1653, but also an emperor-by-emperor account of imperial history from ancient Rome to his own time, with supplementary material on the electors.⁸⁹ Very late in life, in 1702, Melchior Adam served as the publisher as well as the author of *Franconia rediviva*, a comprehensive anthology of lists and documents regarding the noble families and monasteries, cities and institutions of the Franconian Kreis of the Holy Roman Empire.⁹⁰ Each of these books must have rested on systematic compilation—as did the extensive manuscript col-

lections of Melchior Adam's verse, interspersed with curious illustrations, that survive in Philadelphia.⁹¹

In the *Bee-Hive*, Francis Daniel Pastorius recalled that he had learned some of the principles of public law from "the renowned Dr Böckler at Strassburg."⁹² It is likely that he learned some law from the elderly jurist Johann Heinrich Boecler (1611–1672). But it is even more likely that he learned a great deal about compiling and managing information. Boecler was not only a lawyer of reputation but also a master practitioner of literary history, an expert at manipulating the rococo information machines that took in names and titles, anecdotes and maxims, and spat out textbooks and courses. At the request of Leibniz's patron, Johann Christian von Boineburg, Boecler drew up a crisp little manual of the history of letters, from the Creation to the present, for young students. It bore the modest title *A Curious Historical-Political-Philological Bibliography That Reveals the Merits and Defects of Each Writer*.⁹³ Far longer—though still less than 1,000 pages—was the *Critical Bibliography of All the Arts and Sciences* that Boecler also composed.⁹⁴ Johann Gottlieb Krause, who edited this compilation after Boecler's death in 1715, ransacked Boecler's other works for relevant passages and added them to give the book more depth and heft, intervened where he thought editorial care could improve the exposition, and turned the original, skeletal work into a relatively content-rich guide to the world of learning.⁹⁵ In his original sketch of literary history, Boecler had said of the Greek historian Herodotus that he was not a liar, and of Thucydides that he was very noble.⁹⁶ In Krause's elaborated version, the reader encountered Boecler explaining that modern travel accounts confirmed Herodotus's stories about gold-digging ants the size of wolves, and noting that Thucydides' account of the Greek states at perpetual war with one another shed a powerful light on the fragmented, militaristic Holy Roman Empire of his own day.⁹⁷ When Pastorius listed topics, entered excerpts, and drew up indexes, treating compilation as a central and valuable part of scholarly work, he practiced skills that he had encountered in youth and mastered through the long years of his university training.

Pastorius also seems to have developed his interest in preserving and collecting documents—an interest that would be central to his career as a notary and jurist in the New World—as a student. In 1676, he defended a dissertation on a revealing topic: *rasura documentorum* (the scraping, or erasure, of passages in legal docu-

⁹¹ Melchior Adam Pastorius, "Liber intimissimus omnium semper mecum continens thesaurum thesaurorum Iesum, quem diligo solum. in quo vivo et in quo moriar ego"; HSP, Pastorius Collection, MS Am 475; UPL, MS Codex 1150, for which see below.

ments).⁹⁸ In his preface, he explained that since the credibility of documents was often called into question in court, he had planned to cover all the reasons why this happened. But he discovered that the subject was too large and confined himself, for the moment, to various forms of *rasura* (beginning with all the meanings of the word, which also applied to the tonsure of Catholic clerics).⁹⁹ This proved to be a large and suggestive field in itself—as when Pastorius raised the question whether a guilty notary's hand should be amputated “when he has become so skillful in painting, or another art, that his whole intellect seems to have moved into his fingers.”¹⁰⁰ It seems likely that Pastorius already prided himself—as so many notaries did—on writing a hand so neat that it mirrored the neat divisions of property that formal documents described.¹⁰¹

Material evidence confirms that Pastorius began to master all the techniques of compilation as a student. He owned a linked set of textbooks, now in the Library Company of Philadelphia. They include chronological tables for world history from the Creation to the present drawn up by a Braunschweig theologian, Christoph Schrader; introductions to the tradition of historiography from antiquity to modernity, and to the genealogy of rulers from ancient Rome to the present; and a short textbook on geography by a Gymnasium professor, Heinrich Schaevius. Pastorius signed and dated the last of these in 1674.¹⁰² The books themselves, annotated sparsely but systematically, show how he read his way into mastery of a world of scholarly methods and materials. Schrader's chronological tables, which presented world history in the skeletal form normal at the time, were dated, in the traditional way, from the Creation forward: Pastorius followed the custom that had become widespread in the seventeenth century and added a B.C. date, reckoned backward from the Incarnation, for the start of world history. Where Schaevius, whose brief handbook of geography Pastorius read, mentioned Pliny's *Natural History* as a model compilation on cosmography, Pastorius added a marginal reference to the Renaissance classic in the field, the *Cosmography* of Sebastian Münster.¹⁰³ And where Schaevius discussed systems for describing the world's land masses, Pastorius noted, in very up-to-date terms indeed, that “the whole land mass of the world can also be divided into three parts, or great islands, around which the ocean flows: the first

⁹⁸ Francis Daniel Pastorius, *Disputatio inauguralis de rasura documentorum* (Altdorf, 1676).

⁹⁹ Ibid., 3–4. This was, of course, the period in which diplomatics and paleography, the formal arts that ascertained whether documents were authentic, first took shape. Jean Mabillon's *De re diplomatica* would appear in 1681. For a recent study, see Alfred Hiatt, “Diplomatic Arts: Hickes against Mabillon in the Republic of Letters,” *Journal of the History of Ideas* 70, no. 3 (2009): 351–373.

A recto, where the text mentions “Cosmographia, quae totum mundum visibilem depingit: id quod intendit Plinius,” Pastorius adds “& Munsterus.”

contains Europe, Asia, and Africa, the second America, and the third the Magellanic lands that are also called Austral [southern] and unknown.”¹⁰⁴ Most revealing of all, though, is the list of writers on the early church, starting with the apostles and including pagans as well as Christians, that Pastorius copied into one of these books from the dissident church historian Gottfried Arnold’s work on the life of the early church.¹⁰⁵ Every book invited the reader to engage in bibliographical compilation; every ancient authority invited the reader to make comparisons with modern counterparts.

Pastorius not only applied the techniques of the polyhistor, he shared their tastes. Like Kircher, the Jesuit Michael Pexenfelder, whose odd little encyclopedia of the arts and sciences Pastorius owned, took an interest in ciphers and other forms of writing designed to conceal one’s meaning from curious readers.¹⁰⁶ He described steganography as “a clandestine form of writing, which uses secret signs that a few have agreed on.” These could be letters, standing in for one another, or numbers, or “new characters.”¹⁰⁷ Here Pastorius wrote “see the next page, near the bottom.”¹⁰⁸ He covered the next opening, which deals with the use of metal characters in printing, with ingenious prints of many different kinds of leaf. In the bottom margin he wrote that characters could be “natural, the progeny of the gardens and the fields, some of which appear in the margin, or artificial. Of the first category, absinth stands for A, beta for B, the crocus for C, ferns for F, and so on. Botanists understand them very well.”¹⁰⁹ Here we see that Pastorius’s fascination with language, in all its texture, richness, and variation, was rooted in the culture of the old Holy Roman Empire—a world in which cryptography offered the possibility of sending secret messages, something every chancery and resident ambassador regularly did, and inspired the production of a rich body of poetry by a kind of combinatorics—rather like modern language poetry. Pastorius’s mystical vision of language had its roots in a very particular milieu and moment.

This was not the only case in which Pastorius drew on the mysterious codes and

¹⁰⁴ Ibid., sig. A2 recto, where the text discusses “Divisio Terrae quintuplex,” Pastorius writes: “Totus terrarum Orbis etiam dividitur in 3. partes, sive Insulas magnas, quas Oceanus circumfluit, quarum 1a continet Europam, Asiam et Africam, 2a Americam, et 3a Megallanicam, quae et Australis et Incognita vocatur.”

H 2 verso] appears a manuscript, “Index scriptorum ecclesiasticorum.”

¹⁰⁶ On the study of cryptography and steganography and their relation to other forms of scholarship in this period, see Gerhard F. Strasser, *Lingua universalis: Kryptologie und Theorie der Universalsprachen im 16. und 17. Jahrhundert* (Wiesbaden, 1988).

¹⁰⁷ Pexenfelder, *Apparatus eruditionis tam rerum quam verborum per omnes artes et scientias*, 309: “Steganographia est clandestina seu clancularia scribendi ratio, occultis utens signis, ex compacto paucorum, intelligibilibus, ut B pro A; C pro B. Vel numeri adhibentur pro literis, ut 1 pro a. 2. pro b. 3. pro c. Vel pro arbitrio transmutatur alphabetum. Vel novi characteres efformantur: vel inaspecti quopiam illiti succo exarantur in panno, non nisi frigida madefacti legendi, aut in charta ad lucernam transparente colligendi, &c.”

¹⁰⁸ Ibid.: “Vide pag. seq. sub finem.”

¹⁰⁹ Ibid., 310–311. Pastorius has wreathed the margins with leaf prints, and where Pexenfelder writes “Characteres seu literae sunt metallicae,” Pastorius has added a note in the bottom margin: “vel Naturales, hortorum Camporumque propago, ut quaedam apparent in Margine: vel Artificiales. Ex prioribus Absinthium denotat A. Beta B. Crocus C. Filix F. &c. hasque Botanici optime intelligunt.”

poverty through wealth to poverty again, on the title page of his history of the Dutch Revolt, to suggest a way of understanding the narrative that followed.¹¹² True, Aitzinger's cycle had only six phases rather than the seven Pastorius listed—perhaps another instance of his desire to modify the treasures he collected. Basically, though, Pastorius learned from Baroque tradition how to cope with rapid modern social change.

EVEN WHAT SEEM PASTORIUS'S MOST characteristic and original writings drew nourishment from roots set deep in the layers of traditional scholarly practice. Consider, for example, the letters that he sent back to Germany, in which he described the new world that he found around him in Pennsylvania. These texts eventually became the groundwork for his most famous work, the *Umständige geographische Beschreibung der zu allerletzt erfundenen provintz Pensylvaniæ*; or, *A Detailed Geographical Description of Pennsylvania*, published in Leipzig in 1700. One of the preparatory letters, written in Latin and dated December 1, 1688, was directed to Georg Leonhard Modelius. A friend of Pastorius's, then at the University of Altdorf, Modelius eventually became rector of the Gymnasium in Windsheim that Pastorius had attended. He had asked Pastorius, in a letter we no longer have, for a description of Pennsylvania, both for himself and for his colleague Johann Christoph Wagenseil, a professor of oriental languages at Altdorf still famed for his publications both on the Meistersinger of Nuremberg and on Jewish blasphemies against Jesus.¹¹³ The text pleased its recipient so much that he communicated it to one of the new journals of the period, aimed at a literate and alert lay public, Wilhelm Ernst Tentzel's *Monatliche Unterredungen einiger guten Freunde von allerhand Büchern und andern annehmlichen Geschichten* (*Monthly Conversations among Good Friends on All Sorts of Books and Other Pleasant Stories*), where it appeared in April 1691.¹¹⁴

It is a charming text. Pastorius instructs his readers first to use their maps to zero in on the Delaware and on Philadelphia, and then to imagine themselves there in the body, recovering from seasickness and eagerly welcomed by Pastorius. He invites them to enter his house, pointing to the inscription that offers hospitality, and shows them Germantown, with its rapidly growing population: only 13 in 1683, but now over 50. Pastorius displays the prosperous houses and farms that the citizens of the new community have built, notes that they have no need as yet of a wall, and suggests that he and his guest walk out of town to see the Indians. Pastorius apparently shared William Penn's sympathy for the Lenape Indians, which made possible the early "long peace" between them and white settlers.¹¹⁵ He describes the Indians admir-

¹¹⁴ *Monatliche Unterredungen* 3 (1691): 278–288. For the rise of journals in the German world, see Hub. Laeven, *The "Acta eruditorum" under the Editorship of Otto Mencke (1644–1707): The History of an International Learned Journal between 1682 and 1707*, trans. Lynne Richards (Amsterdam, 1990); Gierl, *Pietismus und Aufklärung*, 395–417; and, more generally, Anne Goldgar, *Impolite Learning: Conduct and Community in the Republic of Letters, 1680–1750* (New Haven, Conn., 1995).

¹¹⁵ On Penn and the long peace, see James Merrell, *Into the American Woods: Negotiators on the Pennsylvania Frontier* (New York, 1999). For the later history of relations between white settlers and

ingly and at length, offering detailed accounts of their intelligence, their use of canoes and tobacco, the personality traits and behavior of males and females, their ways of courting and marriage, their religious rituals, and their ways of caring for the sick and burying the dead. The letter winds up with a list of phrases in the Indian language and in translation. Pastorius comments: "If you can divine the origins of these Indians from these bits of evidence, or from the fact that they call their mother *ana*, their wife *squáa*, their old woman *hexis*, their devil *menitto*, their house *wicco*, their land *hockihóckon*, their cow *muss*, their pig *Kuschkusch*, I will admit you're a really good philologist."¹¹⁶

This letter adumbrates not only Pastorius's future achievements as culture-broker and populist, but also more generally the ethnographic writings of men such as Lafitau and Lahontan and their successors.¹¹⁷ Indeed, with its almost obsessive emphasis on the observer's intellectual resources and point of view, it seems to belong to the new travel writing of the eighteenth and early nineteenth centuries. And that impression is strengthened by a passage toward the beginning of the letter. Here Pastorius, as he takes Modelius on his imaginary walk, says, "So that we don't walk in silence like sheep, let's talk a little about the origin of the Nile—or, what is equally obscure, that of our Indians. Some think, not without plausible clues, that they are the descendants of the Hebrews. But their native language suggests that some of those who live farther from here come ultimately from Wales. Your Polyhistor in Altdorf [Wagenseil] will work out for you the dates and details of their navigations across the Atlantic. But I, since I have hardly a single book, will not myself take part in this dubious battle."¹¹⁸ Here, so it seems, Pastorius ironically distanced himself from the culture of the learned in their universities. Implicitly, at least, he emphasized the superiority of direct experience of the present to book learning about the past.

It is always hard to decode the jokes and irony of past actors. Georg Horn spent much of his life devising ways to intercalate the history of China and the New World into the traditional narrative of world history, centered on the Mediterranean and Western Europe. He not only composed original textbooks, but also carried on long debates with colleagues about the origins of the Indians and the paths by which they

Native Americans in the middle colonies, see Peter Silver, *Our Savage Neighbors: How Indian War Transformed Early America* (New York, 2008).

¹¹⁶ *Monatliche Unterredungen* 3 (1691): 287–288: "Ex his elementis, sive etiam, quod matrem *ana*, uxorem *squáa*, vetulam *hexis*, diabolum *menitto*, domum *wicco*, praedium *hockihócken*, vaccam *muss*, suum *Kuschkusch*, appellitent, si tu Indorum horum incunabula divinaveris, bonus mihi eris Philologus &c." For early modern scholars' theories about the origins of the Indians, see Lee Eldridge Huddleston, *Origins of the American Indians: European Concepts, 1492–1729* (Austin, Tex., 1967); Giuliano Gliozzi, *Adamo e il nuovo mondo: La nascita dell'antropologia come ideologia coloniale: Dalle genealogie bibliche alle teorie razziali (1500–1700)* (Florence, 1977); David N. ¹¹⁸ *Monatliche Unterredungen* 3 (1691): 283: "Pergamus, et ne silentio viam transigamus veluti pecora, sermocinemur aliquid de Nili, vel quae aequae obscura est, Indorum nostrorum origine. Nam licet non desint, qui eos Ebraeorum arbitrentur prosapiam, non sine signis verosimillimis: quosdam tamen longius hinc habitantium ex Cambria emersisse, nativa illorum loquutio innuit. Quibus autem temporibus atque navigiis Atlanticum hoc mare exantlaverint, Polyhistor tuus Altdorfinus distinctius explicet: ego nec ullo pene libro instructus tam dubiam litem meam non facio."

had arrived in the New World after the Flood.¹¹⁹ In recent years, Sanjay Subrahmanyam and Daniel Smail have advanced powerful programs for decentering our histories, by abandoning our obsessions with narratives centered in Mesopotamia, the Mediterranean, and Western Europe and by combining scientific with historical evidence.¹²⁰ Horn was their seventeenth-century revisionist counterpart, and Pastorius, as we have seen and will see again, willingly learned from him. Yet Pastorius, as much as he admired Horn's books, seemingly made light of the complex historical genealogies and itineraries that filled their pages, treating them as an outworn, obsessively bookish form of knowledge.

In fact, when Pastorius offered an account of local Indian society based on direct experience, he did not rebel against the world of learning as he had known it in Germany. Rather, he carried on one of its central traditions. In the *Bee-Hive*, after all, Pastorius told his sons that they should record "all remarkable words, Phrases, Sentences or Matters of moment, which we do hear and read"—a clear instruction to combine experience and witnesses' accounts with reading.¹²¹ From the sixteenth century onward, humanists had argued that travel, and the direct experience of other countries and mores that it afforded, was essential to anyone who hoped to attain distinction in scholarship or politics. But travel, like reading, had to follow strict protocols if it was to profit those who undertook it. Theodor Zwinger, Thomas Turler, and many others drew up manuals for what they dubbed the "methodus apodemica" or formal art of travel.¹²² Dozens of writers, and hundreds of young men, bore these instructions in mind (and the books that transmitted them in their pouches) as they compiled guides to the states of Europe, memoirs of their travels, or imaginative works of literature, such as John Barclay's *Euphormionis Satyricon*, that turned on knowledge of the national characters of the different European peoples.¹²³

Pastorius's connections to this tradition were deep and organic—so much so as to make his own career as a travel writer seem almost overdetermined. Travel writing was an early pursuit. Pastorius recalled that he kept "a peculiar Manuscript Journal . . . in 8^o" of his travels down to 1682, when he arrived in Frankfurt.¹²⁴ It was also inherited. His own father, Melchior Adam Pastorius, compiled a detailed journal of his early education in the German college in Rome, his later travels, and his self-discovery in Paris, as a Protestant.¹²⁵ It is a charming medley of prose and verse, full

of vivid recollections. The opening poem makes a boldly self-conscious allusion to Odysseus. Melchior Adam vividly describes how melancholy he felt when he was left on his own in the great city of Ferrara and had nothing to do but visit churches, and how strange he found it that Italian nuns were surprised that he did not speak their language. Well grounded in the “methodus apodemica,” Melchior Adam took a special interest, when he traveled, in the learned men who had adorned particular cities—for example, the Flemish Tacitist and ancient historian Justus Lipsius, whose house he visited in Louvain.

As a grown man, Francis Daniel continued to share his father’s interests—even as he made gentle fun of them: “Here we should be wanting to ourselves,” he writes in the *Bee-Hive*, “to the Memory of Justus Lipsius (oh quantum nomen! to which we dare not presume so much as to aspire) if we should not insert into these our Remarks the Inscriptions and Descriptions of his three most beloved dogs, whose Counterfeits or Resemblances still are to be seen at Lovain, a City in Brabant, in the very house, wch this transcendingly learned man did inhabit.” He even gives their names: Sapphirus, Mopsulus, and Mopsus.¹²⁶

He also continued to respect books from the learned tradition of travel literature, such as Barclay’s *Satyricon*, which he warmly recommended to Lloyd Zachary as late as 1717.¹²⁷ Once again, material evidence proves especially revealing. Pastorius’s books in the Library Company of Philadelphia include *Itinerarium Italiae*, a detailed guide to the sights and antiquities of Italy, region by region, illustrated with crisp views of the major cities. Written by the Antwerp lawyer Franciscus Schottus, the book was edited after his death by his brother Andreas, a Jesuit scholar, and had a long career as a learned person’s guide to Italy.¹²⁸ It begins with a set of instructions for travelers on what to observe, neatly set out in diagrammatic form. Set topics include the geographical region, the name of the place and its founder, geographical features such as rivers and mountains, public and private buildings, political institutions, schools, and then “the customs of the ordinary people: including their ways of earning their living, their clothing and their crafts.”¹²⁹ Pastorius’s Latin report on Pennsylvania followed this outline with striking precision.

YET PASTORIUS WAS FAR FROM satisfied with the scholarly world he had known as a student. He insisted on the central importance of English when he educated his own sons, and even if they inherited the *Bee-Hive*, they practiced crafts rather than pursuing erudition. And in the preface to his published description of Philadelphia, he

¹²⁹ Schottus, *Itinerarium Italiae*, sigs. A3 verso–A4 recto, here A4 recto: “Vulgi mores: quo pertinent ratio victus et vestitus; item opificia.”

stated formally that he rejected the learned institutions of Europe. Though he deplored the wickedness he saw around him in Pennsylvania, he wrote, "Nevertheless I hope things here will never be conducted in a way so unbecoming men, as in those universities in Europe, in which a man must learn for the most part things which are to be utterly forgotten. Many professors waste their time on useless questions and clever trifling tricks, and while they detain the minds of the learners on empty questions they prevent them from aspiring to more solid matters." He rebuked the learned for preferring Greek mythology to Christ, using Aristotle to explicate Scripture, and wasting their time on "utterly useless questions and trickeries," such as looking "among the Greek declensions for the ablative case" (Latin, not Greek, has an ablative case).¹³⁰

As a critic of the German learned world, Pastorius was not alone. In fact, many of his contemporaries and even more younger scholars completely agreed. Johann Burkhard Mencke, the editor of the Leipzig periodical *Acta eruditorum*, described the etiquette of the erudite with biting wit in two satirical orations on *The Charlatanry of the Learned* in 1713 and 1715. He made brilliant fun of scholars' lust for honorific forms of address: "you see many demanding to be called *Clarissimus* who are absolutely unknown outside the walls of their city; *Magnificus*, who are oppressed by poverty; *Consultissimus*, who have little or no advice to give." He mercilessly ridiculed the elaborate Latin titles by which scholars tried to make humdrum books impressive: for example, "Public Law, or Medical Theses on Headache." And he sketched unforgettable acid-pen portraits of self-absorbed scholars such as Johann Seger of Wittenberg:

He had an engraving made on copper, showing the crucified Christ and himself. From his lips came the words, "Lord Jesus, do you love me?," and from the lips of Jesus came the answer, couched in the most laudatory terms: "Yes, most eminent, excellent and learned imperial poet laureate and rector of Wittenberg University, I do love you."¹³¹

On the rituals and mores of the Republic of Letters, and especially for the forms of conduct and publication that could lead to expulsion from it, see Martin Mulrow, *Die unanständige Gelehrtenrepublik: Wissen, Libertinage und Kommunikation in der Frühen Neuzeit* (Stuttgart, 2007).

Similarly, Pastorius looked back without affection to the “impertinent Ceremonies” he had undergone as a beginning student at Altdorf.¹³² His books in the Library Company show that complaints about the tediousness of traditional forms of learning and satires of the erudite piqued his interest.¹³³

Mencke denounced the universities because he hoped to improve them—as he tried to do, as professor and, eventually, rector of the University of Leipzig and editor of the major periodical his father had founded, the *Acta eruditorum*. Much evidence suggests that Pastorius, too, when he was not proclaiming the merits of life in fertile Pennsylvania, criticized the learned world not in order to destroy it but in order to save it. In the *Bee-Hive*, compiled in the last decades of his life, he continued to show an interest in Gottfried Arnold, the church historian who resigned his professorship at Giessen even before he published his history of the church and its heretics, which used the records of the past to challenge what he saw as a sterile orthodoxy in his own day. Pastorius also regularly noted books that contained information about the new university at Halle, and the Pietist orphanage and mission to the Jews there—new intellectual foundations that deliberately departed from the traditions of the past and created new forms of learning and teaching.¹³⁴ And his continued interest in the particular province of the Republic of Letters in which Pietism was giving new life to erudite traditions affords another vital hint about his goals.

Pastorius’s impatience with Latin and ceremony did not lead him to turn his back on the ceremonious, Latin-speaking world of learning. Like Mencke and Arnold, he wanted not to abandon erudition but to reconfigure it. And in that respect he resembled no one more than his close contemporary the jurist Christian Thomasius (1655–1728). In many respects, to be sure, the elegantly coiffed Thomasius, who summoned his fellow German professors to learn to behave as if they were proper courtiers, seems sharply different from Pastorius, with his Quaker-inspired belief in equality and his love of fishing and gardening. Yet the two men shared experiences and qualities. Both were trained as jurists, and belonged to a larger wave of learned lawyers committed to reforming the law and the institutions that sustained it.¹³⁵ Both came under the influence of Philipp Jakob Spener and rejected the Lutheran orthodoxy in which they had been raised. Both were steeped in the traditions of erudition. And though Thomasius sharply criticized these, more often he turned them to new ends. He attacked the universities’ monopoly on learning and promoted modern studies. He broke with tradition and lectured publicly in German at Leipzig; he recommended the cultivated French way of life as superior to the German, pedantic one; and he founded a monthly periodical for the cultivated urban reader. But in doing so, he hoped to make the sterile culture of erudition fertile again.¹³⁶

¹³² UPL, MS Codex 726, I, 406: “Anno 1668. the 31th of July I went with some others to the University of Altdorf, there to be Innitiated among Students (which they call Deponisten), giving to those Novices with abundance of impertinent Ceremonies the Salt of Wisdom, Sal Sapientiae.”

¹³⁶ On Thomasius, see generally Notker Hammerstein, *Jus und Historie: Ein Beitrag zur Geschichte*

Lutheran theologians claimed the right to determine what could be taught and learned at universities. They tested every proposition against what they described as the immutable truths of orthodoxy.¹³⁷ Thomasius, by contrast, argued that the intelligent, cultivated person should receive all philosophical systems with the mild, reasonable skepticism they deserved. By doing so, one could find a middle path, between the absolutist follies of the Aristotelian scholastics and the overly strong prejudices of the Cartesian innovators. The only royal road to wisdom lay in informing oneself about all the schools of philosophy, from the very beginning of human history—and then making an informed, eclectic choice among their principles.¹³⁸ For the human mind was simply incapable of creating a single, universally valid system. As Thomasius reflected, it was better to have a refitted and rebuilt ship that could sail than one that had never been repaired and was full of cracks and falling apart.¹³⁹

Thomasius's call for a reasonable eclecticism gave a new meaning to the polyhistor's pursuit of learning in general and "literary history" in particular.¹⁴⁰ Francis Bacon had suggested that a vital way to reform learning in the present was to compose a "just story" of its vicissitudes in the past. An analytical history of philosophy and the sciences, he believed, would show both which principles and which institutions had proved most productive over time. The passages in which Bacon made this argument had long inspired compilers such as Lambeck.¹⁴¹ Thomasius—and his disciples, including Gundling and Stolle, who became the most renowned compilers of their day—seized upon them as the key to creating a literary world in which every new thesis would be seen against the proper, full background, traced to its roots and fairly judged. As Martin Gierl has shown, what looks from the outside like formless erudition spilling down the thousands of pages of the literary histories actually represented a sustained effort to lead readers out of the maze of opinions that bewildered them. Erudition and eclecticism were the keys, in Thomasius's view, to cre-

des historischen Denkens an deutschen Universitäten im späten 17. und im 18. Jahrhundert (Göttingen, 1972), 43–147.

Barnard, "The 'Practical Philosophy' of Christian Thomasius," *Journal of the History of Ideas* 32, no. 2 (1971): 221–246; Horst Dreitzel, "Zur Entwicklung und Eigenart der 'Eklektischen Philosophie,'" *Zeitschrift für Historische Forschung* 18 (1991): 281–343, here 324–330; Martin Mulsow, "Eclecticism or Skepticism? A Problem of the Early Enlightenment," *Journal of the History of Ideas* 58, no. 3 (1997): 465–477.

¹³⁹ Christian Thomasius, *Introductio ad philosophiam aulicam* (Lelpzig, 1688), 46: "Ita praestat, navem habere ad navigandum aptam, etsi saepius in partibus renovatam, quae renovatio tamen identitatem non tollit, quam retinere perpetuo eandem non bene cohaerentem et rimarum plenam. Ita praestat aedificium a variis artificibus adornatum quam tuguriolum a rustico etsi uno extructum."

¹⁴⁰ Hammerstein, *Jus und Historie*, 43–147, 205–265. For the Renaissance foundations of "historia literaria," see Wilhelm Schmidt-Biggemann, *Topica universalis: Eine Modellgeschichte humanistischer und barocker Wissenschaft* (Hamburg, 1983), 1–66; Michael C. Carhart, "Historia Literaria and Cultural History from Mylaeus to Eichhorn," in Peter N. Miller, ed., *Momigliano and Antiquarianism: Foundations of the Modern Cultural Sciences* (Toronto, 2007), 184–206; and Frank Grunert and Friedrich Vollhardt, eds., *Historia literaria: Neuordnungen des Wissens im 17. und 18. Jahrhundert* (Berlin, 2007).

¹⁴¹ See Schmidt-Biggemann, *Topica universalis*, 212–225.

ating a critical public sphere—one in which the true spiritual understanding of Christianity would come naturally to fruition.¹⁴²

This comparison can help us to dig down below the buzzing polyglot surface of the *Bee-Hive* and detect some of the deeper motives that underlay its creation. Pastorius himself described his commonplace books as memory theaters, and that they certainly were: cultural capital ready to be invested. But Isaac Casaubon also described his commonplace books as mnemonic devices.¹⁴³ And yet, as Joanna Weinberg and I have tried to show, they were also analytical tools, in which he showed how to analyze texts historically and philologically. It was there that he recorded the impressive Talmud lesson he received from a Jewish friend, Jacob Barnet, who had shown him how to surf the oceanic contents of that most complex and rebarbative of texts, moving from the text to the margins, identifying commentators and noting discrepancies between editions.¹⁴⁴ When Pastorius addressed his readers, he instructed them not just to memorize but to revise his collections:

Sis mihi Corrector, resecando superflua Lector; Veraque digneris, quae desunt jungere Veris

(Be my corrector, reader, cutting what is superfluous, and deign to add the truths that are lacking to the truths that are here).

Read not to Contradict, nor to Believe; But to *Weigh & Consider*. Fr. Bacon.¹⁴⁵

Similarly, Thomasius urged his readers to read his *Introduction to Courtly Philosophy* critically, in the hope that their corrections would make later versions of his arguments more rigorous.¹⁴⁶ Both treated erudition not as a stock of material to be drawn on, a cultural bank account, but as a challenge to the reader's intelligence: a challenge to develop prudence and discrimination. And both proved eminently capable of examining and rejecting long-established beliefs and practices.

THOMASIVS REJECTED THE PROSECUTION of witches and the torture of witnesses, using comparative arguments to show that the custom of accepting evidence obtained by torture, though old, was neither universal nor founded in reason.¹⁴⁷ On February 12, 1688, Pastorius and three friends examined the custom of slave-holding that many Quakers accepted and practiced. They rejected it, and drew up a document in which they explained why Christians could not hold African slaves. Their protest begins in

Rolf Lieberwirth (Weimar, 1967); for torture, see Lieberwirth, ed., *Über die Folter* (Weimar, 1960), excerpted in translation in Brian P. Levack, ed., *The Witchcraft Sourcebook* (London, 2005), 168–170.

a very suggestive way. It turns the tables on American slave owners by comparing them with the Ottomans: "How fearfull & fainthearted are many on sea when they see a strange vassel, being afraid it should be a Turck, and they should be tacken and sold for slaves into Turkey. Now what is this better done as Turcks doe?" It goes on to note that by holding slaves, the white inhabitants of Pennsylvania hurt the reputation of their colony: "This mackes an ill report in all those Countries of Europe, where they hear off, that ye Quackers doe here handel men licke they handel there ye Cattel. And for that reason some have no mind or inclination to come hither, and who shall maintaine this your cause or plaid for it?" Above all, it insists, with a scrupulous clarity not often found in European discussions of the table of nations, that black Africans were full humans with a full right to liberty: "Now, tho' they are black, we cannot conceive there is more liberty to have them slaves, as it is to have other white ones."¹⁴⁸

Pastorius loved to read world histories—from the compilations he used as a student to the more innovative books of Horn, with their descriptions of Asian and American societies. It was from Horn that Pastorius learned to see his new home in the Americas as part of a world system. It was in Horn's surveys of world politics and history that Pastorius read about Ottoman attacks on Europeans.¹⁴⁹ More important, it was from Horn—as we saw at the beginning—that Pastorius learned that the skin of Ethiopians had been transformed by a simple, natural process.¹⁵⁰ And, of course, it was Pastorius who was trying, as he followed the lessons he had learned from Horn and others, to represent Pennsylvania to the European world, at once attractively and accurately. The Germantown protest, with its crystalline moral clarity, emerged directly from Pastorius's lifelong concerns as scholar and reader. When he collected information and quotations about justice and injustice, humanity and inhumanity, nature and culture, he was not merely stockpiling impressive morsels of Latin. He thought hard about what they implied for the social world that he experienced every day. The same concern to make learning useful—and the same belief that erudition offered help in ordering and understanding the problems of everyday life—inspired his later efforts to craft a system of law that operated accessibly to all, in English, and preserved the safety of Lenape Indians as well as white settlers.

In this context, it is not strange that even in the last years of his life, Pastorius never ceased writing Latin epigrams to celebrate homely occasions such as the stak-

¹⁴⁸ The original text of the 1688 petition is held in the Quaker and Special Collections, Haverford College. A digitized version is available at http://en.wikipedia.org/wiki/File:The_1688_germantown_quaker_petition_against_slavery.jpg. The text appears in Learned, *Pastorius*, 261–262, and in the digital collection *Slavery and Freedom in American History and Memory*, <http://www.yale.edu/glc/aces/germantown.htm>. For Pastorius's part in the 1688 Germantown Protest, see Hildegard Binder-Johnson, "The Germantown Protest of 1688 against Negro Slavery," *Pennsylvania Magazine of History and Biography* 65, no. 2 (1941): 145–156; and Katharine Gerbner, "Antislavery in Print: The Germantown Protest, the 'Exhortation,' and the Seventeenth-Century Quaker Debate on Slavery," *Early American Studies: An Interdisciplinary Journal* 9, no. 3 (2011): 552–575, who warns against hagiographical interpretations.

¹⁴⁹ Pastorius also read with great interest Giovanni Paolo Marana's *Letters Writ by a Turkish Spy* (UPL, MS Codex 726, I, 115).

¹⁵⁰ There was nothing novel in what Pastorius read in Horn. For earlier debates about the meaning of skin color, see Kim F. Hall, *Things of Darkness: Economies of Race and Gender in Early Modern England* (Ithaca, N.Y., 1995); T. F. Earle and K. J. P. Lowe, eds., *Black Africans in Renaissance Europe* (Cambridge, 2005); Natalie Zemon Davis, *Trickster Travels: A Sixteenth-Century Muslim between Worlds* (New York, 2006), 143–149.

ing of his grapevines. For, like Thomasius and other European reformers, he believed that tradition still had its value; indeed, that tradition, rightly updated, was modernity at its best. One scholar whom both Pastorius and Thomasius respected was the Franeker jurist Ulrich Huber, whose magnificent rectoral speech *On Pedantry* Thomasius reprinted twice. Thomasius denounced those “pretentious” scholars who “cite verses, proverbs, Latin, Greek and Hebrew words, scholastic technical terms, laws, medical rules, and other evidences of their learning when they serve no purpose.”¹⁵¹ Like Thomasius, Huber ridiculed the pedants who insisted on speaking Latin to people who lacked the competence in the language, or the confidence, to reply. But he insisted that Latin still had its uses as “a common chain that links the Christian peoples together,” and its unique position as “the language of the people that ruled all the rest,” and he urged the learned not to abandon it.¹⁵² The fluent Latinist could communicate both with the learned of other nations and with the learned of the past. For Huber, Latin still embodied an intellectual cosmopolitanism that deserved to be honored and preserved. It was in the same sense, as Patrick Erben has suggested, that Pastorius prefaced his highly practical collections of laws, legal documents, and deeds in German, Dutch, and English with grand title pages on which he used bold, sharp Latin axioms to give them a larger philosophical setting.¹⁵³ It was in the same sense, I would argue, that Pastorius used Latin and other elements of erudition: to maintain contact with learned friends in Europe, to make friends with William Penn, Isaac Lloyd, and James Logan, and to include younger friends, such as Lloyd Zachary, in what Pastorius continued to see as the charmed world of a millennial conversation.

Pastorius’s methods derived from a broad culture, Catholic as well as Protestant. He learned them from the Jesuits he disliked as well as the Protestant sages he admired. And he undoubtedly derived elements of his practice as a reader and recorder—including his belief in taking down both good and bad arguments, and letting the reader decide between them—in part from the Quakers he so admired, and into whose world he plunged in America, as well as from the scholarly traditions he came from.¹⁵⁴ But he seems to have had most in common with the particular brand of late humanism that flourished in Halle and elsewhere in North Germany in the years of his, and Thomasius’s, maturity. The similarity between the literary histories compiled by Thomasius and his disciples and Pastorius’s efforts to amass the treasures of Quaker spirituality, European learning, and modern medicine and alchemy

¹⁵¹ Thomasius, *Introductio ad philosophiam aulicam*, 243: “*Ostentatores sunt . . . 3. qui versiculos, sententias, verba Latina, Graeca, Hebraea, terminos scholasticos, leges, praecepta medica, aliaque eruditionis argumenta proferunt, ubi nihil usu veniunt.*”

¹⁵² Ulrich Huber, “*Oratio de pedantismo*,” *ibid.*, 292–293: “*Prorsus opera danda est. ne eruditio nostra cuidam gravis aut molesta sit; nec scio, an non huc, ipsum Latini sermonis commercium redigere nos oporteat, ut nec illud pedantismi sit expers, si absque necessitate frequentetur apud homines, quibus in promptu non est facultas hujus linguae, vel qui promiscuo ejus usu non delectantur. Dolendum equidem est, hoc commune gentium Christianarum vinculum ita resolvi in desuetudinem, ut etiam inter homines doctrinam professos Latine loqui, de rebus a studiorum disceptatione alienis, paedagogicum habeatur*”; 295: “*Demus hoc socordiae seculi et tralatitiae humanitati, ut eorum, qui Latina reformidant pudori ignoscamus; sed nunquam inter nos invicem illam gentis gentium dominae linguam cessemus reddere nobis familiarem; sine cujus exprompta facultate omnis eruditio nostra tanquam situ squalida sordescit et sapientia balbutire videtur.*”

¹⁵⁴ Palmieri, “‘What the Bees Have Taken Pains For.’”

for his sons seems clear. In Germany as in Philadelphia, the culture of erudition was both troubled and inspired by a pervasive dissatisfaction with existing customs and institutions. And in Germany as in Philadelphia, the combination of a strong religious motivation and a vast scholarly arsenal proved potent. In Philadelphia as in Halle, the foundations of the Enlightenment's true Holy City were located in the realms of erudition and religion—both, of course, defined in historically particular ways.¹⁵⁵

Pastorius's case, finally, sheds a distinctive light on the history of learned practices. Historians of information and its regimes have tended to look for ruptures—points where one regime succeeds another.¹⁵⁶ European historians have emphasized the tremendous changes that took place in the seventeenth and eighteenth centuries, as colonies and trading centers transmitted objects and observations both to Europe and to one another; as vernaculars replaced Latin even in traditional book markets such as the German; and as an empirical model of knowledge production gradually replaced a bookish one. These histories accurately describe the larger climatic systems that showered information on European and colonial readers in the decades around 1700. But there were microclimates as well—or, to use the terminology created by Peter Burke, multiple impure information regimes, in which older techniques served new ends, and refluxes of traditional material entered the global circulation system.¹⁵⁷ Pastorius and his friends created one such regime—and used its tools, creatively and effectively, to build a local version of Enlightenment rooted not only in local empiricism and discovery, but also in cosmopolitan erudition and tradition. Information cultures unfold, and coil, and interfere with one another. A good way to follow these mechanisms at work is to listen to the hum of Pastorius's *Bee-Hive*.

¹⁵⁵ For recent research on various forms of these themes, see, e.g., J. G. A. Pocock, *Barbarism and Religion*, 5 vols. to date (Cambridge, 1999–); Peter N. Miller, *Peiresc's Europe: Learning and Virtue in the Seventeenth Century* (New Haven, Conn., 2000); Jonathan Sheehan, *The Enlightenment Bible: Translation, Scholarship, Culture* (Princeton, N.J., 2005); Jacob Soll, *Publishing "The Prince": History, Reading, and the Birth of Political Criticism* (Ann Arbor, Mich., 2005); Dan Edelstein, "Humanism, l'Esprit Philosophique, and the Encyclopédie," *Republics of Letters* 1, no. 1 (2009) <http://rofl.stanford.edu/node/27>; Edelstein, *The Enlightenment: A Genealogy* (Chicago, 2010); David Sorkin, *The Religious Enlightenment: Protestants, Jews, and Catholics from London to Vienna* (Princeton, N.J., 2008); Guy G. Stroumsa, *A New Science: The Discovery of Religion in the Age of Reason* (Cambridge, Mass., 2010).

Haiti, Free Soil, and Antislavery in the Revolutionary Atlantic

ADA FERRER

IN THE LATE EIGHTEENTH CENTURY, the French colony of Saint-Domingue was the richest colony in the world. Set in the Caribbean Sea, a short sail from some of the principal American colonies of Britain and Spain, in the 1780s it produced about half of all the sugar and coffee consumed in Europe and the Americas. It was, in the nomenclature of the time, the “Pearl of the Antilles,” the “Eden of the Western World.” It was there, in late August 1791, that the colony’s enslaved rose up, eventually declaring war against the regime of slavery at its seat of most extreme and opulent power. Within a month, the rebel slaves numbered in the tens of thousands, and the property destroyed amounted to more than a thousand sugar and coffee farms. With this event—the largest and best-coordinated slave rebellion the world had ever seen—the enslaved of Saint-Domingue forced the issue of slavery upon the French Revolution and the world. By August 1793, colonial authorities began decreeing abolition, and in February 1794, the National Convention in Paris ended slavery in France’s colonies, in a sense ratifying what enslaved rebels had already made real on the ground in many parts of Saint-Domingue. A decade later, those same rebels declared themselves free not only from slavery, but also from French rule. On January 1, 1804, the independent nation of Haiti was proclaimed—the second independent state in the Western Hemisphere, and the only one ever founded by former slaves and without slavery.¹

The Haitian Revolution—the name by which we now know these events—commanded the attention of everyone in the region and beyond. But surely few followed

I am grateful to many colleagues for generously sharing their questions, comments, doubts, and enthusiasm. In particular, I thank Gerald Alexis, Lauren Benton, Robin Blackburn, Jean Casimir, Greg Childs, Laurent Dubois, Anne Eller, Sibylle Fischer, Julia Gaffield, Keila Grinberg, David Kazanjian, Graham Nessler, Sue Peabody, Nathalie Pierre, Millery Polyné, Rafael Sánchez, Rebecca Scott, and the anonymous reviewers for the *AHR*. I had the benefit of working on this piece while teaching a graduate colloquium at New York University on the Haitian Revolution and the Atlantic world; my discussions with the students in that course were generative and invaluable. Feedback from students at the University of Chicago’s Latin American History Workshop was also very thoughtful and timely. Finally, I thank my daughter Alina VanRyzin, who indirectly led me to the London documents that serve as the basis for this essay.

¹ On the Haitian Revolution, see C. L. R. James, *The Black Jacobins: Toussaint L’Ouverture and the San Domingo Revolution* (New York, 1963); David Patrick Geggus, *Haitian Revolutionary Studies* (Bloomington, Ind., 2002); Laurent Dubois, *Avengers of the New World: The Story of the Haitian Revolution* (Cambridge, 2004); Carolyn E. Fick, *The Making of Haiti: The Saint Domingue Revolution from Below* (Knoxville, Tenn., 1991); and Jeremy D. Popkin, *You Are All Free: The Haitian Revolution and the Abolition of Slavery* (New York, 2010).

the situation as closely as enslaved people, who apprehended that the world's most profitable and powerful system of slavery had been destroyed by its own slaves. Masters, meanwhile, heard about men much like themselves whose lives and fortunes had just been shattered by the actions of enslaved men and women like their own. Authorities in neighboring slave societies responded quickly with measures such as bans on the entry of so-called French blacks, limits on the slave trade, and surveillance of slaves in their own territory.

Whatever hopes and fears the Haitian Revolution generated across the Atlantic world, its impact on slave emancipation beyond Haiti's borders was not at all clear. In the French Empire, the emancipation of 1794 had been rescinded, and by the time of Haitian independence in 1804, slavery and the slave trade were thriving again in Guadeloupe and Martinique. While organized and popular opposition to slavery gained momentum in England, perhaps some three-quarters of a million people still lived enslaved in its colonies. In the United States, abolitionism became increasingly popular in the north, but in the south slavery remained entrenched, its advocates bent on expanding it to new American territories. In the Spanish world, meanwhile, the model of plantation slavery pioneered in the French and British Caribbean was gaining ground. In Cuba, in particular, planters strove to supplant Saint-Domingue in the world market, and the rapid expansion of slavery there turned the Spanish island into the world's largest producer of sugar and one of the greatest consumers of Africans in the nineteenth-century world.

Even with abolitionism on the rise, then, at the moment of Haiti's founding, slavery was still on the march.² The spectacular example of liberation remained localized there, and Haiti's first governments announced and continually reaffirmed that they were willing to accept that state of affairs. They were fully committed to maintaining emancipation permanently in their territory, but they publicly renounced all ambition of taking that emancipation to any of the slave societies that surrounded their new country.³ Outside of Haiti, therefore, the prospects for legal freedom from slavery in any living person's lifetime remained dim. How, then, might we understand the effects of this new "empire of liberty" in a region where the Haitian example was well known, yet where colonial slavery also continued to flourish?⁴

² Dale Tomich's notion of the "second slavery" is particularly useful here; see *Through the Prism of Slavery: Labor, Capital, and World Economy* (Oxford, 2004), esp. chaps. 3, 5, and 6. For an application of this concept in the Cuban case, see Ada Ferrer, "Cuban Slavery and Atlantic Antislavery," *Review: A Journal of the Fernand Braudel Center* 31, no. 3 (2008): 267–295. The best estimate for the number of slaves in the British Caribbean at the time is 775,000 in 1807, from B. W. Higman, *Slave Populations of the British Caribbean, 1807–1834* (Kingston, Jamaica, 1995), 72.

³ One exception was the public declaration of the indivisibility of the entire territory of the island of Hispaniola, starting with Toussaint's colonial constitution and continuing into the early national constitutions. This declaration presupposed the absorption of the Spanish (and for some period French) part of the island into the western state. Although the territorial indivisibility was in part a strategic and tactical maneuver against any possible re-enslavement or recolonization campaign, it was also couched in terms of a moral fraternity with residents from the east. Less public examples of potential violations of the non-intervention clause include Henri Christophe's aid to anticolonial rebels in Spanish Santo Domingo in 1810 and Alexandre Pétion's substantial aid to Latin American independence leaders. On the former, see Anne Eller, "'All would be equal in the effort': Santo Domingo's 'Italian Revolution,' Independence, and Haiti, 1809–1822," *Journal of Early American History* 1, no. 2 (2011): 105–141.

⁴ The phrase "empire of liberty" was used in the first paragraph of the January 1, 1804, Declaration of Independence: "We must, with one last act of national authority, forever assure the empire of liberty

Historians have begun to explore seriously the extent to which the Haitian Revolution influenced the ascendance of antislavery in the early-nineteenth-century world. Some have assessed the impact of the revolution on European and American abolitionism, examining, for example, the ways in which Haiti was used to illustrate arguments about the dangers of maintaining slavery or about the innate capacity of black men for freedom and civilization. Others have focused on the question of whether the Haitian example inspired movements of resistance and rebellion for black and brown slaves and free people across the hemisphere. In both sets of discussions, historians have faced off, some asserting, others playing down the impact of the Haitian Revolution on the global contests over slavery.⁵ Yet the relationship between Haiti and Atlantic freedom, if in part a story about the power of Haiti's example, was also centrally a story about a Haitian state that developed and projected its own brand of antislavery in the world, about a Haitian government that thought actively about and sometimes explicitly addressed itself to non-Haitian blacks in the hemisphere.

To the important work that has considered the significance of the Haitian Revolution of 1791–1804 for histories of global antislavery, the Age of Revolution, or modern political thought, therefore, we must add an exploration of the import of *post*-revolutionary Haiti, which, as the enslaved of the region well understood, continually tried to intervene in broad Atlantic debates about rights, freedom, citizenship, and sovereignty. In an era in which these concepts were being radically transformed, the Haitian state insisted that its was a critical and necessary voice.⁶ Thus despite the Haitian government's promise of non-intervention in the affairs of its neighbors, the triumph of the Haitian Revolution echoed well beyond Haiti. Indeed, it transformed the very landscape (and seascape) of freedom in the Atlantic world. In that transformation, the post-revolutionary Haitian state played a fundamental role. The laws it enacted and the policies it pursued profoundly shaped the politics, meaning, and character of antislavery at a critical moment in its global history.

An international legal dispute that emerged in 1817 provides an important example of the vital role played by the Haitian state. In January 1817, seven enslaved men from Jamaica commandeered the vessel on which they were serving and sailed

in the country of our birth; we must take any hope of re-enslaving us away from the inhuman government that for so long kept us in the most humiliating torpor. In the end we must live independent or die." Translation from David Armitage, *The Declaration of Independence: A Global History* (Cambridge, 2007), 193.

⁵ Some of these arguments about the impact (or non-impact) of the Haitian Revolution on abolitionism and slave rebellion are distilled in David Brion Davis, "The Impact of the French and Haitian Revolutions," in David P. Geggus, ed., *The Impact of the Haitian Revolution in the Atlantic World* (Columbia, S.C., 2001), 3–9; Seymour Drescher, "The Limits of Example," *ibid.*, 10–14; and Robin Blackburn, "The Force of Example," *ibid.*, 15–20. See also Geggus, "The Caribbean in the Age of Revolution," in David Armitage and Sanjay Subrahmanyam, eds., *The Age of Revolutions in Global Context, c. 1760–1840* (New York, 2010), 83–100.

⁶ Especially important here are Laurent Dubois's call to consider the intellectual history of Enlightenment and revolution in a way that incorporates both the Caribbean and the enslaved, and Deborah Jensen's work on Jean-Jacques Dessalines (who ruled Haiti from 1804 until his assassination in 1806) as a political author and producer of postcolonial theory. See Dubois, "An Enslaved Enlightenment: Rethinking the Intellectual History of the French Atlantic," *Social History* 31, no. 1 (February 2006): 1–14; and Jensen, *Beyond the Slave Narrative: Politics, Sex, and Manuscripts in the Haitian Revolution* (Liverpool, 2011).

to southern Haiti, where they found—as they had expected to—legal protection, freedom from slavery, and access to Haitian citizenship. Alexandre Pétion, president of the Republic of Haiti, defended the right of the men to remain there, refusing—even when challenged by their master and British authorities—to return them to slavery.⁷ He grounded his refusal on Article 44 of the Haitian constitution of 1816, which stated that

All Africans and Indians, and the descendants of their blood, born in the colonies or in foreign countries, who come to reside in the Republic will be recognized as Haitians, but will enjoy the right of citizenship only after one year of residence.⁸

Haiti, argued Pétion, was a land where no one could be enslaved, and where arrival in and of itself conferred freedom and eventually citizenship. At stake, therefore, were not only the status and the future of the seven men in question, but also Haiti's role in international struggles to define the boundaries of slavery and freedom, citizenship and rights.

The 1817 case, and the 1816 constitution on which it was based, provide fresh insight into the intellectual and political history of global antislavery and of post-independent Haiti's robust intervention in that history. Haiti's was a contribution that drew on—and in many cases substantially transformed—multiple and heterodox sources. Some of these sources were of recent vintage and were linked to notions of liberty and rights emerging on both sides of the Atlantic; others reworked longer-standing, Old Regime concepts, from Catholic sanctuary to European free soil. Still others appear to have represented a pragmatic response to specific developments on the ground, as sailors, slaves, migrants, foreign insurgents, and even abolitionists sometimes pushed the Haitian state to act more expansively on the freedom it represented, offering at key moments an opportunity for its leaders to project Haitian freedom outside its borders. Still, Haiti's intervention in global antislavery, as the

⁷ The documentation on the case appears in the National Archives of Britain [hereafter TNA], Colonial Office Papers [hereafter CO], 137/145. Some is printed in Jamaica Assembly, *A Report of a Committee of the Honourable House of Assembly of Jamaica Presented to the House, December 10, 1817* (London, 1818), which includes the testimony of James McKowen, taken in Port-Royal before the committee on November 19, 1817. Some documentation is also reprinted in Richard B. Sheridan, "From Jamaican Slavery to Haitian Freedom: The Case of the Black Crew of the Pilot Boat, *Deep Nine*," *Journal of Negro History* 67, no. 4 (Winter 1982): 328–339. The manuscript sources identify the master as McKowen; printed sources refer to him as M'Kewan. I have used McKowen throughout. Some of the manuscript sources refer to two slaves named James. I believe the second James is the same person as Jem, so named in the printed sources.

⁸ The 1816 constitution represented a revision to the constitution of 1806, generally also attributed to Pétion. The change in the 1816 version that is most often discussed is the new provision that made Pétion president for life. There is a growing body of scholarship on the early Haitian constitutions. See Claude Moïse, *Constitutions et luttes de pouvoir en Haïti (1804–1987)*, 2 vols. (Montreal, 1988–1990); Michel Hector and Laënnec Hurbon, eds., *Genèse de l'Etat haïtien, 1804–1859* (Paris, 2009); Sibylle Fischer, *Modernity Disavowed: Haiti and the Cultures of Slavery in the Age of Revolution* (Durham, N.C., 2004); Julia Gaffield, "Complexities of Imagining Haiti: A Study of National Constitutions, 1801–1807," *Journal of Social History* 41, no. 1 (Fall 2007): 81–103; and David Nicholls, *From Dessalines to Duvalier: Race, Colour and National Independence in Haiti* (New Brunswick, N.J., 1979). The original texts of most of the early constitutions appear in Louis Joseph Janvier, *Les constitutions d'Haïti (1801–1885)* (Paris, 1886). Some also appear in Constitutions of the World Online, http://www.modern-constitutions.de/nbu.php?page_id=cf2bf1a9ce737906a2cc483486798452. In French, Article 44 reads: "Tout africain, indien et ceux issus de leur sang, nés des colonies ou pays étrangers, qui viendraient résider dans la République, seront reconnus haïtiens, mais ne jouiront des droits de citoyen qu'après une année de résidence"; http://www.modern-constitutions.de/nbu.php?page_id=02a1b5a86ff139471c0b1c57f23ac196&viewmode=pages&show_doc=HT-00-1816-06-02-fr&position=8.

seven Jamaican sailors may themselves have come to understand, was rarely a straightforward tale of freedom and rights in ascent—something, of course, that can also be said about the contributions of other, better-known and more highly touted antislaveries of Europe and North America.

IN JANUARY 1817, SEVEN ENSLAVED MEN and boys from Jamaica—identified by name as Dublin, Kingston, Archy, Quashie, Robert, James, and Jem, and held as property by one James McKowen—were serving aboard the schooner *Deep Nine*. The men were accustomed to work on the seas, serving as pilots steering ships in and out of local harbors. At the beginning of the *Deep Nine*'s journey, there had been other slaves on board, but the vessel had been cruising for some time, and some of the pilot slaves had been transferred to other ships to guide them into port, so that at the time of the events in question, only the slave owner's brother, Robert McKowen, and the seven black sailors remained aboard. With the vessel low on wood and water, McKowen decided to stop for supplies at Rocky Point, Saint Thomas, on Jamaica's southeastern shore. After McKowen disembarked and the men went off on a routine search for provisions, Dublin and his shipmates took the vessel and set sail for the country of Haiti.

At the time of their escape, there were, in fact, two Haitis: the republic, headed by Alexandre Pétion, in the south, and a kingdom, ruled by Henri Christophe, in the north. Both leaders had risen to prominence during the course of the Haitian Revolution, and both were committed to a Haitian nation in which legal slavery and European colonialism would never again exist. Yet in 1807, as a result of disputes over the form and leadership of the government, the young state had split in two. The resulting entities differed in two important respects. The north, which became a kingdom in 1811, retained large-scale landholdings, which were managed by military officers and produced sugar with the "attached" labor of former slaves. In the south, which was organized as a republic, the government had divided the large estates and carried out an agrarian reform, dismantling the old plantation system and distributing almost 100,000 hectares of land, mostly in modest plots of 25 to 45 hectares. The differences between the two societies, however, were not absolute. Renting arrangements in the north provided some maneuvering room for former slaves; while in the south, much of the land distributed went to the military, with higher-ranking officers receiving larger plots.⁹

Still, it was to Pétion's south that the Jamaican men escaped. One reason for that choice may have been simple convenience: Jamaica was closer to the ports of the south than those of the north, and trade—both licit and illicit—had long bound Haiti's southern peninsula to the Jamaican coast. But there was likely some informed political calculation involved as well. In the north, where the large plantations survived and where the law, managers, and soldiers tried to limit the mobility of workers, local people were known to escape into Spanish Santo Domingo, where the land was not dominated by plantations. Of the south, meanwhile, at least one of the Jamaican sailors testified that they had heard other kinds of stories—first and foremost about

⁹ Robert K. Lacerte, "The Evolution of Land and Labor in the Haitian Revolution, 1791–1820," *The Americas* 34, no. 4 (April 1978): 449–459.

freedom, but also about the protection offered by the state and the eventual possibility of obtaining land and earning military ranks there. So it was with the south that they cast their lot.¹⁰

A few days after their escape, the men's legal owner, James McKowen, followed them to Haiti, confident that he would be able to retrieve the vessel and the seven men he claimed as his property. McKowen searched from town to town—Cap Tiburon, Les Cayes, Petite Rivière, Trou-Bonbon, Jérémie—to no avail. Finally, hoping for a more satisfactory result, he traveled to the southern capital of Port-au-Prince, where he met face to face with President Pétion. But the result was no different, and McKowen left the meeting empty-handed.

At the heart of Pétion's refusal to hand over the sailors was his invocation of Haitian law, which he said rendered him powerless to deliver them back into slavery. Specifically, he invoked the new Haitian constitution, which had been published to great fanfare in the final days of September 1816.¹¹ The sailors, he said, were "recognized to be Haitians by the 44th Article of the Constitution of the Republic from the moment they set foot on its territory."¹²

While the 1816 constitution had been drafted as a revision to the 1806 constitution, Article 44, granting protection and citizenship to non-white foreigners arriving in Haiti, was newly added, not having appeared in any form in the 1806 charter. The confrontation over the enslaved Jamaican sailors took place approximately three months after the publication of the new constitution. This was likely the first time that the new law of the land was explicitly applied and challenged. As Rear Admiral J. E. Douglas of the British navy, to whom McKowen had appealed for aid, admitted to legal counsel, the case was "altogether of a novel character."¹³ That fact made it hard for the British proponents of the men's enslavement to know how to act or argue in response. At first, McKowen simply emphasized that the men in question were his property. But Pétion countered that by virtue of their arrival in Haiti, the men were now Haitian. The law, he said, was clear: slavery could never exist in Haiti, so the men could not—by law—be slaves. Pétion thus rendered moot the question of their legal status before their Haitian landing.

Perhaps realizing the futility of an appeal based on property rights, McKowen then stressed that the men had acted criminally, stealing his vessel and the items aboard it. The proper response, he argued, was to bring them before a British court as "pirates." Here he seemed to be improvising, for even the British to whom he

¹⁰ The stories the sailors heard and shared about the south will be discussed later in the article. For more on land, labor, and the distinctions and commonalities between the north and south, see Laurent Dubois, *Haiti: The Aftershocks of History* (New York, 2012), chap. 2. At roughly the same time that the Jamaican sailors escaped to the south, Christophe's government in the north was involved in a dispute with Spain over Haitian workers who had escaped from northern plantations to nearby Santo Domingo. Archivo General de Indias [hereafter AGI], Estado, legajo [leg.] 12, expediente [exp.] 53. For more on Haitian escapees to Santo Domingo, see also Eller, "'All would be equal in the effort,'" 124–125. The 1816 constitution and Article 44 survived the reunification with the north in 1821 and with Santo Domingo in 1822. The subsequent Haitian constitution of 1843 had a less powerful version of 1816's Article 44. Article 7 in 1843 stated that all Africans and Indians and their descendants were able to become Haitian, and it added that the specific details of naturalization would be fixed by laws.

¹¹ On the publication of the constitution, see Alexis Beaubrun Ardouin, *Etudes sur l'histoire d'Haïti*, 11 vols. (1865; repr., Port-au-Prince, 2005), 8: 51.

directed his appeal judged that the men could not be claimed or tried as pirates “on account of their being slaves.” Faced with a new kind of danger to their authority, the British subjects and officials on the ground seemed to be scrambling to find the proper language with which to confront it. When nothing persuaded Pétion that the men should be returned, McKowen turned to questions of law and diplomacy: the new constitutional article, he argued, was ill-advised and represented a serious threat to maritime trade and thus to the larger international order. “The Negroes in every drogger or small plantain boat belonging to Jamaica,” he said, would avail themselves of Haitian coasts, which would become “a place of protection and refuge . . . for the encouragement of slaves to run off with the shipping.” He threatened action from higher up: the British navy would be forced to police Haitian coasts, the Jamaican governor might have to intercede, and so on.¹⁴

Whether or not the threat of British action was real, other observers shared McKowen’s sense that the new constitutional law posed a threat to international trade and diplomacy. Since much of the maritime commerce in the Caribbean Sea involved enslaved people, either as crew or as cargo, the possibilities made real in the new constitution were not lost on the men who made their living off the labor of black sailors or by transporting black captives. Just days after the publication of Article 44, privateers were warning each other not to come too close to Haiti’s coasts with any human cargo, for “General Pétion will confiscate the Africans in the interest of their liberty, to increase his population, and to develop agriculture in his territory.”¹⁵

In northern Haiti, where King Christophe was deeply hostile to Pétion’s southern republic, the political class also saw the new law as a dangerous source of instability. Baron de Vastey, Christophe’s chief adviser, who in 1814 had announced that Haitian independence would be the precursor of a worldwide black movement for freedom, deemed Article 44 to be contrary to the Haitian Declaration of Independence and the 1806 constitution, both of which had promised non-intervention in the affairs of neighboring colonies. Vastey argued that the new law made “a direct appeal to the black and coloured population of the colonies or foreign countries, to come and settle themselves in the Republic, [offering them] an asylum in the Republic which is sacred and inviolable, a measure which tends directly to disturb the peace and internal government of those foreign colonies or countries.”¹⁶ Article 44, he argued, represented a blatant and unconstitutional form of interference in the slave regimes of the region.

McKowen, the privateers, and observers in the north were clearly motivated by

¹⁶ Baron de Vastey, *An Essay on the Causes of the Revolution and Civil Wars of Hayti* (Exeter, 1823), 208–209. See also Nicholls, *From Dessalines to Duvalier*, 43–47. French authorities negotiating with Pétion regarding recognition also singled out Article 44 for criticism, discussing it as one of several articles in the constitution that established a “distinction of colour which philanthropy has been labouring for upwards of half a century to destroy.” See Viscount de Fontagnes, Esmangart, Commissioners to the King (France), to Alexandre Pétion, October 30, 1816, in Vastey, *An Essay on the Causes of the Revolution and Civil Wars of Hayti*, Appendix E, no. 12.

different impulses, yet they all seemed to agree that Pétion's new policy made Haiti a safe haven for black and brown people who could manage to set foot on its territory. The policy did not represent the literal exportation of revolution; it did not purport to send revolutionary agents to instigate slave rebellions in neighboring colonies, something that every Haitian foundational document since the Haitian Declaration of Independence had shunned. Article 5 of Pétion's 1816 constitution, for instance, stated that "the Republic of Haiti will never initiate a project designed to conquer or perturb the internal peace and order of foreign States and islands." But Article 44 did elevate Haiti as a tangible source of freedom and citizenship for any black person—no matter his or her location or status—who could make it to Haitian territory. Here, then, was a potentially forceful and expansive antislavery position, and everyone involved seemed to recognize it as such.

But what of Pétion himself? To what extent was he seeking to expand and project the antislavery power of the new Haitian Republic, the non-interventionist text of Article 5 notwithstanding? The 1817 case strongly suggests that he saw the constitution and his application of specific provisions such as Article 44 as acts in a larger, universal drama about slavery and freedom, and about Haiti's international role in accelerating and shaping the passage between the two.

WHILE THE INTELLECTUAL AND POLITICAL position of the Haitian state in 1816–1817 was groundbreaking, it clearly involved a reworking of older, more traditional notions of freedom. At its most basic level, Pétion's argument was that by virtue of the men's color and their arrival in Haiti, Article 44 made them Haitian and therefore free. In effect, Article 44 proclaimed Haiti as legal free soil.¹⁷

The notion of free soil, or what Sue Peabody has designated "the freedom principle," predated the debates of the Age of Revolution. Although an Old Regime concept, it provides a useful prism through which to think about the Haitian state's participation in revolutionary discourses about slavery, freedom, and rights. The freedom principle—long, if fitfully, recognized in various European legal systems—held that "simply setting foot on a particular territory was enough to confer freedom upon a slave."¹⁸ In metropolitan France and England, it may have represented a juridical "extension to the countryside of a principle formulated by medieval communes whereby the 'free air' of cities was declared incompatible with bondage."¹⁹ And as early as the sixteenth century, the concept was upheld in multiple legal cases,

¹⁷ Important work on the notion of free soil has not examined the case of Haiti as an important and divergent example of the principle. Seymour Drescher's important book *Abolition: A History of Slavery and Antislavery* (New York, 2009), for example, argues that the notion of free soil was a central factor in the rise of abolitionism. Yet he argues that Haiti had a minimal impact on its progress (see chap. 6), and at one point he asserts that "by the beginning of the second quarter of the nineteenth century, 'free soil' no longer stopped at the Atlantic edge of Europe" (245)—a formulation that fails to acknowledge the potent combination of antislavery and sovereignty that Haiti represented and projected externally after 1804 and clearly in 1816.

even if not all slaves who based their appeals for freedom on it emerged victorious. Indeed, the legal notion of free soil generally brooked substantial exceptions. For example, the principle was not applied to captured Muslim slaves or within either country's overseas colonies. Only metropolitan soil could confer freedom, and as chattel slavery expanded in the colonial world, limits to the freedom principle were absorbed into metropolitan law itself. Thus, the antislavery promise of the French free-soil provisions of 1759 was severely narrowed by a 1777 law that dictated that all non-whites arriving in France would be quarantined and shipped back to their colonies of origin. During the French Revolution, the National Assembly issued a proclamation on September 28, 1791, the first article of which proclaimed that "every individual, immediately on entering France, is free." As Peabody has remarked, the proclamation inscribed free soil officially as French law rather than informal maxim. In 1802, however, Napoleon reversed the policy by barring all blacks, mulattos, and people of color from entering France. That ban was reiterated in 1806 and 1817.²⁰ Thus Pétion's offer of freedom and Haitian citizenship to brown and black people arriving in Haiti was the precise inverse of prevailing French law at the time. Moreover, because the land under Pétion's rule sat in the middle of the Caribbean Sea surrounded by slave societies and ships carrying black captives, to declare the Haitian republic as free soil was to put freedom within the physical reach of all manner of enslaved persons.

Could Pétion have had free-soil precedents in mind when he wrote Article 44? Several lines of analysis suggest a provisional answer of yes. First, the French tradition and legal conflicts over the freedom principle were well known in the colonies. Pétion himself had spent time in the French port of Bordeaux, which had an early history as a "free city." There—before the heyday of the Atlantic slave trade—boatloads of captives had occasionally been freed on arrival. Even by the time of Pétion's sojourn there, well after the city had established itself as a major slave-trading port, "local pride in the free air tradition" remained strong. Yet legal suits for freedom on that basis were also much less likely to succeed. While almost 250 individuals successfully secured their freedom in the Admiralty Court in Paris between the 1730s and the 1790s, provincial courts in port towns such as Nantes and Bordeaux often expelled petitioners, sending them back to their colonies of origin, Saint-Domingue included. Conflicts over the meaning and boundaries of French free soil—from revolutionary proclamations of free soil to expulsions founded on its reversal—were thus known to people such as Pétion in colonial Saint-Domingue.²¹

In the Caribbean itself, many were familiar with another kind of arrival that legally conferred freedom: Catholic sanctuary. The Spanish government regularly granted freedom, protection, and asylum to foreign fugitive slaves who were willing

On Pétion and Bordeaux, see Susan Buck-Morss, *Hegel, Haiti, and Universal History* (Pittsburgh, 2009), 63–65; and Robin Blackburn, *The American Crucible: Slavery, Emancipation, and Human Rights* (New York, 2011), 185–186.

to embrace Catholicism. The practice persisted until after the start of the French Revolution and served as an inducement for an unknown number of enslaved people, particularly in British, U.S., Dutch, and Danish territories, who sought sanctuary and freedom in Spanish Cuba, Puerto Rico, Florida, Trinidad, and Tierra Firme. Even French authorities complained that enslaved people—already “Catholic”—were taking advantage of the policy to escape to Spanish territory. Before the Spanish sanctuary and manumission policy was abolished in 1790 in response to disorder in France and its colonies, enslaved people in Jamaica often stole canoes and other vessels in order to make quick sea journeys to freedom in Cuba.²² After Haitian independence, and especially after the constitution of 1816, Haiti represented a new and radically different sanctuary for maritime maroons of the Caribbean: one where freedom and protection came not from king and Christ but from the antislavery constitution of an independent black state.

While French, as well as Spanish, precedents may have informed Pétion’s thinking on legal sources of freedom from enslavement, it is clear that in arguing against a Jamaican slave master, he was also making an explicit connection to English law, and specifically to the legal principles of both asylum and free soil. In a letter to Rear Admiral Douglas defending his decision not to return the Jamaican sailors, Pétion invoked the right of asylum recognized by England and also included for the first time in the Haitian constitution of 1816: “There is no doubt, Sir, but the departure of a subject of one government to another places him under the jurisdiction of the one which he has adopted, and, once under that protection, he is no longer amenable to the government he has abandoned. England herself offers an example in the right of asylum.” From asylum, Pétion moved effortlessly to the freedom principle. Here Haiti’s president seemed well aware that English law, since the widely publicized Somerset case of 1772, had effectively abolished slavery on English soil. The case, which famously argued that slavery could exist only if it was established by positive law, was well known outside of England, in part because by the early nineteenth century it had become a staple of antislavery discourse.²³ Thus Pétion wrote astutely that “if the persons claimed by Messrs. James and Robert McKowen had been able to set their feet in the territory of England, there, where no slavery exists, certainly [McKowen’s] claim would not have been admitted.”²⁴ Haiti’s con-

stitution and actions in this case, he argued, were no different from the British principles of asylum and free soil. Surprisingly, authorities in London concurred. Under-Secretary of State for War and the Colonies Henry Goulburn examined the issue and concluded “that the laws of Hayti much resemble those of Great Britain, so far as not to permit persons who have once landed in that island to be considered or treated as slaves.”²⁵

Pétion’s version of free soil, however, was significantly more radical than any British or French precedent. First, his freedom principle was proclaimed not for European territories that were geographically removed from the spaces of mass chattel slavery, but instead for a former slave colony a short sail from numerous and flourishing slave regimes. Thus, his free soil was declared in the geographical space where it most mattered. Second, he made free soil not only a legal principle to be invoked and argued in specific cases, as it was in Europe, but in fact a general and inviolable principle written into the supreme law of the land. He thus drew on principles from Old Regime antislavery and combined them with elements of Haitian antislavery to expand the scope of each. Pétion’s policies broadened the concept of free soil by promising arrivals not only freedom from enslavement, but also citizenship. He simultaneously expanded the reach of the freedom won in the Haitian Revolution and reaffirmed in every Haitian constitution by making it available to strangers, to people who had not been present at the moment of the constitution’s drafting. Article 44 thus made freedom and citizenship more widely attainable, and gave the promise of Haiti’s radical antislavery a more robust life and international projection in an age and place where neighboring states remained very much invested in the regime of slavery.

IF ARTICLE 44—AND THE CONSTITUTION more broadly—represented a radicalization of longstanding free-soil precedents, it also reflected an engagement with newer, revolutionary ideas about freedom and sovereignty emerging on both sides of the Atlantic. Clearly, Article 44 reaffirmed, expanded, and projected internationally the foundational antislavery of the Haitian Revolution. Every Haitian constitution, starting with Toussaint’s colonial constitution in 1801, had specified that the abolition of slavery was guaranteed “in this territory.” Article 1 of Pétion’s 1816 constitution, like its predecessors, declared: “There cannot exist slaves within the territory of the Republic: slavery is forever abolished.” By contrast, as Sibylle Fischer’s work has emphasized, the 1789 “Declaration of the Rights of Man and of the Citizen” in France famously declared that “men are born free and equal in rights” in a manner that implicitly seemed to reference all men universally, but which, by referring neither to a specific location where that freedom would be respected nor to the very real slavery that existed in France’s own territory, fell far short of ending the actual institution of slavery. By explicitly specifying the location where freedom would be made real—“in this territory” in 1801, in the territory of Haiti or of the republic after 1806—the Haitian constitutional texts made it clear that the freedom envisioned was not an abstract proposition, but freedom from real, existing slavery. Freedom was

²⁵ Henry Goulburn to John Wilson Croker, Esq., *ibid.*, 53.

FIGURE 1: Alexandre Pétion, President of the Republic of Haiti, 1807–1818. Kurt Fisher Haitian History Collection, Photographs and Prints Division, Schomburg Center for Research in Black Culture, New York Public Library, Astor, Lenox and Tilden Foundations.

there, on that soil, guaranteed to all.²⁶ In 1816, Article 44 was novel, indeed groundbreaking, because it made that territory without slavery now expressly and legally available to outsiders, to slaves of foreign masters, subjects of foreign kings, and outcasts of other governments.

Pétion never sought to deny that the men had been held as slaves by McKowen in Jamaica, but Haitian law, he seemed to argue, unequivocally invalidated the right of property in men claimed by McKowen and recognized by every other government of the day. Pétion's 1806 constitution, as well as its revision in 1816, did guarantee, like many others, the right of property, but it explicitly defined property as including "the right to enjoy and dispose of . . . one's work and industry."²⁷ Here, then, the protection of property, which had been used elsewhere and would continue to be used for some time as a means to protect the institution of slavery, was defined in such a way as to make slavery doubly inadmissible—as a violation of the rights of man and as a violation of an individual's right to his own property or person. Haitian law—Article 1 prohibiting slavery, Article 10 defining property to include one's own labor, and Article 44 extending the rights of Haitian citizenship, and therefore freedom, to non-white foreigners—together rendered moot and invalid McKowen's (or anyone else's) claim to be the master of black persons residing in Haiti.

If Pétion's reasoning purposely ignored the legal status of the Jamaican sailors outside of Haiti, it also neutralized their master's claim that the men were criminals. Pétion did not deny that the men had stolen the *Deep Nine*; indeed, he returned the vessel to McKowen almost immediately. But he did not regard the taking of the vessel as a crime in and of itself. Instead, he argued that the men's potential crimes would be judged against a different standard. He wrote to McKowen, "If they have committed *crimes against the rights of Men*, they will be tried according to local law of the country of which *they are now citizens*."²⁸

Pétion's invocation of the rights of man suggests that he was thinking expansively about Haiti's relationship to international debates on freedom and rights. He insisted, first, that the rights of man would serve as the standard against which claims on the freedom of the men would be judged. Importantly, he also reserved that judgment to Haitian courts. By making local courts the arbiter of the rights of man, Pétion in a sense universalized Haitian law: national law would have a duty to uni-

²⁶ An insightful discussion of the meanings of the differences in wording between Toussaint's constitution of 1801 and its French precedents will appear in Sibylle Fischer, "'Here, all men are born, live, and die free and French': Toussaint Louverture's Constitution of 1801 and the Difficult Politics of Universal Human Rights" (article manuscript in preparation). It is interesting to note that the only Haitian constitution of the early post-independence period not to specify that slavery was abolished in Haiti was the first official Haitian constitution of 1805 of Dessalines, which stated simply and expansively, "L'esclavage est à jamais aboli." <http://modern-constitutions.de/HT-00:1805-07-27-fr-i.html>.

²⁷ While some important European texts had defined property as that "which men have in their persons as well as goods," constitutional texts from the period generally affirm a right to property without specifying what is meant. John Locke, *Two Treatises on Government* (London, 1821), 340.

²⁸ Emphasis added. The letter is available only in the English translation prepared by British officials in Jamaica. It is worth noting the term "rights of Men." The use of "Men" rather than "Man" reads somewhat awkwardly and raises the question of the exact phrasing in the original. Did it say *droits de l'Homme* or something else, perhaps *droits des gens* (from the Roman concept of *ius gentium*), often translated as "the Law of Nations," referring to natural or common law among states, and encompassing laws on national boundaries, extradition, prosecution of piracy, and so on? In this particular case, then, a reference to the rights of man, related to the right of liberty and the repudiation of enslavement, and a reference to the law of nations might both have been appropriate for Pétion.

versal rights. At the same time, he Haitianized universal rights: the human rights proclaimed and then denied to black people the world over would be respected and realized concretely on Haitian territory. It bears saying that this version of universal rights in Haiti did not apply to most whites, as Articles 38 and 39 of the 1816 constitution, echoing earlier ones, prohibited the entry of white men as property owners and denied them the possibility of becoming Haitian citizens, measures that were designed to impede the return of white French émigrés with potential designs of re-enslavement or reconquest.²⁹

One aspect of Pétion's invocation of rights merits further analysis. His claim that the men were citizens of Haiti seems to represent a generous reading of Article 44, which stated that arrival in Haiti gave African- and indigenous-descended people the right of nationality, with the rights of citizenship to follow a year later. The men in question had been in Haiti for less than a month, yet Pétion stated explicitly that they were "now citizens" of Haiti. It is difficult to know what to make of his reluctance to recognize the distinction between nationality and citizenship, which is explicitly established in the constitutional article itself. Comparisons to French metropolitan law may be instructive here.³⁰ Pétion's definition of nationality echoed pre-revolutionary French law, which rooted nationality in territory rather than blood, defining a French person as someone born on French soil. In Haiti, where more than two-thirds of the formerly enslaved were African-born, leaders eschewed the requirement of birth on national soil; presence rather than birth was key. Importantly, French law itself was changing as a result of the revolution, as naturalization became a matter of law rather than monarchical favor: from a 1790 decree that granted the rights of active citizenship to foreigners after five years of residence, to the revolutionary constitution of 1793, which declared that any foreigner domiciled in France for one year had the rights of a French citizen. By the time of Haitian independence in 1804, however, French law had departed from that norm with the promulgation of the Civil Code of 1803, which conceived nationality as emanating from blood rather than soil, meaning that a French citizen was defined as someone born to a French father, irrespective of his or her actual presence on French soil.³¹ The Haitian constitution thus echoed France's earlier, more inclusive definitions of nationality. In the 1817 case, Pétion's blurring of the lines between nationality and citizenship

²⁹ Article 39 allowed whites in Haiti serving either in the army or as public functionaries, and who had arrived before the 1806 constitution went into effect, to be recognized as Haitian citizens, but made it clear that no white person would enjoy the same right after the publication of the 1816 constitution. Dessalines's 1805 constitution also forbade the entry of land- or slave-owning whites and prohibited any newly arrived white person from acquiring property of any kind in Haiti (Article 12). Christophe's 1807 constitution for northern Haiti did not include prohibitions on white landownership or citizenship. See the texts in Janvier, *Les constitutions d'Haïti*. For a discussion of these property and race provisions over time, see Nicholls, *From Dessalines to Duvalier*, 53.

³⁰ That Pétion sometimes engaged directly with metropolitan precedents is suggested by his instruction to local jurists that when legal uncertainties arose in matters for which no local law could serve as a guide, and until the drafting of a Haitian civil code, jurists should use the Napoleonic Code as a basis for their decisions. See Thomas Madiou, *Histoire d'Haïti*, 8 vols. (Port-au-Prince, 1985), vol. 5: 1811–1818, 359.

³¹ On French definitions of nationality, see Patrick Weil, *How to Be French: Nationality in the Making since 1789*, trans. Catherine Porter (Durham, N.C., 2008), 11–36. For an interesting discussion of the distinction between nationality and citizenship and between simple (passive) and political (active) citizenship in the context of French revolutionary constitutions, see Peter Sahlin, *Unnaturally French: Foreign Citizens in the Old Regime and After* (Ithaca, N.Y., 2004), 283–289.

served to make those definitions even more capacious. He thereby made nationality for non-whites easily obtainable and, importantly, nearly coterminous with citizenship.

There is another important way in which the 1816 constitution and the 1817 case reflected a potentially radical engagement with emerging notions of nationality, territory, and citizenship. Article 3 of the 1816 constitution announced—for the first time—the right of “sacred and inviolable” asylum.³² By the early nineteenth century, asylum in England and elsewhere in Europe was based in territorial sovereignty rather than religious sanctity, and it was offered generally to foreigners who had been banished or persecuted as a result of their political beliefs. Only in Haiti, however, was the practice incorporated into the nation’s constitution.³³ Although the Haitian constitution did not specify to whom asylum could be granted, Pétion’s actions in this case suggested that it would be available to the foreign enslaved. To offer asylum to fugitive slaves was to assert the sovereign power of the Haitian state, on the one hand, and to recognize enslavement as a form of persecution that obligated the granting of asylum, on the other. Article 44, then, cannot be fully understood without being placed in the context of the broader constitution in which it was embedded. Its full power was tangible only alongside those other articles that unequivocally illegalized slavery, rejected any definition of property that might allow a return of slavery even in a few isolated cases, and offered asylum and protection to foreigners.

The Haitian constitution of 1816 and its 1817 application in the case of the seven sailors thus represented a productive engagement with and participation in the major moral and political questions of the Age of Revolution: the fate of slavery, the relationship between rights of property and rights of liberty, and the boundaries of nationality and citizenship. However, Haiti’s engagement with these notions was nothing if not dynamic. In combining the articles in one constitution, Haiti seemed to have gone significantly beyond the conception of those rights in their European (or North American) enunciations. This does not mean that the universalist ideals of rights expressed but truncated elsewhere were realized or redeemed in Haiti by some logic of rights. Rather, in their engagement with those ideals and in their development of real-world policy informed by them, Haitian leaders actually made them something other than what they were originally meant to be. Thus the abstract right of liberty proclaimed elsewhere was transformed into a concrete prohibition on slavery, including the explicit cancellation of all debt ever contracted for the purchase of human beings (Article 2). The right to property, so fundamental to liberal constitutions, was also proclaimed, but it was explicitly defined in a way that no liberal power would have conceived at the time. The sovereign nation, as elsewhere, was imagined as a “space of citizenship in which rights would be accorded and pro-

³² On the right of asylum and the welcome of refugees, see Moïse, *Constitutions et luttes de pouvoir en Haïti*, 1: 54.

³³ The French constitution of 1793, Article 120, asserted the right of asylum to foreigners fighting for “liberty against tyranny,” but that constitution was never implemented. On the French right of asylum, or *droit d’asile*, see Greg Burgess, *Refuge in the Land of Liberty: France and Its Refugees, from the Revolution to the End of Asylum, 1787–1939* (New York, 2008), esp. chap. 1. On the transformation of notions of asylum in the eighteenth century, see S. Prakash Sinha, *Asylum and International Law* (The Hague, 1971).

tected.” But Articles 10 and 44 (and the particular applications they were given) represented a robust redefinition of a space of rights that until then had been essentially national in conception. In Haiti, the space of citizenship—made available to non-white and enslaved foreigners in 1816—was expressly transnational. And the seven sailors from Jamaica seemed to understand that quite clearly.³⁴

ARTICLE 44 AND THE 1816 CONSTITUTION were the products of a thoroughgoing intellectual engagement with both longstanding and emerging principles of freedom and rights. But they must also be understood in the context of Haitian government policy as it evolved after (and in some cases prior to) independence in 1804. Moreover, some of the policies and decisions made by Haitian governments might productively be understood as themselves responding to initiatives and demands by black and brown people in Haiti and beyond.

The Caribbean was an intensely mobile space, and in an age of sea travel, islands and coasts were often more well-connected than their neighboring mainlands and interiors. Since the first abolition of slavery in Saint-Domingue in August of 1793, foreigners of color had arrived seeking (and sometimes securing) freedom from local officials. Ashli White has examined a 1794 case in which a Philadelphia servant fled to revolutionary Saint-Domingue, where French governor Étienne Laveaux refused “to force a man against his own will to leave the land of liberty where he has taken refuge.”³⁵ Sometimes local authorities were even more aggressive in making that land of liberty accessible to strangers. In 1797, black privateers from Saint-Domingue stopped a Swedish slaving vessel that was transporting African captives to Havana, declaring their intention to take the captives to Saint-Domingue so that they “might enjoy their freedom in the land of liberty.”³⁶ Even during the revolution, then, a territorially based notion of freedom—of a land of liberty in which liberty had ex-

³⁴ European intellectual historian Samuel Moyn takes a highly critical view of recent work on the Haitian Revolution and human rights, which in his view erroneously attributes a human rights stance to Haitian revolutionaries. He refers specifically to the work of Lynn Hunt and Laurent Dubois. Moyn argues that the main difference between rights associated with the Enlightenment and the Age of Revolution and modern human rights is that in the former the nation-state (and its authority) was central, while the latter emerged expressly to transcend that authority. While Moyn’s criticism can serve as a useful warning against anachronistic back-streaming from modern notions of human rights, it does simplify more nuanced positions taken by the authors he engages. His necessarily brief discussion of Haiti and human rights does not contend with Haiti as a producer of political thought on these questions, nor with the presciently transnational potential of the rights enunciated by Haitian leaders. Moyn, *The Last Utopia: Human Rights in History* (Cambridge, 2010), 1–43, here 13, 31–33.

³⁵ Ashli White, *Encountering Revolution: Haiti and the Making of the Early Republic* (Baltimore, 2010), 148. Jeffrey Bolster discusses another case in 1802, in which a black sailor escaped to the then French colony claiming “the protection of a French citizen to which he was entitled, [and] that he was now at full liberty and no longer a Slave.” He appears to have won his freedom there. Bolster, *Black Jacks: African American Seamen in the Age of Sail* (Cambridge, 1998), 144–145.

³⁶ See ANC, Gobierno General, leg. 529, exp. 27084, Nicolás Guillarte to Juan Nepomuceno de Quintana, March 27, 1797, and testimony of crew members Fernando Deurer, Andrés Lundbenos, and Juan de Pontes. In this case, the privateers did not succeed in freeing the captives on board because they were surprised by an English vessel. “Land of liberty” might have referred to Saint-Domingue specifically or to France more broadly, as the term (*pays de la liberté*) was also used in metropolitan France. See Burgess, *Refuge in the Land of Liberty*, chap. 1.

plicit material content—appears to have had some power both for local authorities and for black people arriving to claim it.

After independence, the new leaders made it increasingly clear that the “land of liberty” referred to Haiti and not to France, which had by then reestablished slavery and the slave trade. At first, they sought to make that liberty available to black people who had been taken from revolutionary Saint-Domingue as slaves or servants and now wished to return as free men and women. Just days after Haiti’s Declaration of Independence in 1804, the first head of state, Jean-Jacques Dessalines, issued a decree offering payment to American ship captains for returning to Haiti people of color who had been removed from Saint-Domingue during the revolution.³⁷ Pétion himself later took up the idea in the south and expanded it over the years that followed. In January 1809, as Spanish officials were evacuating French residents from Spain’s American territory following the Napoleonic invasion of the Spanish Peninsula, Pétion seized the opportunity to try to repatriate those people whom the Spanish continued to call “French blacks.” He sent a ship to Cuba to bring back anyone interested in returning to Haiti. He also requested permission from Spanish authorities to keep sending such ships, as potential passengers were not likely to have the resources required to organize trips on their own, and one ship would not have been sufficient for all of the people he assumed would seek to return. Pétion referred to those he sought to repatriate as Haitians; Cuban authorities referred to them as “émigrés” or “French people of his [Pétion’s] class.” In the disencounter between these terms lurks the question of whether Pétion intended to repatriate men and women who had been taken from Saint-Domingue and were now being held as slaves in Cuba. He never got the chance; Cuban authorities prohibited the entry of the Haitian vessel and warned its captain that none would be received in the future.³⁸ Despite this setback, some repatriation apparently did occur aboard private Spanish ships in mid-1809. As ships left eastern Cuba with refugees headed to New Orleans, Charleston, and Baltimore, at least ten smaller vessels appear to have made journeys instead to Port-au-Prince and Jérémie carrying returnees, much as Pétion had requested a few months earlier.³⁹

Long before the 1816 constitution, then, Haitian leaders were already developing piecemeal policies designed to facilitate the return of black men and women who had been denied the possibility of freedom in Haiti. Article 44 now went significantly

³⁷ Ardouin, *Etudes sur l’histoire d’Haïti*, 8: 45. For the text of the law, see Jean-Jacques Dessalines, *Lois et actes sous le règne de Jean Jacques Dessalines* (Port-au-Prince, 2006), 13–14.

³⁸ See the correspondence between Pétion and Santiago governor Sebastián Kindelán, between Kindelán and Havana governor, the Marqués de Someruelos, and between Someruelos and Secretario de Estado, Madrid, in ANC, AP, leg. 209, exp. 144; and AGI, Estado, leg. 12, exp. 54.

³⁹ See the lists titled “Relación de los Extrangeros que han salido de esta Ciudad,” dated Baracoa, June and July 22, 1809, both in ANC, Gobierno General, leg. 530, exp. 27085. The lists include vessels leaving for ports in Haiti and the United States. The lists of passengers aboard U.S.-bound vessels often include designations of people as “esclavos” (slaves), “criados” (servants), or “domésticos” (domestics). Haitian-bound vessels did not identify people in servile capacities. Whether that difference is attributable to a difference in the lived status and experience of the passengers in Cuba prior to departure, or to the manner in which the lists were compiled or people were grouped together for the voyages or identified either by themselves, shipmates, or captains upon departure, is impossible to know. For related questions of status, mobility, and the law, see Rebecca Scott, “Paper Thin: Freedom and Re-Enslavement in the Diaspora of the Haitian Revolution,” *Law and History Review* 29, no. 4 (2011): 1061–1087.

further, promising freedom and citizenship not just to blacks returning to Haiti, but potentially to *all* people of color and their descendants.⁴⁰

But here again, policies and decisions that predated the 1816 constitution seemed already to be pointing in that direction in daring ways. Throughout the decade beginning in 1810, for instance, Haitian state vessels—including northern ships—captured several slave-trading vessels bound for neighboring colonies with captives taken from Africa. In these cases, the captives were liberated and allowed to remain in Haiti, and the ships were sent on to their destinations, usually with their crews but without their human cargoes. In at least one case in the north, the African captives arriving in Haiti were publicly welcomed and informed that “they were free and among brothers and compatriots.”⁴¹ The public use of the term “compatriot” suggests the former captives’ incorporation as Haitian nationals. In this way, the individual captures may have presaged what Pétion tried to extend and guarantee in the Haitian constitution of 1816: freedom and citizenship on Haitian soil for foreign persons of color who otherwise would have lived in slavery.

Not only was Haitian nationality offered to men and women liberated off slaving vessels, it was also, in at least some instances, conferred on those who came to Haiti of their own initiative. In 1814, U.S. officials complained that Pétion was regularly “seducing” sailors from all nations who entered his port. That same year, one black sailor, a native of Martinique who had been living in New Orleans for many years, decided to stay in Port-au-Prince. The man insisted that he was Haitian, despite the fact that he was “never until now in Haiti.” Thus, two years before the revision of the constitution, foreign black sailors were seeking refuge in Haiti, calling themselves Haitian, and claiming the privileges of Haitian citizenship.⁴² The case, only briefly discussed by the U.S. consul in Haiti, who felt limited in what he could raise with the president of a republic that his own government did not recognize, suggests a fascinating possibility: that Pétion’s offer of Haitian protection and citizenship to all arriving people of color may have been, at least in part, a response to—and an acknowledgment of—what some foreign blacks in the region were already claiming for themselves.

⁴⁰ The inclusion of indigenous people in Article 44 may have been symbolic, perhaps in line with the naming of the country as Haiti, its original indigenous name, or the naming of the revolutionary army as the Army of the Inca. But that symbolism itself may provide insight into how early Haitian leaders imagined their political and intellectual project. When Dessalines declared in spring 1804 that he had “avenged America,” he seemed to allude to a vision of history and justice that encompassed more than Africans. One wonders also whether the reference to indigenous people may have served obliquely as a way to address people in Spanish Santo Domingo, whom Haitian leaders sometimes referred to as descendants of Indians, as in Dessalines’s April 1805 proclamation, written after his unsuccessful attempt to drive the French out of that part of the island: “Spanish indigenes, descendants of the unfortunate Indians immolated by the cupidity and greed of the first usurpers of this land.” Quoted in Jenson, *Beyond the Slave Narrative*, 155. When Article 44 was written in 1816, slavery and Spanish rule still persisted on the eastern part of the island.

⁴¹ The quote is from *Gazette Royale d’Haïti*, October 10, 1817, quoted in Ardouin, *Etudes sur l’histoire d’Haïti*, 8: 66. For a discussion of some of these cases of captured slavers, though with a focus more on northern examples, see Ada Ferrer, “Speaking of Haiti: Slavery, Revolution, and Freedom in Cuban Slave Testimony,” in David Patrick Geggus and Norman Fiering, eds., *The World of the Haitian Revolution* (Bloomington, Ind., 2009), 240–241; and José Luciano Franco, *Comercio clandestino de esclavos* (Havana, 1996), 106–107.

⁴² U.S. National Archives and Records Administration, General Records of the Department of State, Record Group 59, microfilm M9, reel 5, Consular Despatches, Cap Haitian, William Taylor to James Monroe, August 30, 1814.

BOTH PLACE AND TIME—THE SLAVEHOLDING Atlantic at the turn of the nineteenth century—were strongly present in the policies of the southern republic. By 1816, slavery had uneven power in the region. On the one hand, it had become increasingly influential in places such as Cuba and the U.S. Lower South; in old British colonies such as Jamaica, it maintained its brutal hold over hundreds of thousands of people. At the same time, both Britain and North America had abolished the slave trade, and the British were embarking on an aggressive policy of policing and suppressing the trade on the high seas. Pétion appears to have developed his free-soil policy with both realities in mind. For the enslaved in places such as Jamaica, Article 44 made Haiti an accessible place of refuge and freedom. But in a world in which both abolitionism and racism were on the rise, Article 44 promised to turn Haiti into a place of refuge also for the newly or soon to be freed, who were unable to enjoy the rights of citizenship elsewhere.

Pétion appears to have actively thought about the contest between slavery and freedom in the neighboring United States, where campaigns to limit the mobility of black men and women were in full force. U.S. law required the authorities in free states to give up anyone claimed as a fugitive slave by a putative owner from a slave state. In some northern states, legislatures contemplated restrictions on the entry of free blacks.⁴³ Meanwhile, Quakers and slaveholders, with discrepant motivations, collaborated to settle free black people in foreign territories. The Haitian constitution of 1816 appeared in the same year as the establishment of the American Colonization Society, which was dedicated to resettling freed blacks in Africa. That same year, Paul Cuffee, a free black Quaker and wealthy ship owner, made his first journey to Sierra Leone with thirty-eight free black settlers. Hearing reports from black American sailors arriving in Port-au-Prince that the U.S. government was considering forcibly removing freed blacks to Africa, Pétion sought to insert Haiti into the calculations of exit and removal being made in the United States. Through his secretary-general, Joseph Balthazar Inginac, he invited black Americans to emigrate to Haiti as a way of resisting the exclusion and abuse they faced in the U.S.

Open to their eyes the Constitution of our Republic, and let them see in its 44th Article a fraternal hand opened to their distresses. Since they are at this day refused the title of Members of the American Union, let them come among us, in a country firmly organized, and enjoy the rights of Citizens of Hayti, of happiness and peace: lastly, let them come and show to white men that there yet exist coloured and black men who can raise a fearless front secured from insult and from injury.

The letter, which also offered “bounties of land” and “open arms,” was published in New York in 1818 as the preface to an English translation of the 1816 constitution; it was also published, with excerpts from the constitution, in at least one northern newspaper.⁴⁴ Pétion’s strategy enjoyed some success, as several proponents of Af-

⁴³ See especially Don E. Fehrenbacher, *The Slaveholding Republic: An Account of the United States Government’s Relations to Slavery*, completed and ed. Ward M. McAfee (New York, 2002), chap. 7. For a fascinating discussion of the freedom principle in Pennsylvania, see Richard S. Newman, “‘Lucky to Be Born in Pennsylvania’: Free Soil, Fugitive Slaves, and the Making of Pennsylvania’s Anti-Slavery Borderland,” *Slavery and Abolition* 32, no. 3 (September 2011): 413–430.

⁴⁴ Inginac to James Tredwell, November 21, 1817, in *The Constitution of Hayti* (New York, 1818), 5; retrieved from the Archive of Americana online database, June 20, 2011. A copy was published in *Niles Weekly Register*, October 17, 1818. Pétion’s attempt to disseminate news of his policies was in line

rican colonization, including Cuffee and later Loring Dewey, a founder of the American Colonization Society, began seriously considering a Haitian alternative to African colonization schemes. In the 1820s, approximately 6,000 to 13,000 African Americans migrated to Haiti, a movement clearly facilitated by Pétion's campaigns and legislative policy.⁴⁵

Even as abolitionism was on the rise in the northern states, colonization schemes and legal constraints on black mobility made it very clear to Pétion that in other nations abolition would not be tied to the rights of citizenship or equality. While the sailors from Jamaica imagined Haiti as a place to attain legal freedom, potential free black emigrants viewed it as a place to make an already existing legal freedom more consequential. It was at this critical juncture—in a place and time when the power of slavery and antislavery and racism were all palpable—that Pétion developed his free-soil policy as a means to intervene in pressing contests over the fate of slavery and the formerly enslaved. In the same way that his policies seemed to consider both Old Regime and revolutionary sources of rights and freedoms, Article 44 in 1816 clearly seemed to treat slavery as something of a dual institution in that moment—still strong and in ascent in some areas, but under increasing challenge and gradually giving way to a compromised freedom and thwarted citizenship in others.⁴⁶

If Haiti's attempt to shape U.S. emigration schemes was motivated in part by a commitment to help expand the content of freedom for black men and women abroad, it also emerged in the context of Haiti's assertion of sovereignty. After Pétion's death, his successor, Jean-Pierre Boyer, continued to advocate African American settlement in Haiti. But in 1824, when at least one U.S. scheme contemplated the establishment of "a colony . . . [with] its own laws, courts, and legislature, in *all* respects like one of the States of the United States, and *connected with* and *subject to* the government of Hayti," Boyer responded categorically: "That cannot be." He elaborated only with a general declaration of principles that again returned to the 1816 constitution, and to Article 44 in particular: "The laws of the Republic are general—and no particular laws can exist. Those who come, being children of Africa, shall be Haytiens as soon as they put their feet on the soil of Hayti."⁴⁷ For Haiti's leaders, the process of guaranteeing and giving meaning to freedom from slavery, first locally and then transnationally, was always tied to the question of sovereignty: from fighting against the French expeditionary force in 1802, when Napoleon tried

with what Deborah Jenson has recently examined for an earlier period under Dessalines, who, for example, sent copies of new laws to U.S. publishers and newspapers. See Jenson, *Beyond the Slave Narrative*, 124, 127, 130–131, 138, 142, 150. In both instances, the Haitian state was actively trying to shape its global image and to insert itself into an Atlantic sphere of debate over slavery and freedom.

⁴⁵ On American colonization and Haiti, see Sara C. Fanning, "The Roots of Early Black Nationalism: Northern African Americans' Invocation of Haiti in the Early Nineteenth Century," *Slavery and Abolition* 28, no. 1 (April 2007): 61–85; Chris Dixon, *African America and Haiti: Emigration and Black Nationalism in the Nineteenth Century* (Westport, Conn., 2000); and Floyd J. Miller, *The Search for a Black Nationality: Black Emigration and Colonization, 1787–1863* (Urbana, Ill., 1975).

⁴⁶ In some sense, Pétion appears to have understood the extended moment as a kind of "hinge" between what Dale Tomich has called the first and second slaveries, the second being the slavery that expanded at the height of abolitionism in emerging or expanding areas of cultivation. See Tomich, *Through the Prism of Slavery*, chaps. 3, 5, and 6.

⁴⁷ Loring D. Dewey, *Correspondence Relative to the Emigration to Hayti, of the Free People of Colour, in the United States: Together with the Instructions to the Agent Sent Out by President Boyer* (New York, 1824), 4, 10.

to reimpose slavery, to declaring independence in 1804, to attempting an invasion of the eastern part of the island in 1805 when ruling French officials there invited local residents “to fan into the territory occupied by the rebels [Haiti], to run upon them, and to take prisoner anyone, of either sex, not older than fourteen years of age,” who would then be sold as slaves and deported.⁴⁸ The necessity for Haitian leaders to assert both freedom from slavery and national sovereignty, evident since 1802, appeared present again in connection with the question of African American resettlement. Haitian leaders made it clear that while “emigration” would be welcomed and sought, “colonization” would be impossible.

That Haiti’s leaders linked the fates of antislavery and sovereignty is evident also in Pétion’s engagement with South America. Since the French occupation of the Iberian Peninsula in 1808, Spanish America had become a hotbed of political agitation and uncertainty. Importantly, Pétion’s refusal to return the Jamaican sailors made reference to those political struggles in Latin America. Indeed, he even hinted that he was thinking of Latin America as up for grabs, and potentially as the hemisphere’s second free-soil territory. He wrote to McKowen, “Every country has its Laws, as you must know Sir, and fortunately for the cause of humanity, Hayti is not the only one where Slavery is abolished.”⁴⁹ His confident assertion that abolition was already a reality in at least one other country was a bold and unexpectedly public reference to the revolutionary abolition of slavery in Venezuela by Simón Bolívar in July 1816.

Pétion’s invocation of Bolívar’s emancipation of Venezuela’s slaves had particular significance, given the role that he had played in making it happen. Since December 1815, his government had provided asylum to Latin American independence leaders, including Bolívar, to whom Pétion had offered 6,000 rifles, munitions, supplies, naval vessels, a printing press, and an unknown number of Haitian sailors and soldiers.⁵⁰ With Pétion’s knowledge and approval, as many as 600 pro-independence families from Cartagena and Caracas took refuge and received support in Les Cayes. Thus the proclamation of the right to asylum written into Article 3 of the 1816 constitution consolidated and extended what had already been occurring in practice with the Haitian state’s protection of Bolívar and other like-minded men and women.⁵¹

Importantly, Pétion linked the asylum he offered Bolívar to his broader project of antislavery, thus pushing the Latin American revolutionaries toward new and more radical policies. In exchange for his support, he required two promises from Bolívar. First and famously, Bolívar pledged to abolish slavery in the new republic

⁴⁸ This stunning example is discussed in two recent works: Graham Nessler, “A Failed Emancipation? The Struggle for Hispaniola during the Haitian Revolution, 1789–1809” (Ph.D. diss., University of Michigan, 2011), chap. 5; and Jenson, *Beyond the Slave Narrative*, 151–152. Both call attention to the extent to which Haitian sovereignty was actively threatened by the continuing French presence on the eastern side of the island.

⁴⁹ TNA, CO 137/145, Pétion to McKowen, January 30, 1817.

⁵⁰ On Bolívar’s time in Haiti, see Verna, *Pétion y Bolívar*; and Sibylle Fischer, “Bolívar in Haiti,” in Raphael Dalleo, Luis Duno-Gottberg, Carla Calarge, and Clevis Headley, eds., *Haiti and the Americas: Histories, Cultures, Imaginations* (Oxford, Miss., forthcoming 2012).

⁵¹ See Verna, *Pétion y Bolívar*; John Lynch, *Simón Bolívar: A Life* (New Haven, Conn., 2006), 159–181. In less impressive quantities, Pétion offered succor and aid to Francisco Javier Mina and Pedro Labatot, who organized expeditions to Mexico and New Granada, respectively. William Lewis, “Simón Bolívar and Xavier Mina: A Rendezvous in Haiti,” *Journal of Inter-American Studies* 11, no. 3 (July 1969): 458–465. On asylum and the constitution, see Moïse, *Constitutions et luttes de pouvoir en Haïti*, 1: 54.

he was fighting to establish. He sailed from Haiti for the first time in March 1816 and began the gradual abolition of slavery in May, freeing those who were willing to serve in the liberation army. By July, he had proclaimed general emancipation: "Nature, justice, and politics call for the emancipation of the slaves. From here on forward, there will only be one class of men in Venezuela: all will be citizens." It was this act, he wrote to Pétion, that gave the South American revolutions their true and most just meaning.⁵² In extracting the promise of slave emancipation, Pétion aspired to extend the geographic space of liberty, hoping to help found the hemisphere's second country without slavery.

Bolívar's second promise is less well known but equally significant. At Pétion's insistence, he pledged that any captive Africans taken from slave-trading vessels by insurgent privateers would not be sold into slavery but rather would be turned over to the Haitian government. As the slave trade to Spanish and Portuguese territories flourished and as insurgent seamen plied American waters, there was considerable opportunity to seize human cargo. Evidence exists that these privateers regularly took captive Africans and sold them in places such as Cuba. By extracting Bolívar's promise that insurgent privateers would not sell captured Africans, Pétion devised a new arrangement whereby captives on the sea would be brought to freedom on Haitian territory, thus extending the physical reach of Haitian free soil into Caribbean and Atlantic waters.⁵³

It was only three weeks after the departure of Bolívar's second expedition on December 21, 1816, that the seven sailors stole away to Haiti and were there declared free and Haitian. Bolívar's second expedition, like the first, was organized under Pétion's protection, sailing with munitions, supplies, and vessels provided by Haiti's president. One British member of the company described the troops as "principally blacks of St. Domingo or runaway slaves from the Colonies." The mention of runaways raises the question of whether some of the black men freed upon arrival on Haitian soil subsequently became foot soldiers in a new project to extend to the South American mainland the promise of what had been achieved by Haiti in 1804: freedom from slavery and European rule.⁵⁴

⁵² See "Simón Bolívar a los habitantes de la provincia de Caracas," reprinted in Simón B. O'Leary, *Memorias del General O'Leary*, 34 vols. (Caracas, 1981), 15: 84. See also Lynch, *Simón Bolívar*, 100. In fact, slavery would not be legally abolished in Venezuela until 1854. More work needs to be done considering the apparent discrepancies between the attitudes Bolívar assumed in Haiti and toward Pétion and his less broad-minded words and actions on race and slavery later.

⁵³ On the promise to bring captives to Haiti rather than sell them into slavery and on the insurgent practice of capturing slave ships and sometimes selling the captives (in at least one instance, after Bolívar's promise), see Verna, *Pétion y Bolívar*, 337–342; ANC, AP, leg. 8, exp. 39, "Expediente sobre que el Real Consulado de la Habana acredita el apresamiento de 127 embarcaciones mercantes españolas por buques insurgentes, piratas y otros desde el año 1801 hasta el de 1819"; and ANC, AP, leg. 124, exp. 48, Governor of Santiago de Min. de Estado, June 7, 1816. On insurgent privateering and the slave trade, see Lauren Benton, "Abolition and Imperial Law, 1790–1820," *Journal of Imperial and Commonwealth History* 39, no. 3 (2011): 355–374; and Benton, "Una soberanía extraña: La Provincia oriental en el mundo Atlántico," *20/10 El mundo atlántico y la modernidad iberoamericana, 1750–1850* (forthcoming, 2012).

⁵⁴ The reference to the presence of runaway slaves from colonies appears in C. Brown, *Narrative of the Expedition to South America, Which Sailed from England at the Close of 1817 for the Service of the Spanish Patriots Including the Military and Naval Transactions and Ultimate Fate of That Expedition* (London, 1819), 115–116. See also Verna, *Pétion y Bolívar*, 337.

BUT WHAT OF THE ENSLAVED JAMAICAN SAILORS who found themselves at the center of the dispute over the boundaries of Haitian freedom and citizenship in 1817? Some combination of foresight and happenstance brought them to Haiti soon after the law would recognize them as Haitian and thereby as free. But how did they understand the freedom that might thus be acquired?

It comes as no surprise that their former master, McKowen, characterized the men's decision to make for Haiti in ways that minimized its legitimacy and power. He insisted that they had been seduced into escaping by a man of color who had boarded the *Deep Nine* at Rocky Point and escorted them to Haiti.⁵⁵ Some of the fugitives, he added, were "very young people, who I am confident are not capable of appreciating the value of becoming Citizens of Hayti."⁵⁶ Young, unknowing boys had been enticed or forced by the older crew members or the shady recruiter to make their way to the first black and antislavery state, unaware of the implications of their actions. Finally, complained McKowen, the recruiter had gone unpunished and was still at large at Les Cayes.

Les Cayes, along with other ports on Haiti's southern peninsula, had long been involved in the smuggling trade with Jamaica. Privateers outfitted there often made incursions into Jamaican territory and seized vessels. It was also a place of refuge for hundreds of patriot families from South America; and it was there that both Simón Bolívar and Francisco Javier Mina organized, recruited for, and launched expeditions to liberate Latin American territory. Thus what McKowen cast as a suspect relationship between a Les Cayes recruiter and unwitting Jamaican sailors may instead have signaled multiple "masterless" contacts embedded in a web of communications involving both trade and international politics.⁵⁷ Indeed, when McKowen went to Les Cayes to retrieve the men and boys he considered his property, he was distressed to find "a great number, say from thirty to forty, negroes, who avowed themselves to be runaways from [Jamaica]; and many of them were personally known to my own negroes."⁵⁸ Two of them may have been among a group of slaves who had escaped to Les Cayes at around the same time as McKowen's seven and were said to belong to Hannah French of Jamaica.⁵⁹ A few years later, in Port-au-Prince, the British consul, Charles MacKenzie, would note that "a very large proportion of the population . . . [consisted] of refugee slaves from the British colonies." In Jamaica itself, British authorities complained of Haitians who arrived in

⁵⁵ The accusation appears in TNA, CO 137/145, "Humble Memorial of Robert McKowen"; and J. E. Douglas, Rear Admiral and Commander and Chief of Jamaica Station, to Pétion, May 14, 1817, in Jamaica Assembly, *A Report of a Committee*, 48.

Kingston and other port cities with Haitian gazettes and with news meant to entice people to Haiti.⁶⁰

McKowen's seven sailors appear to have been very much a part of these networks. The sailor identified as Jem, who escaped to Haiti with the others but later returned to Jamaica, allegedly explained to McKowen that he and his companions "had often before been talking of going to Saint Domingo, having understood from the crews of different vessels from that place . . . that there was no danger of their being brought back, as they would not be given up, when once they got there." They had heard stories of other important inducements as well: "each [would] get a coffee plantation, or sugar work, with negroes to work for them," and "after being there twelve months, they [would] all be made officers." Here the sailors' expectations seemed to allude on the one hand to Article 44's promise of greater privileges after a year of residence, and on the other to the link between land distribution and military rank in the southern republic. The men, it seems, were up-to-date on Haitian news.

If we must make an informed inference in order to imagine the combination of expectation and adventure that led Jem and the others to Haiti, we need to do the same to think about their possible fates after arrival. Pétion appears not to have wavered in his defense of their right to remain in Haiti as free men. But beyond that, nothing is certain. For some, the experience of freedom may have comported with expectations. Dublin, for instance, appears to have secured the personal protection of a Haitian general at Jérémie, who baptized him, gave him his name, and then made him his aide-de-camp.⁶¹ But ironically, Dublin's story entered the historical record by way of Jem, who told it while back under McKowen's dominion. After escaping with the others, Jem had been pressed into service on a Haitian man-of-war, and from there he decided to escape back to McKowen, who was on board the British ship *Esk* in Port-au-Prince Harbor, still trying to recover his property in men. Neither McKowen nor the British officials who questioned Jem thought to ask him why he had declined the offer of Haitian freedom and citizenship. And Dublin, now aide-de-camp to a Haitian general, was never asked to comment on how his experience in Haiti compared to the expectations he had harbored before his escape from Jamaica to Haiti.

The case of Dublin, Jem, and the other Jamaican sailors did not become a precedent-setting case to be recorded along with Somerset in the formal legal annals of antislavery. It was, however, a key part of the efforts of the early Haitian state—as the first post-abolition state in the world—to shape the global contest over slavery and to assert its own antislavery and sovereign role in the world. Drawing on Old Regime legal precedents of free soil, emerging notions of rights and citizenship, and opportunities afforded by developments such as slave trade suppression, American emigration campaigns, and the independence struggles in South America, Pétion's policies represented a pragmatic and daring means to define and extend the bound-

aries of freedom and citizenship in an Age of Revolution that otherwise offered no firm assurances of either to black and brown men and women.

FOR CENTURIES, ENSLAVED MEN AND WOMEN in the Caribbean and elsewhere had escaped to freedom. Some made their bids by sea on small vessels and headed for Spanish territory, finding protection in the well-known policies of Catholic sanctuary. A smaller number secured freedom in France or England by arriving on legal free soil. By 1816, however, another, much more radical possibility had emerged. By then, general liberty had been achieved in what had been the seat of the slave regime's most extreme power. The resulting state of Haiti stood not only as a symbol of liberty, but literally as free soil, a place in which freedom, enshrined in the law, could be real for black persons in their own lifetimes. In the 1817 case, the Haitian state offered the Jamaican sailors refuge and protection, elevating their claim to citizenship and emancipation above the legal claim of ownership asserted by their British master. Thus the slaves' bid for freedom found institutional and philosophical support in the constitution of a sovereign—and antislavery—black state.

This particular case can be read as part of a broader process in which the Haitian state shaped the possibilities and character of Atlantic freedom, for it highlights the fact that for the men and women most denied the promise of that freedom, the experience and the understanding of the political transformations of the age occurred in dialogue with Haiti itself. French revolutionary and British abolitionist ideas clearly circulated in the region, but they were engaged and transformed in dynamic and challenging ways in the colonies. Almost from the start of the ferment in Paris in 1789, free people of color questioned the legitimacy of elections and debates that excluded them as rightful participants; and over the course of the revolution, black and colored leaders delivered stinging critiques of what they cast as a false universalism espoused in Paris. They circulated accounts of French barbarism—of loyal officers drowned at sea; black men devoured daily by hunting dogs; wives and sisters made to dine and dance in rooms decorated with black heads on spikes.⁶² They condemned the French for thinking that they were destined to be the masters of colonial blacks, for thinking that “they alone formed the essence of human nature.”⁶³ The former slaves and long-free people of color announced, in other words, not just that they were the new rulers of the former colony, but also that they were the more legitimate and generous guardians of equality and liberty. After independence, they elaborated laws and policies that reworked and reimagined notions of property, territory, and citizenship. In a world in which slavery and colonialism held powerful sway, Haitian leaders crafted political and intellectual positions designed to extend the promise of radical antislavery despite the very real constraints imposed by the active rejection of neighboring states. No story of the rise of rights is complete without an engagement with the intellectual and political work done in Haiti.

⁶³ November 1803 declaration by Dessalines, Christophe, and Clervaux, reprinted in translation in *Gaceta de Madrid*, March 23, 1804, 267–268.

Any history of the role of the Haitian state in the ascent of general liberty and universal rights nonetheless requires several cautionary notes. Haiti stood as an important beacon of freedom, willing to do much more—and more quickly—than the liberal powers of Europe to dismantle slavery where it most mattered. Haiti became literal free soil. That enslaved persons such as the Jamaican sailors took knowing advantage of that policy seems clear. But what the juridical freedom from enslavement signified in practice remains murky. Jem, at least, appears to have abandoned legal freedom in Haiti when it turned out to entail forced military service, voluntarily returning to slavery under a British master. The power and conviction of the Haitian leaders' commitment to antislavery and legal abolition is without question, but as Michel-Rolph Trouillot and others have commented, the liberty to which they were committed did not always coincide with the liberty imagined by Haitian—and Caribbean—black and brown people. While some legal documents offered freedom and protection to people such as the enslaved Jamaican sailors, others made it difficult for free workers to leave their place of work, or more generally to avoid the demands of what scholars have identified as the “militarized agriculture” of early postcolonial Haiti, or the increasingly extractive policies of what Trouillot calls “a republic for the merchants.”⁶⁴ Freed strangers likely faced some of the same fates as native Haitians, including attached labor on plantations, compulsory labor in public works, or, as in the case of Jem, forced service on state vessels or perhaps even on ships headed to South America to free new territory. At the same time, they may have responded as many Haitians did, becoming part of the “counter-plantation” society and the vibrant rural networks that succeeded in carving out spaces outside the purview of the Haitian state.

In some sense, the dilemmas around labor and autonomy that emerged in Haiti—the first post-slavery nation in the modern world—would be the problems faced in every subsequent post-emancipation society. Haiti's post-slavery relapses also have their echoes in later post-emancipation societies, from laws against vagrancy, to the use of penal labor colonies, to the entrenchment of debt peonage. But the fact that the Haitian state actively sought to make its own freedom from slavery a condition accessible to all black men and women from foreign slave societies has no real parallels. While Haiti's bold offer of emancipation and citizenship to outsiders does not mitigate the concrete internal and external obstacles to Haitian freedom, it does remind us that there are obvious and important counterpoints and disjunctures in any story about either the power of Haitian antislavery or the limits of Haitian freedom.

A further caveat to a celebratory account is perhaps equally uncomfortable. It is clear that Haiti—as an independent nation—intervened in an Atlantic arena of debate about slavery and freedom. Haitian intellectual production and policy after independence continued to represent a thoroughgoing and critical engagement with antislavery and rights discourses then developing and circulating in the Atlantic world. But it was one thing to do that intellectual and political work; it was quite another to have that work recognized as part of a broader international debate.

⁶⁴ Michel-Rolph Trouillot, *Haiti: State against Nation—The Origins and Legacy of Duvalierism* (New York, 1990); Mimi Sheller, *Democracy after Slavery: Black Publics and Peasant Radicalism in Haiti and Jamaica* (Gainesville, Fla., 2000); Dubois, *Haiti*; Nicholls, *From Dessalines to Duvalier*.

Haiti's important interventions after 1804 appear to have been projected into something of a conceptual vacuum as far as dominant antislavery or rights thought was concerned. Perhaps that lack of resonance served Pétion well: it allowed him to declare Haiti as free soil within reach of major sites of enslavement without calling too much attention to his challenge and intervention. But the vacuum also amplifies the usual problems of historical research: there is little discussion of Pétion's application of Article 44 of the 1816 constitution in this case or in any other. In contrast to the judicial archive generated by European free soil, there is no cache of petitions and legal decisions to illuminate the thinking either of the political class or of the men and women who sought freedom from slavery by its means. Thus, even if the Haitian state saw itself as making a—*the*—critical intervention in broad debates about freedom and rights, it is not clear that the other participants in those debates acknowledged them or their intervention. And we live today at least as much with the legacies of that refusal of recognition as with the legacies of Haiti's contribution.

She is the author of *Insurgent Cuba: Race, Nation, and Revolution, 1868–1898* (University of North Carolina Press, 1999), which won the 2000 Berkshire Book Prize. Her next book, tentatively titled *Slavery and Freedom in the Atlantic World: Cuba in the Shadow of the Haitian Revolution*, will be published by Cambridge University Press.

AHR Forum
Liberal Empire and International Law

Introduction

If anything distinguishes recent historical writing and research, it is the emphasis on what has become known as transnational history. There is much, indeed, that is new about this approach, but in one sense it has been practiced by generations of historians, especially those who study empires and imperialism. To be sure, transnational history strives to look at the patterns of imperial conquest and control with new eyes, emphasizing interactions rather than mere subjugation, and the movement of ordinary people rather than the work of official agents and soldiers. But this new kind of history has also made us appreciate the virtues of older approaches to the past. For example, many historians have now rediscovered diplomatic history, especially if recast in terms of the informal and non-governmental exchanges that transpired beneath the machinations of diplomatic protocol.

As the essays in this forum demonstrate, the same is true of the study of law, which belongs to the history of empires and imperialism just as much as it can generate insights into our understanding of transnational history. Here the emphasis is on the eighteenth and nineteenth centuries, when the development of norms for international law coincided with the increasing dominance of Western nations over other lands and peoples. Too often, however, the histories of these two phenomena are considered as entirely separate. The contributors to this forum appreciate that they were intertwined.

How does imperialism, which is historically based on coercion, subjugation, and a lack of respect for the sovereignty of subject peoples and nations, square with notions of law and legal legitimacy held dear by those nations? In "The Liberal Traditions in the Americas: Rights, Sovereignty, and the Origins of Liberal Multilateralism," Greg Grandin looks at this question in the context of the Western Hemisphere, where the United States viewed Iberian America not so much as "other"—and thus primarily ripe for conquest and control—but as rival nations with nominally shared values and political forms. In "Empire and Legal Universalisms in the Eighteenth Century," Jennifer Pitts recovers a largely forgotten strain of legal thought that offered a critique of imperialism and a potential constraint on the exercise and abuse of European states' power. Andrew Fitzmaurice's "Liberalism and Empire in Nineteenth-Century International Law" extends the analysis to the high point of European imperialism, showing how law could be deployed both to justify and to oppose imperial rule. Finally, in "Empire and Its Anxieties," Anthony Pagden offers a wide-ranging comment on these essays, providing as well an insightful summary of the political and legal history of this vexed subject.

The Liberal Traditions in the Americas: Rights, Sovereignty,
and the Origins of Liberal Multilateralism

GREG GRANDIN

America is therefore the land of the future, where, in the ages that lie before us, the burden of the World's History shall reveal itself—perhaps in a contest between North and South America.

G. W. F. Hegel, 1857

Somos más Americanos/We are more American.

Los Tigres del Norte, 2001

“WHO HAS WRITTEN ON A WESTERN HEMISPHERE scale,” Herbert Bolton asked in 1932, “the history of shipbuilding and commerce, mining, Christian missions, Indian policies, slavery and emancipation, constitutional development, arbitration, the effects of the Indian on European cultures, the rise of the common man . . . Who has tried to state the significance of the frontier in terms of the Americas?” Bolton, a student of Frederick Jackson Turner, raised the question in his presidential address to the American Historical Association, hoping to prompt an innovative approach to American studies, one that would take the so-called New History movement associated with Turner—organized around the sociology of migration, institutions, ideas, and property relations—and stretch it over a transnational frame. Bolton started his address by making what seems a commonsense comparison, noting that if European history could not be understood by studying England, France, or Germany alone, then “Greater America” could not be “adequately presented if confined to Brazil, or Chile, or Mexico, or Canada, or the United States.”¹

This effort to dilute nationalist historiography by depicting “American History as Western Hemisphere History” holds up well against the scholarly provincialism

I would like to thank Mark Healey, Jim Scott, Gil Joseph, Emilia da Costa, Corey Robin, Andrew Fitzmaurice, Christy Thornton, Alan Knight, James Dunkerley, Stuart Schwartz, Maxine Molyneux, Tatiana Neumann, Sinclair Thomson, Ada Ferrer, Manu Goswami, Caitlin Fitz, Ernesto Semán, Karen Kupperman, Juan Pablo Scarfi, Mark Brilliant, Brian DeLay, Daniel Sargent, Margaret Chowning, and Josh Frens-String for their insights, along with other participants of Yale's Agrarian Studies Seminar, Berkeley's International and Global History Seminar, and the University of London's Institute for the Study of the America's Liberalism in the Americas seminar.

Bolton, “AHA Presidential Address: The Epic of Greater America,” December 28, 1932, *American Historical Review* 38, no. 3 (April 1933): 448–474, http://www.historians.org/info/aha_history/hebolton.htm; Lewis Hanke, ed., *Do the Americas Have a Common History? A Critique of the Bolton Theory* (New York, 1964).

of Bolton's day. Yet his belief that the Western Hemisphere shared a unity of republican and anticolonial experiences and, by implication, interests led him to posit a homologous relationship between the nations of Greater America and those of Greater Europe that did not exist. America was different from half-monarchical, largely illiberal, balance-of-power Europe. More importantly, the United States' emergence as a new kind of hegemon, able to project its power and influence free from the burdens of direct territorial or administrative rule, prevented Bolton, and many who followed, from seeing a more useful comparison: between the United States' relationship with Latin America and Europe's with its colonial possessions. As a result, more recently, as intellectual historians (including Jennifer Pitts and Andrew Fitzmaurice in this *AHR* Forum) have considered the links between liberalism and empire, the United States and its dealings with Latin America have largely been ignored.

In all the debates over what is and is not distinct about the United States—in terms of national identity, political institutions, domestic history, and foreign policy—little attention has been paid to one variable that can, at least in relation to its global ascendance, unambiguously be called unique: its relationship with Latin America.² “South America will be to North America,” the *North American Review* wrote in 1821, “what Asia and Africa are to Europe.”³ Not quite. Other liberal capitalist world powers—France, Holland, and Great Britain—tended, at their apex, to rule over culturally and religiously distinct peoples in Africa, Asia, and the Middle East. The settlers who colonized North America, by contrast, looked to Iberian America not as an epistemic “other” but as a competitor in a fight to define a set of nominally shared but actually contested ideas and political forms: Christianity, republicanism, liberalism, democracy, sovereignty, rights, and above all the very idea of America. After the republican revolutions of the late eighteenth and early nineteenth centuries, the relationship between the United States and the new nations of Spanish America developed a contentious ideological and legal intimacy—an ongoing “immanent critique”—unmatched by other comparable hegemon-periphery relations, especially one that would jump scale from the regional to the global level. England's relation to its “Celtic fringe,” especially to Ireland and Scotland, produced a somewhat similar dynamic that gave form and content, in terms of law, justifying ideologies, and administration, to the British Empire.⁴ But in the Americas, extended space (“a hemisphere to itself,” as Thomas Jefferson once put it) and time (running from Elizabethan anti-Hispanism of the seventeenth century to the neoliberal Washington Consensus of the twentieth) allowed the rivalry to play out on an unprecedented scale.

⁴ Cf. David Armitage, *The Ideological Origins of the British Empire* (Cambridge, 2000).

Out of this antagonism emerged a normative ideal of republican America. The origins and endurance of the United States' sense of moral purpose, distinct from the utilitarian, positive-law expositions of international diplomacy that took shape in nineteenth-century Europe, have long been the subject of scholarly inquiry. In 1820, Jefferson imagined a future when "our strength will permit us to give the law of our hemisphere," marked by "the meridian of the mid-Atlantic," which would serve as "the line of demarcation between war and peace, on this side of which no act of hostility should be committed, and the lion and the lamb lie down in peace together."⁵ Rarely, however, have scholars considered that it was South and Central America that would give substance to Jefferson's vision, through the elaboration of what the region's legal theorists and statesmen would by the early twentieth century come to call American international law—a remarkable body of jurisprudence made even more so by the way it is overlooked by intellectual historians concerned with charting out the transnational origins of liberal multilateralism.⁶

Independence leaders and jurists in the new Spanish-American nations (Brazil remained tied to Portugal through the transference of the monarchy to Rio de Janeiro and therefore did not become a republic until 1889) also believed that the Americas represented a rejuvenating world-historical force. But over time, there emerged a growing divergence over how to define the two constitutive elements of this moral and political power: individual rights and sovereignty. Put crudely, Spanish Americans and Brazilians came to hold individual rights relative to the establishment of the public common good and territorial sovereignty as absolute. In the United States, the terms were reversed; U.S. politicians defined individual rights as inherent and inalienable, and qualified state sovereignty on responsible public administration that could protect those rights.

The distinction between these related but antagonistic rights traditions is intentionally schematic. The evolution of the political culture of the United States comprises, of course, "multiple traditions"—some egalitarian, others not, some individualizing, others hierarchal—with each influenced by a diverse array of social and intellectual sources.⁷ Many of these traditions, *à la* Bolton, can be found throughout the Americas, North, Central, and South, and include artisan and workingmen's associations, trade unions, urban life, civic republican sentiment, abolitionism, migration, Christian and secular reform movements, family and gender relations, labor regimes, and "ascriptive forms" of racial and national identity.⁸ One source of national policy that is specific, at least in its degree of importance, to the United States—nineteenth-century western settlement and land entitlements—highlights

⁸ *Ibid.*, 550.

the generative tension between ideology and practice: the “free-born sons of America,” as Andrew Jackson described the American ideal in his 1812 war cry, owed their existence to a strong, structuring, and increasingly militarized state.⁹ Similarly, many of the Latin American jurists who in the late nineteenth century would weave together diverse legal arguments into an overarching theory of absolute sovereignty—used to contest what was described as an expansionist, Indian-killing, warmongering United States—were citizens of governments doing the exact same thing. The region’s most prominent liberal legal theorists were from countries—Chile, Argentina, Brazil, and Mexico—then consolidating control over their own hinterlands, engaged in wars to subdue or exterminate remaining Native American groups. These nations elaborated their own “anti-imperialist imperialism,” a civilizing mission that, by providing a rhetorically favorable contrast with U.S. Indian policy, helped divert attention away from their own violence against native peoples, such as the Yaqui and Apache in northern Mexico or the Mapuche in Patagonia.¹⁰ It turns out that the United States’ “imperial anticolonialism,” to use William Appleman Williams’s description of the nation’s motivational creed, was not so unique. But over time, this deflection produced very distinct ways of reconciling what Pitts, Fitzmaurice, and other scholars have identified as the elemental tension within liberalism between universalism and difference.¹¹

The argument that the United States was able to displace through expansion the problems that slavery and inequality presented to republican virtue and universalism is not new.¹² But placing it in the broader perspective of Greater America—that is, considered in relation to other republican and liberal traditions in the Americas—allows for reconsideration. The region that would eventually become known as Latin America also had to reconcile race and class to republicanism/liberalism.¹³ In contrast to the United States, however, its independence leaders and theorists inherited a colonial system of legal and theological thought that consciously organized “difference,” understood primarily in racial and class terms, into administrative and

⁹ Laura Jensen, *Patriots, Settlers, and the Origins of American Social Policy* (Cambridge, 2003). For another use of the term “free-born sons of America,” to help white Missourians, “upon whose birth the genius of liberty smiled,” resist the tyranny of federal efforts to restrict slavery, see Jennifer Louise Turner, “From Savagery to Slavery: Upper Louisiana and the American Nation” (Ph.D. diss., University of Wisconsin, Madison, 2008), 315; quotation by Senator Freeman Walker of Georgia, January 18, 1820, in U.S. Senate, *Annals of Congress*, 16th Cong., 1st sess., 175.

¹² See William Appleman Williams, *The Contours of American History* (1961; repr., New York, 2011); Michael Paul Rogin, *Fathers and Children: Andrew Jackson and the Subjugation of the American Indian* (New York, 1975). Louis Hartz did not base his arguments concerning the primacy of Lockean liberalism in the U.S. on race violence, but did think it “obvious that the violence in the external elimination of the Indian permitted a heightened degree of peace within the American community”; Hartz, *The Founding of New Societies: Studies in the History of the United States, Latin America, South Africa, Canada, and Australia* (New York, 1964), 95.

¹³ Historians distinguish between republicanism and liberalism, particularly related to formulations of the “common good.” For the sake of highlighting the comparison I am drawing between U.S. and Latin American political culture, this essay will follow scholars who stress their overlap and similarities. See Daniel Walker Howe, *Making the American Self: Jonathan Edwards to Abraham Lincoln* (New York, 2009), 10–13; Stephen Macedo, *Liberal Virtues: Citizenship, Virtue, and Community in Liberal Constitutionalism* (Princeton, N.J., 1987).

juridical structures. And unlike the United States, these new nations at their inception had to deal with the rights and interests of other nations at their borders. As a result, the region's intellectuals, jurists, and politicians were confronted with the problem of difference both within and without their new nation-states. In response, they bridged the chasm separating their universalizing ideal of "America" from their territorial fundamentalism by laying out the legal foundation of multilateral cooperation. Based on principles of non-aggression, international arbitration, and economic justice, they developed a sovereignty–social rights complex, as I call it, that would revolutionize the interstate system.

Latin America's success in helping to socialize hemispheric liberalism and diplomacy success was short-lived. It was, nonetheless, consequential, for it allowed Washington to develop ways to project its authority and influence in a new interstate system defined not by empires but by nominally free and sovereign nations. This served the United States well, for although its expansionist–individual rights complex, as it could be described, was effective in propelling territorial enlargement and accumulating capital in the nineteenth century, it was too volatile a nationalism to underpin the kind of global power it would become in the twentieth century. One historical moment that focuses the distinction between these two rights complexes is the post–World War I Paris Peace Conference and, especially, debates that took place before and after the conference over the meaning of the Monroe Doctrine. That 1823 doctrine is often presented as a succinct statement of U.S. interests, interpreted over the years to justify successive interventions in Latin America: Europe, keep out. But a closer look reveals irreconcilable assumptions embedded in the injunction. There was a tension between, on the one hand, the particular interests of an ascending world power and, on the other, a justification of policy based on universal New World moralism. "Few persons can define it," wrote the doctrine's pre-eminent historian, Dexter Perkins, "but that does not matter. One does not have to analyze in order to believe."¹⁴ Even Woodrow Wilson, on the stump after the Versailles Conference to sell the League of Nations to the U.S. public, admitted that "while . . . in Paris" he had attempted to pin down the meaning of the Monroe Doctrine, but to no avail. "I will confide to you in confidence," he said, "that when I tried to define it I found that it escaped analysis."¹⁵ The same has been said about American exceptionalism, and in both instances what has been missing from a fuller consideration is Latin America.

SPANISH-AMERICAN INDEPENDENCE LEADERS and intellectuals came to stress to a greater extent, compared with the social minima of U.S. political thought, the active role of the state in promoting virtuous citizenship. Simón Bolívar, as Anthony Pagden writes, appreciated the vitality of the kind of civil society that drove the federal expansion of the United States but did not believe that the conditions for

it existed in Spanish America.¹⁶ After centuries of colonialism that had left the region divided between a subjugated majority and an oligarchic elite, it would take more than the unleashing of individual interest to generate republican virtue. It would take a strong executive presiding over a moral state that would “make men good, and consequently happy.” The goal of constituted societies was, Bolívar wrote, to produce “the greatest possible sum of happiness, the greatest social security, and the highest degree of political stability.”¹⁷ There was a kind of republican Thomism on display in many of the region’s post-independence constitutions, a mix of ideas drawn from classical republicanism, Catholic monism, particularly the theology associated with Saint Thomas Aquinas, and more modern influences, including the work of Jean-Jacques Rousseau, Benjamin Constant, and Thomas Hobbes.¹⁸ These intellectual traditions downplayed the separation between private interests and the public good and discouraged the idea, central to the Lockeanism prominent in the United States, that the individual pursuit of the former would generate the latter.

Whatever the philosophical origins of this distinction between Anglo and Hispanic republicanism, it was deeply rooted in the social history that distinguished British from Spanish colonialism in the Americas as related to the subjugation of Native Americans and Africans. Under Spanish rule, the genocide of Native Americans was frontloaded; the violence of the conquest, which within a century resulted in a demographic collapse of upwards of 90 percent of the pre-Columbian populations—by some estimates, tens of millions of people—forced a revitalization of rational natural-law theory. Even as this catastrophe was taking place, Spanish polemicists, jurists, and theologians, notably Bartolomé de las Casas, Francisco de Vitoria, and the scholars affiliated with the Universidad de Salamanca, questioned previous divine justifications, developed over centuries against Islam and initially applied to the conquest of the New World, to make war, dispossess, enslave, and rule. Historians still parse whether the “law of nations” that emerged out of this debate was based on positive or natural law, but the questions raised—concerning the equality of human beings, the source of individual rights, the nature of political sovereignty—set the terms of what would become international law.¹⁹ Vitoria, in particular, raised the bar of universalism high when, as Annabel Brett writes, he defined the law of nations as “a law neither between individual men, nor between sovereign states, but between all human beings as forming one community: ‘The whole world, which is in a sense a commonwealth, has the power to enact laws which are just and convenient to all men; and these make up the law of nations.’”²⁰

But this emerging “juridical unity,” in Brett’s words, evolved alongside a colonial

state that consciously justified itself through the administration of difference, creating a corporate hierarchy that assigned distinct obligations and privileges to specific groups, understood largely, though not exclusively, in racial terms. There was a great disparity in the administrative reach of the early Habsburg and then later Bourbon imperial states, yet from the very inception of Spanish colonialism, Native Americans, and then African slaves, *qua* Native Americans and African slaves, played key roles in the construction of Hispanic modernity. Coerced Indians and enslaved Africans were of course essential to the extraction of silver and gold, in effect the primary producers of one of the world's first truly universal standards. They were also the focal point in the creation of a bureaucratic, legal, philosophical, and religious system that, however much it was based on brute exploitation, was forced for more than three centuries to deal with difference. The tension was sustaining, creating absorptive bureaucratic channels of redress. But it was ultimately unsustainable: colonial universalism could be subdivided only so many times by a potentially infinite list of legal and vernacular caste identities—*mestizo*, *pardo*, *moreno*, *negro*, *de color*, *mulato*, *amarillo*, *trigueño*, *negro*, *jabao*, *indio*, *prieto*, *zambo*, *quinterón*, *tentenelaire*, *saltapatrás*, *tercerón*, *cuarterón*, *negro libre*, *negro pardo*, *negro ladino*, *negro bozal*, *negro criollo*, and so on—before dissolving into meaninglessness.

This history yielded, by the end of the eighteenth century, a republicanism that was more inclusive than its counterpart in the United States, in the sense that its advocates were products of a colonial regime that for centuries had openly acknowledged the problem that racial difference posed to its universalism; and also more activist, in that they envisioned a strong state as needed to transcend that regime. There existed a large distance between the broad expressions of humanism and equality that found their way into independence constitutions, many of which abolished distinctions based on race, and the reality of ongoing exploitation. Debates about how best to turn Indians and Africans into citizens, or how to end slavery, were often hypocritical and premised on cultural erasure. After independence, race-based hierarchies, primarily enforced through economics, politics, and gender ideologies, continued. Notions of progress, honor, and hygiene were also used to exclude large numbers of Native Americans, peoples of African descent, and women from the protections and rights afforded to citizens. In many countries, an activist understanding of republican virtue gave way in the late nineteenth century to authoritarian liberalism or positivism, which tilted decidedly more to progress and order than to liberty and equality, a forebear of twentieth-century civilian and military dictatorships.

But unlike the rigid, formally exclusive racialism that came to reign in the United States, race thinking in Latin America could produce powerful countervailing democratic movements and ideologies, often manifested in the collective militancy that the region has become famous for: from the prolonged, violent wars of independence, fought by armies made up of peasants, manumitted slaves, and free people of color, to the radical anti-racism of Cuba's late-nineteenth-century thirty-year war against Spain, on to the Mexican Revolution and its celebration of the *mestizo* as a national archetype.²¹ In the nineteenth century, mobilization could express itself in

²¹ Ada Ferrer, *Insurgent Cuba: Race, Nation, and Revolution, 1868–1898* (Chapel Hill, N.C., 1999); Peter Blanchard, *Under the Flags of Freedom: Slave Soldiers and the Wars of Independence in Spanish*

the idiom of what social historians of Mexico, Peru, Guatemala, Colombia, and elsewhere in Latin America call “popular liberalism” or “popular republicanism.”²² In the twentieth, it took the form of agrarianism, populism, nationalism, and different forms of socialism.

In Latin America, it was not primarily the extension of market relations and wage labor that brought forth the sense of self and self-interest that elsewhere is identified as underwriting liberalism. The extreme concentrations of economic and political power that stoked the pessimism of Bolívar were real; the spread of export capitalism led in many areas to a retrenchment and fortification of extra-economic hierarchy and privilege. In a number of countries, well after the formal abolition of slavery, generalized forms of coerced labor based on debt and vagrancy laws existed into the twentieth century. It was, rather, intense conflict that often drove forward the liberalization of society—and, in turn, the socialization of liberalism.²³

Latin America in the twentieth century would become famous for its revolutionaries; less acknowledged is the region’s contribution to global social democracy, with its jurists and politicians codifying both in country-specific constitutions and in international charters a slate of economic rights. The 1917 Mexican constitution was the world’s first fully conceived social-democratic charter, predating similar documents in Europe and India, enshrining the right to organize unions, the right to work, a minimum wage, equal pay for men and women, welfare, education, and health care. In subsequent years, similar rights were reaffirmed in the constitutions of nearly all Latin American nations, and in 1948 by the United Nations. Cuba, Chile, and the Organization of American States provided drafts for the final version of the UN Declaration of Human Rights. The Jesuit-educated Chilean socialist (and lifelong friend of Salvador Allende) Hernán Santa Cruz, who worked with Eleanor Roosevelt on the declaration’s drafting committee, was the most forceful advocate for including in the declaration the right to work, to organize labor unions, to enjoy rest, leisure time, and adequate pay, and to have access to food, clothing, housing, health care, and education. The Dominican Republic insisted on treating men and women as equals, and Mexico had the phrase “without any limitation due to race, nationality or religion” inserted into the declaration’s guarantee of the “right to marry.”²⁴

²³ See Greg Grandin, *The Last Colonial Massacre: Latin America in the Cold War* (Chicago, 2004), for an argument that emphasizes mass collective politics, rather than the spread of commercial society, as an important venue of individuation in Latin America. Cf. Charles W. Bergquist, *Labor and the Course of American Democracy: US History in Latin American Perspective* (London, 1996).

²⁴ In 1948, the same year Mexico added this clause to the “right to marry” section of the Universal Declaration, the California Supreme Court struck down an anti-miscegenation law that had prevented Andrea Pérez, the U.S.-born daughter of Mexican migrants considered white, and Sylvester Davis, an African American man, from marrying. See Mark Brilliant, *The Color of America Has Changed: How Racial Diversity Shaped Civil Rights Reform in California, 1941–1978* (Oxford, 2010), 106–114. Cf. Paolo G. Carozza, “From Conquest to Constitutions: Retrieving a Latin American Tradition of the Idea of Human Rights,” *Human Rights Quarterly* 25, no. 2 (May 2003): 281–313; Mary Ann Glendon, *A World Made New: Eleanor Roosevelt and the Universal Declaration of Human Rights* (New York, 2001).

Central to the achievement of these social rights was the consolidation of a definition of property according to its public utility. Like the more activist, state-centered republicanism to which it was related, what Latin American jurists would by the 1960s commonly call the “social function of property” could be traced to both older, colonial Catholic notions of a just society and more recent expressions of nineteenth-century positivism.²⁵ As such, the ideal enjoyed widespread support across the political spectrum. The ability of the state to regulate property was seen by politicians of all stripes as necessary to create a modern nation, needed either to capture surplus value in order to distribute a “social wage” in the form of health care, education, and social security, or to intervene more actively in the economy, enacting agrarian reform, nationalizing industry, and taxing certain sectors, so as to stimulate manufacturing and industry. As with social rights more generally, the idea was elaborated first and most fully in Mexico’s 1917 constitution, in Article 27, which stated that “all land and water within national territory is originally owned by the nation, which has the right to transfer this ownership to individuals.” By 1980, the constitutions of Colombia, Brazil, Argentina, El Salvador, Venezuela, Paraguay, Honduras, Haiti, Panama, and Bolivia, among other countries, limited property rights according to their “social function,” as did Nicaragua’s Sandinista charter of 1987. So too did Guatemala’s 1945 constitution (but not the 1956 edition adopted after the 1954 CIA coup). Even Chile’s new 1980 charter, ratified by the government of Augusto Pinochet and supposedly modeled on the principles set forth in Friedrich von Hayek’s 1960 *Constitution for Liberty*, identified property as a social utility and assigned to the state “absolute dominion” over the nation’s hydrocarbon and mineral wealth.

IN ANGLO NORTH AMERICA, AN ALMOST exact opposite history unfolded. Native Americans themselves were *relatively* peripheral to the Anglo colonial project, at least as compared with the foundational role they played in Spanish colonialism.²⁶ Thus, the kinds of moral debates that took place following the Spanish conquest were avoided. Periodic conflict against Native Americans was justified by, and helped further define, legal arguments concerning “just war.” Episodes of extreme violence, including the near- and total extermination of specific indigenous groups, often did provoke outrage and calls for reform, such as John Eliot’s passionate outcry against the “mass enslavement” of the Algonquin.²⁷ Yet the repression of Native Americans under

²⁵ Charles Johnson, “Two Mexicos,” *Atlantic Monthly* 126 (1920): 703–709, provides a summary of the conflict that this article provoked in the United States. He writes: “the old legal doctrine of the Crown’s title to all the land has been rephrased in Article 27, to meet modern Republican conditions” (704). See Stephen Haber, Armando Razo, and Noel Maurer, *The Politics of Property Rights: Political Instability, Credible Commitments, and Economic Growth in Mexico, 1876–1929* (Cambridge, 2003), 1, for the creation of a more modern, though “selectively enforced,” property rights regime during Mexico’s long liberal dictatorship of Porfirio Díaz (1876–1911), which the 1917 constitution largely abolished.

²⁶ I am not arguing that Native Americans were not economically, politically, or ideologically important to Anglo colonialism; for the distinction I am suggesting, compare Steve J. Stern’s *Peru’s Indian Peoples and the Challenge of Spanish Conquest: Huamanga to 1640* (Madison, Wis., 1993) to Richard White’s *The Middle Ground: Indians, Empires, and Republics in the Great Lakes Region, 1650–1815* (Cambridge, 1991).

²⁷ See Jill Lepore, *The Name of War: King Philip’s War and the Origins of American Identity* (New York, 1998), 158–167, for how early colonial war reshaped international norms.

British rule did not prompt the kind of wholesale legal and philosophical reflection that it did in Spain.

In fact, as Andrew Fitzmaurice has argued, the English quietly but deliberately defined their colonial project against that reflection.²⁸ In 1607–1608, the Council of the Virginia Company debated whether to issue a document to justify their actions in the New World. Records reveal a keen appreciation of the problems that Salamanca's "Casuists" and "Confessors" had (once they rejected treating Native Americans as "Naturally slaues") with applying natural-law doctrine to justify both sovereignty and property. Spanish logic, they felt, was "indeterminable" and "incoherent," and after "50 yeares," the Spanish king's "fryars" could reasonably justify political authority, but not the dispossession of Native American property. The Virginia Council therefore opted to avoid the question altogether: aware that they would be held "not only comparatiuely to be as good as ye Spaniards . . . but absolutely to be good agaynst ye Naturall people," members of the council decided that it would be "better to abstayne from this vnnecessary way of prouication, and reserue ourselues to ye defensiuie part."²⁹ Here, then, is a remarkably clear example of how imperial competition generated a slippery form of universalism, one that, in contrast to Spanish colonialism, denies, consciously at first but then habitually, its own contradictions. "Let the divines of Salamanca," wrote the council three years later, "discusse that question how the possessor of the west Indies first destroyed, and then instructed."³⁰

Hypocritical, inconsistent, and ineffectual in stemming abuse, Spanish "Casuists," along with their republican successors, nonetheless laid the groundwork for a universalism that acknowledged the problem of difference, which in the twentieth century seeded Latin America's strong social-democratic tradition. Their late-coming Anglo counterparts put in place something quite different. Fitzmaurice has noted how the evolution of the primal deflection of the concerns of the Salamanca School resulted in an almost perfect inversion of the "moral force" of natural-law theory, with English philosophers and colonists using it not to temper dispossession but to justify it. "Rather than recognizing that Indians lived in civil society," Fitzmaurice writes, the English "needed to start describing Native Americans as devoid of society, closer in this respect to animals than to humans."³¹ The liberal tradition that emerged from these justifications was complex and had many different political ex-

pressions, but at least one strong current of it came by the mid-nineteenth century to link rights to individualism, individualism to freedom, freedom to expansion, and expansion to war and dispossession.³²

In the centuries that followed the Council of the Virginia Company debate, Anglo colonialists and then republicans continued the tradition of defining their political ideas in relation to Spanish America. By the 1820s, the region's prolonged wars of independence were providing an aging generation of founding fathers a chance to reflect on the meaning of their own revolution. Some were generous in making the comparison.³³ In 1826, for example, James Madison wrote that he thought the United States could learn from "regions south of us," particularly as they addressed the problems of having "inferior tribes adjoining a white population." If Spanish Americans achieved success in instituting "comprehended" citizenship, it might provide answers for how the United States could deal with its own "baffling" racial problems: "the black race within our bosom" and "the red on our borders."³⁴ Others, such as Edward Everett, a professor of Greek literature at Harvard and a Unitarian pastor, were less ecumenical. In an 1821 essay, he took the opportunity provided by a Spanish-American request for help against Spain to abstract the United States from the rest of the Americas, defining the U.S. against the region's "corrupt and mixed race of various shades and sorts." Spanish America, for Everett, reflected back what was singular about the United States. Its feudal institutions, seignories, and population divided into a "wealthy aristocracy and a needy peasantry" had more in common with Europe than with the United States, and its seemingly interminable, property- and people-destroying revolutions offered a close-to-home warning of the risks of a republicanism taken too far, a dangerous migration of the ideas of the French Revolution to New World soil. "Before any good omen is drawn from the analogy of our revolution," Everett wrote, decades before the idea of American exceptionalism was formulated and over a century before the phrase itself was coined, it must be remembered that "political liberty . . . is distinct from social liberty." If one did not have the latter—by which he meant a constituted civil society of free, rights-bearing individuals, which characterized British America even before its break from the metropolis—then "the question of independence of a foreign crown is one of little moment."³⁵

BOUND UP WITH THE ISSUE OF CITIZENSHIP and rights was the question of sovereignty. The United States was born expanding, a fact that its early leaders and intellectuals

³² Throughout the nineteenth century, ongoing expropriation of Native American property contributed to the "Americanization of the law of real property," as legal scholar Howard Berman writes in his discussion of the Marshall Court's key *Fletcher v. Peck* (1810) and *Johnson v. McIntosh* (1823) decisions; Berman, "The Concept of Aboriginal Rights in the Early History of the United States," *Buffalo Law Review* 27 (Fall 1978): 637–667. See also Stuart Banner, *How the Indians Lost Their Land: Law and Power on the Frontier* (Cambridge, 2005), 152; Tim Alan Garrison, *The Legal Ideology of Removal: The Southern Judiciary and the Sovereignty of Native American Nations* (Athens, Ga., 2009), 94; Patrick Griffin, *American Leviathan: Empire, Nation, and Revolutionary Frontier* (New York, 2007).

³³ Caitlin Fitz, "Our Sister Republics: The United States in an Age of American Revolutions" (Ph.D. diss., Yale University, 2010), charts the evolution of popular perceptions of Spanish-American independence in the U.S., from celebratory to suspicious.

were fully aware of and theorized. Lockean notions of dominion justified the drive into the “wild woods and uncultivated waste” of the West and consolidated notions of property rights, while Madisonian ideas of federal expansion were offered as a way to dilute the factional passions that arise from a civil society founded on those property rights.³⁶ Native Americans, of course, bore the brunt of this push west, but the growing body of case law concerning their sovereignty offered legal principles too contradictory and inconsistent to be translated into diplomatic norms. It was Spain and Spanish America, fully recognized despite their oft-commented-on shortcomings as political societies, that taught the United States how to be, legally speaking, in the world. Territorial expansion into Spanish Florida, Louisiana, Texas, and Mexico (and projected expansion into the Caribbean) produced, as the historian Brian Loveman has detailed, a set of diplomatic justifications, legal arguments, and military strategies that continue to define U.S. foreign policy to this day.³⁷

In *Empire's Workshop*, I argued for Latin America's importance in shaping the ideas, tactics, and constituencies of the United States' two great twentieth-century governing coalitions, the New Deal under FDR and the New Right under Ronald Reagan.³⁸ The argument could be extended back even further into the nineteenth century. President James Monroe's 1823 declaration that all of the Americas were off limits to European intervention was the first of many instances when debates about Spanish America, and the actions resulting from those debates, allowed a reconciliation of competing sectional interests and ideas concerning domestic and foreign policy. As the culmination of Henry Clay's “American System”—a broad, tariff-based vision of how the Western Hemisphere should be organized, with a developing U.S. economy at its center, counterpoised against Great Britain—the Monroe Doctrine helped synthesize positions as diverse as those represented by Clay, John Quincy Adams, and James Monroe.

In reaction, the rising Jacksonians built on the kind of race-based exceptionalism expressed by Everett to attack Clay and his American System; the extended congressional debate over whether the United States should attend Simón Bolívar's 1826 Panama Conference, which Adams, Clay, and others saw as an opportunity to put the system into place, allowed many of the pro-slavery future founders of Jackson's Democratic Party to focus their criticism and build their coalition. In particular, the conference's proposed agenda—which included the establishment of diplomatic re-

³⁶ Intellectual historians continue to debate the degree to which Locke's original writings justified or questioned empire. Earlier scholarship stressed the former; while more recent thinking corrects some overstatements, the justification for dispossession and colonization remains strong in his writings. See James Tully, *An Approach to Political Philosophy: Locke in Contexts* (Cambridge, 1993). A revision by David Armitage, “John Locke: Theorist of Empire?,” will appear in Sankar Muthu, ed., *Empire and Modern Political Thought* (Cambridge, forthcoming August 2012). The application of interpretations of Lockean ideas was less ambiguous. For instance, the Connecticut reverend John Bulkley based his 1726 argument in favor of indigenous dispossession “entirely on John Locke”; Tully, *An Approach to Political Philosophy*, 166. As late as 1868, Bulkley, as proxy for Locke, was being cited in debates over how to define property law in New York's constitution. See *Proceedings and Debates of the Constitutional Convention of the State of New York, Held in 1867 and 1868 in the City of Albany*, 5 vols. (Albany, N.Y., 1868), 5: 3446. See Cass R. Sunstein, “The Enlarged Republic—Then and Now,” *New York Review of Books*, March 26, 2009, for Madisonian ideas of federal expansion.

lations with Haiti and “consideration of the means to be adopted for the entire abolition of the African slave trade”—tightened the loose associations in the minds of pro-slavery politicians between Spanish-American independence (fought by armies made up of a considerable number of people of color), the Haitian Revolution, and abolition.³⁹ As Jay Sexton has written, members of this “nascent Jacksonian coalition” (among them three men—Jackson, Martin Van Buren, and James Polk—who would go on to win the presidency) used the debate to exploit “racist conceptions of Latin Americans as a means of bringing together their constituencies in the North and South.”⁴⁰ Where Clay and Thomas Jefferson before him had begun to speak of a single, unified “America,” with shared interests different from those of old Europe, these early Jacksonians, according to Sexton’s close reading of the congressional minutes, began to stress, not for the first time but with particular weight, *South America* as distinct from *North*. This slicing of America in two made it into Webster’s 1828 *American Dictionary*, which divorced north from south at the Darien Gap in Panama, and took place, it should be noted, decades before Spanish Americans began to talk of “two Americas,” one “Latin,” the other “Anglo-Saxon.”⁴¹

Spanish America did more than provide ideological focus for the new Jacksonian coalition. It also provided land—through the annexation of Texas and territory seized after the war with Mexico—for the push west, which not only deferred the crisis of slavery but allowed for a satisfaction of demands generated by the potentially volatile mix of natural law, civic republicanism, and an expanded franchise. Following the Mexican-American War, the United States’ exemplary exceptionalism—the idea that the republic could serve as a model to be emulated but would largely restrain itself from imposing that model on other nations—began to transform into what might be called actionable exceptionalism, that is, direct intervention to remake the politics and economics of other nations.⁴²

But expansion also accelerated the sectional crisis, and the run-up to the Civil War is the one period in which Latin America could not reconcile the United States: the Confederacy looked south to build an “empire of slavery,” while many people of color and white abolitionists took inspiration from Spanish America, where countries such as Chile, Colombia, and Mexico had ended slavery decades earlier.⁴³ After the Civil War, Spanish America had begun to be seen by many as a place to naturally extend southern reconstruction, to build the “New Latin America” along with the “New South.” And so Mexico, in the decades after Appomattox, became, as the historian John Mason Hart has argued, Washington’s and New York’s first sustained effort to restructure a nation’s economy and politics along liberal capitalist lines, an

endeavor that would continue after 1898 in Cuba, Haiti, the Dominican Republic, Nicaragua, and Panama.⁴⁴

In the drive west, Native Americans were often cast as “children,” incapable of forming the rational political society that justified both sovereignty and dominion.⁴⁵ After the frontier closed and the trope of maturity/immaturity that had long been

⁴⁴ John Mason Hart, *Empire and Revolution: The Americans in Mexico since the Civil War* (Berkeley, Calif., 2002).

⁴⁵ Rogin, *Fathers and Children*.

imposed on these supposedly stateless, property-less peoples was no longer made vital by war, Latin American nations became the new irresponsibles.⁴⁶ Prior to the 1919 Paris Peace Conference, for instance, one of Woodrow Wilson's experts in the Latin American Division of the State Department drafted a classification schema that seemed to have been inspired directly by John Locke's *Second Treatise of Government*. Using his experience dealing with Latin America, he ranked countries "as mature, immature or criminal" and came up with a series of tests "to determine whether they are yet ready to be allowed to conduct their own affairs in a world to be governed by reason." "How many Cubas are there?" the document wondered.⁴⁷

Embedded in such questions is the principle that only a morally responsible nation could be sovereign. What was judged moral changed according to the circumstance: at times it meant the ability to exercise effective control of a population and territory; at other times it meant democratic or procedural legitimacy—with the best way to protect foreign private property serving as the variable determining which of these two standards Washington applied. But in either case, what counted was that the United States reserved the right, often invoking its own sense of exceptionalism, to be the judge.

In marked contrast, Spanish-American republics were conceived into confederation, nations among nations, confirmed at the time of independence by a general acceptance of colonial administrative borders as the limits of the new republics. In a series of post-independence treaties, conferences, constitutions, and declarations, regional diplomats and jurists revitalized the doctrine of *uti possidetis*, or "as you possess," which under Roman law had referred to the control of territory at the end of a conflict. They were not the first to apply the standard to the process of decolonization; the United States had done so earlier, during its revolution, in an effort to reach a settlement with Great Britain. Yet it was in South and Central America, where foreign ministries throughout the nineteenth century repeatedly invoked what they had taken to calling "uti possidetis of 1810" to insist that no part of the Americas lacked sovereignty, that the "principle developed into a rule."⁴⁸

Despite these legal affirmations, much of the region was in fact outside of administrative control (including large swaths of the Amazon, the coastal islands, Patagonia, and northern Mexico), and border lines were vague and contested; valuable resources such as rubber and oil were found on one side or the other, leading to more than a century of episodic conflict and occasional full-scale wars, from the 1825 confrontation between Brazil and Argentina over Montevideo to the Chaco War

between Paraguay and Bolivia in the 1930s. Yet every diplomatic effort to resolve these disputes appealed to *uti possidetis*, which solidified the legitimacy of the principle and led to its acceptance despite conflicting interpretations.⁴⁹ (Brazil tended to emphasize *uti possidetis de facto*, which stressed effective possession; Spanish America defended *uti possidetis juris*, which invested legitimate possession in Spanish royal decrees.) By the early 1900s, the doctrine had become the foundational principle of what Latin American jurists called American international law, based on the ideal of non-aggression, interdependence, and solidarity rather than on realpolitik rivalry.

In the United States, an ideal of individual natural rights immediately harmonized with and reinforced a definition of sovereignty conditioned on the protection of those rights. In Latin America, the link between a “common good” notion of citizenship and a “common good” vision of territorial sovereignty was at first formalistic, more of an analogy than mutually constitutive: individuals, like nations, exist not in isolation but in harmony, bound together as equals by mutual needs and limitations. But over time there developed a more dependent relationship. Efforts to institutionalize social rights entailed state intervention in the economy, which often provoked domestic and foreign interests to retaliate. Coups executed or supported by the U.S. in Guatemala in 1954, Brazil in 1964, and Chile in 1973 are among the most well-known examples of such retaliation, though there are many other examples; between 1898 and 1994, according to historian John Coatsworth, Washington had “intervened successfully to change governments in Latin America a total of at least 41 times.”⁵⁰ In turn, nationalists, social democrats, populists, and socialists came to see social rights and sovereignty as mutually constitutive. It would take a fortified executive with control over both the physical and the social space of the nation to realize the Bolivarian dream of achieving the “greatest possible sum of happiness, the greatest social security.” Theorists of American international law, such as the Chilean Alejandro Alvarez, were aware that there was a tension between their almost positive-law ideal of territorial fundamentalism and their normative notions of justice: what right did an unjust ruler or aggressive nation have to sovereignty?⁵¹ As an answer, they held up multilateral arbitration as a solution. Still, confronted with an expansionist United States, and plagued by their own interstate skirmishes, Latin American nations by the early twentieth century had deepened their commitment to *soberanía absoluta*.

⁴⁹ “I am going to insist one more time,” an Ecuadorian envoy told his Peruvian counterpart at an 1889 Quito conference convened to determine the Amazonian border separating their two countries, “that the only line that can possibly serve as a basis for agreement is that of *uti possidetis* of 1810.” Ministerio de Relaciones Exteriores, Peru, *Memorias y documentos diplomáticos sobre la negociación del tratado de límites entre Perú y el Ecuador* (Lima, 1892), 389.

⁵⁰ John H. Coatsworth, “United States Interventions: What For?” *ReVista*, Spring/Summer 2005, 6–9, <http://www.drclas.harvard.edu/publications/revistaonline/spring-summer-2005/united-states-interventions>.

⁵¹ Alvarez (1868–1960) was a Chilean delegate to the Permanent Court of Arbitration at the Hague and the League of Nations; a judge on the International Court of Justice; the author of hundreds of essays, many of them on pan-Americanism; and the founder of the American Institute of International Law, affiliated with the Carnegie Endowment for International Peace. Despite his analytical sophistication and range of interests, very little has been written on him. But see *Leiden Journal of International Law* 19, no. 4 (2006), a special issue devoted to his work and legacy.

THE HISTORY OF UNITED STATES–LATIN AMERICAN relations in the late nineteenth and twentieth centuries is often narrated as a litany of outrages, of U.S. freebooting, interventions, counterinsurgencies, gunboat and dollar diplomacy, and pre–Cold War coups in Texas, Nicaragua, Mexico, Cuba, Puerto Rico, Panama, the Caribbean, and Central America. But threading through this narrative of territorial and economic expansion is a slow yet steady revision of the fundamentals of international law.

A good place to chart this revision is in the competing interpretations of the Monroe Doctrine. Rarely discussed in all the considerable scholarship on the doctrine is the fact that Spanish-American diplomats and politicians did not object to Monroe's declaration that all of the Americas were off limits to European intervention. Rather, they understood its prohibition against recolonization as an affiliate and affirmation of their antecedent *uti possidetis*, and moved to incorporate the Monroe Doctrine into their emerging multilateral framework.⁵² In 1824, Colombia invoked the doctrine, asking for Washington's help against what it feared were designs on its territory by France and Spain. A year later, both Brazil and Argentina appealed to the doctrine in their dispute over Montevideo, with Argentina pointing out that since Brazil was still tied to Portugal, it therefore constituted a European power. And in 1826, Simón Bolívar invited the United States to attend the Panama Congress to "proclaim" the Monroe Doctrine and discuss how to abolish slavery.⁵³

Washington refused these specific requests for aid and resisted all efforts by Spanish Americans to define the Monroe Doctrine as international law or to read the doctrine normatively, in a way, say, that would imply the end of American slavery or suggest a revision in diplomatic protocol.⁵⁴ Through the nineteenth and the early twentieth century, presidents, secretaries of state, and politicians would broaden its interpretation in purely nationalist terms, to justify territorial expansion and unilateral policing, most famously by Theodore Roosevelt with his 1904 corollary to the doctrine.⁵⁵ American exceptionalism aside, when it came to retaining the great-power right to intervene in the affairs of other nations to protect its interests, Washington envoys steadily deflected calls for the United States to conform to what Latin Americans understood to be a specific "American" jurisprudence: after Latin Americans at the 1889 inaugural Pan-American Conference passed a number of resolutions attempting to standardize their ideas, including the adoption of arbitration to settle regional disputes as a "principle of American International Law," the U.S.

⁵² For instance, a Colombian diplomat, considering the history of border disputes between his country and Peru, wrote in 1893 that "what is called, for example, the Monroe Doctrine, is simply the application of the principle of national sovereignty to the republics of this continent." Mariano H. Cornejo and Felipe de Osma, *Memoria del Perú en el arbitraje sobre sus límites con el Ecuador*, vol. 7: *Apéndices á la Memoria del Perú* (Madrid, 1906), 121.

⁵³ Alejandro Alvarez, *The Monroe Doctrine: Its Importance in the International Life of the States of the New World* (New York, 1924), 13.

⁵⁴ Richard Drinnon, in "The Metaphysics of Empire-Building: American Imperialism in the Age of Jefferson and Monroe," *Massachusetts Review* 16, no. 4 (Autumn 1975): 666–688, describes one of Washington's first invocations of the Monroe Doctrine, to prevent Mexico from working with John Dunn Hunter to settle displaced Indians in what was then northern Mexico, leading to the creation of the opposite of an asylum of indigenous refugees: a slaver's utopia, Texas.

⁵⁵ See the special issue dedicated to interpretations of the Monroe Doctrine and U.S.–Latin American relations, *Proceedings of the American Society of International Law at Its Eighth Annual Meeting Held at Washington, D. C., April 22–25, 1914* (Washington, D.C., 1914).

delegate to the conference, William Henry Trescot, explicitly rejected the term. "There can," he said, "no more be an American international law than there can be an English, a German, or a Prussian international law"; there was just "international law," whose "old and settled meaning" was defined "long before any of the now established American nations had an independent existence."⁵⁶ When U.S. statesmen did call for the Monroe Doctrine to be entered into the "admitted canon of international law," it was to confirm their regional authority and right to intervene, as Secretary of State James Olney did in 1895 in the case of a dispute between Venezuela and Great Britain.⁵⁷

Rather than seize on the growing rift between the United States and Latin America as a marker of hypocrisy or betrayal of the "American" idea, as many Latin American intellectuals did, the Chilean jurist Alejandro Alvarez in 1909 developed an almost Hegelian argument that the roots of twentieth-century multilateralism are to be found in Monroe's nineteenth-century unilateralism.⁵⁸ Alvarez believed the Monroe Doctrine to be evolving in two distinct but dialectally related realms: *politics*, where Washington's preponderant power allowed it to interpret the doctrine according to its own interests; and *law*, which, while initially dependent on U.S. unilateralism, would eventually transcend that dependence and become international jurisprudence:

On recognizing that solidarity of interests as to the continuance of their independence existed between the states of America, Monroe did not do more than serve as an echo of the sentiment that then predominated in all the republics. Therefore, whether the famous message of 1823 had been written or not, the principles contained in it would always have been sustained in the New World. In this sense, it may be said, and not without a certain amount of truth, that the Monroe Doctrine is neither *doctrine* nor of *Monroe*.

But that which constitutes its undeniable merit and makes it famous, is that such an exact synthetic statement of the destinies of America should have been given thus early in the period of emancipation, by a people whose increasing power would not permit the rest of the world to regard that statement as merely utopian. It was this that enabled America, from the very beginning of independent life, to give to its foreign policies a safe norm instead of the vague

⁵⁶ "Minority Report on Claims and Diplomatic Intervention from the Delegate from the United States," in International American Conference, *Reports and Recommendations Concerning a Uniform Code of International Law*, 51st Cong., 1st Sess., Sen. Ex. Doc. 183 (Washington, D.C., 1890), 26, in *Reports and Recommendations, Together with the Messages of the President and the Letters of the Secretary of State Transmitting the Same to Congress* (Washington, 1890); *Reports of Committees and Discussions Thereon*, vol. 2: *Patents and Trade-Marks; Extradition of Criminals; International American Monetary Union; International American Bank; International Law; Arbitration; Miscellaneous Business of the Conference* (Washington, D.C., 1890), 1079.

⁵⁷ Walter LaFeber, *The New Empire: An Interpretation of American Expansion, 1860–1898* (1963; repr., Ithaca, N.Y., 1998), 242–283. Likewise, Argentine minister of foreign relations Luis María Drago's 1902 citation of the doctrine to protest European interventions to collect debt did become international law, albeit with U.S. reservations. The "Drago Doctrine" was based largely on the earlier work of Drago's colleague Carlos Calvo, as elaborated in his *Derecho internacional teórico y práctico de Europa y América* (Paris, 1868); see Arthur P. Whitaker, *The Western Hemisphere Idea: Its Rise and Decline* (Ithaca, N.Y., 1954), 86–107.

⁵⁸ For discussions of how U.S. expansion generated among Latin American intellectuals a more oppositional notion of "America," a "Latin" America contrasted against a "Saxon" one, see Greg Grandin, "Your Americanism and Mine: Americanism and Anti-Americanism in the Americas," *American Historical Review* 111, no. 4 (October 2006): 1042–1066.

ideas then existent on these subjects. In this sense the Monroe Doctrine is *doctrine* and is of *Monroe*.⁵⁹

The hard shell of U.S. unilateralism, Alvarez thought, had served its historical purpose and was now opening to reveal the ideal of multilateralism, which had, by the early twentieth century, gestated from the “merely utopian” into a global necessity.

Prior to the Paris Peace Talks in 1919, Woodrow Wilson often admitted that norms and practices worked out within the Western Hemisphere—non-aggression, arbitration, territorial sovereignty, mutual defense, and the belief that common interests (as opposed to “competitions of power”) should form the basis of international agreement—were the source of what he hoped to accomplish at war’s end.⁶⁰ Latin America’s importance in generating Wilsonian liberal internationalism is likewise revealed by the incorporation of the spirit of the doctrine of *uti possidetis* into Article 10 of the League of Nations Covenant, which pledged nations to “respect and preserve as against external aggression the territorial integrity and existing political independence of all Members of the League.” And the League itself—Wilson’s famous fourteenth point—was directly modeled on the Pan American conferences that the United States had been participating in since 1889 and Spanish Americans had been convening since Bolívar’s 1826 Panama Congress. “Bolívar dreamt of a League of Nations,” Brazilian ambassador Manoel de Oliveira Lima said in 1920. “We call it a dream because the hour had not yet struck for the realization of such a lofty ideal—but when he attempted it, he did not relegate even Haiti to a black place.”⁶¹

The League’s final charter did include a specific reference to the Monroe Doctrine. Yet this had less to do with “universalizing” the doctrine than with trying to appease nationalists in the Senate, who were afraid of losing hemispheric privilege.⁶² Article 21, which affirmed the continued validity of “regional understandings like the Monroe doctrine,” did not win over opponents in the U.S. And it alienated supporters in Latin America, who read the article as investing the U.S. with “mandatory” powers within the Western Hemisphere, similar to those granted to Great Britain in the Middle East.⁶³ During the conference, many of the Latin American delegates had grown resentful of their marginalization. “I find that they have been left alone too much,” observed one State Department official, “and have been having Latin American Conferences among themselves,” an unwittingly apt description of dip-

(Boston, 1922), 1: 97; John H. Latané, “The League of Nations and the Monroe Doctrine,” in *The World’s Work: A History of Our Time*, vol. 37: November, 1918 to April, 1919 (New York, 1919), 441–444.

⁶³ This is also how London read Article 21, believing that it would invest Washington with responsibility to enforce debt collection and ensure property rights in Latin America on behalf of Europeans; see The National Archives, Kew, UK [hereafter TNA], “The Monroe Doctrine and the League of Nations,” Foreign Office [hereafter FO] 608/174. Mexico did not join the League until 1931, with the condition that “she has never recognized the regional understanding mentioned in Article 21”; Philip Marshall Brown, “Mexico and the Monroe Doctrine,” *American Journal of International Law* 26, no. 1 (1932): 117–121, here 117.

lomats and jurists representing a region of the world that indeed held one international meeting after another leading to the elaboration of American international law. They continued the conversation in subsequent Pan-American conferences, insisting that Washington concede what now had become the overriding demand of that law: an acknowledgment of the absolute right of sovereignty of all nations. In practical terms, this meant one thing: Washington—then bogged down in a series of occupations and counterinsurgencies in the Caribbean—would have to renounce the right of intervention, which it refused to do through the 1920s.

IF THE DISCUSSION OF THE MONROE DOCTRINE at the Paris Peace Conference signaled the limits of Washington's willingness to recognize territorial sovereignty as a universal norm—especially when it came to Latin America—the arrival of an uninvited guest, Alberto Pani from Mexico, highlighted its steadfast hostility to the region's emerging social-rights regime. Pani was sent by Mexican president Venustiano Carranza to observe the peace conference, even though Mexico, neutral during the war and thought to be pro-German, had not been invited to the talks. Relations between Mexico and the United States were bad because of the latter's heavy-handed interventions in the former's affairs, including a number of military incursions. They had grown worse with the ratification of Mexico's 1917 constitution. The evolution of U.S. property law is complex; by the early twentieth century, it had also incorporated the idea that public interest could mitigate inalienable rights. Yet many legal theorists who accepted this principle still viewed the Mexican constitution as heretical for explicitly stating that private property is a privilege conceded by the government. And many feared that the Mexican constitution, if legitimated, would lead other countries to a similar conclusion, thus threatening "certain hard to define but nevertheless well-internationally recognized vested individual rights."⁶⁴

The Carranza government in Paris, through its agent Pani and his team of lawyers, defended Mexico against the claims of the National Association for the Protection of American Rights in Mexico and the Oil Producers' Association, which were representing U.S. interests that had suffered destroyed or expropriated property during the revolution. These owner associations were applying pressure on Wilson to demand the revocation of the constitution and to take action that would lead to the overthrow of Carranza.⁶⁵ "We want Pan-Americanism and the Monroe Doctrine," said one hardliner, apparently attuned to the divergent meanings of rights and

⁶⁴ Raoul E. Desvernine, *Claims against Mexico: A Brief Study of the International Law Applicable to Claims of Citizens of the United States and Other Countries for Losses Sustained in Mexico during the Revolution of the Last Decade* (New York, 1921), 51–53; Ira Jewell Williams, "Confiscation of Private Property of Foreigners under Color of a Changed Constitution," *American Bar Association Journal* 5, no. 1 (1919): 152–162.

⁶⁵ Gilderhus, *Pan American Visions*, 146, 152–153. Back in Mexico, Carranza responded with a mix of concessions—postponing any serious attempt to implement Article 27 against U.S. oil and other economic interests—and rhetoric, strongly criticizing the inclusion of the Monroe Doctrine in the League's charter as a pretext for intervention and offering his own "Carranza Doctrine," which London's ambassador to Mexico, concerned with the loss of British property to the revolution, defined as a "desire to organize Latin-America in every way possible for opposition to American influence . . . a proposal to change diplomatic custom and practice entirely, declaring as its cardinal principle that no nation shall under any pretext for any reason interfere with the affairs of another"; TNA, FO 608/174, Folio 76: March 10, 1916.

sovereignty outlined above, “in its true meaning.”⁶⁶ But Carranza also went on the offensive. He instructed Pani to lobby the conference delegates to adopt the principle of absolute non-intervention and “the ideas of the new Mexican constitution” as international law.⁶⁷

That did not happen. But Mexico’s efforts do allow for an interpretation of the Paris Peace Conference outside the “Lenin vs. Wilson” rivalry, that is, as a conflict between Soviet Marxism and Wilsonian liberalism. By seizing U.S. land and oil but justifying the seizure not as a rejection of modern liberal notions of property rights but as their extension and fulfillment, Mexican revolutionaries in a way carried out a subtle and arguably more effective subversion of international law than did their Russian counterparts. Not only would other nations adopt the social rights enshrined in the Mexican constitution, but Article 27’s definition of property did migrate into Latin American law, serving as the central legal instrument of import-substitution developmentalism, of the kind associated with Raúl Prebisch and the UN’s Comisión Económica para América Latina.

The United States adamantly resisted Latin America’s sovereignty–social rights complex, until, facing strong regional opposition to its Caribbean-basin militarism and a shortfall of power caused by the contraction of the Great Depression, it didn’t. In retrospect, the extemporaneous agreement of Franklin Delano Roosevelt’s secretary of state, Cordell Hull, at the 1933 Montevideo Pan-American Conference to Latin American demands that Washington recognize the absolute sovereignty of American nations must be considered one of the most unambiguously successful foreign-policy initiatives the United States has ever undertaken. Facing militarists, fascists, and imperialists in Europe and Asia, Washington was able to use the goodwill generated by its renunciation of the right to intervention to regroup in Latin America.⁶⁸ Over time, what became known as the Good Neighbor Policy provided a blueprint for a revived globalism; it established in the Western Hemisphere what eventually became the four pillars of Washington’s postwar global diplomacy: an acceptance of national sovereignty; a way of managing that acceptance through a new array of multilateral institutions and agreements; the recognition of social rights, including the right of developing countries to regulate foreign investment and property (which gave Washington an important moral weapon in the looming Cold War); and a regional alliance system.⁶⁹

LATIN AMERICA’S CONTAINMENT OF THE United States’ intervention–individual rights complex was historically consequential, leading to the creation of a multilateral order that allowed Washington to accumulate unprecedented global power. But it was

⁶⁶ Gilderhus, *Pan American Visions*, 147.

⁶⁷ See “To Oppose Alien Rights in Mexico,” *New York Times*, January 23, 1919. A British diplomat summed up the mission of Pani and his “large staff” in Paris as to argue “(1) that no nation shall interfere with another country, even where property rights of its own citizens are concerned (2) That a Govt. by altering its constitution can legally take over any properties of which it has need”; TNA, FO 9479/127, Folio 163; February 24, 1919. The U.S. Senate responded with an investigation and report calling on Washington to intervene to protect U.S. property, including U.S.-owned oil fields. Merrill Rippey, *Oil and the Mexican Revolution* (Leiden, 1972), 157–158.

⁶⁸ Lloyd C. Gardner, *Economic Aspects of New Deal Diplomacy* (New York, 1964).

⁶⁹ See Grandin, *Empire’s Workshop*, 33–39, for a fuller discussion.

often begrudged. During his 1950 tour of Latin America, George Kennan, the man most closely associated with the policy more commonly understood as “containment,” that is, of the Soviet Union, described the taxes that U.S. oil companies paid to the Venezuelan government as “a sort of ransom to the theory of state sovereignty and the principle of non-intervention which we had consented to adopt.”⁷⁰ And in retrospect, it was short-lived. By the 1980s, with the ascendance of the New Right to governance in the U.S., President Ronald Reagan was again invoking the Monroe Doctrine, in the words of that hardliner at the Versailles Conference, in “its true meaning,” in its most interventionist form.⁷¹ And just as Latin America played a central role in the consolidation of multilateralism, the region would be where it was first rolled back.

The United States had “intervened” in Latin American affairs through the whole of the Cold War, but it did so in a way that did not undercut the diplomatic principles of multilateralism. The CIA’s successful 1954 Guatemalan coup and its botched 1961 Bay of Pigs invasion, for example, were covert and therefore violations of sovereignty. But they did not entail a direct legal challenge to the idea of sovereignty. In fact, these interventions confirmed the principle, formally, at least, since Washington sought and received the Organization of American States’ sanction to isolate Guatemala and Cuba diplomatically. The OAS likewise endorsed, with some dissent, Lyndon Baines Johnson’s 1965 invasion of the Dominican Republic.

But starting in the 1980s, Reagan’s actions in Central America and the Caribbean did rewrite the terms of law and diplomacy. The war against the Sandinistas in Nicaragua, for example, was largely meant to be secret. But in response to the 1986 International Court of Justice ruling that the United States must pay Nicaragua billions of dollars for mining its harbor and conducting an illegal war of aggression, Washington opted to withdraw from the court’s jurisdiction. Legal scholar Eric Posner argues that that was a “watershed moment” in the United States’ relationship with the international community, one that George W. Bush’s ambassador to the UN, John Bolton, cited as evidence for why the U.S. should not abide by other multilateral obligations.⁷²

The 1991 invasion of Panama was another turning point, described in 2009 by Thomas Pickering, U.S. ambassador to the United Nations at the time, as paving the way for 2003’s unilateral war in Iraq.⁷³ Like most military actions, this one, coming

Bolton, “Courting Danger,” *National Interest*, Winter 1998–1999, <http://nationalinterest.org/article/courting-danger-633>; see also Anthony D’Amato, “Modifying U.S. Acceptance of the Compulsory Jurisdiction of the World Court,” *American Journal of International Law* 79, no. 2 (April 1985): 385–405; and D’Amato, “Trashing Customary International Law,” *American Journal of International Law* 81, no. 1 (January 1987): 101–105. The 1983 invasion of Grenada was likewise an important step in expanding the scope of unilateralism. Throughout the Cold War, an ability to move back and forth between the OAS and the UN gave Washington room to maneuver regionally while still adhering to the principles of global multilateralism. But in 1983, confronted with an increasingly hostile OAS, Jeane Kirkpatrick, Reagan’s ambassador to the UN, opted for subdivision, citing treaty obligations to the minuscule Organization of Eastern Caribbean States to justify the landing of Marines in Grenada; Stuart Malawer, “Reagan’s Law and Foreign Policy, 1981–1987: The Reagan Corollary of International Law,” *Harvard International Law Journal* 29, no. 1 (1988): 85–109.

⁷³ *Foreign Policy*, December 18, 2009.

just over a month after the fall of the Berlin Wall, was justified by a hierarchy of rationales. But high on the list, and unique in its prominence, was the goal of installing democracy in Panama. It therefore had a transformative effect on international law, one that was immediately recognized by all Latin American nations, including close U.S. allies such as Augusto Pinochet's Chile.⁷⁴ The OAS, in an emergency session, opposed the invasion by a 20 to 1 vote. In response, Luigi Einaudi, the U.S. ambassador to the Organization of American States, gave a speech that explicitly reclaimed for the United States the right to intervene in the affairs of another country, not just defensively, but because it deemed the quality of its sovereignty unworthy of recognition. "Today, we are . . . living in historic times: a time when a great principle is spreading across the world like wildfire. That principle, as we all know, is the revolutionary idea that people, not governments, are sovereign."⁷⁵

Concurrent with this dilution of the ideal of territorial sovereignty was an attempt to disentwine social and political rights. In the decade prior to the invasion of Panama, Reagan embraced the rhetoric of human rights in order to reinvest U.S. military power with moral authority. Yet this embrace came with an important caveat: "All too often," wrote Richard Allen, the president's national security advisor, in 1981, "we assume that everyone means the same thing by human rights." When the United States talked about human rights, Allen stated, it meant only the defense of "life, liberty, and property" and not "economic and social rights." The expansion of human rights into the social realm, he went on, constituted a "dilution and distortion of the original and proper meaning of human rights."⁷⁶ That same year, Elliott Abrams, who soon would be appointed Reagan's assistant secretary of state for human rights, drafted an influential memo, often cited as key in Reagan's efforts to define the Cold War as a righteous fight: after announcing that "our struggle is for political liberty" and in defense of "human rights," Abrams nonetheless felt that the latter expression was too tainted by issues related to economic justice. He suggested a rebranding: "We should move away from 'human rights' as a term, and begin to speak of 'individual rights,' 'political rights' and 'civil liberties.' We can move on a name change at another time."⁷⁷

⁷⁴ "U.S. Denounced by Nations Touchy about Intervention," *New York Times*, December 21, 1989.

⁷⁵ Luigi Einaudi, "Remarks to the Organization of American States," December 22, 1989, reprinted in U.S. Department of State, *Panama: A Just Cause* (Washington, D.C., 1990). By "historic times," Einaudi was referring to the fall of the Berlin Wall, which he used to justify weakening of the idea of absolute sovereignty. The Mexican writer Carlos Fuentes drew a different lesson from that event, writing that U.S. politicians "refuse to let go of their 'sphere of influence'—Central America and the Caribbean—claiming the right to intervene in the internal affairs of a sovereign nation and dictate the terms of that nation's political life. In other words: the process of perestroika underway in Europe is not matched by an American perestroika"; in Alberto Novoa, "The Last Word: Comments on the US Invasion of Panama," *Revista Envío* 103 (February 1990), <http://www.envio.org.ni/articulo/2585>. Many legal theorists likewise disagreed with Einaudi's interpretation of history; see Alan Berman, "In Mitigation of Illegality: The U.S. Invasion of Panama," *Kentucky Law Journal* 79, no. 4 (1991): 735–797.

⁷⁶ Richard Allen, "For the Record," *Washington Post*, June 4, 1981.

⁷⁷ "Memo on Human Rights," in *Historic Documents of 1981* (Washington, D.C., 1982), 779–786, <http://library.cqpress.com/historicdocuments/hsdc81-0000110851>. For Abrams's authorship of this memo, which was circulated out of the office of Deputy Secretary of State William Clark and Under Secretary for Management Richard Kennedy after Reagan's first nomination for this position, Ernest W. Lefever, was rejected by the Senate, see Aryeh Neier, *Taking Liberties: Four Decades in the Struggle*

THERE IS A STRAY COMMENT IN Herbert Bolton's "Greater America" address in which he credits the Mexican Revolution with giving rise to "rights for the common man," a reference to its guarantees of health care, welfare, education, land, and collective bargaining. Bolton's tribute captured what he believed to be the historical direction of Greater America, toward a conceptualization of democracy as social democracy. "Mexico for Mexicans, rights for the common man, and education for the common people," he said, are "slogans which sound familiar to Anglo-Americans."⁷⁸ In the years that followed, New Deal domestic politics and diplomacy did align the United States as closely as it ever would be to Latin American conceptions of social citizenship and sovereignty. Subsequent history, however, beginning during the late Cold War and quickening afterward, has been marked not by convergence but by divergence, suggesting that Bolton's remarks should be read not as an illustration of a movement toward unity, as he meant them, but as an opening to thinking about the history of Greater America as an ideological contest, an ongoing rivalry to define its exceptionalism.

Greg Grandin is Professor of History at New York University and a member of the American Academy of Arts and Sciences. He is the author of a number of books, including *Blood of Guatemala: A History of Race and Nation* (Duke University Press, 2000), which won the Latin American Studies Association's Bryce Wood Award; and *Fordlandia: The Rise and Fall of Henry Ford's Forgotten Jungle City* (Metropolitan Books, 2009), which was a finalist for the Pulitzer Prize, the National Book Award, and the National Book Critics Circle Award. He is currently writing a book on Herman Melville and free and unfree labor in the Americas during the age of revolution.

Empire and Legal Universalisms in the Eighteenth Century

JENNIFER PITTS

RECENT WORK ON EMPIRE IN THE HISTORY of political thought has been much concerned with the connections between various forms of moral universalism and projects of conquest. This work, especially on the “mutually constitutive” relationship between liberalism and empire, has asked: What sorts of universalism have accompanied imperial expansions, whether to justify them or to reflect critically on them?¹ Is moral universalism inherently imperial? What was it about nineteenth-century liberalism, in particular, that made it so hospitable to imperial ambitions?² Liberalism has all too often had a parochializing effect on the European imagination, thanks in large part to a linear view of progress that figured European civilization as the vanguard or the telos of world history, as at once unique and a model for the rest of the world. Even as it came to understand itself in global terms, then, Europe “diminished its own ethical possibilities.”³ Paradoxically, scientific and scholarly attention to global phenomena in the nineteenth century was in part driven by, and can be said to have contributed to, European parochialism, as Europe came into an understanding of itself as an entity with global reach and global significance, both because of its outsized power and because of the apparent uniqueness of European progress in human history. This process is particularly striking in the field of inter-

I am deeply grateful to Clifford Ando, David Armitage, Richard Bourke, Andrew Fitzmaurice, Matthew Fitzpatrick, Jill Frank, Nancy Green, Bonnie Honig, Douglas Howland, Rosalind Morris, Sankar Muthu, Anthony Pagden, Kapil Raj, Wolfram Schmidgen, Richard Tuck, James Tully, Lisa Wedeen, and Linda Zerilli for their suggestions, and to the *AHR*’s thoughtful reviewers and editors. I also thank audiences at the University of Wisconsin–Milwaukee, the University of Sydney, the Ecole des hautes études en sciences sociales, Cambridge University, Northwestern University, and Washington University in St. Louis, where I presented earlier versions of this essay.

national law, which became an increasingly disciplinary, and self-consciously European, endeavor over the course of the nineteenth century, alongside the development of that parochial moral universalism.⁴

Until recently, the dominant narrative about the history and sources of international law has been one inherited from the nineteenth century. That story said that international law had its origins within Europe, above all between sovereign European states that viewed each other as free and equal.⁵ It saw a decisive moment in the Westphalia treaties, which, it said, above all set out to protect states' independence from intervention by outsiders.⁶ And, it concluded, this essentially European system gradually came to incorporate other states as they reached the appropriate "standard of civilization," or, as more recent language would have it, as they entered the state system or decolonized and became independent.⁷ That narrative largely ignored the global and imperial contexts and sources for international law—the profound preoccupation with imperial concerns by thinkers deemed foundational, such as Vitoria and Grotius; the influence of Roman legal concepts developed in the course of Roman imperial expansion; and the inter-imperial rivalries that contributed to so many of the decisive wars, treaties, and theories.⁸

Throughout the modern period, the law of nations and later international law

have been both distinctively European and also universalist in their aspirations.⁹ The project of creating an international order has long been commingled with that of European consolidation and informed by European exceptionalism, from Christendom's global project of conversion in mediæval and early modern Church doctrine, through eighteenth-century projects for perpetual peace, to contemporary theorizations of the European Union as a democratic model for a post-sovereign world.¹⁰ The Abbé de Saint-Pierre reported that he had initially conceived his project for perpetual peace as encompassing "all the Kingdoms of the World" but had concluded that "even though in following Ages most of the Sovereigns of Asia and Africa might desire to be receiv'd into the Union, yet this Prospect would seem so remote and so full of Difficulties, that it would cast an Air of Impossibility upon the whole Project." He projected that a Christian European union "would soon become the Arbiter of the Sovereigns" of "the Indies," who would place their faith in it when they recognized that its only interest was in mutually beneficial commerce and not in conquest.¹¹ Projects for European union have in this way long seen it as having a vocation both as a political archetype for the rest of the world and as an authoritative arbiter of the political legitimacy of extra-European states: a model for the future and a judge for the present. As Greg Grandin's essay in this forum suggests, the United States' own project of "exemplary exceptionalism" within its hemisphere in some ways mirrored the European project, though it was fraught with unusually "contentious ideological intimacy," as Latin American states countered U.S. ideals of republicanism, liberalism, sovereignty, and rights with their own competing accounts of the same ideals.

European thought about the law governing interactions among states and peoples—*ius gentium*, law of nations, international law—has thus always existed in a space of tension between the European and the universal. If the dominant register in which the tension was expressed shifted from the religious to the civilizational, these shared a basic narrative structure: Europe was, for the moment, uniquely in

⁹ Europeans, as Martti Koskenniemi has noted, have never "thought of Europe in merely local terms, but generalized it into a representative of the universal": Koskenniemi, "International Law in Europe: Between Tradition and Renewal," *European Journal of International Law* 16, no. 1 (2005): 113–124. On the "messianic teleology" of "much Western legal cosmopolitanism," as well as for the provocative claim that the law of nations and international law cannot be seen as a continuous tradition, see also Koskenniemi, "International Law and *Raison d'état*: Rethinking the Prehistory of International Law," in Benedict Kingsbury and Benjamin Straumann, eds., *The Roman Foundations of the Law of Nations: Alberico Gentili and the Justice of Empire* (Oxford, 2010), 297–339, here 297; and Koskenniemi, "Legal Cosmopolitanism: Tom Franck's Messianic World," *NYU Journal of International Law and Politics* 35, no. 2 (2003): 471–486.

¹⁰ Immanuel Kant's federation of republics is described in universal language but is often read as a project of European federation; Kant, "Toward Perpetual Peace," in Kant, *Practical Philosophy*, ed. Mary J. Gregor (Cambridge, 1999), 311–351 (describing a "federalism that should gradually extend over all states," 327). See also James Tully, "The Kantian Idea of Europe: Critical and Cosmopolitan Perspectives," in Anthony Pagden, ed., *The Idea of Europe: From Antiquity to the European Union* (Cambridge, 2002), 331–358. Max Pensky (Cambridge, Mass., 2001), 88; see also John P. McCormick, *Weber, Habermas, and Transformations of the European State: Constitutional, Social and Supranational Democracy* (Cambridge, 2007), 204.

¹¹ The work was published as he was serving as a French secretary during the Utrecht treaty negotiations. Charles-Irénée Castel de Saint-Pierre, *Projet pour rendre la paix perpétuelle en Europe* (Utrecht, 1713), xix–xxi; translation from *A Project for Settling an Everlasting Peace in Europe* (London, [1714]), viii–ix.

possession of universal moral and political truths. The discourses also coexisted and mingled: medieval canon law deploys tropes of civilizing as well as converting infidel barbarians or wild men, and international lawyers continued to insist into the early twentieth century on the distinctively Christian character of international law.¹² To be sure, throughout this long and complex history, critical and dissenting voices have called into question these narratives and imperatives, even during periods, such as the later nineteenth century, of remarkably deep agreement about Europe's distinctive moral and political authority, as Andrew Fitzmaurice's essay in this forum attests.

The late eighteenth century saw an unusual, perhaps unmatched, flourishing of critical approaches to the question of the scope of the European law of nations and the nature of legal relations between European and non-European states. The period stands out in the history of the law of nations as one of striking openness on the part of Europeans to the possibility of shared legal frameworks and mutual obligations between Christians and non-Christians, Europeans and non-Europeans. Legal and political thinkers exemplary of these critical approaches—Edmund Burke, the French orientalist Abraham Hyacinthe Anquetil-Duperron, and the great Admiralty Court judge William Scott, Lord Stowell—articulated a more inclusive and pluralistic understanding of the global legal order than the view that came to prevail. None was an opponent of imperial rule as such, but they envisaged a global legal order, or network of orders, as a constraint on the exercise and abuse of European states' power. They wrote during the decades framed by the Seven Years' War and the Napoleonic Wars: a period when European states were constructing imperial constitutions of global reach, and when states as well as other actors such as trading companies and pirates competed to defend their power and interests in the terms of newly extensive legal regimes.¹³ The perhaps obvious point should be stressed that the thinkers considered here were Europeans speaking to European audiences, often with limited knowledge of the extra-European societies, languages, and legal traditions they discussed.¹⁴ They drew, likewise, on the ambiguous status of the law of nations as putatively universal despite its heavily European history. But they did so with the aim of chastening European power through legal constraints and obliga-

¹² Robert Phillimore wrote that although international law is binding among "heathen" states, "Unquestionably, however, the obligations of International Law attach with greater precision, distinctness, and accuracy to Christian States in their commerce with each other"; Phillimore, *Commentaries upon International Law*, 4 vols. (London, 1871–1874), 1: 24. See also Oppenheim, *International Law*; Robert A. Williams, *The American Indian in Western Legal Thought: The Discourses of Conquest* (Oxford, 1990), 107; James Muldoon, *Popes, Lawyers, and Infidels: The Church and the Non-Christian World, 1250–1550* (Philadelphia, 1979), 19–22, 119–121.

tions, including asymmetrical constraints that Europeans should recognize as binding themselves even when they could not presume to use them to bind others.

IN ROMAN LAW, THE *IUS GENTIUM* REFERRED to the law common to all peoples; it supplied the basis for legal decisions involving non-Romans living under Roman government, in contrast to civil law, which applied exclusively to Roman citizens. The *ius gentium* was considered to be based on natural reason and so to be largely in accordance with natural law, with certain key exceptions such as slavery, which was forbidden by natural law but permitted by most societies and so by the *ius gentium*. Vitoria argued that the *ius gentium* should also be taken to be the *ius inter gentes*, the law governing relations among peoples. The term “international law” was one of Jeremy Bentham’s few successful neologisms, presented in his *Introduction to the Principles of Morals and Legislation* (1789) as a translation of *droit entre les gens*, which he saw as more apt than the ambiguous *droit des gens* or *ius gentium*.¹⁵

Despite the universalist connotations of a *ius gentium* based on natural law, medieval legal thought and practice had been structured by a notion of a unified *Christianitas* predicated on hostility to infidels, even within the more inclusive strand of thought that defended the legitimacy of infidels’ property and political power (two key aspects of *dominium*), following Thomas Aquinas and the canonist Sinibaldo Fieschi (Pope Innocent IV from 1243 to 1254).¹⁶ While Renaissance humanists styled Europe more politically as a *respublica christiana*, the figure of the infidel continued to serve as a unifying opponent for many thinkers in humanist as well as more strictly theological traditions in the sixteenth and seventeenth centuries.¹⁷ The Protestant jurist Alberico Gentili, though he is generally thought to have rebuffed theological authority with his famous “*Silete theologi in munere alieno*” (“Theologians, mind your own business”), held that alliances with infidels are wrong precisely because they are

infidels.¹⁸ Despite deep disagreements among medieval and early modern thinkers about Christianity's implications for law and temporal power, and about the degree to which Christendom could or should be internally united, there remained a widely shared commitment to a deep division in legal status between Christendom and its enemies.

That gulf in legal status remained plausible, if increasingly contested, into the early eighteenth century. Gottfried Wilhelm Leibniz, for instance, combined a project of "universal jurisprudence" accessible to all minds with the project of unifying the *respublica christiana* against "the plague of Mohammedanism."¹⁹ Early-eighteenth-century treaties such as Utrecht (1713) continued to refer to the *respublica christiana*, even as this language was giving way to the language of European community.²⁰ At the same time, when the East India Company sought to defend its trade monopoly in the famous 1683 case *East India Company v. Sandys*, on the grounds that only an explicit royal charter could override the religious prohibition on commercial or military alliances with infidels, a lawyer for the independent English merchants fighting the monopoly rejected "this notion of Christians not to have commerce with infidels" as "a conceit absurd, monkish, fantastical and fanatical."²¹ In 1758, the influential Swiss jurist Emer de Vattel thought that he hardly needed to address the topic at all: a treatment of treaties with infidels, he wrote, "would be superfluous in our age. The law of nature alone regulates the treaties of nations: the difference of religion is a thing absolutely foreign to them. Different people treat with each other in quality of men, and not under the character of Christians, or of Musulmans."²² And while the older Christian-infidel fault line had retreated in legal

Béla Kapossy and Richard Whatmore, trans. Thomas Nugent (London, 1797; repr., Indianapolis, 2008).

thought, the stark division between barbaric and civilized nations or “races” so characteristic of the nineteenth century had not yet become entrenched.

During the nineteenth century, legal and political thinkers increasingly argued that although international law was exclusively European in origin, their law was destined, thanks to Europe’s superior civilizational status, to be authoritative for all, and Europeans had the right to dictate the terms of legal interaction to backward, barbarous, or savage peoples.²³ The tension between the European and the universal in international law, that is, came to be resolved through a view of global legality as a European order writ large. The nineteenth-century position has tended to go by the name of positivism, among both its proponents and later historians, and to be contrasted with an earlier natural law universalism.²⁴ Some claimed that unlike natural lawyers, they were not engaged in a normative project at all. They were simply interested in recording and codifying actual state practice.²⁵ But their theories belied their self-description in at least two ways. First, they were not just recording state practices but selecting the practices they considered worthy as sources of international law (and doing so on the basis of a set of poorly defended cultural and normative assumptions). Thus treaties between European powers but not between Europeans and Asian powers were relevant sources; the others were explained away, for instance, as not properly reciprocal, and so not, strictly speaking, part of international legal practice. Second, they did have universalist aspirations: they saw the European order they were codifying as the basis for a future international order that would gradually be extended to or imposed on the rest of the world, in large part through colonial conquest.

Others, including the influential Victorian jurist Sir Travers Twiss, saw the law of nature as among the sources of the law of nations but further specified that the “Law of Nations, as distinguished from the Law of Nature, is a rule of international conduct [based on the practice of civilized states] . . . the observance of which is obligatory upon every Nation that claims to participate in the common advantages of . . . civilisation.”²⁶ Although Twiss acknowledged the long history of diplomatic agreements between Christian European powers and others, especially the Ottoman Empire, he regarded these as a separate legal universe from the European, civilized,

²³ See T. J. Lawrence’s formulation: “The area within which the law of nations operates is supposed to coincide with the area of civilization. To be received within it is to obtain a kind of international testimonial of good conduct and respectability; and when a state hitherto accounted barbarous desires admission, the leading powers settle the case upon its merits. In addition to the attainment of a certain, or rather an uncertain, amount of civilization, a state must have possession of a fixed territory before it can obtain the privilege of admission into the family of nations”; Lawrence, *The Principles of International Law* (London, 1895), 59. See also William Edward Hall, *A Treatise on International Law*, 5th ed., ed. J. B. Atlay (Oxford, 1904), 40; Henry Wheaton, *History of the Law of Nations in Europe and America: From the Earliest Times to the Treaty of Washington, 1842* (New York, 1845), 555.

See also Andrew Fitzmaurice, “The Resilience of Natural Law in the Writings of Sir Travers Twiss,” in Ian Hall and Lisa Hill, eds., *British International Thinkers from Hobbes to Namier* (New York, 2009), 37–60; Fitzmaurice, “Liberalism and Empire in Nineteenth-Century International Law,” this issue; Sylvest, “‘Our Passion for Legality.’”

and presumptively universal law of nations. He argued that in contrast to the complex customary law underpinning “the system of Public Law, which has grown up amongst the Nations of Christendom,” “between Islam and Christendom, there is no common platform, even of the simplest kind, of consuetudinary law”; but he added that capitulations could be considered “the entire body of grants and treaties, which constitute a kind of international code between Christendom and Islam [which] has been the work of ten centuries to complete.”²⁷ As Andrew Fitzmaurice details in his essay in this forum, Twiss himself was prominently involved as an unofficial British delegate during the Berlin Conference of 1884–1885, which carved up Africa among the European powers, as well as in providing legal justification for the Belgian king Leopold II’s conquest of the Congo and indeed writing a draft constitution for the Congo Free State. His “projection of his vision of European sovereignty upon Africa” and his view that the community of the law of nations did not include Africans or East Asian states, though it met with criticism from fellow members of the Institut du droit international such as Charles Salomon and Gaston Jèze, may be said to have prevailed.

Even before the most recent wave of scholarship on the intersection of law and empire, a powerful revision of the standard narrative emerged in the 1950s and 1960s in the work of the international lawyer Charles Henry Alexandrowicz. Alexandrowicz’s work had both historiographic and normative aims. He meant to set the historical record straight, from what he saw as its long Victorian detour, to show that international law both in theory and in practice had been far more inclusive than it was to become in the nineteenth century. And he sought to recover that greater inclusiveness as a means of combating “European egocentricity” in international law, with all its pernicious effects in the postcolonial period.²⁸ Alexandrowicz argued that for much of the sixteenth through the eighteenth centuries, Asian states or rulers were routinely respected as fully sovereign; treaties with them were equal and binding, and these treaties were regarded by European lawyers and scholars as evidence of their participation in the law of nations. For instance, the Maratha state, a formidable military power in northwest India, was, he held, “clearly considered a legal entity in the . . . law of nations and there is no doubt as to its membership in the Family of Nations and its capacity of dealing with other members on a footing of equality and of concluding treaties in the meaning of international law.”²⁹ Alexan-

²⁷ Twiss, *The Law of Nations Considered as Independent Political Communities*, 464–465. See also his report to the Institut de droit international arguing that it was not yet clear whether “Orientals are capable . . . to the same degree as Western peoples, of admitting a moral basis of reciprocity with other peoples who do not accept the same religious sanctions”; “Rapport de sir Travers Twiss,” *Annuaire de l’Institut de droit international* (Oxford Session of 1881) 5 (1882): 133; and see Pitts, “Boundaries of Victorian International Law,” 71–72.

²⁸ C. H. Alexandrowicz, *An Introduction to the History of the Law of Nations in the East Indies (16th, 17th and 18th Centuries)* (Oxford, 1967), 2.

²⁹ He added that this picture could “be considered valid for the whole period of the 16th, 17th, and 18th centuries”; C. H. Alexandrowicz, “The Afro-Asian World and the Law of Nations (Historical Aspects),” *Hague Recueil* 123, no. 1 (1968): 127–128. For a recent revival of the view that “In classical writings [e.g., Grotius, Wolff, Vattel] there is nothing to suggest that the law of nations applied differently to different nations,” see Alexander Orakhelashvili, “The Idea of European International Law,” *European Journal of International Law* 17, no. 2 (2006): 315–347. Orakhelashvili persuasively explores nineteenth-century international law’s support for an “ideology of colonialism,” but following Alexandrowicz he overstates the degree to which the law of nations was considered universal prior to the nineteenth century.

drowicz argued that this naturalist universalism was displaced by positivism beginning in the late eighteenth century. He saw authors such as D. H. L. von Ompteda and J. J. von Moser as intermediate figures, with Ompteda seeking to defend the law of nature in a kind of rearguard action against the encroaching positivist ideology, and Moser a representative of the latter whose work nonetheless shows that “The concept of universalism was . . . capable of holding a qualified position of its own in spite of adverse doctrinal developments.”³⁰

As compelling and as dauntingly erudite as Alexandrowicz’s argument is, it seems flawed in several respects. First, his distinction between natural law universalism and positivism is overdrawn, for theories of the law of nations have always contained elements of both: earlier so-called natural law theories relied on the practice of nations for the content of that law, and they often specified that they meant “civilized” nations. And even the self-declared positivists of the nineteenth century who eschewed natural law held on to claims of prospective universal validity for their positive law of nations. Second, he overstated the consensus in seventeenth- and eighteenth-century Europe that Asian states were fellow members of an international legal community, for there was much greater doubt and disagreement on this question than his claims about natural law universalism suggest.

What, then, did Europeans think were the sources of the law of nations in this period between the waning of the Christian legal community and the rise of a so-called positivism based exclusively on European practice? How could one determine its content? Why, and for whom, was it authoritative, given that there is no world state? Was it indeed universal? The major sources for the law of nations, according to writers of eighteenth-century legal textbooks, were the great legal treatises (by Grotius, Wolff, Pufendorf, Burlamaqui, Vattel) that had introduced Roman law in place of theology and canon law as a primary source of legal principles.³¹ Other key sources were treaty collections and diplomatic memoirs and correspondence, which were thought to provide essential contextual information about the meaning and purposes of the treaties. Treaty-collecting was a growth industry in this period, particularly after the heroic compilation published by Jean Dumont in the 1720s.³²

The great treatises of the law of nations in this period tend to be written in resolutely universalist language. Christian Wolff described his conception of the *civitas*

³⁰ C. H. Alexandrowicz, “Doctrinal Aspects of the Universality of the Law of Nations,” *British Year Book of International Law* 37 (1961): 506–515; and see Alexandrowicz, *An Introduction to the History of the Law of Nations in the East Indies*, 8–11, on the shift from naturalism to positivism. Ompteda wrote *Literatur des gesammten sowohl natürlichen als positiven Völkerrechts* (Regensburg, 1785); Moser wrote *Beiträge zu dem neuesten europäischen Völkerrecht in Kriegszeiten* (Tübingen, 1779–1781).

³¹ Benjamin Straumann, “The *Corpus iuris* as a Source of Law between Sovereigns in Alberico Gentili’s Thought,” in Kingsbury and Straumann, *The Roman Foundations of the Law of Nations*, 101–123; and Straumann, “‘Ancient Caesarian Lawyers’ in a State of Nature: Roman Tradition and Natural Rights in Hugo Grotius’s *De iure praedae*,” *Political Theory* 34, no. 3 (2006): 328–350.

³² See, for instance, Charles François Lefèvre de La Maillardière, *Précis du droit des gens, de la guerre, de la paix, et des ambassades* (Paris, 1775), x (where La Maillardière calls himself the “bee gathering the purified sugar” from Grotius, Vattel, Barbeyrac, Pufendorf, Burlamaqui, and others); also Pierre Joseph Neyron, *Principes du droit des gens européen conventionnel et coutumier* (Brunswick, 1783), which cites, as sources of the “droit des gens européens,” treaties, treaty collections, memoirs and negotiations, systems of this law, and political journals. For treaty collections he cites Dumont’s *Corps universel diplomatique du droit des gens* (Amsterdam, 1726–1731), as well as “les Capitulaires des Francs rassemblés par Balluze, Muratori, Du Chesne, Freher, Leibnitz pour les anciens Traités. Outre cela Rymer pour l’Angleterre, Leonard pour la France, Bertodano pour l’Espagne, Faber & Lungi pour L’Allemagne.”

maxima as encompassing “all nations,” and he held that because states are equal, none has the right to impose its own interpretation of natural law on another, so that while all nations have duties of mutual assistance to one another, states cannot compel “barbarous nations” to accept their assistance. His sinophilism, with its suggestion that “pagans and atheists could be just as moral in their daily lives as practicing Christians,” led to his expulsion from his post at the University of Halle. (Characteristically, Twiss would take Wolff’s *civitas maxima* to refer specifically, though “somewhat indistinctly,” to European nations, that is, to “an ‘Inner Circle’ of the more civilized nations.”)³³ Vattel, likewise, wrote of “the bonds of that universal society which nature has established among” all nations. He looked forward to the time when the principles of the law of nations would be adopted as state practice, and “the world would have the appearance of a large republic; men would live everywhere like brothers, and each individual be a citizen of the universe.”³⁴ And as we have seen, in keeping with the more general view by this time, he insisted that a nation’s religion was irrelevant to its legal standing: “the obligation of performing the offices of humanity . . . plainly appears to be solely founded on the nature of man. Wherefore no nation can refuse them to another, under pretence of its professing a different religion: to be entitled to them, it is sufficient that the claimant is our fellow-creature.”³⁵ Still, given the emphatic universalism of Wolff and Vattel’s language, there is remarkably little in their treatises to suggest that they seriously considered the place of treaty relations or legal practices beyond Europe as germane to the emerging doctrine of the law of nations. Like Wolff’s, Vattel’s language tends to be highly abstract, and his examples are drawn primarily from dealings among Europeans.³⁶

Beyond his claim that difference of religion has no bearing on legal obligations, Vattel wrote little about how the law of nations might bind Europeans in their dealings with powers outside Europe. He did recognize the application of the law of nations outside Europe in his assertion of the universality of respect for ambassa-

³³ Christian Wolff, *Jus gentium methodo scientifica pertractatum*, trans. Joseph H. Drake, 2 vols. (1764; repr., Oxford, 1934), 2: §§157–158. Wolff also held the practices of civilized states to be authoritative for less cultured nations (even if not to be imposed by force): “it is plain . . . that what has been approved by the more civilized nations is the law of nations”; *ibid.*, Prolegomena, 2: §§20–22. Donald F. Lach, “The Sinophilism of Christian Wolff (1679–1754),” *Journal of the History of Ideas* 14, no. 4 (1953): 561–574, here 564. Twiss, *The Law of Nations Considered as Independent Political Communities*, xxvi.

³⁴ Vattel, *The Law of Nations*, bk. 2, §16. On the universality of natural law, see also Vattel’s 1742 essay “Dissertation on This Question: Can Natural Law Bring Society to Perfection without the Assistance of Political Laws?” trans. T. J. Hochstrasser, *ibid.*, 773–781.

³⁵ Vattel, *The Law of Nations*, bk. 2, §15 (though note that Vattel’s example of this principle is the willingness of Pope Benedict XIV to protect Dutch ships from Algerine corsairs).

³⁶ In addition to Wolff and Vattel, see, e.g., Richard Zouche, *An Exposition of Feacial Law and Procedure, or of Law between Nations, and Questions concerning the Same*, trans. J. L. Brierly (Washington, D.C., 1911), pt. 1, §1.1: “That which natural reason has established among all men is respected by all alike, and is called the Law of Nations, as being a law which all nations recognize”; it includes both “the common element in the law which the peoples of single nations use among themselves” and the law observed between nations, or “*jus inter gentes*.” See also J. G. Heineccius, *A Methodical System of Universal Law; or, The Laws of Nature and Nations*, trans. George Turnbull, ed. Thomas Ahnert and Peter Schröder (1741; repr., Indianapolis, 2008), which asserts a universal law of nations based on the law of nature but says almost nothing about contemporary non-European nations (there is a brief mention of systems of barter among “barbarous countries” in “Asia, Africa, and America”; bk. 1, chap. 13, §337).

dors. He saw the inviolability of ambassadors as a principle “confirmed by the uniform practice and general consent of mankind,” pointing to observance of this rule “in Mexico . . . even among the savage tribes of North America . . . [and] in China”; he attributes violations of the rule by “the Turks” as “rather imputable to the ferocity of particular princes than to the principles of the nation at large.”³⁷ Likewise, his condemnation of the execution of the Incan emperor Atahualpa gestured at the global scope of the law of nations: “The Spaniards violated all rules, when they set themselves up as judges of the Inca Atahualpa. If that prince had violated the law of nations with respect to them, they would have had a right to punish him. But they accused him of having put some of his subjects to death, of having had several wives, &c.—things, for which he was not at all accountable to them; and, to fill up the measure of their extravagant injustice, they condemned him by the laws of Spain.”³⁸ Such claims arguably gesture at the sort of view developed by Burke and Anquetil, but Vattel devotes little attention to such extra-European encounters in comparison to either (or to the authors of nineteenth-century treatises of international law). As a Swiss subject of the Prussian Empire, he was perhaps less drawn to the global features of European wars, including the Seven Years’ War, than was true of his French and British contemporaries.³⁹ On two key matters, he departed from Wolff’s position and took, influentially, a permissive stance toward European conduct: the right to wage total war on nations deemed to protect piracy, and the colonization of so-called vacant land.⁴⁰ (As Greg Grandin shows, this combination of postures—criminalizing certain adversaries and licensing territorial expansion on agricultural grounds, which Grandin calls the “intervention–individual rights complex”—was soon to become the characteristic posture of the new United States, where Vattel’s *Droit des gens* [1758] immediately became an authoritative standard.)⁴¹ In any case, notwithstanding their universalistic language, Wolff’s and Vattel’s works

³⁷ Vattel, *The Law of Nations*, bk. 4, §103.

³⁸ Ibid., bk. 2, §55: “One sovereign cannot make himself the judge of the conduct of another.” This passage is made much of in the anonymous essay “The Effects of Contempt for International Law,” in H. Stanley, ed., *The East and the West: Our Dealings with Our Neighbours* (London, 1865), 111–138.

³⁹ On the Swiss context for Vattel’s concerns, particularly about the vulnerability of small European states, see Theodore Christov, “Vattel’s Rousseau: *Jus Gentium* and the Natural Liberty of States,” in Quentin Skinner and Martin van Gelderen, eds., *Freedom and the Construction of Europe: New Perspectives on Philosophical, Religious, and Political Controversies* (Cambridge, forthcoming 2012); and Richard Whatmore, “‘Neither Masters nor Slaves’: Small States and Empire in the Long Eighteenth Century,” in Duncan Kelly, ed., *Lineages of Empire: The Historical Roots of British Imperial Thought* (Oxford, 2009), 53–81.

⁴⁰ Vattel argued for a collective right to punish any nation that “by its manners and by the maxims of its government” fosters piracy, including the Barbary states (bk. 2, §78). On Vattel’s permissiveness with regard to violence toward an “enemy of the human race” (bk. 3, §176); see Dan Edelstein, *The Terror of Natural Right: Republicanism, the Cult of Nature, and the French Revolution* (Chicago, 2009), 39. In contrast, the Dutch jurist Cornelius van Bynkershoek specified that the Barbary states were “entitled to the rights of independent states,” even if they sometimes violated treaties or acted “with less justice than others,” because perfect respect for treaties could not be expected of any state; Bynkershoek, *Quaestionum juris publici libri duo*, trans. Tenney Frank, 2 vols. (1737; repr., Oxford, 1930), 2: 99. On Vattel’s aggressively pro-colonizing stance and its departure from Wolff, see Vattel, *The Law of Nations*, bk. 1, §§209–210; and Tuck, *The Rights of War and Peace*, 195–197.

⁴¹ But note Vattel’s ambiguous stance on intervention: a strong standard of non-intervention that admitted numerous exceptions. On Vattel’s influence in the new United States, see David Armitage, *The Declaration of Independence: A Global History* (Cambridge, Mass., 2008), 38–41; Charles G. Fenwick, “The Authority of Vattel,” *American Political Science Review* 7, no. 3 (1913): 395–410.

cannot be taken as evidence of a consensus that the law of nations applied outside Europe.

Moreover, the fact that European states signed treaties with so many non-Christian powers in the course of their global expansion does not show, as Alexandrowicz claimed, that they saw these treaties as foundational to the law of nations in the way that treaties within Europe were thought to be. This is not, of course, because European states scrupulously abided by their treaties with each other and violated those with powers beyond Europe. Rather, treaties with the Turks and other Asian and North African powers were generally treated differently from those within Europe, as though they belonged to a distinct legal universe. Many of the treaty collections that were seen as the basis of the law of nations did not include treaties with any non-European states at all, and they often explicitly noted that they were restricting themselves to Europe. Treaties of the East India trading companies with Asian powers were usually collected separately. Some of the most influential collections, such as Dumont's, did include treaties with non-Christian powers, especially the Ottoman Empire and the Barbary states. Indeed, Dumont, in justifying the usefulness of his collection, used as his example a hypothetical English ambassador to the king of Morocco, who would want to know the full history of Morocco's treaty relations with France in order to secure the best arrangements for England.⁴² But even though Dumont's title was *The Universal Diplomatic Corpus of the Law of Nations*, his subtitle indicated that he was including only European treaties. It is this sort of equivocation, in which "universal" and "European" seem to be used as synonyms, that suggests that we must not assume that the language of "universal" and "mankind" in works such as Vattel's was literally intended to apply globally.

Turkey was, then as later, an ambiguous case. Some saw it as outside Europe; others noted that it was technically part of Europe but not fully a participant in the European *legal* community. G. F. von Martens, for instance, writing in the 1780s, preferred the term "*European* law of nations" to "law of *civilized* nations," but he added that "European" was not quite right, either, because "although, *in* Europe, the Turks have, in many respects, rejected the positive law of nations of which I here treat; and though, *out of* Europe, the United States of America have uniformly adopted it."⁴³ The treaty collections often include caveats about the differences between Ottoman or North African treaties and standard European ones. They state that such treaties were restricted to a few key issues, or that the procedure for enforcing them was distinct. A British collection of maritime treaties published in 1779, for instance, noted that treaties with Turkey had to be different from the others,

⁴² Although the English archives would include only England's own treaties, such a diplomat would also want knowledge of all the treaties between Morocco and France so as "to procure for his Master all the same honors, that this African Monarch renders to the King of France."

⁴³ Martens's Latin text was published in 1785, the French in 1789, from which this English translation by Cobbett was published in 1795. See G. F. de Martens, *Summary of the Law of Nations, Founded on the Treaties and Customs of the Modern Nations of Europe: With a List of the Principal Treaties*, trans. William Cobbett (Philadelphia, 1795), 5. See also Karl-Heinz Ziegler, "The Peace Treaties of the Ottoman Empire with European Christian Powers," in Randall Lesaffer, ed., *Peace Treaties and International Law in European History: From the Late Middle Ages to World War One* (Cambridge, 2004), 338–364; and Guido Komatsu, "Die Türkei und das europäische Staatensystem im 16. Jahrhundert: Untersuchungen zu Theorie und Praxis des neuzeitlichen Völkerrechts," in Christine Roll, ed., *Recht und Reich im Zeitalter der Reformation: Festschrift für Horst Rabe* (Frankfurt am Main, 1996), 121–144.

because the Turks were “unacquainted with the Treaties made by us with other Nations in Europe,” and so the usual assumptions and procedures could not be followed.⁴⁴

Similarly, diplomatic memoirs regularly insisted that the Turks were not fully acquainted with the European law of nations, or that they refused to recognize it, and so were not properly part of the emerging interstate legal system. The English emissary Paul Rycaut argued in 1668 that “though the *Turks* make these outward demonstrations of all due reverence and religious care to preserve the persons of Ambassadors sacred and free from violence,” it was clear from their treatment of ambassadors during wars that “they have no esteem of the Law of Nations,” and it was a *principle* with them to violate their treaties with unbelievers whenever doing so would contribute to the expansion of their empire or the propagation of their faith.⁴⁵ (This was one of the claims that Anquetil was to set out to disprove.) The English diplomat Sir James Porter likewise wrote a century later that “the Turks have properly no idea of the law of nations.”⁴⁶ Both Rycaut and Porter were considered unusually sympathetic observers of the Ottomans, and Porter, in particular, insisted that the Ottoman regime was law-governed and not an oriental despotism. But he held nonetheless that the law of nations did not apply in Turkey. Clearly, many Europeans in the seventeenth and eighteenth centuries, despite the fact that their states and trading companies were signing treaties with Asian and Muslim powers, believed these treaties to exist in a different legal space from that of the European treaties they saw as the basis for a systematic law of nations.

EIGHTEENTH-CENTURY CONCEPTIONS OF THE law of nations were, then, not as inclusive of Asian powers as Alexandrowicz claimed. But the contrast he drew between an earlier legal universalism and the later “European egocentrism” gets at something both historically and normatively important.⁴⁷ The notion that the law of nations was *not* exclusively European but was based on reciprocal, binding legal arrangements among a host of diverse states served in the eighteenth century as a powerful basis for criticism of European imperial conduct and the cultural presumptions that underlay it. This critical posture was not, perhaps, the dominant view, but its exponents could, and did, draw on both diplomatic practice and the most influential legal thought of the day to make their case; and their arguments had a resonance in broader public debates that they would not have in the following century.

We might divide these critical approaches, somewhat schematically, into two strands. The first, which can be found in especially well-developed form in the work of Burke and Anquetil, insisted that the law of nations applied broadly to states and

⁴⁴ See *A Complete Collection of All the Marine Treaties Subsisting between Great-Britain and France, Spain, Portugal, Austria, Russia, . . . &c.: Commencing in the Year 1546, and Including the Definitive Treaty of 1763* (London, 1779), lv.

⁴⁵ Paul Rycaut, *The Present State of the Ottoman Empire* (London, 1668), 161; the book was quickly and widely translated and widely cited through the eighteenth century.

societies outside as well as within Europe.⁴⁸ This was in part because it was based, in their view, on the law of nature, which was by definition universal. It was also due to Europeans' longstanding treaty relations with various Asian and African powers in particular, treaties that they thought should be understood to be among the sources of the law of nations. They argued that Europeans' contempt for international law had been a major cause of European injustices abroad, as well as of justified resistance on the part of their adversaries or victims outside Europe.⁴⁹ Although not without its own dangers, this strand of legal inclusion could be a powerful tool with which to criticize the imperial conduct of European states.

The second strand held that while there *was* a distinctively European legal enterprise known as the European law of nations, non-European states had their own recognizable legal systems that could be engaged by Europeans. This view was powerfully stated beginning in the 1790s by the influential Admiralty Court judge William Scott, later Lord Stowell, in a series of opinions around maritime controversies involving subjects of the Ottoman Empire and the Barbary states. The key difference between these approaches, then, is that while Burke's and Anquetil's approach stressed the broad scope of the law of nations, Scott stressed the possibility of communication among different legal systems. This disparity was one of emphasis rather than substantive disagreement, for Burke and Anquetil certainly recognized the distinctiveness of what was coming to be called European public law. Burke developed the idea of Europe as a distinct juridical unit in justification of British intervention in revolutionary France, justification that he had earlier sought and failed to find in Vattel.⁵⁰ Crucially, however, he did not posit this distinct corporate entity as the nucleus of the law of nations *as such*, as would the nineteenth-century treatises.

Burke and Anquetil argued that imperial depredations had been made possible by the European powers' contempt for the legal standing of Asian states, and they used similar strategies for making the case that the law of nations was as strictly binding on Europeans beyond as within Europe. Unlike the later civilizing international lawyers, these thinkers tended to direct their critique inward rather than outward: they were interested mainly in criticizing European abuses rather than the

⁴⁸ On Anquetil, see Raymond Schwab, *Vie d'Anquetil-Duperron, suivi des Usages civils et religieux des Parses* (Paris, 1934); Guido Abbattista, "Introduzione," in Abraham Hyacinthe Anquetil-Duperron, *Considérations philosophiques, historiques et géographiques sur les deux mondes (1780–1804)*, ed. Abbattista (Pisa, 1993); Siep Stuurman, "Cosmopolitan Egalitarianism in the Enlightenment: Anquetil Duperron on India and America," *Journal of the History of Ideas* 68, no. 2 (2007): 255–278; and Frederick Whelan, "Oriental Despotism: Anquetil-Duperron's Response to Montesquieu," *History of Political Thought* 22, no. 4 (2001): 619–647.

⁴⁹ For two unusual nineteenth-century echoes of this argument by non-jurists, see "The Effects of Contempt for International Law" (fn. 38 above) and F. W. Newman, "Indian Annexations: British Treatment of Native Princes," *Westminster Review*, n.s., 23 (1863): 115–157. In his essay in this forum, Andrew Fitzmaurice discusses the minority of nineteenth-century jurists who carried on what they saw as a tradition of legal universalism running back to Vitoria, one recognizing, as Gaston Jèze put it, that "the law of nations does not admit any distinction between barbarians and the so-called civilized"; Jèze, *Etude théorique et pratique sur l'occupation comme mode d'acquérir les territoires en droit international* (Paris, 1896).

⁵⁰ On the radically new standard for intervention in France based on Roman private law remedies that Burke developed in his 1796 *Letters on a Regicide Peace*, after finding Vattel's more restricted theory of intervention unsuited to his purposes, see *The Writings and Speeches of Edmund Burke*, gen. ed. Paul Langford, 9 vols. (Oxford, 1981–1997) [hereafter *WSEB*], 9: 248–251; and Iain Hampsher-Monk, "Edmund Burke's Changing Justification for Intervention," *Historical Journal* 48, no. 1 (2005): 65–100, here 97–99.

inadequacies of non-Europeans or non-Christians. They turned to the language of law primarily to chasten European power rather than to legitimate it. They shared an attention to the limits of European knowledge and European authority, a sense of humility and respect in the face of complex civilizations of which Europeans had only the most superficial knowledge, and, especially in Anquetil's case, a belief that Europeans had much to learn from these societies, which, he said, they were in the habit of seeing merely as potential markets or as curiosities rather than as true interlocutors about politics and morals. This posture of auto-critique in the face of increasing European power and the triumphalism that accompanied it was a characteristic element of the political discourse of this era, as in the writings of Denis Diderot, Johann Gottfried Herder, and Samuel Johnson, among many others, though it more rarely took the form of legal argument as we find in the figures under discussion here.⁵¹ Anquetil argued that one of the major causes of the arrest of human knowledge—along with brute ignorance and religious dogmatism—was Europe's "presumptuous science": scholars were sure that knowing Greek and Latin meant they knew everything worth knowing, even though, having been "raised in the knowledge of four to five hundred leagues of country, the rest of the Globe is foreign to us." Merchants, at least, had the curiosity that is driven by desire for profit, but they were indifferent to the human beings and the moral worlds they encountered, rather than seeking to learn from their laws, customs, and opinions.⁵²

These authors focused on European relations with Asian and Muslim agricultural and commercial states, and it might be said that in insisting on a shared legal community with Asian commercial societies, Burke and others were simply moving the boundary of exclusion further along a spectrum of development, so that societies deemed "savage" were still outside it. Burke wrote relatively little about relations with African and Native American tribal societies; he did write some about Native Americans between the 1750s and 1770s, and his characterizations can be crude and derogatory.⁵³ Anquetil wrote a long manuscript defending indigenous Americans against their European denigrators, but this was a work of sympathetic ethnography rather than an argument for legal inclusion.⁵⁴ Moreover, their arguments were not necessarily anti-imperial: Anquetil wavered on the question of whether European empires were justified, and at some stages of his career he was certainly criticizing the British with the aim of defending French claims in India.⁵⁵ Burke, too, is read

⁵¹ Sankar Muthu, *Enlightenment against Empire* (Princeton, N.J., 2003); Clement Hawes, *The British Eighteenth Century and Global Critique* (New York, 2005); Pitts, *A Turn to Empire*.

⁵² Abraham Hyacinthe Anquetil-Duperron, *Législation orientale: Ouvrage dans lequel, en montrant quels sont en Turquie, en Perse et dans l'Indoustan, les principes fondamentaux du gouvernement* (Amsterdam, 1778), "Dedication," iii–iv. He called for the study of Asian languages, "because it contributes to our knowledge of lands that are more considerable than Europe, and it presents us with a grand survey proper to perfect the knowledge of mankind, and above all to assure the inalienable rights of humanity" (181).

⁵³ The bulk of the material on Native Americans was co-written and is hard to attribute definitively to Burke; see *An Account of the European Settlements in America* (London, 1757). See also Margaret Kohn and Daniel I. O'Neill, "A Tale of Two Indias: Burke and Mill on Empire and Slavery in the West Indies and Americas," *Political Theory* 34, no. 2 (2006): 192–228. On the history of European legal thought about the Americas, see Williams, *The American Indian in Western Legal Thought*; Stuart Banner, *How the Indians Lost Their Land: Law and Power on the Frontier* (Cambridge, Mass., 2005).

⁵⁴ Anquetil-Duperron, *Considérations philosophiques, historiques et géographiques sur les deux mondes*.

⁵⁵ He could also praise Warren Hastings, governor-general of Bengal from 1773 to 1785, for having

by some as seeking (successfully) to reform the British Empire so as to entrench its power more deeply, though he also intimated that British rule in India was irredeemably unjust.⁵⁶

Burke apparently did not cite Anquetil in his writings and speeches on India, and Anquetil's writings had neither the prominence in their day nor the longer-term influence, nor the theoretical originality, of Burke's.⁵⁷ But the marked affinities in their legal and moral arguments make it clear that Burke was not unique in basing his account of a law of nations with broad scope on an argument that European and various other legal systems were mutually intelligible and shared basic principles of legal and political order. Both Burke and Anquetil insisted on the fundamental similarities between European legal regimes and other systems widely regarded as the antithesis of legal order. Both argued, against the theory of oriental despotism associated with Montesquieu, that these societies were regulated by law, that laws protected subjects' property, and that these rulers recognized themselves as bound by law both internally, with respect to their own subjects, and in their external relations. Indeed, both argued, no society of any durability could be habitually, constitutionally lawless, as oriental despotisms were said to be. Both used such arguments to insist that these states were parties to the law of nations, and that Europeans dealing with them were bound by its key provisions, such as respect for the sovereignty and the internal constitution of other states, and an obligation to abide by treaties and contracts entered into with them.

Anquetil, an exact contemporary of Burke's, had an earlier and far more intimate knowledge of Indian laws, languages, and society; he published his *Législation orientale* in 1778 as Burke was just beginning to acquaint himself with India. Anquetil left France for India in 1755 at the age of 23, and made a three-year overland voyage from Pondicherry to Surat, where he remained studying Zoroastrian manuscripts until 1761. His *Législation orientale* was a refutation of Montesquieu's theory of oriental despotism by way of a detailed account of the legal frameworks of the Ottoman, Persian, and Mughal empires: his arguments were at once of broader scope than Burke's in addressing Turkey and Persia as well as India, and more detailed in their consideration of these societies' laws. He presented abundant evidence to show, against Montesquieu, that the rulers of these states recognized legal obligations, both toward their own subjects and toward foreigners and Europeans.

Anquetil argued that all of these societies respected the law of nations. He re-

"established the British throne with majesty on the ruins of Mogol power"; Anquetil-Duperron, *L'Inde en rapport avec l'Europe: Ouvrage divisé en deux parties* (Paris, 1798), xxiv. See also Joan-Pau Rubiés, "Oriental Despotism and European Orientalism: Botero to Montesquieu," *Journal of Early Modern History* 9, no. 1–2 (2005): 109–180, describing Anquetil as "in some ways more anti-British than anti-colonialist" (172); and on the royalist context for Anquetil's arguments, see Thomas Kaiser, "The Evil Empire? The Debate on Turkish Despotism in Eighteenth-Century French Political Culture," *Journal of Modern History* 72, no. 1 (2000): 6–34.

⁵⁶ Nicholas B. Dirks, *The Scandal of Empire: India and the Creation of Imperial Britain* (Cambridge, Mass., 2006); Robert Travers, *Ideology and Empire in Eighteenth-Century India: The British in Bengal* (Cambridge, 2007), 220; Jennifer Pitts, "Empire," in Christopher Insole and David Dwan, eds., *The Cambridge Companion to Burke* (Cambridge, forthcoming 2012).

⁵⁷ In 1762, the *Annual Register* (then under Burke's editorship) devoted considerable space to translated excerpts of Anquetil's account of his voyage to India, with an introduction that lavishly praised his erudition and character; *The Annual Register; or, A View of the History, Politicks, and Literature of the Year 1762* (London, 1762), 103–129.

jected the claim by Rycaut, one of Montesquieu's sources, that Muslim rulers believed themselves "authorized . . . by the Law of their Prophet" to break treaties or alliances when doing so would increase their empire or the reach of Islam. He quoted from the ninth sura of the Qur'ān to show that Islam "orders the observation of Treaties made with Infidels who uphold their promises" and cited numerous instances in which Turkish leaders insisted on upholding treaties when interest might have dictated breaking them. It is clear, he wrote, that "the law of nations, the law of war, public faith, the security of property, that of commerce, in sum that the laws of humanity and of reason are respected by the Ottoman Monarchs as well as by their representatives." He cited as one example Sultan Ahmed's treaty with Henri IV of France reaffirming earlier agreements between the two countries. Anquetil observed that "to show such a singular respect for Treaties made by his predecessor was as much as to say to [European] nations [*les nations*] 'I have the same principles of equity as you do; the Ottomans share the same public law.'" ⁵⁸

Anquetil took ironic pleasure in using instances of Asian cruelty as evidence that these societies recognized the laws of nations and would punish European violations of them. He wrote that in 1775 the Marathas had given the Europeans "some rather cruel lessons in the law of nations." The English had committed atrocities in the course of seizing the island of Salcette near Bombay, after agreeing to come to the aid of the Marathas in a local power struggle. These atrocities, wrote Anquetil, "revolted all the people of the country, the Marathas included . . . Indignant at these violations of all the laws of war and the laws of humanity, they avenged themselves by cutting off the ears and the noses of the English who fell into their hands."⁵⁹ Unlike Burke, Anquetil did not rely on claims about the universal reach of the law of nature to make these arguments; his evidence was precisely the actual practice of states that later positivist jurists would insist restricted international law to Europe. Against Sir James Porter's claim that the Turks did not respect the law of nations, he wrote, "I ask whether the law of nations, distinguished from natural law, has other foundations than treaties and the accords made among nations. The Turks observe these Treaties, they regulate their behavior by [*se règlent sur*] these agreements, thus they have an idea of the law of nations."⁶⁰

Treaties and accords between European and Asian "nations" had, of course, long been mediated by chartered companies with shifting and ambivalent relations to their sponsoring states: the Portuguese Estado da India, the English Levant Company, the Dutch Vereenigde Oost-Indische Compagnie (United East India Company), and the English East India Company.⁶¹ The last, chartered by Elizabeth I in 1600, was, as Philip Stern has argued, a "body politic" and "political community" in some ways typical in early modern England's complexly "interlocking matrix" of commonwealths, corporations, and associations, when the prerogatives of sover-

⁵⁸ Anquetil-Duperron, *Législation orientale*, 55–56.

⁵⁹ *Ibid.*, 6–7. In a similar if less gory instance, he wrote that even if the laws of commerce are simple and few, this does not necessarily imply that contracts are insecure. "In Surat," he wrote, "I saw a European in need of all the protection of the English, then masters of the fortress, to elude the force of . . . his creditors" (9).

⁶¹ Sanjay Subrahmanyam, *The Portuguese Empire in Asia, 1500–1700: A Political and Economic History* (London, 1993); Om Prakash, ed., *European Commercial Expansion in Early Modern Asia* (Aldershot, 1997).

eignty had not yet been deemed the exclusive province of the state.⁶² Its officials quickly concerned themselves not simply with commercial imperatives but with the responsibilities and prerogatives of sovereignty: governance of territories and populations, war, and diplomacy. But tensions among its commercial interests, its responsibilities as an Indian sovereign, and its status as a representative of the English and then British state and nation, perceived by the Company's critics and its own agents from the start, came to seem intolerable to many observers, especially after the Company's acquisition of vastly greater powers and territory by the end of the Seven Years' War.⁶³

Goaded by an army of pamphleteers, including disgruntled former Company employees and independent merchants, Parliament attempted to exert greater control over the Company's activities, from its "first major inquiry into the [Company's] affairs" in 1667, through Lord North's Regulating Act of 1773 establishing the position of governor-general, Charles James Fox's failed East India Bill, and a series of select committees convened to investigate allegations of corruption, despotism, and abuse of power by the Company.⁶⁴ These efforts culminated in 1786 with a vote in the House of Commons to impeach Warren Hastings, the former governor-general of Bengal, before a committee of the House of Lords, for "unwarrantable and criminal practices" that threatened the well-being of the natives of India, the fortunes of the East India Company, and the honor of the British nation and the crown.⁶⁵ Burke, the chief manager of the prosecution on behalf of the House of Commons, was hailed as a humanitarian during the early stages of one of the greatest political dramas of eighteenth-century Britain, as the public grew increasingly anxious over the Company's practices of widespread bribery and corruption, aggressive war-making, and mistreatment of Indian rulers. By the time Hastings was finally acquitted in 1795, he was regarded as the victim of Burke's vindictive and monomaniacal crusade. Burke's spectacular oratory, by turns powerful, theatrical, and overwrought, was the object of both admiration and ridicule from the large public

⁶⁵ *Journals of the House of Commons*, 42: 666; quoted by P. J. Marshall in *The Impeachment of Warren Hastings* (London, 1965), 1. The trial itself began in 1788. See also Marshall, "Burke and Empire," in Stephen Taylor, Richard Connors, and Clyve Jones, eds., *Hanoverian Britain and Empire: Essays in Memory of Philip Lawson* (Woodbridge, Suffolk, 1998), 288–298; Geoffrey Carnall and Colin Nicholson, eds., *The Impeachment of Warren Hastings: Papers from a Bicentenary Commemoration* (Edinburgh, 1989); David Musselwhite, "The Trial of Warren Hastings," in Francis Baker, Peter Hulme, Margaret Iversen, and Diana Loxley, eds., *Literature, Politics, and Theory: Papers from the Essex Conference, 1976–84* (London, 1986), 77–103; Dirks, *The Scandal of Empire*; Mithi Mukherjee, "Justice, War, and the Imperium: India and Britain in Edmund Burke's Prosecutorial Speeches in the Impeachment Trial of Warren Hastings," *History Cooperative Journal* 23, no. 3 (2005): 589–630.

that followed it in person and in the daily press. Much has been written since about the many rhetorical registers and lines of attack that Burke took up over the course of the trial: his Whig assault on the power and patronage of the crown; his sometimes sentimental defense of traditional hierarchies in India and England against the novel wealth and power of Company agents; his anxiety over the seemingly incomprehensible alienness of Indian society to the British public; his chivalric defense of vulnerable Indian women against the "errant masculinity" of the Company; and his lurid detailing of Company misdeeds.⁶⁶ Scholars have long read the trial for evidence of Burke's motives and psychology; more recent work has recovered a compelling moral and political theory from his India speeches.⁶⁷

However ultimately self-defeating his presentation of the case against Hastings and the Company, Burke's primary aim in the trial, it is often and rightly emphasized, was moral suasion rather than legal conviction: the British public, and posterity, were as much his audience as the Lords sitting in judgment.⁶⁸ A central element of this project of persuasion was his effort to prompt a reconception of law itself, specifically the role of law in global commercial and political encounters. Burke himself understood the trial as a peculiar and potent form of global legal encounter: it mobilized British law, through the rarely used mechanism of impeachment, to check the abuse of British power abroad, and it might help to transform an overly insular British law by way of encounter with other legal orders. This meant soliciting from his British audience both a new respect for unfamiliar legal and normative systems and an unaccustomed sense of doubt about the adequacy of their own. As was typical of Burke, this was a project of both transformation and conservation, in the sense that he argued both that British legal traditions were parochial and inadequate to a global politics, and that they contained the seeds of their own reform.

By the end of the trial, during his nine-day closing speech in 1794, Burke had come to characterize his dispute with Hastings as at bottom a controversy about law. Given at a time of despair for Burke, when it was clear that the legal case against Hastings was all but lost, this speech (four hundred pages in the modern edition) is one of his least successful performances: rambling, repetitive, exaggerated, convoluted, and often vindictive. At the same time, it was in this speech that he most fully and powerfully elaborated his vision of legality in the imperial and inter-imperial

⁶⁶ "Questions of effeminacy, the decline of landed families, and the figuration of despotism as errant masculinity suddenly emerge as the substance of the Whig case against East India Company's flirtations with disturbing modes of sovereignty"; Daniel O'Quinn, *Staging Governance: Theatrical Imperialism in London, 1770–1800* (Baltimore, 2005), 124. See also Isaac Kramnick, *The Rage of Edmund Burke: Portrait of an Ambivalent Conservative* (New York, 1977); Regina Janes, "At Home Abroad: Edmund Burke in India," *Bulletin of Research in the Humanities* 82 (1979): 160–174; Frans De Bruyn, "Edmund Burke's Gothic Romance: The Portrayal of Warren Hastings in Burke's Writings and Speeches on India," *Criticism* 29, no. 4 (1987): 415–438; Sara Suleri, *The Rhetoric of English India* (Chicago, 1992); Nicole Reynolds, "Phebe Gibbes, Edmund Burke, and the Trials of Empire," *Eighteenth-Century Fiction* 20, no. 2 (2007–2008): 151–176.

⁶⁷ See especially Frederick G. Whelan, *Edmund Burke and India: Political Morality and Empire* (Pittsburgh, 1996); Mehta, *Liberalism and Empire*; and David Bromwich's essays, such as his introduction to Edmund Burke, *On Empire, Liberty, and Reform: Speeches and Letters*, ed. Bromwich (New Haven, Conn., 2000); Conor Cruise O'Brien, *The Great Melody: A Thematic Biography and Commented Anthology of Edmund Burke* (Chicago, 1992).

⁶⁸ This is especially apparent in Burke's nine-day closing speech, which F. P. Lock has called "a lengthy restatement of the moral case against Hastings, with no regard to the question of legal evidence"; Lock, *Edmund Burke*, 2 vols. (Oxford, 1998–2006), 2: 468.

space that India had become. In arguing that British actions in the world beyond Europe were constrained by a complex web of laws—including positive laws of English and other origins as well as natural law and the law of nations—Burke was articulating a distinctive vision of the global legal order. His insistence on the broad reach of the law of nations and its basis in the law of nature spans the entire trial and indeed predates it.⁶⁹ This vision had its roots in the natural jurisprudence of the eighteenth century, but Burke attended more closely than its canonical exponents such as Wolff and Vattel to its potential implications for engagements beyond Europe.

Burke's reflections on these questions point us toward a notion of global legality different from the view that was emerging among thinkers as different as Vattel and Bentham, and which would triumph in the nineteenth century: the view that international law applied exclusively to states understood as equal and independent sovereign entities.⁷⁰ Vattel's *Droit des gens* was the most influential articulation in Burke's time of the idea that states are equal, free, and independent, and the exclusive subjects of the law of nations.⁷¹ In insisting on the uniformity of the international legal space and of the states that filled it, Vattel's theory may have facilitated the emergence of the view that only certain sorts of states can qualify for that status: states that fit a particular institutional and cultural description that for most nineteenth-century thinkers turned out to exist only in Europe. Such claims are not necessarily implied by Vattel's theory—indeed, they may contradict its universalistic spirit—but his insistence on legal uniformity may have made difficult the more flexible and political legal pluralism that Burke developed during the Hastings trial.⁷² Bentham's views about international law are too complex to treat here, but in his late notes toward a code of international law, he began with the principles of equal and independent states.⁷³ He also proposed that states refrain from intervening in

⁶⁹ See especially Burke's "Inquiry into the Seizure of Private Property in St. Eustatius," May 14, 1781, in *The Speeches of the Right Honourable Edmund Burke, in the House of Commons, and in Westminster-Hall*, 4 vols. (London, 1816), 2: 248–263; and Burke, "Motion for an Inquiry into the Confiscation of the Effects Taken on the Island of St. Eustatius," December 4, 1781, *ibid.*, 313–325.

⁷⁰ Edward Keene has argued that as early as Grotius, we can find a bifurcated notion of law and sovereignty, so that while sovereignty in Europe was seen as unitary and absolute, the prerogatives of sovereignty in Asia were seen by European theorists as divided between semi-sovereign Asian rulers and European states and their agents; Keene, *Beyond the Anarchical Society*.

⁷¹ See Vattel, *Le droit des gens*, Introduction, §§14–21; the law of nations is the "science of the rights which exist between Nations or States, and of the obligations corresponding to these rights" (§3). Recent challenges to such a "monist . . . statist . . . and positivist" conception of law include William Twining, *Globalisation and Legal Theory* (London, 2000); and Robert Cover, "Nomos and Narrative," in Cover, *Narrative, Violence, and the Law: The Essays of Robert Cover*, ed. Martha Minow, Michael Ryan, and Austin Sarat (Ann Arbor, Mich., 1993), 95–172. On traditions of legal pluralism, see Paul S. Berman, "Global Legal Pluralism," *Southern California Law Review* 80 (2007): 1155–1237; Sally Engle Merry, "Legal Pluralism," *Law and Society Review* 22, no. 5 (1988): 869–896; Merry, *Colonizing Hawai'i: The Cultural Power of Law* (Princeton, N.J., 1999); Lauren Benton, *Law and Colonial Cultures: Legal Regimes in World History, 1400–1900* (Cambridge, 2002).

⁷² On Vattel's influence on Burke, and Burke's late departures from Vattel during the war with revolutionary France, see David Armitage, "Edmund Burke and Reason of State," *Journal of the History of Ideas* 61, no. 4 (2000): 617–634; Hampsher-Monk, "Edmund Burke's Changing Justification for Intervention"; and Isaac Nakhimovsky, "Carl Schmitt's Vattel and the 'Law of Nations' between Enlightenment and Revolution," *Grotiana* 31 (2010): 141–161.

⁷³ See "International Law," June 11, 1827: "Art. 2. The equality of all is hereby recognized by all. Art. 3. Each has its own form of government, each respects the form of government of every other. Art. 4. Each has its own opinions and enactments on the subject of religion: each respects that of every other.

one another's colonies among "barbarous nations," a significant departure from his position of the 1780s that emancipation of all colonies was essential for any prospect of peace.⁷⁴

Burke, in contrast, emphasized the multiplicity of legal orders within and among states. He complicated Vattel's view of perfectly independent sovereigns in his writings not just about India but also about Europe, where in response to the French Revolution he articulated his vision of a European Commonwealth or community, the "grand vicinage of Europe," which was governed by a sort of "Law of Neighbourhood."⁷⁵ Burke saw the legal problems thrown up by both the Company in India and Jacobinism in France as unprecedented.⁷⁶ Those who viewed the war with France through the lens of simple interstate law were, he thought, mistaken. He similarly accepted the coexistence and interpenetration of multiple legal systems in India, without insisting, as Hastings and others did, that what was needed was an authoritative hierarchy or code of jurisdictions, with Europeans as the ultimate arbiters.

In rebutting Hastings's claim that Indians had "no laws [and] no rights," Burke appealed to a variety of legal and normative orders in Indian society, from property and inheritance regimes to "hereditary dignities" and systems of "honour and distinction."⁷⁷ Whereas Hastings and his lawyers held that disorder was endemic in India, for Burke, order was apparent in these overlapping normative systems, and it was the British who represented the irruption of disorder. Burke stressed the antiquity of Indian jurisprudence, as in his claim in the closing of the Hastings impeachment trial that "We have shown you that those people [in India] lived under the Law, which was formed even whilst we, I may say, were in the Forest, before we knew what Jurisprudence was," and that the British were "bound to know and to act by these Laws."⁷⁸ He suggested that India had a long history of functioning legal pluralism, disrupted by the British and their contempt for and ignorance of local structures of obligation.⁷⁹

Art. 5. Each has its own manners, customs, and opinions, each respects the manners, customs, and opinions of every other." British Library [hereafter BL], Add MS. 30151, fol. 13.

⁷⁴ Ibid., fol. 17. Compare the documents headed "Pacif. & Emancip." [Pacification and Emancipation], Bentham Papers, University College London Library, Box XXV, fols. 29–33; Gunhild Hoo-gensen, *International Relations, Security, and Jeremy Bentham* (London, 2005); and Armitage, "Globalizing Jeremy Bentham."

⁷⁵ See Burke's "First Letter on a Regicide Peace," *WSEB*, 9: 248–251, where Burke writes that writers on public law have been right to call Europe a Commonwealth, since it "is virtually one great state having the same basis of general law." He also called this European "Law of Neighbourhood" a "law of civil vicinity." "Civil laws are not all of them merely positive. Those which are rather conclusions of legal reason, than matters of statutable provision, belong to universal equity, and are universally applicable" (250).

⁷⁶ On Burke's insistent linking of "Indianism" with Jacobinism, see Sunil Agnani, "Jacobinism in India, Indianism in English Parliament: Fearing the Enlightenment and Colonial Modernity with Edmund Burke," *Cultural Critique* 68 (Winter 2008): 131–162.

⁷⁷ *WSEB*, 7: 264–265.

⁷⁸ Ibid., 285.

⁷⁹ He said that even the Muslim conquerors of India at the time of Mohammed, whom he characterized as cruel religious fanatics, "left the ancient people in possession of their states; and left the ancient Sovereigns of the Country possessed of an inferior Sovereignty; and where the nature of the Country would permit it, they suffered them to continue in a separate state of Sovereignty from them" (*WSEB*, 6: 308). The Holy Roman Empire served as one model of a system of plural legal orders to which Burke implicitly gestured in inviting his audience to imagine India on the model of Germany (5: 390ff.).

Over the course of the trial, Burke came to insist that the British should respect Indian laws not because Indians themselves were incapable of moving beyond them, as Hastings argued, but because those laws independently obligated the British. Most directly this was so for contractual reasons, as an implicit element of the agreement that, Burke claimed, underlay the Company's power in India. But while he sometimes made it clear that he meant that these local laws imposed obligations on the British *as governors*, he also regarded them as constraints on Hastings's more general "relations with the people of that Country," which is to say those outside British territory as well. Burke's argument seems to rest on a notion of the sanctity of the rule of law itself, so that a structure of legal relations should be treated with respect, across polities as well as within them. The British were not operating in a legal vacuum beyond their own territory in India. One reason, in Burke's view, that these legal systems all had normative standing is that they had been worked upon and reformed over a long period of time: they should be presumed to be distinctive but valid approximations of what he called the eternal law.⁸⁰

One of Burke's most often repeated charges was that the Company under Hastings, with a flagrant contempt for the law of nations, had violated every treaty it made with Indian powers. He used the occasion of such charges to maintain that the law of nations bound the British "with regard to all foreign powers," in India as well as in Europe.⁸¹ And he argued that the British were obligated to extend the benefit of the doubt to powers that "appear to be sovereign" or that had recently been sovereign. He framed the treaty violations not simply as a problem of bad faith or opportunism, but as the product of a dangerous legal theory. He rebuked Hastings for having questioned, in testimony before the Commons, "the validity of any Treaty that can be made at present with India."⁸² Hastings, he argued, "is bound in all transactions with foreign Powers to act according to the known, recognized rules of the Law of Nations, with regard to all powers that are Sovereign, or appear to be Sovereign, whether dependent or independent."⁸³ Burke did reject Hastings's contention that wazirs and other governors had sovereign powers, but he argued, against Hastings, that Chait Singh, the raja of Benares, was "cloathed with every one of the attributes of Sovereignty." For John Austin, whose view of sovereignty was to become dominant in the next century, the idea of a dependent sovereign would have been incoherent. Burke's more fluid conception of sovereignty encompassed the possibility of a ruler with sovereign status who had fallen into dependence on others but to whom legal obligations under the law of nations still applied.

Burke held that the British were obliged not merely to follow the law of nations

⁸⁰ As Mithi Mukherjee argues, Burke staged a "convergence . . . between two independent traditions of jurisprudence," the "exclusively national" tradition of common law and the "international discourse" of natural law; Mukherjee, "Justice, War, and the Imperium," 619.

⁸¹ *WSEB*, 7: 256 (also "we do contend that the Law of Nations is the Law of India as well as Europe" [291]).

⁸² "Your Lordships will find Mr. Hastings considers all Treaties as being weakened by a considerable degree of natural doubt and invalidity, concerning their binding and conclusive force in such a state of things as exists in India." *Ibid.*, 7: 393. In evidence before the Lords on February 25, 1788, Hastings had argued that "all the governing Powers of Hindostan are extremely averse to any Treaties or Agreements which are declared to be binding on Posterity; and I have had frequent Difficulties in many Negotiations with the native Princes on this Head; they have always pleaded 'that it was against the Custom of their Country.'"

⁸³ *Ibid.*, 7: 282.

in their dealings with Indian rulers, but also to attempt to construe those rulers' actions as if they might be in accordance with shared legal principles, and to look for evidence of shared principles in their practice and their legal documents.⁸⁴ To that end, he cited passages from Vattel to argue that Hastings had acted illegally in crushing what Hastings had called a rebellion by a local ruler. Burke argued that Chait Singh had not been rebelling but had been freed from his treaty obligations as a result of failures by the British to live up to their own. He argued that the British were obliged to recognize "the rights of natural equity, of the Law of Nations which is the birthright of us all."

Finally, Burke envisioned English law itself as being transformed by these global encounters. Municipal law had to evolve and progress by constant reference to developments in morals and society—by, as he put it, "keep[ing] Pace with the Demands of Justice, and the actual Concerns of the World."⁸⁵ He argued that the extraordinary complexity introduced by empire and global commerce made a flexible and inclusive sense of equity imperative.⁸⁶

THE SECOND STRAIN OF COSMOPOLITAN legal thinking appears most strikingly in the opinions of the Admiralty Court judge William Scott (after 1821, first Baron Stowell).⁸⁷ Educated at Oxford and the Middle Temple, Scott chose the path of civil rather than common law at time when prize cases generated by the American war were bringing renewed political and commercial importance to the civil law-based Admiralty Courts after a long decline.⁸⁸ Scott was an acquaintance of Burke's, briefly a counsel for the Hastings prosecution, and a fellow member of Samuel Johnson's circle and of the Club, the London dining club that Johnson founded with Joshua Reynolds, whose members included many of the era's leading political and literary

⁸⁴ In the course of denouncing the Jacobins for having "demolished" the jurisprudence that France shared with "other civilized countries," Burke wrote, "I have not heard of any country [except France], whether in Europe or Asia, or even in Africa on this side of Mount Atlas, which is wholly without" institutions dedicated to the conservation of that universal jurisprudence; Burke, "First Letter on a Regicide Peace," 240.

⁸⁵ *WSEB*, 7: 168. See the discussion of the *Report*, "Burke's Most Sustained Legal Writing," in Lock, *Edmund Burke*, 2: 470–474. The idea of law as a flexible instrument that evolved in response to the demands of society was one that Burke had first explored in his early *An Essay towards an Abridgment of the English History* (London, 1757).

⁸⁶ "As Commerce, with its Advantages and its Necessities, opened a Communication more largely with other Countries; as the Law of Nature and Nations (always a Part of the Law of England) came to be cultivated; as an increasing Empire; as new Views and new Combinations of Things were opened, this antique Rigour and over-done Severity gave Way to the Accommodation of Human Concerns, for which Rules were made, and not Human Concerns to bend to them"; *WSEB*, 7: 163.

⁸⁷ Scott was generally referred to by later jurists as Lord Stowell, but since his relevant opinions were delivered before his peerage, I refer to him, as the documents do, as Scott. Henry J. Bourguignon, *Sir William Scott, Lord Stowell, Judge of the High Court of Admiralty, 1798–1828* (Cambridge, 1987); R. A. Melikan, "Scott, William, Baron Stowell (1745–1836)," in *Oxford Dictionary of National Biography* (Oxford, 2004); E. S. Roscoe, *Lord Stowell: His Life and the Development of English Prize Law* (Boston, 1916); Benton, "'Slave Trading Is Not a Piratical Offense': Abolition, Prize Law, and the Imperial Constitution" (paper presented at the 2010 Symposium on Comparative Early Modern Legal History: New Perspectives on Legal Pluralism, Newberry Library, Chicago, April 23, 2010).

⁸⁸ Bourguignon, *Sir William Scott*, 37. Scott took his doctorate in civil law and joined the Doctors' Commons in 1779; he also held a readership in ancient history at Oxford from 1774 through 1785. As a civil lawyer, he practiced ecclesiastical law in addition to maritime law.

figures.⁸⁹ In 1788 Scott was appointed king's advocate general, the state's chief authority on maritime and international law. He served in Parliament from 1790 until his elevation to the Lords, and from 1798 until 1828 he served as judge of the High Court of Admiralty. Scott's learned and highly respected Admiralty opinions on the frequent maritime controversies of the Napoleonic Wars, the first such judgments to be regularly collected and published, quickly became an authoritative source for maritime and international law in both Britain and America. As a civil lawyer, he was widely and deeply read in Roman law, canon law, and the continental law-of-nations tradition.⁹⁰ The English civilian tradition was committed, as the common law was not, to comparative law, foreign sources of law, and the development of law with transnational and perhaps universal validity; it looked to the past as a source not of legal authority but of conceptions and practices against which to judge contemporary principles.⁹¹ Scott was a member of the last great generation of English civilians in ecclesiastical and admiralty law; although his judgments were much admired by nineteenth-century international lawyers, it appears that they misunderstood his views on the scope of the law of nations.

Despite the difference that Burke insisted that the law of nations was based on the law of nature, while Scott described it as a historically European phenomenon, based more on state practice than on general principles, there are important affinities between the two men's views of how the law of nations should apply to non-Europeans.⁹² Scott considered his court a tribunal of the law of nations, a law that, as he put it, "has no locality": "If, therefore, I mistake the law in this matter, I mistake that which I consider, and which I mean should be considered, as the universal law upon the question."⁹³ He saw that law as rooted, certainly, in general principles, but, he wrote, "it travels with those general principles only to a certain extent," and states are required to "confine [themselves] to those modes which the common practice of mankind has employed, and to relinquish [others], those which the same practice has not brought within the ordinary exercise of war, however sanctioned by its principles and purposes."⁹⁴

As Burke did with Indian states, Scott argued for recognizing the sovereignty of

⁸⁹ He also founded—along with his brother John (later Lord Eldon), Prime Minister William Pitt's solicitor general, and Robert Chambers, one of the first justices of the Supreme Court of Calcutta—the "distinctly Tory" University College Dining Club; *ibid.*, 38.

⁹⁰ On the English civil law tradition, see *ibid.*, 1–30; Stein, *Roman Law in European History*; Peter Stein, "Continental Influences on English Legal Thought, 1600–1900," in Stein, *The Character and Influence of the Roman Civil Law: Historical Essays* (London, 1988), 209–229; Daniel R. Coquillette, *The Civilian Writers of Doctors' Commons, London: Three Centuries of Juristic Innovation in Comparative, Commercial and International Law* (Berlin, 1988); G. D. Squibb, *Doctors' Commons: A History of the College of Advocates and Doctors of Law* (Oxford, 1977); and on the awkward place of natural law in common-law thought such as Blackstone's, see David Lieberman, *The Province of Legislation Determined: Legal Theory in Eighteenth-Century Britain* (Cambridge, 1989), 37–42.

⁹¹ See Coquillette, *The Civilian Writers of Doctors' Commons*, 16–23.

⁹² He claimed to be an impartial administrator of the law of nations, acknowledging that "the seat of judicial authority is, indeed, locally *here*, in the belligerent country, according to the known law and practice of nations: but the law itself has no locality." His biographer calls this the "diplomatically soothing, stock assertion of his predecessors," and he notes a contemporary objection to one of Scott's decisions as biased toward Britain; see Bourguignon, *Sir William Scott*, 264.

⁹³ Scott's legal decisions are cited as they appear in Chr. Robinson, *Reports of Cases Argued and Determined in the High Court of Admiralty; Commencing with the Judgments of the Right Hon. Sir William Scott, Michaelmas Term 1798* (London, 1799–1808), 6 vols., *Flad Oyen*, 1 Rob. 151.

⁹⁴ *Ibid.*, *Flad Oyen*, 1 Rob. 139–140.

the Barbary states, and he granted that certain very fundamental legal principles could be considered to bind them as well as Europeans. But he also argued for some deference toward their own laws and practices when it came to the finer points of the European law of nations. "Although their notions of justice, to be observed between nations, differ from those which we entertain," he wrote, "we do not, on that account, venture to call in question their public acts."⁹⁵ He noted that even within Europe, states could not always find unanimous agreement on the principles of the law of nations.⁹⁶ And he argued that such disagreements with Barbary states should not, as some (following Gentili) held, place them beyond the bounds of the international legal community.

Scott heard numerous cases involving the seizure of European property by Barbary ships and vice versa during the intense maritime conflicts of the Napoleonic Wars.⁹⁷ In one case, that of the *Kinders Kinder*, involving the capture of an Algerian ship by British subjects, he noted that he could offer only a "coarse sort of equitable arbitration."⁹⁸ He stressed the importance of caution because—according to "a law of nations now peculiar to themselves"—Barbary states followed a practice considered inappropriate under European law of nations: they demanded immediate compensation from any countrymen of those who had seized their property. Scott did not conclude that because the Barbary states failed to follow European law they were lawless, or that Europeans had the right to force European standards on them. Rather, he argued, Europeans should regard the Barbary states' actions as regulated by their own law of nations and as therefore to be respected even if they were unjust under European law. If Europeans wanted to do business with such countries, he noted, they would have to accept the vulnerabilities that came with that business.

In a later case involving another seizure of Algerian property by Britons, he ruled for the Algerian claimants, saying, "I do not . . . mean to apply to such claimants the exact rigour of the law of nations as understood and practiced among the civilized states of Europe; it would be to try them by a law not familiar to any law or practice of theirs," and "we must pay some attention to the rules of morality and law that prevail amongst such people."⁹⁹ Finally, in yet another case, Scott summarized his earlier reasoning as follows: "it would be extremely hard on persons residing in the kingdom of Morocco, if they should be held bound by all the rules of the law of nations, as it is practiced among European states . . . they may on some points of the law of nations, be entitled to a very relaxed application of the principles, established, by long usage, between the states of Europe, holding an intimate and constant intercourse with each other." He called this law "a pretty artificial system, which is not

⁹⁷ On the broader maritime context, see Martin Robson, *Britain, Portugal and South America in the Napoleonic Wars: Alliances and Diplomacy in Economic Maritime Conflict* (London, 2011).

⁹⁸ Robinson, *Reports of Cases Argued and Determined in the High Court of Admiralty, Kinders Kinder* (1799), 2 Rob. 88.

⁹⁹ Ibid., *The Fortune, Smith Master* (92ff.), April 7, 1800, 2 Rob. 99. Here he cited the jurist Cornelius van Bynkershoek's judgment, against Alberico Gentili, that Europeans owed the Barbary states legal recognition (rather than seeing them as pirates), since they met all the criteria of legal sovereignty, and that "they even have some respect for treaties, as other nations have, though nations are usually more concerned about their own advantage than about treaties. That they should have complete respect for treaties, no one could require, since we cannot require that even from other nations."

familiar either to their knowledge or their observance.” He went on to except from this rule certain cases of widely known and longstanding principles, such as the principle of respecting blockades: “I must hold that they are bound to the observance of this most ancient principle, on which nations have acted in every state of civilized society, since the first records of mankind.”¹⁰⁰

Scott, then, saw the law of nations as a complex practice that combined a small set of principles that he believed were universally binding with a larger set of historically European rules that could not be said to obligate non-Europeans. Like Burke, though, Scott saw European laws as binding on Europeans in their dealings with others, even when those same laws did not bind the other party. So there is, in the thought of both men, what we might see as a kind of deferential asymmetry in the application of the laws.¹⁰¹ Scott, like Burke, saw various legal systems as mutually intelligible despite their differences. Even while he acknowledged that encounters with those outside the historical bounds of the European law of nations might be freighted with additional risk for Europeans, he resisted the temptation, which would come to dominate later nineteenth-century accounts, to insist that European law should become authoritative for all.

Scott was Britain’s foremost judicial authority on the law of nations at the turn of the nineteenth century, and his opinions had unusual influence, in part because they were considered extraordinarily well judged, and in part because his tenure on the Admiralty Court coincided with the first systematic recording of its judgments, in the volumes of Christopher Robinson. An example of his authority, as well as of his sense of the rigorous duties imposed on Britain by the law of nations, can be seen in correspondence between Scott, then advocate general, and Henry Dundas, then home secretary, on the subject of punitive levies imposed on the residents of St. Lucia after it was captured from France in 1794. Dundas, on behalf of the ministry, had requested Scott’s opinion as to the appropriateness of the levies under the law of nations (though he had already written to General Sir Charles Grey to say that the levies seemed to him “perfectly proper” as a temporary measure). Scott responded that according to the “Modern Law of Nations,” the British policy of confiscating the property of civilian residents of St. Lucia “appears to be utterly unjustifiable, and ought to be revoked”; he was, indeed, so shocked by the policy (in contrast to Dundas’s complacency about it) that “I can hardly bring myself to believe, that such a step can have been taken.”¹⁰²

¹⁰⁰ “Upon such considerations, the Court has, on some occasions, laid it down that the European law of nations is not to be applied in its full rigor to the transactions of personas of the description of the present claimants, and residing in that part of the world (2nd Adm. Rep. p. 88).” Ibid., *The Hurtige Hane*, June 20, 1801, 3 Rob. 325.

¹⁰¹ Scott’s version of this argument is as follows: “In the first place it is to be recollected, that this is a Court of the Law of Nations, though sitting here under the authority of the King of Great Britain. It belongs to other nations as well as to our own; and what foreigners have a right to demand from it, is the administration of the law of nations, simply, and exclusively of the introduction of principles borrowed from our own municipal jurisprudence, to which, it is well known, they have at all times expressed no inconsiderable repugnance. In the case of a British subject it is different. To him it is a British tribunal, as well as a Court of the Law of Nations; and if he has been trampling on the known laws of his country, it is no injustice to say, that a person coming into any of the Courts of his own country, to which he is naturally amenable, on such a transaction, can receive no protection from them.” Ibid., *The Recovery*, 1807, 6 Rob. 348–349.

¹⁰² William Scott to Henry Dundas, June 1, 1794, BL, Add MS. 38353, fol. 88.

DESPITE THE CONSIDERABLE STATURE AND influence of Burke and Scott during the nineteenth century (the same cannot be said for Anquetil), the views adumbrated here left remarkably little trace in later European legal thought.¹⁰³ An increasingly hegemonic understanding of the international realm as made up of free, equal, and independent states eclipsed the earlier, more complex legal landscape of corporate polities and dependent and divided sovereignty, superannuating Burke's complexly political legal pluralism.¹⁰⁴ Europe's increasing self-confidence in light of the industrial revolution and its "great divergence"—its apparently decisive technological superiority over Asian societies whose cultural achievements had earlier commanded European respect—also surely contributed to the tendency to regard the world as divided into hierarchized legal spheres, with Europe representing the archetype and future for the rest.¹⁰⁵

If Burke's and Anquetil's legal arguments were largely ignored, Scott's view was seemingly misunderstood, or misrepresented, by later thinkers. Travers Twiss, for instance, cited Scott to make the case that the law of nations was binding only within Europe, and that because Christian powers could not expect Muslims to follow the European law of nations, there could be no legal relationship between them at all, but only, as Twiss wrote, citing Friedrich Carl von Savigny, a "purely moral" one.¹⁰⁶ This view accords with John Stuart Mill's argument that "To characterize any conduct whatever towards a barbarous people as a violation of the law of nations, only shows that he who so speaks has never considered the subject. A violation of great principles of morality it may easily be; but barbarians have no rights as a nation, except a right to such treatment as may . . . fit them for becoming one."¹⁰⁷ While the substance of Scott's view is far closer to Burke's and Anquetil's—that whatever the particular differences among legal systems, they were united by certain very basic common principles, and were mutually intelligible as law—Scott's earlier move away from a universalist and naturalist reading of the law of nations may have laid the ground for this sort of argument. Indeed, the arguments of his contemporary and acquaintance Robert Plumer Ward, in his 1795 *Law of Nations*, illustrate the ambiguous implications of the decision to abandon a commitment to the universality of the law of nations, a decision that Ward presented as the justification of his work, as against the mistaken assumptions of natural law jurisprudence:

¹⁰³ But cf. Burke's influence on nineteenth- and early-twentieth-century Indian nationalists. See Ganes Prasad, "Whiggism in India," *Political Science Quarterly* 81, no. 3 (1966): 412–431; and Mukherjee, "Justice, War, and the Imperium," as well as the references to Burke in the thought of nineteenth-century imperial critics (particularly regarding his respect for Indian civilization) as noted by Gregory Claeys, *Imperial Sceptics: British Critics of Empire, 1850–1920* (Cambridge, 2010), 33, 61.

¹⁰⁴ The East India Company and the Holy Roman Empire, for instance, were both being assimilated into the modern state at the turn of the nineteenth century. On the "contagion of sovereignty" that spread the Vattelien model of the free and equal state in the wake of the American Revolution, see Armitage, *The Declaration of Independence*, 103–112.

¹⁰⁵ For the (still controversial) argument that the economic and technological divergence began at the end of the eighteenth century, much later than nineteenth-century observers convinced of Europe's cultural superiority were inclined to believe, see Kenneth Pomeranz, *The Great Divergence: China, Europe, and the Making of the Modern World Economy* (Princeton, N.J., 2000).

¹⁰⁶ Twiss, *The Law of Nations Considered as Independent Political Communities*, 161.

¹⁰⁷ J. S. Mill, "A Few Words on Non-Intervention," in *Collected Works of John Stuart Mill*, ed. John M. Robson, 33 vols. (Toronto, 1963–1991), 21: 119.

It appeared to me, that we expected too much when we contended for the *universality* of the duties laid down by the Codes of the Law of Nations; that, however desirable such an universality might be . . . what is commonly called the Law of Nations . . . is not the Law of *all* nations, but only of particular classes of them; and thus there may be a *different* Law of Nations for *different* parts of the globe . . .

No one has yet laid it down in a clear, ample and precise manner that the Laws which are the objects of our enquiry are *not* the Laws of the World; of course no one has yet examined, how far they obtain with particular nations; or how far attention ought to be paid to the circumstance of their obeying another Code.¹⁰⁸

For Ward, as for Scott, the European law of nations “was not obligatory upon persons who had never been called upon to decide upon its ramifications; who might widely differ as to its application, and even as to its general and fundamental principles.”¹⁰⁹ He hoped that the example of Europe’s recent relations with Turkey, which showed some relaxation of the “horrid enmity of the Christian and Mahometan nations,” suggested that mutual legal recognition of states adhering to different law-of-nations codes was a historical probability.¹¹⁰ But like the later positivists who smuggled universalism into their apparently particularist accounts through their theories of progress and civilization, Ward belied his own seeming rejection of universalist jurisprudence in claiming that Christianity was the only true moral system.

The inclusive understanding of the law of nations as universal because rooted in the law of nature was a double-edged sword for those included. As Richard Tuck has pointed out, in addition to constituting a kind of recognition, it also morally freed Europeans for a newly aggressive imperial interventionism through treaties of alliance and military aid that once would have been forbidden as treaties with infidels.¹¹¹ But that expansive conception of the law of nations also provided the framework for a powerful line of critique of imperial injustices during this formative period for both European empires and international law. According to this critique, religious and cultural difference was no justification for differential standards of legal and political obligation. Europeans had a duty to treat their engagements outside Europe—with powers and societies that might not share European legal principles and customs in all their particulars, but that were recognizably legal orders—as just as binding, just as much a part of a global legal framework, as those within Europe.

A further danger of the broad legal inclusion through equivalence, of the kind exhibited by Burke, is that it may too readily assimilate the unfamiliar into one’s own framework, and so not recognize or give due respect to genuine differences or alternatives. Burke might be said to have done this when he claimed that he could try

¹⁰⁸ Robert Plumer Ward, *An Enquiry into the Foundation and History of the Law of Nations in Europe, from the Time of the Greeks and Romans to the Age of Grotius*, 2 vols. (London, 1795), 1: xiii–xiv, 169, emphasis in the original. It was Scott who reportedly first proposed that Ward, a friend of his brother, Lord Eldon, write the work; see Edmund Phipps, *Memoirs of the Political and Literary Life of Robert Plumer Ward, Esq.: With Selections from His Correspondence, Diaries, and Unpublished Literary Remains*, 2 vols. (London, 1850), 1: 15. On Ward’s counterrevolutionary politics, see Diego Panizza, *Genesi di una ideologia: Il conservatorismo moderno in Robert Ward* (Milan, 1997); and for a comparison with Bentham’s international thought, see Armitage, “Globalizing Jeremy Bentham.”

Hastings by any law, from the Institutes of Tamerlane to the Qur'ān, and get the same result as under English law. But whatever the limitations of their approach, Burke and Anquetil were persistently self-critical, aware of the ever-present dangers of parochialism, complacency, and what Anquetil called Europe's "presumptuous science." They were alert to the ways in which the powerful may use the law as yet another tool at their disposal, and they saw the effort to secure common legal frameworks as a means of restraining abuses of power.

The greater danger of the later hegemonic universalism, the one that Arjun Appadurai rightly calls parochial, was that it assumed that the unfamiliar was unintelligible, irrational, or inferior. Its proponents assumed that their own society's beliefs constituted universal moral standards to which others ultimately would conform. Universalism premised on such a narrative of progress regards different treatment for various groups as not only defensible, but indeed required by the moral duty to assist the backward to advance. Even if the more egregious forms of this liberal imperialist universalism have been discredited, its legacies remain: as in U.S. efforts to use international law and institutions to enforce neoliberal conceptions of democracy and good governance in a project, as Grandin notes, not just of structural adjustment but of "moral adjustment." An attachment to an international hierarchy whose terms are dictated by the morally and politically advanced continues to inform liberal political thought as well as American statecraft, as in John Rawls's typology of liberal, "decent" peoples, burdened societies, and outlaw states.¹¹² The U.S. also inherited imperial Europe's resistance to the vulnerability imposed by legal constraint, as Grandin's essay in this forum so powerfully shows: U.S. leaders have insisted on understanding the Monroe Doctrine, from the time of its 1823 proclamation, as a license for unilateral intervention, rather than, as their neighbors to the south sought to read it, a mutually binding normative framework. The deferential asymmetry commended by Burke and Scott, in contrast—their insistence that powerful states limit themselves even according to laws that they cannot impose on commercial or military adversaries—counseled an acceptance of vulnerability by powerful states in their global engagements, even as they accepted the reality of empires. The vision of international law as an order of purely European origins to be imposed gradually on the rest of the world eclipsed more pluralistic understandings of possible global legalities. Those views failed to win many adherents even among the idealistic liberal internationalists of the late nineteenth and early twentieth centuries, whose dream of taming state violence through international institutions and legal codes required equality only within an inner circle of "civilized" states, which together would impose law on those without.¹¹³ Recovering the earlier strands of thought even as we acknowledge their deficiencies may yet provide resources as we

Liberalism and Empire in Nineteenth-Century
International Law

ANDREW FITZMAURICE

SINCE THE PUBLICATION OF Edward Said's *Orientalism*, historians have exposed liberalism's complicity in empire.¹ Many figures in the liberal canon had close ties with colonial enterprises. More importantly, they developed their philosophies through reflection on the relative status of European and non-European peoples and consideration of the problems of empire and global commerce. The progressive or stadial theory of history, which was central to the liberal outlook, was framed by the experience of empire. Stadial theory described a hierarchical system in which the European state sat at the top, with a cascade of lesser political societies below. It was a view of the world that allowed Europeans to justify empire through the projection of their understanding of sovereignty onto societies that they judged to be inferior.

This account of liberal thought and empire has become so historiographically dominant that it has obscured the depth of liberal opposition to empire. It is true

I would like to thank Saliha Belmessous, Greg Grandin, Anthony Pagden, Paul Patton, Jennifer Pitts, Glenda Sluga, Shane White, the participants in the University of New South Wales History and Philosophy Seminar, and the editors of and anonymous reviewers for the *American Historical Review* for comments on earlier versions of this article. This research was made possible by a grant from the Australian Research Council.

¹ Edward W. Said, *Orientalism* (New York, 1978); Bhikhu Parekh, "Liberalism and Colonialism: A Critique of Locke and Mill," in Jan Nederveen Pieterse and Bhikhu Parekh, eds., *The Decolonization of Imagination: Culture, Knowledge and Power* (London, 1995), 81–98; James Tully, *Strange Multiplicity: Constitutionalism in an Age of Diversity* (Cambridge, 1995); Uday Singh Mehta, *Liberalism and Empire: A Study in Nineteenth-Century British Liberal Thought* (Chicago, 1999); Richard Tuck, *The Rights of War and Peace: Political Thought and the International Order from Grotius to Kant* (Oxford, 1999). John Locke has been a focal point of these studies, not because he was a liberal but because he became a rallying point for liberals: Barbara Arneil, *John Locke and America: The Defence of English Colonialism* (Oxford, 1996); James Tully, *An Approach to Political Philosophy: Locke in Contexts* (Cambridge, 1993); David Armitage, "John Locke, Carolina, and the *Two Treatises of Government*," *Political Theory* 32, no. 5 (October 2004): 602–627. Recent studies point to a more supple liberalism, but one still largely beholden to empire; see, for example, Duncan Bell, *The Idea of Greater Britain: Empire and the Future of World Order, 1860–1900* (Princeton, N.J., 2007); Karuna Mantena, "The Crisis of Liberal Imperialism," in Duncan Bell, ed., *Victorian Visions of Global Order: Empire and International Relations in Nineteenth-Century Political Thought* (Cambridge, 2007), 113–135; Jennifer Pitts, *A Turn to Empire: The Rise of Imperial Liberalism in Britain and France* (Princeton, N.J., 2005); Jeanne Morefield, *Covenants without Swords: Idealist Liberalism and the Spirit of Empire* (Princeton, N.J., 2005); Casper Sylvest, *British Liberal Internationalism, 1880–1930: Making Progress?* (Manchester, 2009); Jane Burbank and Frederick Cooper, *Empires in World History: Power and the Politics of Difference* (Princeton, N.J., 2010). For a comprehensive review of the literature on empire and liberalism, see Jennifer Pitts, "Political Theory of Empire and Imperialism," *Annual Review of Political Science* 13, no. 1 (2010): 211–235.

that liberalism acted as an engine of empire, but the liberal tradition also generated debates over the justice of empire. Self-described “liberal” thinkers opposed and critiqued empire from a variety of motives. Many of these critiques came from international law. The law of nations and international law have in recent years been shown to have made a key contribution to the liberal apology for empire.² Liberals turned to international law when they sought to establish the legitimacy of empire. It was, however, within international law that a vigorous debate was also conducted about the civilizing mission, the hierarchy of nations, and the degree to which peoples at different levels of that hierarchy possessed rights. In this light, the emerging discipline of international law needs to be understood as something more than a liberal instrument created for the domination of global political society.

The skeptics of empire among international jurists were not motivated by philanthropy or humanitarianism. Indeed, most philanthropists and humanitarians have been correctly portrayed as apologists for empire.³ The skeptics were concerned with liberty rather than sovereignty. Freedom was as important in the liberal tradition as sovereignty, and the pursuit of freedom was frequently in tension with the demands of the state. For these jurists, empire posed a threat to the fragile freedoms that had been secured by the modern revolutions. Although those revolutions had, they argued, overthrown absolutism, empire created a space in which arbitrary rule and absolutism could return and could then be repatriated to Europe.

These authors were not the first European opponents of empire. In the sixteenth and seventeenth centuries, the Spanish Empire had been critiqued from the point of view of rights, famously by the so-called School of Salamanca.⁴ The European empires of the seventeenth century were opposed with the humanistic argument that luxury created by empire would corrupt metropolitan virtue.⁵ As Jennifer Pitts’s essay in this forum shows, concerns about rights in the context of empire persisted through the eighteenth century. Philosophers such as Denis Diderot, Immanuel Kant, and Johann Gottfried Herder were also skeptical of empire.⁶ Some of these writers, including Montesquieu and, later in the nineteenth century, Alexis de Tocqueville, were ambivalent about empire, but others were prepared to abandon it altogether.⁷ In the eighteenth and nineteenth centuries, the Whiggish concern with luxury and empire continued to flourish.⁸ Moreover, a third, socialist, mode of opposition to empire developed over the course of the nineteenth century.⁹ Finally, nineteenth-century liberals launched a powerful critique of empire on the basis that

it was a hazard to free trade, although these critics were happy, on the same grounds, to see the extension of what has been described as “informal” empire.¹⁰ In the second half of the nineteenth century, opposition to empire was nothing new, although it found new material. What was remarkable about this late-nineteenth-century critique of empire, however, was that it found a place at the heart of liberalism at a time when it had reached the high-water mark of pro-imperial sentiment. It therefore underlines the fact that, even at its most pro-imperial, liberalism was characterized by conflict over empire, rather than doctrine.

The liberal divisions over empire were deepened by debates over the Congo. Africa was a focus of the great expansion of European imperial enterprise in the 1870s and 1880s, and the discussion of empire within international law became most heated leading up to and following the carve-up of that continent. In 1884, Otto von Bismarck, the chancellor of the newly established German Empire, called a meeting in Berlin of those powers that were recognized as members of the community of nations. His intention was to establish the principles upon which European sovereignty could be extended over Africa in a manner that contained the rivalries. It was expected that international law could furnish those principles. These efforts to justify European empires provoked innovation in the legal apparatus used to justify the extension of sovereignty over non-European peoples. But the same efforts also stimulated and intensified opposition, which drew upon the longstanding critiques of empire. The debates between the jurists had a direct impact upon decisions about Africa’s destiny, as well as the broader world order, and they were mobilized through such tools as a constitution for the Congo and the creation of the concept of *territorium nullius*. Even though the critics would lose their struggle against the occupation of Africa, they drew attention to the fact that liberalism contained resources with which it was possible to oppose empire.

The thesis that liberalism drove empire is partly sustained by the notion that concepts of universal rights were eclipsed in the nineteenth century by nationalism and positivism.¹¹ The positivists scorned the idea that rights could be natural and could therefore exist outside civil authority. Rights were guaranteed only by positive law, and therefore by the state. Positivism thus encouraged the notion that peoples outside the nation could possess rights only by virtue of possessing sovereignty. If they had no sovereignty, then they could benefit only from the rights that would come from the projection of European sovereignty. There could be no *ius gentium*, no law of peoples whereby people possessed rights as people rather than as citizens or sub-

itarian Foreign Policy,” in Bell, *Victorian Visions of Global Order*, 239–266; Gregory Claeys, *Imperial Sceptics: British Critics of Empire, 1850–1920* (Cambridge, 2010).

jects. In this way, positivism, combining powerfully with a stadial theory of sovereignty, has been seen as the epistemology of the liberal apology for empire. Since a self-described liberal tradition did not emerge until the nineteenth century, it would certainly appear to be more than a coincidence if the universal understanding of rights, which reached its peak in the Enlightenment, was buried at the historical moment that liberalism was born.

There are problems, however, with the representation of positivism and nationalism as hegemonic nineteenth-century discourses.¹² The purchase of positivism was at its weakest in international law, because in international space, positive law was not sanctioned by a sovereign. For many jurists, only some form of natural law sanction—such as self-preservation—could make it possible for international positive law to be regarded as law. Positivism, public opinion, historicism, and natural law combined to form a synthetic understanding of rights in the writings of many international lawyers. It was the notion of rights having universal moral force, and not just as the creation of the legal regimes of states, that fed much of the liberal critique of empire during the course of the century.

The different traditions of understanding rights in the history of Western political thought point to the fact that liberalism, within which rights held a central place, was itself divided. Nineteenth-century liberalism was a loose consensus on the desirability of liberty, rights and duties, freedom of commerce, the rule of law, and the sanctity of property. One of the central divisions within liberalism, and in political thought prior to the existence of a self-conscious liberal tradition, was precisely over the question of whether rights were the creation of states or whether certain fundamental rights belonged to humans in nature. This debate underlines what Jürgen Habermas has called the Janus-faced nature of liberalism, and both sides in it have produced assumptions that could be used to justify and to critique empire.¹³

The new race for empire in the 1870s and 1880s was stimulated by improvements in military and transport technologies, including rail and the steamship (which made fast-flowing West African rivers navigable to Europeans for the first time), as well as progress in tropical medicine. Renewed French and British empires, and a new German Empire, were also driven by ideologies, by national Darwinism, by capitalism, and by a passionate rhetoric of the civilizing mission. Jules Ferry, the French premier at the time of the Berlin Conference in 1884–1885, was a champion of the new imperialism, famously declaring in July 1885: “the superior races have a right vis-à-vis the inferior races.” He was speaking, however, during an uproar in the French Parliament. He was immediately interrupted by Jules Maigne, the Left deputy from Haute-Loire, who cried: “Oh! You dare to say that in the country where the rights of man were proclaimed.” Ferry responded by asking whether the Declaration of the Rights of Man had been written for “black people in Equatorial Africa,” and then repeated, “the superior races have a right because they have a duty.

They have a duty to civilize the inferior races." Yet again, however, he was interrupted, this time by the republican deputy Joseph Fabre, who protested: "This is excessive! You thus succeed in the abdication of the principles of 1789 [the Revolution] and 1848 [the July Revolution] . . . and consecrate the replacement of the law of justice with prerogative law [*la loi de grâce*]." ¹⁴ The responses to Ferry express what was at stake for the liberal critics of empire: namely, the possibility that empire would encourage the return of arbitrary rule, thus threatening the freedoms that had been won by the modern revolutions. This sentiment was found among critics of empire across Europe. The opposition included strident criticism of the civilizing mission, which was perceived as a threat to European freedom. ¹⁵ In this context, those jurists and politicians who defended empire took a robust view of the state as the creator of rights, while those who critiqued empire employed the argument that rights exist outside the state.

MOST LATE-NINETEENTH-CENTURY international lawyers were members or associate members of the Institut de droit international. The Institut was the first organization of international lawyers. It established the idea of international law as a profession, rather than a sideline pursued by diplomats and civil lawyers, and it rapidly deepened debate on the issues that concerned this community. ¹⁶ It was founded in 1873 as a reaction to the failure to respect the Geneva Convention during the Franco-Prussian War, but its members were moved by a broader liberal and reforming spirit. It was established by prominent liberals, men such as the Belgian politician and lawyer Gustave Rolin-Jaequemyns (1835–1902), the Swiss jurist and political theorist Johann Kaspar Bluntschli (1808–1881), and Gustave Moynier (1826–1910), co-founder and president of the International Committee of the Red Cross. Membership embraced all the major European and American powers, and this group met every two years. ¹⁷ These self-described liberals aimed not only to establish a system of rules that would govern the behavior of states, but also to reform states and combat authoritarian rule. The exception to their reforming spirit, we are told, was their attitude to empire. ¹⁸ They are said to have endorsed the projection of European sovereignty abroad as enthusiastically as they pursued reform at home. In fact, they were divided in their views regarding empire, and also civilization. Many were indeed enthusiasts for European civilization, some were ambivalent, some were relativists, and yet others were damning of the "pretensions" of civilization. Importantly, the divisions between these jurists deepened from the 1870s through to the 1890s. The principal cause of this polarization was the scramble for Africa, which raised the stakes in the discussion of the justice of empire.

Auguste-Wilhelm Heffter (1796–1880), a founding member of the Institut, strongly rejected force in the conduct of empire and was similarly dismissive of the rights of civilization.¹⁹ Heffter was born in Saxe, and later became professor of law at Bonn, Halle, and Berlin and a counselor of the Supreme Court of Berlin.²⁰ For Heffter, a constitutional state, which was an expression of popular will, was the highest form of political development.²¹ He published these views in successive editions of *Das europäische Völkerrecht* in 1844 and 1848, at a time when Prussia was torn between supporters of the monarch's divine right to rule and the revolutionaries who in 1848 sought constitutional government. He wrote, moreover, when imperial designs beyond Europe were remote from German political life. Heffter's text was republished in 1873, the year the Institut was founded, and in this translation he declared: "Occupation is notably applied to areas or islands which are not inhabited or not entirely occupied, but no power on earth has the right to impose its laws upon wandering or even savage peoples." He added that while nature did not forbid empire, "propaganda about civilization" did not justify an empire's attempt to establish "domination everywhere it suits that nation."²²

Heffter's views can be contrasted with those of the Swiss-born Bluntschli, also one of the Institut founders, who was typical of the liberal apologists for empire and was in tune with the developing interest within Germany in overseas expansion in the 1870s.²³ Among his many offices, Bluntschli was a professor of constitutional law at Heidelberg, counselor to the Grand Duke Frederick I of Baden, and a member of the Baden Parliament. He devoted his life to theorizing and valorizing the state and strongly supported Prussian hegemony and Bismarck's policy of unification.²⁴ His enthusiasm for European sovereignty as the highest expression of the freedom of human beings was evident in his discussion of the occupation of the territory of "barbarian tribes." These tribes, he argued, could not be expelled; they must be allowed to "emigrate" in peace. At the same time, the colonizing state had a right to "extend its sovereignty over territory occupied by savage tribes in order to promote civilization and the extension of culture."²⁵

AT THE TIME THE INSTITUT DE DROIT INTERNATIONAL was established, there were already contrasting views about the justification of empire, such as those of Heffter and Bluntschli. But these differences hardened as the scramble for Africa accelerated in the late 1870s and the early years of the 1880s. Sir Travers Twiss (1809–1897), one of Bluntschli's colleagues in the Institut, expressed a similarly robust view of the rights of European nations to colonize, and he developed that view further in jus-

tifying the occupation of the Congo. Twiss wrote for much of his career in support of British interests.²⁶ When he wrote on the Congo, however, he was serving another sovereign.

In 1873, Twiss resigned his offices in service of the crown as the consequence of a marriage scandal.²⁷ Prior to this rupture, he had risen to advocate general, the government's adviser on civil law. Subsequently, he spent much of his energy promoting King Leopold II's claims over the Congo. Thus, he was not even engaged in the service of another nation, but rather of a private individual, Leopold, who had failed to secure the support of the Belgian government for his scheme, and a private organization, the International African Association. Leopold's Congo venture was the most extreme form of the new imperialism, insofar as it was launched by a private association and not by a state. In this instance, the ideological and technological instruments of empire can be seen to be ends in themselves. Twiss's justification of the Congo enterprise extended beyond his publications through to an involvement in the various international institutions that attempted to regulate African colonization, notably the Berlin Conference of 1884–1885. He showed that publishing and institutional activism were most effectively employed in concert.²⁸

Drawing on his knowledge of ecclesiastical law, Twiss deployed the canon law concept of *territorium nullius* in international law, a concept that would soon play a central role in the debates that revolved around the Berlin Conference. Reflecting his role as an Admiralty Court lawyer, he repeatedly employed the term "*nullius territorium*" in the 1860s and 1870s to explain that the sea could not be subject to the sovereignty of any state.²⁹ Indeed, Twiss appears to have been almost the only international lawyer in the nineteenth century to employ the concept of *nullius territorium*, or *territorium nullius*, prior to 1880.³⁰ His increasing use of the term in the late 1870s corresponded with the intensifying interest shown by European colonial

³⁰ See also Edward S. Creasy, *First Platform of International Law* (London, 1876), 232, citing Twiss. But Twiss was certainly not the originator of the term. *Territorium nullius* was relatively frequently employed in European canon law at least as early as the 1830s, and probably well before. The term was used by Catholic canonists to describe church land that could not be occupied and was not subject to sovereignty.

powers in central West Africa, but there was as yet no apparent connection made with that colonial ambition.

Leopold succeeded in converting his “humanitarian” International African Association into a state that would be responsible for the deaths of millions of Congolese people.³¹ At the outset, however, he faced significant obstacles to his ambitions, particularly insofar as the acceptance of the international community was concerned. To overcome these obstacles, he enlisted Twiss, who had been ostracized from British public life. From 1878, fears were raised that the increasing competition between the various European interests acting in the Congo could lead to conflict.³² Twiss responded that the necessary condition for peace in the Congo would be territorial sovereignty.³³ He acknowledged that some form of law existed already in the lower Congo, but he declared that “the organisation of the native races on the banks of the Congo is still *tribal*, and *territorial* Sovereignty in the sense in which it has superseded *personal* Sovereignty in Europe, is still unknown.”³⁴ He claimed that in the upper Congo it was not at all clear to whom European merchants owed obedience.³⁵ In both cases, so far as Twiss was concerned, the presence of even personal sovereignty exercised by native peoples meant that there was a void of territorial sovereignty. He was not concerned only about the native peoples of the Congo when he spoke about the vacuum of territorial sovereignty; he was also referring to the empty pretensions of certain European powers to possess sovereignty over the region, particularly the Portuguese.

In the months prior to the Berlin Conference, a tract titled *Sir Travers Twiss et le Congo* was published in Brussels. The anonymous author, identified only as “A Member of the Royal Geographical Society of Anvers,” attacked both Leopold and Twiss, accusing them of attempting to create an absolutist state.³⁶ “Who would believe,” the author stormed, that anybody would wish to spend millions civilizing central Africa out of a “simple love of humanity.” The author argued that “to demand today the recognition of absolute rights, without their even being exercised in fact, as is the case in the Congo, this would seem to us to leave the path of serious juridical debate.”³⁷ This linking of empire with absolutism was the common refrain of critics.³⁸

The British government sent five delegates to the Berlin Conference, including

³¹ The best accounts of the negotiations leading to the creation of the Congo Free State are William Roger Louis, *Ends of British Imperialism: The Scramble for Empire, Suez and Decolonization—Collected Essays* (London, 2006); and S. E. Crowe, *The Berlin West Africa Conference, 1884–1885* (London, 1942). Adam Hochschild, *King Leopold’s Ghost: A Story of Greed, Terror, and Heroism in Colonial Africa* (Boston, 1998), provides a vivid account of the terror of the Congo Free State.

³⁸ In May 1884, Twiss responded to his attacker with a third article on the Congo in the *Revue de droit international*: Twiss, “La libre navigation du Congo: Troisième article,” *RDI* 16 (1884): 237–246.

Twiss in an unofficial capacity.³⁹ He thus contrived to return to public service simultaneously for both Britain and Leopold, even though their interests at the conference were not identical. At the conference, the powers accepted Leopold's desire to turn the International African Association into a state, because this outcome would guarantee that a large part of the Congo would be denied to the other major powers. Twiss presented Leopold's case to the British and, having prevailed, was given the task of drafting the treaty recognizing the new state.⁴⁰

The Congo Free State was now born in all but name. In anticipation of this outcome, Leopold had already commissioned a draft of its constitution. For that task, he turned once again to Twiss. This constitution confirmed the fears of Twiss's anonymous Belgian attacker. It granted prerogative rule to Leopold, giving him the power to suspend laws and officers of the state "à sa discrétion."⁴¹ Finally, Twiss was appointed to chair the commission at the Berlin Conference that would determine the rules of effective occupation.⁴² Twiss's efforts are an indication of the degree to which the jurists who belonged to the Institut were concerned that real-world consequences follow from textual debates. Most members of the Institut held diplomatic and political positions, as well as being practicing jurists, and in these roles they sought to bring their visions of global order to reality.

THE CONCERN WITH HOW TO JUSTIFY the occupation of a society that possessed some degree of law, and even sovereignty, became the focus of jurists' discussions several years after the conference. In September 1885, the Institut met in Brussels, where the members established a commission, chaired by the German professor of ecclesiastical and international law Ferdinand Martitz, to study the question of effective occupation.⁴³ In Martitz's subsequent report, a new understanding of effective occupation was being articulated, in which the measure of whether colonial occupation was possible was not property but sovereignty, and not merely sovereignty but territorial sovereignty, not *dominium* but territorial *imperium*. To this end, he applied the term *territorium nullius* to the question of colonization. Apart from Twiss's works in which *nullius territorium* had been used, the term was fresh in international law, and it had not been used to discuss colonization prior to this point. The seven members of the Brussels committee were Tobias Asser, Edouard Engelhardt, Friedrich Geffcken, Emile de Laveleye, Friedrich Martens, Martitz, and, almost inevitably, Twiss. Each member of the committee was eminent in international life. For example, Asser, who would later win the Nobel Peace Prize, and de Laveleye were among the founders of the Institut. The Belgian de Laveleye had written on the

economics of colonization since the 1860s and was a close adviser to Leopold on the creation of the International African Association.⁴⁴

The members of the committee were divided, however, and could not reach a common position. Their division reflects the polarization of pro- and anti-imperial views among jurists over the scramble for Africa in the 1880s. Martitz's report reflected only one side of that debate. According to Martitz, "All regions are considered to be *territorium nullius* which do not find themselves effectively under sovereignty . . . no matter whether the region is inhabited or not."⁴⁵ "It is an exaggeration," he declared, "to speak of the sovereignty of savage or semi-barbarian peoples." Moreover, "international law does not recognize rights of independent tribes." For this reason, he concluded, "*territorium nullius* is not the same thing as *res nullius*."⁴⁶ The idea of *res nullius* was based upon the Roman law of occupation whereby things that were judged to have no owner became the property of the first taker. Martitz accepted that African tribes had rights under the law of *res nullius*: that is, for him, *res nullius* was a rule of property or *dominium*. The African peoples could possess property rights, and so not be inhabitants of *res nullius*, but that did not give them any rights of sovereignty, and in this sense, the *imperium* of their regions remained unrealized. All of Martitz's arguments regarding *territorium nullius* in relation to the Congo were consistent with Twiss's pronouncements on the same subject. Indeed, the test that Martitz applied to whether colonial intervention was justified was one of territorial sovereignty. *Territorium nullius* was a measure of territorial sovereignty, which, according to Twiss, was precisely the form of political organization that was absent in the Congo.⁴⁷ Indeed, *territorium nullius* was both the legal complement to treaty-making and the legal expression of the protectorate.

Just as there was a distinction in the minds of these jurists between *res nullius* and *territorium nullius*, it is also important to distinguish between *territorium nullius* and the now more commonly known term *terra nullius*. It has been said that there was a contradiction between the application of the doctrine of *terra nullius* to African peoples, denying them any rights, and the common claim to title through purchase and cession from those same tribes.⁴⁸ The term *terra nullius* was not, however, applied to Africa in the late nineteenth century. Although it had sometimes been previously employed in canon law, the term became popular in international law in early-twentieth-century debates over the polar regions, and in that context it signified

⁴⁶ *Ibid.*, 374.

⁴⁷ For Achille Mbembe, one of the key elements in the "European imaginary" necessary to late-nineteenth- and early-twentieth-century colonization was the "territorialization of the sovereign state." It was precisely this idea that *territorium nullius* articulated. According to Mbembe, the people who were to be colonized were also perceived as not being "sovereign subjects," although it is striking that the concept of *territorium nullius* was developed in order to justify even the colonization of a people who could be perceived in that way. See Mbembe, "Necropolitics," trans. Libby Meintjes, *Public Culture* 15, no. 1 (2003): 23–24.

⁴⁸ Jörg Fisch, "Africa as *Terra Nullius*: The Berlin Conference and International Law," in Stig Förster, Wolfgang J. Mommsen, and Ronald Edward Robinson, eds., *Bismarck, Europe, and Africa: The Berlin Africa Conference, 1884–1885, and the Onset of Partition* (Oxford, 1988), 347–375; Anghie, *Imperialism, Sovereignty and the Making of International Law*, 91; and Sylvest, "'Our Passion for Legality,'" 415.

a complete absence of rights.⁴⁹ The doctrine of *territorium nullius*, by contrast, denied rights only of territorial sovereignty. Indigenous peoples could still have rights of property and, as Twiss observed, rights of personal sovereignty without possessing territorial sovereignty. Those peoples could therefore cede through treaties those rights they were believed to have without there being any implication that they were territorially sovereign and so exempt from the laws applying to effective occupation.

Twiss had argued for the need for treaties in order to occupy *territorium nullius* in his submission on the Congo to the U.S. Congressional Committee on Foreign Relations. According to the report of that committee, the “exhaustive statements of Sir Travers Twiss” had demonstrated that the United States should recognize the International African Association as a state because “the native chiefs have the right to make these treaties” ceding “any powers” that belonged to them.⁵⁰ The effort to occupy the Congo had been accompanied by a race to make treaties with local rulers.⁵¹ The Berlin Conference then determined the destinies of those peoples without any signatories of the treaties present, a fact upon which even the British ambassador, Sir Edward Malet, felt obliged to comment: “I must remind myself that the indigenous people are not represented in our meeting” even though “the decisions of the Conference have for them an extreme gravity.”⁵²

At the 1888 meeting of the Institut de droit international at Lausanne, the meaning and scope of *territorium nullius* became the center of attention. Guido Fusinato, professor of law at the University of Turin and Italian undersecretary of state for foreign affairs, explained that “the idea of *territorium nullius* in public law corresponds with that of *res nullius* in private law.” He expanded: “As *res nullius* in private law concerns things that are not objects of property, *territorium nullius* in public law is not an object of sovereignty.” He insisted, moreover, that just as *res nullius* had been regulated by the law, so “in public law, the acquisition of *territorium nullius* must be regulated.”⁵³

At the same meeting, skeptics of colonization, including Edouard Engelhardt, protested against the understanding of occupation that jurists such as Martitz, Twiss, and Fusinato derived from the agreements made at the Berlin Conference. Engelhardt had been a member of Martitz’s commission and wrote a dissenting report in which he demanded that the Lausanne meeting of the Institut “renounce” the first article of Martitz’s report: namely, the article demanding that “all regions, whether or not they are inhabited, be regarded as *territorium nullius*.”⁵⁴ Engelhardt objected

that it was dangerous to apply this rule to inhabited regions.⁵⁵ Under what conditions, he asked, would a state be regarded as part of the community of nations? What was the situation of a state, such as Morocco, that recognized some of the rules of the law of nations and not others? Other societies, he insisted, were outside the law of nations and yet still deserved respect. He argued that there were even savage peoples, who were completely outside the law of nations, for whom it would nevertheless be “exorbitant to consider their territory as *territorium nullius*.”⁵⁶ Engelhardt prevailed after intensive debate, and the first article, the concept of *territorium nullius*, was suppressed. The opponents of treating Africa as *territorium nullius* were concerned about the potential for European sovereigns having arbitrary power over private property. That potential would arise if those sovereigns were able to seize power over peoples who clearly possessed both *dominium* and *imperium*. This concern was particularly strong in relation to the Congo because Leopold’s state, based upon a private company, was ruled by prerogative rather than by law. Prerogative power had, as we have seen, been legitimized by Twiss in his constitution for the new state.

THE PROJECTION OF EUROPEAN SOVEREIGNTY, and the principles discussed in the aftermath of the Berlin Conference, became the topic of a number of treatises in the last years of the century. Some of these subjected the Berlin agreements and the Institut debates to highly skeptical scrutiny. A number of French jurists and politicians had become critical of empire following the Franco-Prussian War in 1870–1871. The effort required to maintain the French Empire was partly blamed for domestic military weakness. By the 1880s, however, critics of empire were focused less upon the problems raised directly by the Franco-Prussian War than upon arguments used by neo-imperialists, such as Jules Ferry, who were themselves emerging from the shadow of the 1870–1871 war. Prominent among these critics of an increasingly strident imperialism were Charles Salomon and Gaston Jèze.

The Berlin Conference, according to Salomon, had recognized some of the limits in which occupation can be applied; for example, it recognized that “indigenous peoples, as indigenous peoples, are not incapable of having rights of sovereignty. Their rights of private property must [also] be respected.” But, he objected, the principles agreed at Berlin had not been respected by imperial governments.⁵⁷ Moreover, the principles established at Berlin concerning occupation were themselves “incomplete and insufficient.”⁵⁸ Indeed, in the two decades after Salomon wrote, the assurances made at Berlin regarding the property rights of native peoples were ignored by most colonial states in Africa, which deprived the native farmers and pastoralists of their land.

Salomon turned to the conditions in which occupation could be just. In Roman law, he argued, for property in something to be acquired, it must belong to no one.

⁵⁵ Engelhardt, “Sixième commission,” 177.

⁵⁶ Ibid., 178. See also Engelhardt, “Étude sur la déclaration de la conférence de Berlin.”

⁵⁷ Charles Salomon, *L’occupation des territoires sans maître: Étude de droit international* (Paris, 1889), 83–84.

⁵⁸ Ibid., 96.

In international law, it is sovereignty rather than property that is acquired. In that case, the same rule applied: namely, the object of occupation must belong to no one, but the difference was that it must not be under any form of sovereignty; it must be a *territorium nullius*. Thus he agreed that *territorium nullius* was the equivalent in international public law of *res nullius* in private Roman law.⁵⁹ But for Salomon, the territory in question must have no form of political organization at all to be a *territorium nullius*, whereas apologists for the occupation of Africa had attempted to base the concept upon a distinction between different levels of sovereignty. At issue were a different anthropology and a dramatically contrasting attitude to civilization.

In the sixteenth and seventeenth centuries, according to Salomon, all territories not inhabited by Christians were taken to be *res nullius*. In his own day, he said, an even more odious doctrine prevailed—namely, that all territories that were not civilized were treated as *res nullius*: “the argument used nowadays by civilized peoples to justify and disguise the spoliation of the weaker races, is no longer religious interest, it is the interest of civilization: modern peoples have a civilizing mission to fulfill from which they cannot escape.” “No word,” he declared, “is vaguer and has been used to commit greater iniquities than the word ‘civilization.’” Revealing the motivation for his skepticism, he warned: “Beware! The pretended right of civilization could serve to legitimize the gravest attacks, even in Europe . . . Is there not a German civilization, a Slavic civilization, a Latin civilization? Have we not often supported the incontestable superiority of one over the other?”⁶⁰

While Salomon was at one end of a spectrum that was polarized after the 1880s, his views were by no means radical in the 1890s. Authors who were ambivalent about empire, such as Henry Bonfils (1835–1897) and Frantz Despagnet (1857–1906), nevertheless expressed doubt about the civilizing mission. Bonfils was the author of probably the most influential French textbook in international law at the end of the century, in which he argued that “an absolute respect is due to the independence of savage or barbarian tribes as well as to their right to property . . . Civilized powers do not have more right to seize the territories of savages than savages have the right to occupy European continents.”⁶¹ In the light of defeat in the Franco-Prussian War, Despagnet sought a place for France in the international order whereby it could recover its grandeur and yet pursue progress, justice, and peace.⁶² “Civilization,” he observed, “is an eminently relative thing that we cannot measure.” The “pretended right to spread civilization” had been used to “despoil savage peoples of their sovereignty.” “An absolute respect,” he declared, “was due to all sovereignty, even barbarian.” Despagnet’s own absolute respect for sovereignty meant that any peoples who were not perceived to live in sovereign political systems could have their territory occupied.⁶³

Salomon, by contrast, took his concerns about the imperial mission further. His understanding of what kinds of societies possess sovereignty was extensive and in-

cluded “half civilized or savage small tribes, tribes or hordes.” For such a society, “making a beginning, however rudimentary or imperfect it may be, of political organization, we say that the territory is not a *territorium nullius*, that it cannot be the object of an occupation pure and simple.” The only way occupation could proceed in such circumstances was by means of a treaty. And treaties had, as Kant insisted, to observe the rules of justice, the first of which was the genuine consent of the indigenous people.⁶⁴ Salomon concluded that the vast majority of treaties with non-European peoples had not been just. But, like most contemporary critics of empire, he left some room for treaties that met all the conditions of justice. He had little choice. Treaties were central to the law of nations, including treaties for the cession of land, and they were employed extensively between European nations as well as being a means of extending empire. The problem was not whether treaties were legitimate but how their abuse could be prevented.

Salomon used the introduction to his treatise to explain why the legality of occupation in colonial contexts troubled him. Here we do not find an author with a deeply humanitarian or philanthropic conscience. Indeed, he seems almost to be untouched by contemporary philanthropic movements, many of which pursued the civilizing mission of which he was so contemptuous. Rather, he was motivated by the possibility that legal abuses in the colonies could be repatriated to Europe. Foremost among his concerns was that imperial occupations confused sovereignty with property. *Imperium*, or sovereignty, and *dominium*, or property, had, he argued, been confused in civil law prior to the French Revolution. After the Revolution, the distinction had been clarified. It was a fundamental principle preventing the arbitrary appropriation of property by the sovereign. According to Salomon, however, while *dominium* and *imperium* had been separated in “public internal law,” the confusion had found a last refuge in public international law and in the behavior of imperial states. The threat posed by illegal occupation in empire was a threat to the Revolution itself.⁶⁵

Gaston Jèze (1869–1953), a professor of law at the Sorbonne, acknowledged criticism of the Berlin Conference by Salomon and others. He argued, however, that the Berlin Act contained enough substance to protect the sovereignty and property of African peoples, and that the subsequent abuses of those rights had arisen from states and companies acting without regard to the agreement.⁶⁶ Jèze conceded that colonization was vital to the strategic interests of the powers. Colonies also provided markets for European goods and agricultural goods for European populations, which were growing rapidly as birth rates outstripped death rates. Excess population could be sent to the colonies, as could prisoners. For all of these reasons, Jèze argued, occupation as a mode of acquiring “sovereignty” had taken on a new importance.⁶⁷ He then turned to address the justice of occupation in a way that called into question the very foundations of the “politique coloniale.” The race for empire presented two dangers. The first arose from the conflicts over competition for territory. Laws of occupation would restrain those conflicts. The second danger was the violation of

the rights of colonized peoples: "Barbarian peoples are not without rights. Under the pretext of civilization, we cannot deliver them to the calculations of an immeasurable ambition . . . Ideas of humanity and of social progress too often hide a spirit of scandalous plunder."⁶⁸ Philanthropy was a veneer.

Jèze briefly surveyed the history of the idea of occupation, but he argued that the most important acts and documents concerning occupation were those arising from the Act of the Berlin Conference on February 26, 1885, and the Project on Occupation adopted by the Institut at Lausanne in 1888. He applied himself, therefore, to clarifying the rules of *territorium nullius*, which had been established through those two forums. The Institut could, he argued, have accepted Fusinato's formulation that *territorium nullius* regulates in public international law what *res nullius* regulates in civil law, namely, things that are owned by nobody. The object in question in the case of *territorium nullius* would be sovereignty, and this test would apply whether the land was inhabited or not.⁶⁹

By accepting whether indigenous sovereignty was present as a test of whether there could be colonial occupation, it may seem that Jèze had succumbed precisely to the intention of those jurists who had developed the concept of *territorium nullius*. He then insisted, however, that "savage" and "barbarian" peoples held sovereignty. If, therefore, occupation was to be permitted in the territory of barbarian peoples, it could only be with the consent of those peoples. For Jèze, as for Salomon, Kant provided the terms for what constituted a legitimate treaty. Applying Kant's rigorous test for consent, Jèze observed that "1. it must be free; 2. it must be intelligent; and 3. it must be conducted according to the customs of the country." "If the people refuse," he noted, "we cannot pass by another route."⁷⁰ He observed that proponents of colonial occupation had argued that it was not possible to make treaties with peoples who are not sovereign, but responded: "We refuse absolutely to admit such a doctrine. In the first instance, we have recognized a right of sovereignty for indigenous peoples. We can, therefore, speak legitimately of treaties."⁷¹

In addition to his insistence upon honest treaties, Jèze argued that "States alone have the right to occupy."⁷² At first sight, this clause may seem intended to restrict action in international law to the club of European states, but his target was actually Leopold's venture in the Congo. He rejected the recognition at the Berlin Conference of the International African Association as a sovereign state. His opposition to the Congo Free State was matched by his cynicism for the civilizing mission more generally.⁷³ Reviewing the anti-imperial tradition, Jèze observed: "As Vitoria already said in the sixteenth century, civilized powers have no more right to seize the territories of savages than savages have to occupy the European continent. The law of nations does not admit any distinction between the barbarians and the so-called

civilized.”⁷⁴ Like Salomon, he did not turn to humanitarian sentiment to motivate his critique of colonial expropriation. He too was concerned by the danger that colonial abuses would be repatriated to the metropolis: “Otherwise, the argument turns against those who propose it. Is not the right of civilization invoked even in Europe? Do we not hear certain chauvinistic spirits repeat that the civilization of this or that European country is superior to a neighboring state? Must we not admit, under that pretext, that the strongest will crush the weakest?”⁷⁵

A generation later, when Mussolini’s army invaded Ethiopia, Jèze agreed to represent the king of Ethiopia, Hailé Sélassié, in bringing Ethiopia’s challenge to the Italian conquest before the League of Nations. The French monarchist and nationalist right mounted virulent demonstrations against Jèze in late 1935 and 1936.⁷⁶ When the League Council, led by the Soviet foreign minister, Maxim Litvinoff, agreed that Italy, France, and Britain would negotiate the destiny of Ethiopia outside of the council deliberations, Jèze reportedly “glared at President Litvinoff and hissed: ‘You offer us the choice between suicide and assassination. Well, we prefer assassination!’”⁷⁷ Again, during World War II, Jèze challenged the powers of the occupying German army over the French Jewish community. The two cases were connected—as Jèze well understood, the laws of occupation applied in colonies and in European wars. As jurists such as Jèze and Salomon had foretold, the practices that had been employed in empire were being repatriated to the occupation of Europe during war.⁷⁸ This critique was later taken up in the twentieth century by figures such as Raphaël Lemkin and Hannah Arendt.⁷⁹

Jèze’s legal representation of Hailé Sélassié raises the question of whether the critiques of the liberal anti-imperialists of the late nineteenth century ever had any impact upon the international political life that they tried to shape. Clearly, in the context of the Berlin Conference, figures such as Twiss won the debate and justified a new wave of empire. As the imperialism of the 1880s and 1890s gathered momentum, the opposition became stronger but still had little impact. It is true that by the 1890s Leopold was revealed to have conducted a reign of terror in the Congo, but opposition in this instance was galvanized by humanitarian sentiment, not by fears about liberty in the metropolis, so that the territory of the Congo Free State was annexed by Belgium in 1908.⁸⁰ If we are to look for a legacy from the anti-imperial critiques of the international jurists, they are more likely to be found in the

⁸⁰ Joseph Conrad’s *Heart of Darkness*, which condemned the brutality of Leopold’s rule in the Congo, was also typical of the humanitarian ambivalence concerning empire. However, Edward Said’s argument that Conrad’s conscience was noble but that it was only possible for him to think imperially is based upon a Foucauldian assumption about the hegemony of imperial discourse, an assumption shared by many historians; see Said, *Culture and Imperialism* (New York, 1993), 19–31. For the debate over Conrad’s anti-imperialism, see the contributions to Gail Fincham and Myrtle Hooper, eds., *Under Postcolonial Eyes: Joseph Conrad after Empire* (Rondebosch, 1996).

anti-imperialism of the first fifty years of the twentieth century. They may have achieved little in the 1880s and 1890s, but they were writing on the eve of the breakup of an international order that was based upon empires, and the creation of a new system in which empires persisted but self-determining nation-states became increasingly prominent. This process was led by anti-imperial nationalism in the colonies, but it was also complemented by liberal anti-imperialists in the metropolis such as Jèze.⁸¹

LIBERAL SKEPTICISM OF EMPIRE WAS generally, then, motivated not by humanitarian sentiment but by self-interested concern about the endurance of the European revolutions. The same critics frequently identified philanthropy as the apology for empire that it was. This domestic concern about liberty abroad underlines one of the weaknesses of some of the recent influential studies produced in international history. In these accounts, the human-rights wave of the twentieth century has been presented as an international agenda pursued by the major powers in order to satisfy strategic goals, rather than as motivated by humanitarians such as Eleanor Roosevelt.⁸² The cynicism about humanitarianism is justified, but it diminishes the national, rather than international, goals of those who pursued rights. Rights theories and rights claims, it must be remembered, were developed over centuries by jurists and politicians, many of whom, whether or not they held that rights could be autonomous of states, believed that they placed a limit on state power. In the nineteenth century, those same figures frequently pursued rights in international contexts in order to secure what they believed to be fragile national freedoms.

It remains, therefore, to reconsider the relationship of liberalism to empire and the role that international law played in that relationship. International law certainly was at the forefront of the projection of sovereignty onto the non-European world, and there is no better example of that than Twiss's involvement with Leopold. But international law was also one of the domains in which opposition to empire was most strongly articulated. The liberal reformers from the generation that established the *Institut de droit international* were internationalists. Some were internationalists because they thought that international cooperation was the only means by which the expansion of empire could be organized in a way that would preserve peace, and they looked to the Berlin Conference to fulfill those ambitions. The internationalism of the skeptics of empire was motivated by a belief that only international agreements could restrain Europe from plunging into a new imperial epoch that would imperil the newfound liberty of European states. Internationalism, then, was an intellectual tool, as was international law.

They were tools that could be turned to different, and conflicting, ends. The liberal toolbox offered many such examples. Rights, too, were a tool that could be applied to conflicting ends. Rights were used to support the projection of European

sovereignty. The concept of *territorium nullius* was a species of rights argument. It was a concept that conceded that African peoples had property and even limited sovereignty but insisted that their land could still be open to the imposition of territorial sovereignty: that is, open to the creation of protectorates. But even this weapon, which seemed to point in only one direction, could be turned upon its creators. Skeptics appropriated the term and replied that Africa was not *territorium nullius*.

THE TOOL OF RIGHTS WAS USED IN other ways. Among the European jurists, diplomats, and politicians, those who were most skeptical of empire generally claimed that rights exist outside the system of state sovereignty, while those who believed rights to be the creation of states were least troubled by empire. Greg Grandin reminds us, however, that in the Americas, almost the reverse applied. U.S. expansionists insisted on the rights of property independent of the state (indeed, this was the ideology that had nourished the land speculators after the Proclamation of 1763). In Grandin's account in this forum, the opposition to this U.S. expansionism came from Latin American figures who defended the primacy of national sovereignty.

The instability of these arguments underlines a larger point about the nature of international law and liberalism. While it is true that both international law and liberalism emerged in an imperial context, that context must be understood to include both pro- and anti-imperial voices. Liberalism may have been constituted by a consensus about the desirability of liberty, rights and duties, freedom of commerce, the rule of law, and the sanctity of property, but it was also characterized by a dialogue about how to achieve these objectives and by divisions over fundamental issues such as whether the origin of rights was inside or outside the state. This dialogue was not accidental; it was an engagement between adversaries. As is clear in the case of the debate over Africa, participants in the dialogue were directly responding to each other's arguments, and their disagreement was pursued through institutions as well as texts. This dialogue and conflict, rather than doctrine, defined liberalism.

The resurgence of interest in empire among historians has been stimulated by a perceived return of empire in the twenty-first century.⁸³ Historians are divided between those who argue that empire is an inevitability and a reality that must be responsibly managed, and those who use the past to reveal the abuses of empire.⁸⁴ The argument that empire must be managed diminishes and even ignores the abuses of empire.⁸⁵ The focus on the abuses of empire, if one is to use history as a judge, has never been sufficient to curb those abuses. Indeed, humanitarian sentiment too

⁸³ Not all historians are convinced that "empire" is the appropriate term for the twentieth-century projection of power beyond the state; see, for example, Frederick Cooper, "Empire Multiplied: A Review Essay," *Comparative Studies in Society and History* 46, no. 2 (April 2004): 247–272. For a contrasting view, see Pitts, "Political Theory of Empire and Imperialism."

often collapsed back into an apology for empire. George Steinmetz asks what a critical anti-imperialism might look like today.⁸⁶ The tradition of anti-imperial critique in international law offers some insights. It is possible to reflect on that tradition, not in search of moral lessons from history, but in order to understand the complex heritage of liberalism with which we live today, and to discover what possibilities lie within that tradition.⁸⁷ The critiques of empire that were least prone to collapsing into imperial apology were those based not so much upon a sense of common humanity but upon self-interest: that is, upon the problem of liberty at home. This form of rights-based but self-interested critique has been apparent in our own time. Imprisonment at Guantanamo Bay, for example, has been criticized from the perspective of empathy with the human rights of the prisoners, but it has also been opposed with the argument that if such abuses of rights are possible in territory outside U.S. jurisdiction, it will be only a matter of time before the same extra-judicial practices are employed within the United States.⁸⁸ Today's most potent anti-imperial critiques may therefore be said to owe much to enduring debates within the liberal tradition.

AHR Forum
Comment: Empire and Its Anxieties

ANTHONY PAGDEN

TWO RELATED, AND PERSISTENT, ANXIETIES followed the creation of Europe's overseas empires, from the mid-sixteenth century, when the Spanish first became aware that they now had an empire in a remote and hitherto unknown region of the world to which no previous argument for occupation could apply, until almost the end of empire (or at least of colonial rule) in the 1960s. The first was caused by uncertainty over sovereignty, the second by the fear that whatever occurred, in no matter how distant a corner of the globe, would inevitably have consequences for what took place in the metropolis. Both are, perhaps, as old as empire itself. But the European empires from the eighteenth to the twentieth centuries, with which the three essays in this forum are concerned, faced them in a particularly acute form. The history of the sovereignty issue has traditionally been traced back to Francisco de Vitoria and Hugo Grotius, who figure prominently in the literature of international law in the nineteenth century as the founders of a modern positive law of nations, based upon a universal consensus. On this account, the law of nations, the *ius gentium*, was defined as that law upon which all rational beings supposedly could have agreed had what Cicero called "the republic of all the world" possessed a single legislative assembly. It was, as Grotius and many later jurists from Samuel Pufendorf to Emeric de Vattel claimed, a form of what the Glossators and Post-Glossators had originally called a "secondary" natural law. This made it inescapably universal, but it also left its actual content usefully imprecise. Grotius's famous claim that the natural law—and thus by implication the law of nations—was "unchangeable, even in the sense that it cannot be changed by God," meant also that it could easily be detached from the kind of religious determinism that had accompanied many of the early European justifications for empire.¹ It was with this legacy that the liberal theorists of the nineteenth century, and even to some degree the twentieth, despite the complete dismantling of the entire epistemological edifice of the "natural law" by Immanuel Kant and then G. W. F. Hegel, had to contend.

The writers with which these essays are concerned had, then, inherited a long and powerful tradition with which all of them were thoroughly familiar. It was its status as a body of laws which, in Jennifer Pitts's words, were at once "both distinctively European and also universalist in their aspirations" that allowed the law of nations to become the platform upon which a number of ambitious projects for a peaceful,

¹ Hugo Grotius, *De iure belli ac pacis*, I, 40.

cosmopolitan, world were subsequently erected, from Eméric Crucé's *New Cyneas* of 1623 (one of the earliest to include both Europeans and non-Europeans), through Kant's *Perpetual Peace*, to the more ambitious plans for a federal Europe in the aftermath of World War II.

Kant's attempt to provide a workable alternative to the current understanding of the law of nations, which he viewed as "simply an Idea"—and a useless one at that, because no legal code could possibly have any force in a world in which "states as such are not subject to a common external constraint"—led, however, in two ultimately contradictory directions.² Kant's *ius cosmopoliticum*, which was intended to replace the useless *ius gentium*, demanded that the cosmos (however defined) acquire a new political identity, the famously contested "representative republic," all of whose citizens would be able to recognize themselves as the ultimate authors of their sovereign's laws. For Kant, this offered an alternative to empire—or "universal monarchy," as he called it—which, he believed, no matter what its form, could only ever be the "graveyard of freedom" and a "soulless despotism."³ For some modern Kantians, most notably Jürgen Habermas, the closest modern equivalent to this, at least as a model for future interstate relations, is the European Union.

The other direction, the liberal one, and the one taken by most of the practitioners of the new "international law" in the nineteenth century, was effectively to limit the cosmos to a specific set of peoples (Europeans and former Europeans) all of whom could be said to accept the same basic legal principles. By the nineteenth century, a significant, if never very precise or consistent, distinction emerged between what was still referred to as the "law of nations" and the new "international law." The law of nations became the law that governed the relationship between any number of "civilized" states. It was a kind of club to which "a state hitherto accounted barbarous," in the words of the British international lawyer T. J. Lawrence, might apply for membership, and, as with all clubs, the members would then "settle the case upon its merits."⁴ A number of jurists, as Andrew Fitzmaurice shows, were prepared to accept that there might exist several such clusters of nations in the world, each governed by its own body of laws, and, since the law of nations had by now been entirely detached from its old *jusnaturalistic* moorings, these might be very unlike one another. (The two largest groups were the Europeans themselves and the Muslims.) International law—a term coined by Jeremy Bentham precisely, he said, in order to make a distinction between the French *droit entre les gens* and the *droit des gens*—was the law that governed the relationship between all those peoples who had their own "law between nations" and all those—the "barbarians"—who did not. It is not insignificant that Henry Maine, Regius Professor of Civil Law at the University of Cambridge and the Law Member of the Viceroy of India's Council from 1862 to 1869, should have claimed, as quoted here by Pitts, that "international law" was the modern equivalent of the Roman "fetial law," since that had very largely been concerned with the proceedings to be observed in waging a "just war," and the relationship between Europe's imperial powers and the world's "barbarians" was always

ultimately bellicose. The “law of nations,” by contrast, is still understood today in many places to constitute what might be described as the jurisprudence of international relations.

This transformation in the conception of the law was in large part a response to a radical transformation in the political cultures of both the states of Europe themselves and their overseas empires. The world that Edmund Burke and Abraham Hyacinthe Anquetil-Duperron (as described here by Pitts) fought to defend was very different from the one that Sir Travers Twiss, Charles Salomon, and Henri Bonfils (as described here by Fitzmaurice) were struggling to define a century later. The period between 1776 and 1814 had seen the destruction of the *ancien régime* not only in France but throughout most of Europe; it had witnessed the rise and fall of the Napoleonic Empire, the last successful, if also short-lived, attempt before 1939 to create an empire on European soil; and it had seen the consolidation of the European nation-state, and with it the triumph of a new, all-pervasive ideology: nationalism. During the same period, and partly as a consequence of these transformations, the European empires had also changed dramatically. As many historians have pointed out, the distinction between a “first,” almost exclusively American, and a “second,” Asian, Australasian, and African, British Empire is, chronologically, at least, problematical.⁵ But although Britain had already established a significant presence in Asia and Africa before 1783, and maintained one in North America and the Caribbean afterward, the empires of the seventeenth and eighteenth centuries were significantly different from those of the nineteenth and twentieth in their administrative, structural, legal, and ideological objectives, and in how they were perceived by the metropolis. Neither was Britain the only European power to have had a “first” and “second” empire. The Treaty of Paris of 1783, which brought the British Empire in America to an end, had been preceded twenty years earlier by a treaty that had effectively extinguished the first French Empire in both North America and India; and the revolutions that began in 1810 in the Spanish-American “kingdoms” completed the job of dismantling the Spanish Empire, which had begun at the Treaty of Utrecht in 1713. (Not that Spain ever acquired a second empire, despite General Francisco Franco’s repeated promises in the early years of the dictatorship to do so, unless one accepts the protectorate of Morocco from 1912 until 1956 as such.) Only the Portuguese and the Dutch, routinely ignored as they are in any discussion of liberalism and empire, had a more or less unbroken history from the seventeenth to the late nineteenth century.

These “first” empires had been relatively limited in extent compared with their nineteenth-century successors, and were predominantly settler societies. New England had famously been “in England”; the Spanish “colonies” were *de iure* (and unevenly in practice) integrated kingdoms of the Crown of Castile; New France had been a collection of feudatories governed by a body of local administrative law called the “*Coutume de Paris*,” all of whose (Catholic) residents—including Native Americans—were held, after 1664, to be “denizens and French natives.” The “new” empires, by contrast, did not encourage migration. Although the French jurist Gaston

⁵ See P. J. Marshall, “The First British Empire,” in Robin W. Winks, ed., *The Oxford History of the British Empire*, vol. 5: *Historiography* (Oxford, 1999), 43–47; and Marshall, “The First and Second British Empires: A Question of Demarcation,” *History* 49, no. 165 (1964): 13–23.

Jèze, as Fitzmaurice points out, might have believed in the final decade of the nineteenth century, as had Richard Hakluyt in the seventeenth, that colonies offered useful opportunities for “excess populations”—and in some parts of Africa in the interwar years, they certainly did—this never became the official view. In South Africa, as late as 1936, after successive interwar migrations, European settlers accounted for only 21 percent of the population. In Southern Rhodesia, they accounted for less than 5 percent.⁶ Even in places such as Algeria, which was something of an exception in having originally been intended, by Tocqueville, at least, as an “extension of France itself to the far side of the Mediterranean,” by 1931 the *colons* amounted to less than 13 percent of the population.⁷ Even British India, in many respects an exception to every rule, was a place visited by what Burke called “birds of passage and prey” rather than settled, even in the eighteenth century, and remained so until independence.

The new conception of the nation, and the new construction of overseas empire, prompted the new international jurists to think of the world in far less cosmopolitan, pluralistic terms than their predecessors had done. The “striking openness on the part of Europeans to the possibility of shared legal frameworks and mutual obligations between Christians and non-Christians, Europeans and non-Europeans,” noted by Pitts in the eighteenth century, had been animated by a vision of empire as a single, if diverse, polity, united by commerce, and operating to the mutual benefit of all its members. “‘Empire’ and ‘civil society,’” in J. G. A. Pocock’s words, were “nearly if not fully interchangeable.”⁸ By the middle of the following century, this image had given way to one in which empire had become, as Eric Hobsbawm once observed, a kind of “good ideological cement.”⁹ Instead of creating large settler bureaucracies supervised by visiting metropolitan officials, the new imperial administration attempted, where possible, to govern through local intermediaries. What F. D. Lugard, governor and governor-general of Nigeria between 1912 and 1919, was the first to describe as “indirect Rule” had, in fact, been the practice of all the European powers, with the exception of Portugal, in much of Africa and Asia since the mid-nineteenth century. It was also obviously the case that if power was to be divided with any number of local rulers, then, as Fitzmaurice points out, even the most skeptical among the new international jurists had every reason to think of international law, and the rights it conferred, as a strictly positive, rather than a universal, or natural—even a “secondary” natural—one. After all, the “Declaration of the Rights of Man and Citizen,” presented to the French National Assembly in 1789, had already established what would become in the following century a clearly recognized principle: that rights were inseparable from citizenship. It was an article of faith among nineteenth-century nationalists that a person without a nation was barely a person at all. Even today, despite the work of the United Nations (described here

by Greg Grandin) to establish a very broad-ranging conception of “human” rights to replace the older “natural” or “subjective” rights, “stateless persons” are, in effect, also rights-less ones.

All of these essays describe phases in what was, in effect, a prolonged period of crisis. Not only was one kind of empire, associated with Enlightenment universalism, displaced by another, associated with liberal imperialism, but also one kind of Europe, where, as Burke had envisaged it, every one of its inhabitants would feel at home, was rapidly and violently displaced by another, consisting of mutually suspicious, nationalist, and increasingly racist nation-states—the world that would finally destroy itself in Europe’s two great civil wars between 1914 and 1945.¹⁰

As Pitts says, the main critics of empire in the eighteenth century tended to “direct their critique inward rather than outward.” This is not to say that Burke had no genuine concern for the welfare of the “distressed” Indians. (Anquetil-Duperron’s defense of the Turks, Arabs, and Persians was prompted by an intense dislike of Montesquieu, Voltaire, and the entire circle around the *Encyclopédie*, who had made such derisive comments about his translation of the Avesta.) But what really troubled him was the danger that the kind of behavior in which Warren Hastings had indulged might eventually come to corrupt the metropolis, and even, more broadly, the whole of European culture. The servants of the East India Company, he warned, “not only bring with them the wealth which they have, but they bring with them into our country the vices by which it was acquired.” Preserving India “from oppression” meant, in effect, preserving “the British Constitution from its worst corruption.”¹¹

With the arrival of the new “imperialism,” most of this anxiety over the possibly corrupting effect of empire vanished. Although, as Fitzmaurice points out, there were some liberal critics of empire who feared that any argument for occupation in Africa might threaten what he calls the “endurance of the European revolutions” (of 1789 and 1848), in a world in which the colonies were distant outposts, administered rather than ruled, with only a scattering of settlers, any vision of empire as a single extended polity was clearly unintelligible. In the 1880s and 1890s, there was no new Burke to protest the actions of Cecil Rhodes in Matabeleland.

The key issue now became one of sovereignty, and sovereignty was primarily a legal concept. It is worth noting that although some of the debates over the legitimacy of empire before the nineteenth century were juridical, the bulk of them were moral, which is to say that they inevitably came down to being a discussion of either divine purpose or an understanding of the law of nature. (They were also, for the most part, written by men—Vitoria, Grotius, Pufendorf, Christian Wolff, Kant—who were not, or not primarily, jurists.) Burke, for instance, hardly ever mentions the question of legitimacy. For him, the “sacred trust” of empire had been “given by an incomprehensible dispensation of Divine providence into our hands.”¹² That was all that needed to be said. The situation in the nineteenth and twentieth centuries was almost exactly the reverse. True, there was a great deal of talk about the “civilizing mission,”

¹⁰ Edmund Burke, “Two Letters Addressed to a Member of the Present Parliament on the Proposals for Peace with the Regicide Directory of France,” in Burke, *The Writings and Speeches of Edmund Burke*, ed. Paul Langford, 9 vols. (Oxford, 1981–1991), 9: 248–249.

but even that was more often than not expressed in legal or institutional terms as the obligation to prepare the “backward races” of the world for entry into the “law of nations.” Grounds for occupation and jurisdiction, for *imperium* and *dominium*, had now to be found outside the moral and religious framing used by preceding generations. This explains the resurgence, described by Fitzmaurice, of an altered form of the older language of *res nullius*, which both Vitoria and Grotius had rejected as inapplicable in practice and incoherent in principle. Occupying unused, or improperly used, lands did not commit the occupying power to “civilizing” their inhabitants. The seemingly bizarre appropriation of a canon law coinage, *territorium nullius*, also allowed many of the new international lawyers to conflate sovereignty and property rights, which, in the juridical discourse, at least, had been kept separate since Alberico Gentili in the sixteenth century.

Matters were somewhat different, however, on the far side of the Atlantic. As Greg Grandin says, post-revolutionary America, both North and South, was very different from this “half-monarchical, largely illiberal, balance-of-power Europe.” But the Americas had inherited their legal and political cultures from Europe, and with them they had inherited the European anxieties over sovereignty; and the United States, at least, had inherited the worry over the potentially damaging consequences for the metropolis of any kind of imperialism. The new American states were all the outcome of settler revolts, and both they and the polities they ultimately created had, as Grandin argues, far more in common with one another than the exceptionalism of North American historians has generally allowed for. Both, once they had thrown over their former European masters, were faced with the need to consolidate their hold over vast territories sparsely populated by indigenous peoples. In both cases, however, the sole claim they could make to sovereignty in these regions derived from their prior status as European dependencies. Their territorial limits had been defined for them by Britain and Spain, respectively, and probably the sole legal justification for their continuing presence in the Americas, as both British and Spanish jurists had argued at one time or another, was the law of prescription, which allowed for long-term *de facto* occupation to be recognized *de iure* as conferring retrospective rights of property and of jurisdiction. But as they were now free, independent states created *ex nihilo*—a point on which all insisted—this could not provide them with any legal grounds on which to seize lands they did not already occupy. Yet if they were to become the kinds of nations they imagined themselves to be, they had to do just that. Both effectively shelved the issue by embarking on massive and devastating (for the indigenes) policies of occupation, buttressed by arguments that loosely resembled current European ones. Where territory had previously been acquired by prior contract with or purchase from private individuals, the new states, as the successors of the old imperial administrations, merely ratified them. When no such contracts existed, the Indians were declared to be “children,” in Grandin’s words, “incapable of forming the rational political society that justified both sovereignty and dominion.” Their lands were therefore, *de iure*, in the terms that were being used in Africa, *territorium nullius* if not actually *res nullius*. In both North and South America, this resulted in the creation of true *imperia*. Where, however, these clearly differed from the previous European attempts to emulate Antonine Rome was in the fact that the outcome was never intended to be, in any sense,

an “empire”; it was intended to be a nation, single and indivisible. Francisco de Miranda’s “Monarquía Incásica,” a blend of English constitutionalism and a romanticized vision of the Inca Empire, although it secured him British support for his attempt to invade Venezuela in 1806, remained a fantasy, its constitution locked away in the Public Records Office in London. The “Mexican Empires” of 1821–1823 and 1864–1867 were empires in name only. None of the American states in the nineteenth century were any less nationalist in their new political ideologies than their European counterparts, and in most cases they were, for obvious reasons, much more so. *E pluribus unum* applied equally to North and South. Debates over how to turn “Indians and Africans into citizens” may have been, as Grandin says, “hypocritical and premised on cultural erasure,” but it is hard to see, under the circumstances, how they could have been otherwise. In both North and South, making one out of many meant making the many into one.

And within the frontiers of that one, sovereignty had to be indivisible. Empire, however, most particularly in the “second” European empires, had always relied upon the practice of shared sovereignty. “Sovereignty,” as Henry Maine put it in 1887, “has always been regarded as divisible in international law.”¹³ Sharing sovereignty beyond the frontiers of the nation was, for the U.S., unthinkable. If the Constitution was to follow the flag, then any potential overseas possession, such as Hawaii or, more problematically, Puerto Rico, had somehow to be incorporated into the nation. As William Jennings Bryan, three-time contender for the presidency, said in 1900, any attempt to exercise sovereign authority outside the United States meant, in effect, violating the Constitution, and that could only mean imperialism; and “Imperialism abroad will lead quickly and inevitably to despotism at home.” His logic was not impeccable, but the anxiety was clear enough.¹⁴

The United States, for all its unilateral meddling in the affairs of other sovereign states, which Grandin describes here, is not an empire in any sense that would ever have been recognized in Europe. Because it cannot contemplate sharing sovereignty, and (at least since the beginning of the twentieth century) has had no wish to expand the Union, it is constantly driven back on the kind of *de facto* shared sovereign rule it exercised in Iraq and still exercises in Afghanistan—the kind of rule the British exercised in Egypt for seventy-two years, and which, in the words of Lord Kitchener’s “Oriental secretary,” Ronald Storrs, was conducted “in the Subjunctive, even the wistful Optative mood.”¹⁵ The U.S., however, has usually preferred outright denial to even the most wistful optative. Either that, or it has fallen back on robustly Roman declarations of political and cultural superiority in defense of supposedly universal political values. Luigi Einaudi’s declaration that the U.S. had the right to invade Panama in 1991 because in his view, as Grandin puts it, “the quality of its sovereignty” was “unworthy of recognition” assumed a division of the world into the civilized and the uncivilized analogous, at the very least, to that adopted by the European champions of imperial rule in nineteenth-century Africa. Einaudi’s petulant remarks should not, perhaps, be taken as entirely representative. But as the de-

moralizing revelations of legal and moral abuse, of torture and treaty-violation, not to mention the chipping away at civil liberties represented by the Patriot Act, have made all too clear, the old anxieties about the consequences for the metropolis of what its citizens do in its name beyond its frontiers have become even more acute today than they were for Edmund Burke. For unlike eighteenth-century Britain, the United States is a democracy; and as Raymond Aron once warned, "Never forget the essential: that an empire whose metropolis is a democracy is a contradiction, because the imperial power can never maintain itself except by denying itself."¹⁶

ALEXANDRA HARMON. *Rich Indians: Native People and the Problem of Wealth in American History*. Chapel Hill: University of North Carolina Press. 2010. Pp. x, 388. \$39.95.

In *An Inquiry into the Nature and Causes of the Wealth of Nations* (1776), Adam Smith argued that aboriginal peoples' economic equality, their lack of specialization, and their failure to create capital prevented them from growing rich. According to Alexandra Harmon, similar assumptions shaped Euro-American views of Native American economic behavior for nearly four centuries. In this fascinating book, Harmon uses seven case histories to investigate how Euro-Americans reacted to Native American economic behavior and what those reactions said about both cultures from first contact through the present. Harmon argues that Indians early became associated with poverty. Europeans invoked the labor theory of value beginning in the seventeenth century to justify their claims on Indian lands and resources; they insisted that Indians perversely chose poverty despite the presence of great natural wealth. As the title indicates, though, Harmon also highlights Indians who upended this stereotype and became wealthy. "Indian affluence," she contends, "caused Indians and non-Indians to ponder a variety of questions about right and wrong" (pp. 7–8). Alongside the image of the "poor Indian," another powerful stereotype emerged: the "rich Indian," a beneficiary of accidental wealth, whether from oil rights or casino profits.

Harmon is interested in the interplay of Euro-American and Native American political economies. She contends that Indian responses to capitalism shaped American economic culture and vice versa. The morality of wealth is a classic American preoccupation, she argues, and both rich and poor Indians raised important questions for contemporaries about how to achieve wealth, who deserved wealth, and how to show wealth. Euro-Americans and Natives alike portrayed Indian culture as inimical to individual accumulation, entrepreneurship, and inequality in ways that justified a variety of forcible policy interventions, including removal, allotment of common holdings, and guardianship. Officials and writers subjected rich Indians to a critical scrutiny that other wealthy Americans escaped. Often these discussions reflected ideas about race, since many

wealthy Indians were mixed-race individuals whose entrepreneurialism, commentators assumed, arose from their connections with white culture.

This book represents a sorely needed effort to integrate Native Americans into the story of American economic development and its consequences. As is true of U.S. history in general, the metanarratives of American economic history often exclude Indians. This limits our understanding of economic change, especially its costs and benefits. Harmon's work also speaks to other questions: what has it meant to be "Indian"? What kinds of cultural, spatial, material, and ethnic change could Indians experience and yet remain Indians? Was there an essential economic component to Indian culture? Did entrepreneurial Native American wealth-accumulators cease to be real Indians? And how did material change shape Native American ethnogenesis—the process by which groups created and recreated new identities in the face of change?

This is a great topic, and Harmon tackles it with energy. Synthesizing an impressive range of material, she examines seven eras of Indian/European economic interaction, beginning with encounters in the seventeenth-century Chesapeake, when the colonists first developed perceptions of Indian economic incapacity, and ending with the contemporary successes of the Indian gaming industry. Four intermediate chapters focus on individuals or groups who achieved exceptional wealth: "Indian gentry" members Joseph Brant, Alexander McGillivray, and Coosaponakeesa in the eighteenth century; John Ross and other assimilated Cherokee leaders during the removal era; Gilded Age entrepreneurs in Indian territory; and beneficiaries of the Osage oil boom of the 1920s. The penultimate chapter investigates the interaction between government antipoverty crusades and the Indian communities they targeted in the mid-twentieth century, culminating in the "tribal renaissance" of the 1970s.

It seems unfair to ask an author who covers so much ground to do more, but Harmon's portraits of Euro-American and Native American economic culture are

rather static and lack analysis, especially of Indians' responses to economic change. In her lively first chapter, Harmon notes interesting parallels between Native American and Euro-American views on trade, class, and wealth in early Virginia. Indians and colonists eagerly sought exchange. Both groups believed that communal or customary rights could sometimes trump individual use of resources. For English colonists, as well as for the Powhatan sachem Wahunsonacock, legitimacy and power depended on the acquisition and distribution of resources. Yet for Harmon, this period of congruence—and of European economic dependence on Indians, which conferred power on the Powhatans—lasted barely two decades. Indian economic culture, which understood individual acquisition and power but stressed redistribution and collective well-being, was overtaken by an emerging Euro-American culture of entrepreneurship and a “dialectic of land acquisition and population change that beggared” the Indians (p. 54). Harmon does not use the term dependency, but she implies that Indians opted out of the larger economy.

I am not convinced that the economic marginalization of the Indians occurred so quickly. Thanks to three decades of excellent work on Native American history, we now know that much of the growth of the early American economy depended upon Native Americans. Harmon rightly highlights the fact that invasion, displacement, and catastrophic Indian mortality facilitated a massive transfer of Indian wealth and resources to Euro-Americans. But this was an extremely long process. Although econometricians who have assessed colonial economic wealth generally ignore Native Americans, Peter C. Mancall and James Weiss argue that increases in colonial GDP appear only when Indians are included in calculations (“Was Economic Growth Likely in Colonial British North America?” *Journal of Economic History* 59 [March 1999]: 17–40).

Europeans were in no position to impose their will on many Indian groups, and often had no wish to displace them. European settlements remained dependent on Indian food supplies, aid, and technology for anywhere from a few years to two centuries. The presence of Indians made colonization and expansion profitable, since fur and skin trades remained central throughout the colonial era in New France, Louisiana, and the Southeast, and well into the nineteenth century in the Missouri and Mississippi valleys. Skins were the fourth largest class of exports from the mainland English colonies to England on the eve of the American Revolution, and the Pacific fur trade proved integral to America's trade with Asia in the nineteenth century. Indians also exercised power as consumers, and European manufacturers catered to Native tastes in what was for them a crucial market. Indian labor, both free and forced, powered local economies throughout the Americas, and Indian slaves were themselves prized items in robust continental and international trade networks.

Scholars have charted the impact of these economic relationships, and some, including William Cronon and Daniel K. Richter, have argued that connection to in-

ternational markets destroyed Indian resource bases and created dependent relationships with Euro-Americans. A focus on war, furs, and trade certainly altered gender relations and power structures within Indian societies; changes illustrated in Claudio Saunt's *A New Order of Things: Property, Power, and the Transformation of the Creek Indians, 1733–1816* (1999) and Theda Perdue's *Cherokee Women: Gender and Culture Change, 1700–1835* (1998). But Native Americans also responded to market forces, opportunities, and the realities of their shrinking resources by making creative choices, and I wish that Harmon had given the constraints Indians faced and the strategies they devised in response more attention. Despite violent displacement, Native Americans controlled significant resources in land, oil, and minerals, making them players in western agriculture and extractive industries. Natives experimented effectively with different economic strategies, such as leasing land. As demonstrated repeatedly in the scholarship of R. David Edmunds, Richard White, Daniel H. Usner, Jr., Jay Gitlin, Stephen Aron, and others, when cessions and removal depleted their hunting lands, many nineteenth-century Choctaw, Chickasaw, Creek, and Navajo adopted activities that permitted continuity with older customs, including commercial stock raising. Harmon rues the fact that Indians chose agriculture rather than railroad ownership, yet many seized opportunities in manufacturing and servicing travelers. The Osage held onto oil wealth because they owned their land by purchase rather than by treaty, having used compensation from removal to enter the real estate market. Ownership did not insulate them from government interference, but the Osage example illustrates how Indians could engage with economic development on their own terms.

Harmon raises interesting questions about whether the Indians' redistributive ethos and lack of a centralized polity undermined their economic success. “It was not a taste for wealth that Indians had to develop in order to be more like enterprising Whites; it was the habit of amassing property, and either retaining it or putting it to use in the generation of additional wealth that would stay within a limited family circle” (p. 106). Her focus on “public discourse” creates an asymmetry at the heart of the book, however, since most of the commentary on Indian political economy she presents was produced by Euro-Americans for consumption by other Euro-Americans. Despite her efforts to incorporate material from native newspapers, speeches, and Congressional testimony, she references few Indian voices before the mid-twentieth century. In fact, part of her argument is that Indians' inability to shape or even engage in debate contributed to their power deficit, because “distorted images” shaped U.S. public policy (p. 207). As a result, she writes little about economic strategy within Indian country beyond an ongoing conflict between “traditionalists” and often mixed-race entrepreneurs or battles for access within the Indian elite. I was left wondering what Harmon thought of “rich Indians” herself. Contemporaries and scholars have ques-

tioned whether biracial leaders could pursue profit and yet function as protectors of Indian economic autonomy and resources. Harmon sees them as cultural “outgrowths” not “anomalies”; she defends the personal accumulation of McGillivray and Brant as fitting into Indian customs of political leadership (p. 89). Yet their behavior roused considerable controversy in Indian country. Beyond U.S. officials’ favoritism toward mixed-race individuals, how important were Euro-American ties to rich Indians’ economic success, and were there any “traditionalist” entrepreneurs who created less animosity? Harmon’s story hints at undercurrents of class and gender conflict. Cherokee leaders in the 1820s adopted legal structures that favored the wealthy as well as inheritance and citizenship rules inimical to Indian women’s interests, but these measures protected women’s property rights better than Euro-American equivalents. It would be interesting to know how Indian women fared in the communities that Harmon’s subjects constructed in post-removal Kansas, Oklahoma, and Missouri.

Considering other sources might have let Harmon explore Indian and Euro-American economic thought more fully. Native movements that battled Euro-American encroachment, including the Brothertown Indians, the Creek Red Sticks, and the Shawnee Tenskwatawa, had economic goals. Consumption offers another window into economic culture. Harmon notes that consumption strategies that commanded respect within Osage country formed “proof of their weakness and moral inferiority” to outside critics (p. 208). She indicates that feasting and food showed continuity with past values, but when rural Osage bought mink coats, luxury cars, and flapper hats were they still working within the same cultural framework and understandings of power as the seventeenth-century Powhatans, or were new influences at work? What else did Indians invest in, including education?

Ascribing political economy to Native Americans im-

plies the existence of polity. Indians remained non-citizens within America until 1924, and as Harmon notes, the modern tribal state, a collaborative creation of Indians and federal officials, did not emerge until the mid-twentieth century. Earlier kin-based, consensual societies did not conform to Euro-American notions of a state, but there was Indian political activity, and Harmon does not explore the political organizations, parties, and non-governmental institutions that Indians used to confront economic change in the same way that other Americans did. She notes the existence of a Native American Populist group, but we never hear about its activities or those of the Industrial Workers of the World and other union movements that attracted Indian participants through the 1950s. In her excellent chapter on the “tribal renaissance” of 1950–1980, Harmon charts Indian efforts to “secure, protect, and control economic resources,” in part building on economic initiatives from the Office of Economic Opportunity (p. 226). She credits this success to the activism of a rising generation of educated Indians, but she does not look back to earlier experiences or even to cross-fertilization between Indian emancipation and the struggle for black economic equality. Scholars of civil rights are pushing back the story of the movement’s origins to the nineteenth century, and a similar approach might find ways to link the modern Indian self-determination movement, which has a strong political economy component, with the previous century of Indian organizational experience. Despite the stereotypes, Indian tribal governments have done a decent job of promoting economic development; even non-casino tribes have a rate of economic growth much greater than the overall American economy. And they have done so while maintaining collectivist values of redistribution and social welfare that Harmon emphasizes in this noteworthy book.

LAWRENCE B. GLICKMAN. *Buying Power: A History of Consumer Activism in America*. Chicago: University of Chicago Press. 2009. Pp. xix, 403. \$45.00.

For the past thirty years, historians have intensively investigated the evolution of consumer economy and society in the United States. They have probed the histories of getting and spending, of goods, of merchandizing and provisioning, of consumption’s role in social life, politics, and state formation, and of its centrality to modern culture. Doubtless, historians will still study the contours of consumer culture and the relationships of the state and markets, but we now have a definitive account of consumer activism. Lawrence B. Glickman’s long-awaited volume surveys the social movements animated by and through consumer actions. Consumers today routinely ponder the ethical implica-

tions of their spending for workers, the environment, and the national or local economy. Yet the myriad movements that seek to influence spending all have long and subterranean histories. Glickman’s book offers a powerful account of the ways American consumers have organized to influence spending for political and social ends from the Boston Tea Party until today.

Glickman’s previous monograph, *A Living Wage: American Workers and the Making of Consumer Society* (1997), chronicled how workers in the late nineteenth century shed their ideology of independent artisans and adopted a consumer identity by seeking better wages and work. He has previewed this new volume in sev-

eral journal articles, but these chapters now hold together as one narrative that examines the shifting meanings and forms of consumer action over two centuries. From a political perspective, there is nothing inherently virtuous about consumption; classical republican political theory and an array of commentators have long castigated spending as dangerous and corrupt behavior, the ultimate expression of luxury-seeking self-interest that weakens civic engagement. For them, consuming is apolitical at best, the acidic solvent of citizenship at worst. Almost by definition, in republican thought consumers cannot be citizens, a view most recently upheld by political theorist Benjamin Barber. However, like a number of historians before him, including T. H. Breen, Landon Storrs, Elizabeth Cohen, and Meg Jacobs, Glickman argues the opposite. Consumer activists have in fact been political theorists who were convinced that spending "is a fundamentally social act, with far-reaching consequences" and citizens bore the "ultimate responsibility for the rippling consequences of their purchases" (p. 3). Consumers have often been avidly engaged in civics, organizing to influence the market to achieve political goals. Whereas previous historians have focused on a specific movement or moment, Glickman surveys the entire scope of U.S. national history to recover "an American political tradition," a "significant and understudied strand of American political culture, a durable but flexible mode of political engagement" (p. 22).

This is no easy task of recovery; consumer activism has assumed many forms with varying and sometimes conflicting aims. Moreover, as Glickman notes, consumers acting in concert "rarely achieved their immediate objectives," (p. 2), unlike the more storied movements of labor, civil rights, or women's suffrage. Most interestingly, Glickman's history is one of discontinuity. Consumer activists had little memory of previous movements; each new cohort claimed to be original in its specific campaign against marketplace injustice by channeling spending. The only forebears organized consumers generally acknowledged were the revolutionary generation of the Boston Tea Party and non-importation. Claiming these ancestors gave consumer movements a patriotic high ground to seek reform, and to stage both boycotts (commercial "ostracism" of certain goods or sellers) and "buycotts" (advocacy of certain items to replace or counter the suspect goods of boycotts). But Glickman identifies an important problem for future scholars of marketplace activism: what sort of tradition cannot acknowledge itself as such?

This book's sweeping history periodizes the movements in three eras. The first chronicles the origins of consumer activism from the revolutionary era through the Gilded Age invention of the term boycott. The second traces the rise of national consumer movements (as opposed to *ad hoc* activism) from the Progressive era to World War II, and the third centers on the postwar disentangling of movements, activists, and the federal government during the "consumer's republic."

Glickman begins with the revolutionary generation's

long familiar campaigns against British-made goods. Adopting the boycott, a premodern communal practice of ostracizing offending merchants and goods, the colonists' non-importation and homespun movements quickly became the cornerstone of subsequent rebellion against the crown. Glickman argues that print media's reach as well as the colonists' recognition of the markets' susceptibility to influence from outsiders enabled them to generate "long-distance solidarity," a necessary hallmark of all future consumer activism. Thus he evokes but does not name Benedict Anderson's "imagined communities," another form of long distance solidarity made possible by print capitalism. In one of his most welcome contributions, Glickman next uncovers antebellum-era northern abolitionist campaigns against slave-made goods and their "free produce" alternatives, along with contemporaneous Southern non-importation campaigns against the North. The flowering of boycotts in the 1880s escalated the stakes of consumer based activism. Expanding communication networks enabled boycotters, especially labor, to extend the reach of long distance solidarities, even as their opponents could now easily brand them as unpatriotic. In an era of transnational activism and emerging socialism, consumer-led, labor-allied protests against immoral business practices or tainted goods could now be labeled anti-capitalist and un-American.

The Progressive era saw sporadic boycotts transform into a specific consumer movement, albeit one with goals that altered considerably over time. For the first time, Glickman notes, observers depicted consumers as a distinct group in the social order with specific interests. Progressive era reformers viewed consumers as the constituency essential to a revived citizenship appropriate to the industrialized mass society. Yet the consumer movement hinged on a paradox: the new democracy of consumers depended on enlightened experts to provide guidance in a complex world. The moral qualities and practices of goods, makers, and merchants were no longer transparent, and consumers needed education to make ethical choices. The National Consumers League revealed the exploitative conditions under which goods were made and agitated for protection for those making and selling goods. The Progressives' impulse in turn gave way to consumerists, the scientifically trained experts who popularized product testing and turned attention toward the plethora of goods and away from the conditions of manufacture. Consumers' Research (founded in 1929) and its rival Consumers Union (1936) embodied conflicting approaches to consumer interests. Consumers' Research adopted an individualist emphasis on scientific expertise to evaluate consumer goods themselves without attention to social conditions; Consumers Union in turn emphasized the social aspects of consuming and formed alliances with other groups, notably labor. By World War II, the United States had a vibrant consumer movement that focused on both protection against faulty goods and social responsibility in buying.

Glickman's third era centers around the impulse for

national consumer protections, the changing relationships of consumers, movements, and the federal government, and the politics of regulation. The postwar era saw consumerists targeted as subversives and communists, even as the middle class flocked to Consumers Union. The push to create a Cabinet Department of Consumer Protection, first proposed in the mid-1960s, provoked a ten-year campaign of resistance and lobbying from political conservatives and organized business. Glickman argues that conservatives' success rested on associating consumerism with liberalism itself, and attacking them both endlessly with McCarthyite associations of communism and totalitarianism. Even as the nation fought over a partially realized civil rights agenda, and other groups formed separate movements to claim political and civil rights, politicians ultimately refused to grant specific oversight to the broadest interest group of all. This campaign had implications far beyond the secretariat itself. Glickman argues that the fight against the Consumer Protection Agency (CPA) provided business and free enterprise conservatives a blueprint for their ultimate ascendancy in domestic politics in the 1980s and beyond. The defeat of consumer protection left liberalism permanently weakened. Here he unfortunately downplays other factors that fed the rise of the Right: demographic change, fundamentalism's revival in the suburbs, the decades-long business campaign to discredit and overturn the New Deal, and the corrosive effect of entrenched white privilege on the New Deal political coalition, to name a few. All were important to the rise of Reagan-era conservatism.

The study concludes with Glickman's observation that since the 1980s consumer activism has come full circle; direct consumer actions erupted in dozens of new campaigns, even as the state's support of consumer movements and interests stagnated and declined under conservative deregulation. Once more, consumers perceive compelling moral cause to purchase or boycott particular goods or manufacturers. The ascendancy of both globalization and neoliberal regimes ensures that activists must work across national borders and cultures. Ever changing in tactics and aims, current consumer activism nonetheless reveals its deep ties to the movements of the past two centuries.

This formidable book reminds us that boycotts and buycotts have been democratic tools accessible to every level of society. While many critics have dismissed consumer-based movements as middle-class diversions aimed at superficial problems, Glickman argues that consumer activism has arisen at all levels of society and has sometimes generated broad cross-class coalitions. Some of the most effective moments of consumer protest have been initiated by African Americans, most notably during the late nineteenth century and the civil rights movement. Glickman also astutely notes that the politics of pleasure lie at the heart of many consumer protests; while numerous activists have been historically suspicious of luxury and waste, he uncovers a long line of protesters who saw little conflict between plea-

sure and politics, beauty and righteousness, display and virtue. Boycotters and activists simply cannot be reduced to a cavalcade of cranks and humorless ascetics. Finally, Glickman underscores the tensions between expertise and democracy throughout this history. While consumer activists have regarded themselves as democratic, awareness of morally suspect, dangerous, or inadequate goods increasingly came to depend on expert knowledge. Boycotters and the experts who supplied them knowledge often viewed the mass of buyers as ignorant and possibly dangerous. But if consumers have been unable to generate that knowledge alone, the experts' diagnoses have often proved politically impossible or culturally unpalatable. Consumer activists have never been united on any question, and any attempt to discern a transcendent consumer interest will end in useless platitudes or endless frustration.

Glickman's work leaves us with new questions and new areas to consider. Most pressing are the origins of contemporary widespread activism; Glickman pays little attention to the recent decades since the rise of political conservatism he links so strenuously to the fate of the CPA. The emergence of a variety of green movements, slow food and locavore adherents, campaigners for corporate responsibility, and the "No Logo" and "culture jamming" initiatives all highlight that this era of consumer activism may be unprecedented in scale or numbers. How do these movements continue or differ from past campaigns? Second, we need to know more about the transnational dimensions of consumer activism. Long-distance solidarities have flourished from at least the antislavery movements to the present. As scholars turn their attention to more recent movements, global campaigns and boycotts will no doubt claim their attention.

Tantalizingly, Glickman leaves unanswered the question that runs through the book: why has there been such amnesia from one generation to the next? Consumers were civically engaged, but they did not establish clear traditions understood and embraced by subsequent activists. While Glickman points out the continuities underlying activist histories, he also notes the participants themselves had little knowledge of or interests in past movements, apart from the founders. Glickman might have turned his gaze away from movement tactics and politics and paid more attention to culture for some clues. Shopping and provisioning in everyday life do not necessarily inculcate amnesia or self-absorption, but clearly U.S. consumer society's insistent emphasis on individualism and self-interest continually reinforces barriers to long-distance solidarity. The common sense that consumers are the ultimate sovereigns of the market, and capitalist markets provide the most important resources for daily living more effectively, fairly, and efficiently than other economic systems remains powerful and ubiquitous. Institutions, media, and authorities all echo and enforce it. Consumption takes place in material settings and spaces that embody and uphold that logic. To oppose it, consumers must continually set themselves against the

grain of authority. Additionally, the contested goods of boycotts undermine possibilities for collective memory. Because most boycotted goods were largely ephemeral, later generations lacked the most tangible reminders of earlier struggles. Finally, why would the collective memories of consumer activists seem weaker than those of other movements? Perhaps the relatively small numbers of boycotters made it difficult to pass on any legacy. It is no indictment of this hidden history to note that

perhaps the very malleability of consumer protests against merchants and goods has obscured the continuities that have united them over time. Fortunately for us, this study provides a definitive history that links past and future movements so well that scholars will draw upon it for years to come.

DAVID CIARLO. *Advertising Empire: Race and Visual Culture in Imperial Germany*. (Harvard Historical Studies, number 171.) Cambridge: Harvard University Press. 2011. Pp. xvi, 419. \$49.95.

David Ciarlo has written a breakthrough book, one that provides an important point of departure for a new generation of studies of the cultural history of imperial Germany. One of the reasons for this is that *Advertising Empire* disaggregates the two entities in its title, compelling us to think about the ways in which “advertising” and “empire” complemented or diverged from one another. Resisting the all too simplistic conclusion that the presence of increasing numbers of stereotyped Africans in German advertising was a direct result of Germany’s post-1884 leap into imperial activity, Ciarlo investigates instead a wide variety of other factors that structured the Wilhelmine visual universe and shaped its fledgling advertising community. We learn something we probably should have suspected, but which nonetheless comes as a surprise: the racialization of German advertising imagery in the Wilhelmine era was not exclusively about imperial fantasies or projections. It was chiefly about selling stuff. The question then becomes, why did racialized images (and especially increasingly stereotyped images of Africans) help sell goods to an overwhelmingly white population, most of whom had never seen an African in person, and at least some of whom disapproved of German colonization? To answer this question, Ciarlo draws on little-studied aspects of Wilhelmine commercial and visual culture that take us far beyond the no longer productive assertion that imperial dreams suffused German culture during the long nineteenth century.

As with many breakthrough books, the innovation of *Advertising Empire* lies partly in its excavation of a series of new or underused sources and partly in a courageous and careful explanation of those sources. Ciarlo’s new sources are the trademark rolls of the Imperial Patent Office, where, after 1894, advertisers registered at least some of their signature designs; to these he adds images from several museum collections and wide reading, not only in the literature about German colonialism but in the literature (such as it is) about the history of German commerce, visual culture, and popular entertainments. The trademark rolls in particular allow him to obtain a chronologically specific overview of market-oriented

image making between the 1890s and 1914, making it possible to examine advertisements and poster art not, as he describes it, in individual test-tubes—as if made by artists living in a visual vacuum—but as a “down-pour” of clichés in which the historian can find patterns (p. 16). Ciarlo explores and interprets this visual language with considerable subtlety and insight; one of the delights of the book is that he is a fine reader of images, one who draws attention to specific aspects of visual language that the viewer can actually see in the images. The images themselves (including twenty-seven color plates) are well-chosen and beautifully reproduced, and Ciarlo deserves a great deal of credit for the hard work that surely went into this aspect of the volume.

Ciarlo begins his analysis with an unorthodox account of the world and colonial exhibitions and *Völkerschauen* (ethnographical shows) of the 1880s and 1890s, subjects that have been featured in many recent studies of colonial culture. Right off the bat he makes several striking observations. For example, the fact that the exhibitions gave up displaying colonial products and adopted the techniques of the *Völkerschauen* was not really an ideological move but was a response to the realities that most German colonies produced almost nothing (except bloodshed for the natives and boasting rights for the kaiser) and that visitors found exhibits of colonial goods boring. He writes that “we must resist the temptation to see the Colonial Exhibition [of 1896] through the eyes of its colonialist sponsors—as a powerful presentation of Germany’s imperial might” (p. 58); in fact, most visitors spent their time riding in hot air balloons or checking out huge new telescopes rather than wandering through product displays or even viewing the “real” native peoples. Most Germans did not even see these “exotic” peoples in the flesh, but encountered them through representations in posters, advertisements printed in magazines, and on product labels. Thus the real story of Germans’ relationships with African “others” is a story of representations, not of first-hand encounters. Therefore we need to understand the creators of the visual clichés, not just the vocal supporters of German colonialism.

Ciarlo next turns backward in time, showing that German consumers had been exposed to images of black people long before the late nineteenth century, from depictions in high art (as allegorical figures representing the continent of Africa or in depictions of the Magi) and in popular culture, as the “tobacco Moor” figure printed on packets of tobacco since the seventeenth century. But as Ciarlo points out, many of these images were composites of New and Old World types (the “tobacco Moor” combines a black body with a skirt of American tobacco leaves), and aside from their skin color Africans were not depicted as physically different than Europeans. What gave this visual tradition a jolt was the intrusion of images from the United States, led by minstrel shows already touring in the late 1830s and followed in the 1860s and afterward by P. T. Barnum and his German imitator, Carl Hagenbeck. Both the minstrel shows and Barnum’s circuses, the posters for which drew on the racist visual vocabulary of the Jim Crow era, left a lasting legacy in the form of representations of ragtag, red-lipped, and wide-eyed African-Americans. When in the 1890s it became possible to reproduce half-tone and colored illustrations cheaply, the newly-minted advertising profession had a grab-bag of images of minstrels, mammies, pickaninnies, and ape-men to deploy in their own attempt to use otherness to catch the eye.

Barnum, then, alerted savvy men of commerce that sensation sold, and American entertainers provided new, more strongly racialized images of people of African origin. But homegrown elements also contributed to the shaping of early advertising imagery in imperial Germany. One of the (again unexpected) elements to which Ciarlo draws our attention is caricature, a German strong suit beginning with Wilhelm Busch, the probable inventor of the comic strip in the 1860s, and blooming in the satirical journals *Kladderadatsch* and *Simplicissimus* by the 1890s. Early German advertisers liked visual jokes, and for many of these Africans were useful. The most long-lived of these drew on the familiar adage expressing endless frustration, “like trying to wash a Moor”; the *Möhrenwäsche* (“Moor wash”) proved to be a joke that soap manufacturers found endlessly entertaining. Images of Africans were also employed in the selling of black-colored items like ink and shoe polish, products that also lent themselves to numerous visual gags. It appears that racial difference was thought to be funny, and advertisers hoped that it would hold the viewers’ gaze long enough to sell the product. And, Ciarlo points out, from a design standpoint blackness was simply visually eye-catching, especially when advertisers were using only two or four-color images. In posters, black stood out against light-colored backdrops or walls; in advertisements for toothpaste, a black face made the whiteness of the teeth stand out. Catching the consumer’s eye was the object, whether this entailed creating a spectacle, telling a visual joke, or simply creating colorful contrasts, and in all of these areas, the black body did important work.

There were other reasons, too, for depicting Afri-

cans. Advertisers trying to sell new products like bicycles had to explain to consumers why they needed these items but wanted to do so without being condescending or overly didactic; one way to do this was to picture Africans, and especially African children, as the recipients of information about “civilizing” products. This strategy flattered viewers while telling them what to buy. Depicting clearly racial “others” also helped advertisers reach an audience that was divided by socioeconomic, educational, regional, political, and gender differences: African was one thing Germans were not, and depicting them as eternal servants, the butts of jokes, or the object of lessons was one way not to offend any member of the buying public, including (though Ciarlo does not say this) the internal “others,” such as working-class men, women, Jews, or Polish immigrants.

Ciarlo is not only interested in depictions of Africans and the usefulness of this visual language to those who wanted to sell their wares. He also wants to preserve a connection between this visual language and the history of German colonization, something he does by demonstrating that the depiction of Africans did change over time as stereotypical racial characteristics such as large, red lips became more and more exaggerated. Increasingly, he argues, Africans were presented as “man children”: adults (for depictions of children might arouse too much sympathy) with disproportionately large heads and small bodies. This new colonial figuration of Africans, he contends, did not coincide with the onset of German colonization but rather with the beginning of intense colonial warfare after the Boer Wars and with developments in lithography that made colored images and packages much cheaper to reproduce. The introduction of mass-produced advertising stamps for grocery packages also contributed to a movement toward the simplification of imagery—as did the advent of modernist design. This era witnessed both the intensification of colonial conflict and competition and a vastly increased scale and rate of image circulation—for this was also the era of trading cards and tabloids, of falling prices for illustrated journals, and mass emigration into the image-rich German cities. While not generated by political forces, these images, Ciarlo argues, surely played a role in naturalizing colonialism by insisting on racial differences (p. 155). Since advertisers had to speak to their audiences in languages they would both understand and accept, we can conclude, at the very least, that Germans did not object to picturing Africans as bodily misshapen, eternally uncivilized, happily enslaved, and sometimes dangerously irrational people. That colonizing them would not be an evil—no matter how savage the civilizing process—would be a logical conclusion to draw.

Ciarlo’s concluding section takes us briefly forward into the world of the Great War. Here his research is spotty, and his conclusions seem speculative and overdrawn. I suppose it is possible that linkages made between modernity and American images of blacks contributed to right-wing rhetoric about American mongrelization (p. 313), or that depictions of German

superiority contributed to “the detachment from realism with which the German public . . . went to war” (p. 315), but I am dubious. Surely Ciarlo is right that racialized images of Africans were used in depictions of French colonial troops (the “Black Horror”) during the war and during the Rhineland crisis of 1922–1923, but one simply does not know what to do with Ciarlo’s observation that antisemitism, though pervasive in right-wing discourse before and during the war, did not present itself in commercial imagery: “in advertising’s world of expedient color contrasts, race was constructed against Africans, not against Jews” (p. 309). Does that mean, then, that commercial images do not, at the end of the day, create racist antipathies? And then there are Ciarlo’s interesting and important remarks on the other imagery he has found in the trademarks. Depictions of Africans were by no means the most common; thin women, babies, and muscular men were depicted more frequently, and their bodies were also increasingly subject to stereotyping. Perhaps we need some investigation of these positive conventions, too, to understand

the patterns in the “downpour” of Wilhelmine visual imagery.

The most important contribution this book makes is to our understanding of visual culture and advertising strategies in the Wilhelmine era, and Ciarlo also deserves praise for decoupling empire and commercial culture, in part so that we can untangle their real relations (as once had to be done with the relationship between Nazism and big business). As I learned long ago from the classic book on the history of American advertising (Roland Marchand, *Advertising the American Dream: Making Way for Modernity, 1920–1940* [1985]), studying the relationship between advertising and national cultures as a whole is a tricky business, and it takes enormous ingenuity and deep immersion in both visual and political contexts to say something meaningful. Ciarlo has accomplished that with spectacular success.

METHODS/THEORY

FRANCESCO BOLDIZZONI. *The Poverty of Clio: Resurrecting Economic History*. Princeton: Princeton University Press. 2011. Pp. xi, 216. \$39.50.

Surely it was R. H. Tawney who said that a colleague is not an Amalekite to be smitten hip and thigh? Francesco Boldizzoni patently dissents from this and writes a demolition of cliometrics smiting one practitioner after another. The ad hominem approach makes for a jerkiness that is hard to review. Repeated *obiter dicta* followed by partial disclaimers add to the difficulty. It may however be said that in Boldizzoni's eyes nothing cliometricians do is right. They scarcely do research, instead making things up. They cannot read languages, which cuts them off from the *Annales* School. They are determined to replace social context by neoclassical economics. They aim to validate the American market economy by demonstrating that the entire past operated by similar rules. Boldizzoni is clever and exceptionally well read, but utterly unforgiving when hunting down heretics.

Who is in the dock in his great show trial? Chief among them are Avner Greif and Peter Temin. Greif searches the past to demonstrate that game theory "sanctions" the superiority of economic individualism, although Boldizzoni fails to show that this is wrong. Temin ignores 120 years of scholarship to construct a market economy in the ancient world from scraps of secondary evidence. Richard Posner builds his theory of economic anthropology on dubious premises. Avner Offer only parrots Tibor Scitovsky on happiness economics. Angus Maddison is able to find evidence of per capita GDP for ancient times yet maintains that Africa "is a mystery" (let us concede this one). Robert Allen engages in "acrobatic calculations" and Jan Luiten van Zanden is an anachronistic quantifier who invents evidence for "the new institutional narratives on the predestination of the West since medieval times." Jack A. Goldstone develops a "rhetorical construction" of growth in the past "without any regard to sources." Jan de Vries (of all people) makes a very selective use of the existing literature when adumbrating the industrious revolution. And Joel Mokyr's work on the industrial revolution is an incoherent bricolage of theories.

First, contrary to Boldizzoni's text, or subtext, clio-

metricians do a great deal of research. Robert William Fogel on the railroads, and Fogel and Stanley L. Engerman on slavery, dig deep into the sources. What marks their work, and that of others, is a strongly focussed quest for data to test hypotheses. It is wrong to imply that cliometricians are unaware of context simply because they do not pen general histories. Second, Boldizzoni wrongly suggest that cliometricians enjoy "splendid isolation" as he confuses finding certain foreign texts not very rewarding with an inability to read them. Third, the insinuation that conventional economics and econometric methods are complicit in a right-wing plot—Boldizzoni's unrestrained praise of anti-market scholars gives the impression this is what he thinks—is unsupported by evidence about the politics of cliometricians.

Frank Knight declared to economists, "measure, and if you can't measure, measure anyhow." This aspect of the critique does therefore sometimes stick. Econometric exercises undoubtedly leave some historians, used to more concrete pathways, *wie es eigentlich gewesen*, cold. Econometricians interpolate. A purist might deny the value of augmenting our knowledge by any such means unwarranted in the raw documents, and as a traditional economic historian I have been the first to complain of flights of fancy along these lines. Some scholars—including me—can claim to have found through casting about in the sources and traipsing around the countryside, wearing the stout boots of Tawney's celebrated advice, features of the past that cliometricians will never find. Even so, in the larger scheme of things the approaches are complementary.

Furthermore, the way cliometricians sometimes seize on implausible proxies is certainly objectionable in elevating technique over substance. It is easy to poke fun at all this, but there is no call for Boldizzoni's ceaseless *odium theologicum*. It is also easy to work oneself into a fret at the tribalism of cliometricians and their take-over of positions in economic history, though I do not see this as a concerted American "threat" to Europe. Academic politics says little about the intrinsic usefulness of the method cautiously applied, as it often is. Agreed, there is overreach, but it is hardly a conspiracy and the metatheoretical alternative Boldizzoni offers seems an unstable mélange drawn from non- and anti-market authorities. Economics has well-known limita-

tions, as do econometric methods, but this could have been rehearsed in less agonistic and disagreeably personal tones. The book is indeed so intemperate that I feel it may come to haunt the author many years hence.

ERIC JONES,
Emeritus
La Trobe University

EDWARD B. BARBIER. *Scarcity and Frontiers: How Economies Have Developed through Natural Resource Exploitation*. New York: Cambridge University Press. 2011. Pp. xviii, 748. Cloth \$105.00, paper \$48.00.

In this book, Edward B. Barbier examines the historical connections between economic development and frontier expansion. He argues that economists and economic historians have traditionally viewed natural resources as “fixed endowments”—the stuff of economic progress provided “freely by nature” and “distributed randomly across regions and countries,” such as carbon-based energy, raw materials, and land (p. 6). Today, however, the global community confronts the dangers of resource scarcity. As humans claw at the ocean floor for its remaining fish, Earth’s final frontier is being thoroughly exploited. Having eaten and burned our way through the “Golden Age” of natural resources, humans have now entered the “Age of Ecological Scarcity.”

In this heavily documented and thorough synthesis, Barbier demonstrates the relationship between resource availability and economic development since the Agricultural Transition circa 10,000 B.C.E. His purpose is modest: to illustrate that resource development is central to economic history and that this history, as we enter the “Age of Ecological Scarcity,” will hold valuable lessons for the future of humans. For Barbier, frontiers are the driver of economic history. Frontiers can be horizontal expanses, usually seen as “empty” by the exploiters, but they are almost always home to somebody. But frontiers can also be vertical expanses because mining coal and metals proved critical to early modern and modern economic development. By focusing strictly on models of economic development, Barbier appears to skirt, just barely, debates about the merits of “frontiers” in historical analysis, particularly as outlined two decades ago by the “new western historians.”

When we view frontiers as horizontal and vertical expanses, writes Barbier, “frontier expansion has clearly been pivotal to economic development for most of global history” (p. 8). Europe proved the main benefactor of this frontier bonanza through the exploitation of oceans, boreal forests, tropical lands for plantations, and temperate arable lands for grains. Barbier covers eight key historical epochs that, for those who study and teach world history, are familiar. The focal point is the moment of divergence, when the East, largely represented by China and the Islamic world, yielded to the West, represented by early modern European states. China turned inward, intensifying agriculture within its

borders, while Europe thrust outward, seeking new resources to exploit and trade.

To trace this trajectory, Barbier starts with the Agricultural Transition and the creation of surplus, cities, and empires. He examines parallels between climate change and agricultural expansion. A complex amalgam of factors, ranging from climate and culture to the “overkill hypothesis,” pushed and pulled people into settled agriculture. But frontier expansion fueled the spread of agriculture around the globe. Barbier is decidedly unconcerned with debates over technological diffusion. Rather he is interested in the fact that frontiers proved the arena for the exchange of agricultural techniques and technologies.

The Agricultural Transition led to the rise of surplus and cities, which required even more frontier resources to avoid the danger of the Malthusian crash. Barbier’s most technical section diagrams the relationship among agricultural output, population, and minimum subsistence requirements. The graphs are interesting and compelling, but, as J. M. Blaut has argued, most Malthusian theories are Eurocentric (they are usually marshaled to explain the “European miracle”) and need to be viewed with skepticism. Indeed, the fact that Barbier reverts to theoretical modeling over concrete historical examples (other than the quintessential poster child, Easter Island) is telling. But we should not bury the old English economist just yet. The population of Earth reached seven billion on October 31, 2011, which will further exacerbate the ramifications of the “Age of Ecological Scarcity.”

Barbier next turns to international trade between the great civilizations. Although it started out as a periphery, Europe stood at the center of world trade by 1500. Barbier is overly Eurocentric when explaining the “rise of Europe,” with its “abundant land relative to scarce labor,” “agricultural innovations” that improved surpluses, handy financial institutions, diversified economies, and competition between nation-states (p. 162). Such political and economic factors were indeed important but they were by no means unique to Europe. What really mattered was that Europe, for a variety of reasons ranging from geographic proximity to North America to maritime daring-do, was the first to reach the New World, infect it, and then exploit its human and natural resources. These resources then financed even greater frontier adventurism. Unlike Europe, writes Barbier, the “core economies in China, the Islamic states and India failed to translate their dominance of the world economic system into a successful strategy of sustained, trade-oriented natural-resource-based economic development” (p. 203).

After Christopher Columbus and Vasco da Gama, economic progress became inseparable from frontier expansion and the world entered the age of “Global Frontiers.” Once again, Europe emerged as the alpha male of the world pack because it was a “collection of small and highly competitive nation-states.” Because of this economic competition, explains Barbier, Europe proved better prepared to compete globally (p. 234). I

would emphasize slave labor, Caribbean sugar plantations, Potosí silver mines, and other examples of resource exploitation over the unique attributes of European culture, but I understand Barbier's basic point. By contrast, economic development in the contemporary era, from 1950 to present, has been characterized by a broadening of the gap between the wealthy, industrialized countries and the rest of the world. Sadly, we have run out of frontiers to exploit and the United States and other industrial countries control access to most of those remaining sources of energy and raw materials.

Barbier concludes with some valuable thoughts on where humans might go from here. Just as the "Age of Abundance" defined economic development in one epoch of human history, the "Age of Ecological Scarcity" will define another. Barbier minces no words: "Either we recognize the threat posed by this global scarcity problem and adopt the necessary and sufficient conditions for sustainable economic development, or we face the growing human, environmental and economic costs imposed by worsening ecological scarcity and global imbalances" (p. 713). This book is an outstanding example of why the fields of economic and environmental history have so much to offer one another.

BRETT L. WALKER
University of Minnesota,
Twin Cities

AVNER BEN-ZAKEN. *Reading Ḥayy Ibn-Yaḡẓān: A Cross-Cultural History of Autodidacticism*. Baltimore: Johns Hopkins University Press. 2011. Pp. xiii, 191. \$60.00.

Avner Ben-Zaken's latest book is really two books in one: a selective study of the reception history of *Ḥayy Ibn-Yaḡẓān*, a speculative treatise composed in the late twelfth century by the Andalusí philosopher Abu Bakr Muhammad Ibn-Tufayl, and an effort to sketch out the intellectual history of autodidacticism as it relates to the early modern development of experimental method. This is an extraordinary accomplishment for a relatively slim monograph, and it is therefore unsurprising that the reception history of *Ḥayy* offered by Ben-Zaken is highly selective (giving short shrift to all but one of its early modern English translations) and that the account of autodidacticism and experimental method is idiosyncratic. This latter aspect of the volume is in keeping with the methodology found in Ben-Zaken's recent work, *Cross-Cultural Scientific Exchanges in the Eastern Mediterranean, 1560–1660* (2010), which surveyed the channels through which modern scientific thought travelled throughout Europe and the Islamic world during the period of the Scientific Revolution. Both studies take a similarly broad, synoptic view of connections across languages, cultures, and religious orientations to give an overview of the complex web that links disparate peoples across time and space. Both, moreover, are suggestive rather than exhaustive, opening up exciting new approaches to the study of premodern intellectual history.

As Ben-Zaken rightly points out, previous studies of *Ḥayy Ibn-Yaḡẓān* have tended to focus only on a single phase of the work's long life: the twelfth-century setting in al-Andalus where it was composed; its transmission in Hebrew translation and the philosophical responses engendered by it during the later Middle Ages; its reception and translation into Latin in Renaissance Florence; or its circulation in early modern England, where in various ways it influenced politics, theology, science, and philosophy. Ben-Zaken is the first to attempt to weave these various contexts of creation and reception together into a rich fabric, tracing the development of medieval and early modern thought through the brilliant glow of a single thread, Ibn-Tufayl's philosophical treatise on the pure autodidact. Ben-Zaken's study is composed in four chapters (plus introduction and conclusion), each of which puts *Ḥayy Ibn-Yaḡẓān* into a particular place and time: "Marrakesh, 1160s," "Barcelona, 1348," "Florence, 1493," and "Oxford, 1671." Each of these situations marks a turning point in the history of the work: not just the individual translations and commentaries generated by Moses Narboni, Giovanni Pico della Mirandola, and Edward Pococke, but also significant moments in the development of a theory of knowledge that privileges experiential learning above received wisdom, and conceives of the autodidactic experience of the character *Ḥayy* as the ultimate test-case for this theory of knowledge.

Such an approach has limitations as well as benefits. Perhaps the most striking limitation is that a full history of the reception of *Ḥayy* is effaced in favor of a more selective account of specific, carefully chosen moments in that reception-history. Ben-Zaken anticipates this difficulty, however, and the bibliography that ends the volume includes a relatively comprehensive list of adaptations and translations of *Ḥayy*, both modern and premodern, providing a useful basis for the expansion of this aspect of his work by future generations of scholars. In addition, the intellectual history that Ben-Zaken sketches chooses certain moments in the development of experimental learning above others: for example, the conclusion includes an excursus on early modern utopias that highlights the famous work of Thomas More alongside allusions to the ideal of the "noble savage" of Jean-Jacques Rousseau; but Ben-Zaken might just as easily have turned to the *Essays* of Michel de Montaigne or Daniel Defoe's *Robinson Crusoe* to illustrate a different strand in the history of autodidacticism that is also deeply indebted to the world view of *Ḥayy Ibn-Yaḡẓān*. This is not to say that Ben-Zaken should have included a fuller engagement with these authors (or others) but rather to suggest the remarkable range and breadth potentially opened up by Ben-Zaken's exploration of the readership of *Ḥayy*.

This book will inspire future scholars along three different paths. First, it encourages fuller development of the reception-history of *Ḥayy Ibn-Yaḡẓān*, especially of its many translations and adaptations; second, it opens up new directions in the study of the wider themes of autodidacticism and experimental learning in the early

modern world, even beyond those probed here by Ben-Zaken; and, finally, it illustrates a new, increasingly popular methodology in the practice of intellectual history that moves beyond the constraints of period, national literature, religious orientation, and even scholarly discipline to produce a thick description of the movement of ideas across time.

SUZANNE CONKLIN AKBARI
University of Toronto

JOSEPH A. DANE. *Out of Sorts: On Typography and Print Culture*. (Material Texts.) Philadelphia: University of Pennsylvania Press. 2011. Pp. xii, 242. \$59.95.

As its title suggests, this book is a polemic by a disgruntled scholar of English literature, Joseph A. Dane. Directed against both the recent approach of book history and the older tradition of analytical bibliography, it aims to reveal the chasm between grand narratives about "The Book," which Dane deems a mere abstraction or illusion, and particular histories of material books. Attacking the notion of "print culture" as developed first by Lucien Febvre and Henri-Jean Martin and then by Elizabeth Eisenstein, the author insists not only that such a culture was a construction of printers themselves, as revisionist scholars such as Adrian Johns have asserted, but that it continues to mask the reality of the *ars artificialiter scribendi* ("art of artificial writing") as it developed beginning in the mid-fifteenth century. For the misrepresentation of the book, Dane also blames bibliographers, such as Thomas Frognall Dibdin of the early nineteenth century, who, while they enabled research by gathering the books in our collections, constructed a particular *telos* of book history from the standpoint of the nineteenth century. Emphasizing that we still know very little about early printed objects, Dane's work is a manifesto for a reinvention of analytical bibliography to uncover the history of actual books. In his effort to demonstrate the problems with previous assumptions about "print culture," Dane focuses on typography. Noting that the first detailed verbal account of typefounding did not appear until 1683, he criticizes previous scholars for reading practices of the seventeenth and eighteenth centuries, as depicted for example in the *Encyclopédie*, backward onto the era of the invention of the *ars artificialiter scribendi*, which may have involved very different methods (p. 19).

Dane's point about the historical contingency of the material form of books is best exemplified in chapters on gothic, or blackletter, type. Performing a rough experiment with fonts in Microsoft Word, Dane challenges a persistent bibliographical myth that such type, which was seen as paradoxical to the rise of humanism, was used by fifteenth-century printers because it was more economical of space than roman type. Instead, he suggests, gothic type was used by early Italian printers such as Aldus Manutius and Nicholas Jenson because their customers were used to reading certain genres of texts—such as law books—in that style of writing. Moreover, with reference to the title pages of eigh-

teenth-century books, Dane insists that the very definition of "gothic" as opposed to, say, classical, is connected not to genre but to period. Cautioning against the use of such a term to describe a material element of a book, he writes, "A critical or historical term such as 'gothic' is not problematic simply because it is vague or ambiguous. Rather, it is problematic because our very invocation of such a term creates bodies of evidence ('gothic features of title pages') that constitute illusory supporting microhistories" (p. 90). The importance of careful contextualization of extratextual elements is illustrated by another chapter, on "manicules" or fists in the margins of early folio editions of Geoffrey Chaucer's work in the sixteenth century. Asserting that the original function of these fists is unclear, Dane shows how such marginalia can nonetheless be used as evidence for the printer's copy used in subsequent editions of Chaucer's work (p. 106). The importance of attention to the original material form of a text is likewise demonstrated in a very different chapter, on the digital Piers Plowman and William Blake archives. According to Dane, despite their intention to reproduce unmediated editions of texts, both of these archives revive the notion of editorial authority against which they were directed. His discussion of the strengths and weaknesses of digital reproduction of printed texts is of significance for public historians and librarians, as well as humanities scholars.

Elsewhere, however, Dane descends into esoteric quibbling with obscure bibliographers. For example, his "Interlude" on literary critic Randall McLeod's postmodern analysis of two shape poems of seventeenth-century poet George Herbert, in which he argues that typography constrains meaning, will interest only a handful of analytical bibliographers or literary scholars. And it is not really apparent how chapter seven, on the model of linear perspective in art manuals and stage representations, fits into his main argument about the variability of books. Moreover, Dane's methods are often no more rigorous than the previous scholars he is critiquing. In the chapter on perspective, for instance, he chooses from Google Books two nineteenth-century drawing manuals, "more or less at random," without concern about their representativeness. To demonstrate his point that authors ultimately have little control over their texts, he also makes an outrageous admission that, decades ago, while employed as a typist of term papers and moot court briefs for college students, he frequently rewrote texts—sometimes with lewd comments in the middle or at the end, to see whether anyone would discover them. Finally, Dane's prose is often less than crystal clear. To take just one among many examples, in his "Interlude" on McLeod, he writes, "In other words, by following invalid codes set up by the editor of a literary text, we come to a truth that is transcendent of the half-truths held by those who naively follow valid codes of that editor" (p. 96).

In the end, Dane's collection of essays undermines the foundations of the work of analytical bibliographers and book historians without constructing any new in-

terpretation of early printing in their place. Like his earlier collection, *The Myth of Print Culture: Essays on Evidence, Textuality, and Bibliographical Method* (2003), this work serves to remind us of the singularity of books as material objects. However, the point has been made in a more coherent and persuasive form by others, most notably Johns, with whom Dane has taken issue. As presented here, Dane's work will interest only the most devoted scholars of late medieval culture and material bibliography. Toward the end of this book, Dane writes, "When we confront a problem, whether ethical or academic, most of us judge its complexity in terms of our self-interest: a discussion that does not deal with the complexities with which we are familiar is simplistic or naive; one that deals with greater complexities than we wish to confront is overly sophisticated and unnecessarily mystified" (p. 161). According to Dane's own standards, many historians will probably find that this book is not in their "self-interest."

Charlotte

DOMINICK LACAPRA. *History and Its Limits: Human, Animal, Violence*. Ithaca: Cornell University Press. 2009. Pp. ix, 230. Cloth \$59.95, paper \$19.95.

Dominick LaCapra writes, theorizes, and criticizes what he regards as the limits of history—violence and traumatic events such as the Holocaust, genocide, and other phenomena that threaten our ordinary "historical" thought and imagination. For him history is not and should not be "ingratiating narrative" but an invitation to his (not the Frankfurt school's) "critical theory." In effect, intellectual history takes on a metadisciplinary and quasi-religious mission of "rethinking" the world. LaCapra's hope is to enlarge the possibilities of historical thought both inside and outside the discipline, indeed in the academy in general. In his remarks on canonization he recognizes non-canonical reading that permits critical and not merely historical understanding. History does not simply tell the truth as empirical scholars assume, but it reconstructs reality, and he wants to include in history animal and ecological concerns.

In "Vicissitudes of Theory and Practice" LaCapra thinks through other critical theories, regarding some as excessively speculative and others (e.g., Gabrielle Spiegel's "practice theory") as uncritical reactions to documentary history. For him the problem is "all that goes into the making of a significant, if problematic, world self-presentation, justification, prejudice, fantasy, and affect as well as experience that is not reducible to immaculate perception" (p. 50). Rethinking means a view of the sublime and the sacred that neither uncritically accepts nor rejects it. LaCapra's approach involves (in a typically convoluted sentence) not a simplistic Enlightenment faith or an equally simplistic understanding of secularization as the opposite of religion. Instead it leads to the question of intricate

nonlinear displacements, repetitions, and variations in the complex interactions of the secular and the religious. "Traumatropism" is one of LaCapra's technical terms, related to trauma studies arising out of psychoanalytic thought and including such matters as "genocides and other forms of abuse" and victimization. Trauma distorts memory and demands a different sort of treatment from ordinary forms of experience, which seems to mean that the cultural critic has an essential role of interpretation, although as usual LaCapra takes us through a maze of conflicting opinions and equivocations. For LaCapra trauma resides in the sacred and is something like a negative sublime. He often draws artistic analogies: for example, to Edvard Munch's *Scream* or the shoes on Picasso's peasant woman in *Guernica*. This line of thought leads to the phenomenon of horror and its relation to the sublime, such as Heinrich Himmler's agonizing view of annihilating Jews as sublime, arising from the conflicting roles of perpetrator, victim, and witness. LaCapra emphasizes the role of the "secondary witness" who goes beyond primary testimony, as do art, literature, and cultural criticism, which all are involved in what LaCapra calls "working through."

In chapter eight LaCapra offers a critique of violence as an antidote to a "debased sociopolitical and cultural system"—the positive side of terrorism, as trauma is another side of the sublime. Martin Heidegger's "turn" to Nazism brings into play the value of poetry as a way of rethinking and rendering problems out of the ordinary "uncanny." Yet Heidegger failed to contextualize his own thought with regard to contemporary ideologies, although he did relate the question of truth to the sacred as well as to play. LaCapra gives his own reformulation of Heidegger's thought but he prefers not to deny either of the "two registers" in which that thought can be interpreted. LaCapra's eclectic approach leads to an effort, in the name (or spirit) of religion, to blur any distinction between animal and human, humanism and the sacred, human and universal rights. For LaCapra humanism is a form of anthropocentric prejudice that relegates the non-human to the animal world, and likewise, by analogy, to the race-purging process of the Holocaust. The fact that some Nazis were inclined (like Adolf Hitler) to vegetarianism or sentimental views of animals only reinforces LaCapra's argument.

LaCapra's final chapter is really introductory in that it offers an autobiographical dimension to his trek from naïve historicism to critical and cross-disciplinary thinking. He notes his religious point of departure and the continuity with both "post-religious" and "post-secular" thought. This view, he says, is neither mystical nor messianic, but the product of a non-anthropocentric response to the other joined to an ecological understanding of modernity. LaCapra points to his own "rather serious deconversion experience," which accompanied the linguistic turn. This trauma occurred when his father, after hearing that he proposed to major in intellectual history, asked if there was also a "dumb history." The exchange may have helped lead LaCapra to scorn

the non-theoretical-critical history featured in most history departments. So he was led down the path mapped out by Jacques Derrida, Hayden White, and others.

I first met LaCapra over thirty years ago at a conference that he and a colleague organized entitled "The Future of Intellectual History," which resulted in publication of a distinguished collection of essays. The volume appeared under another title, but the original bold claim might seem prescient to many who have followed the fortunes of LaCapra and his associates in the generation since then. In any case, he has remained faithful to his posthistoricist and postrational project.

ALAN ROSEN. *The Wonder of Their Voices: The 1946 Holocaust Interviews of David Boder*. New York: Oxford University Press. 2010. Pp. xvii, 310. \$74.00.

One of the most significant and sustained attempts to record Holocaust survivors' experiences occurred in the summer of 1946. David Boder, professor of psychology at Illinois Institute of Technology, went to France, Germany, Switzerland, and Italy and, over the course of two months, interviewed survivors in displaced persons camps and shelters run by Jewish organizations. Using a wire spool recorder, he gathered 130 interviews in nine different languages.

Boder had been motivated to conduct this project when he noticed that virtually all the evidence regarding the murder of the Jews that reached America in the year after the war was visual. There were pictures of bodies being bulldozed into graves, of survivors who resembled cadavers more than human beings, and of the camps. There were newsreels of respectable German citizens from surrounding towns exhibiting great shock at "discovering" what had happened in their backyards. But where, Boder wondered, were the voices of those who could speak in the first person singular about their experiences? Boder, upset by the "enormous discrepancy" between the abundance of visual material and the absence of first-hand auditory material, determined to rectify the situation.

Alan Rosen observes that Boder had a number of agendas. He wanted not only to record a firsthand account of what happened but to bring that story to the American public so that it would be more amenable to opening the country's doors to survivors. Convinced that only the interviews could fully illuminate for Americans the dark story of the Holocaust, Boder applied to the National Institute for Mental Health for a grant. They funded his initial work and, over the next seven years, provided a total of sixty thousand dollars to enable him to transcribe, analyze, and publish his findings. Despite this great show of support, Boder never finished the transcriptions.

Ironically, while these interviews are considered to be among the earliest body of oral Holocaust testimonies, Boder was upset that he had undertaken this project so late. He bemoaned the fact that he had not begun his

work a year earlier when the survivors' memories were fresher. While Boder was hardly the first person to interview survivors, he was one of the first to record them. Most of the earlier interviews, as well as those conducted in subsequent years, were edited and condensed. Some interviewers turned the survivors' remarks into a narrative. In contrast, Boder's recordings contain not just the survivors' recollections but his questions as well.

Boder also asked survivors to sing songs from the camps. As Rosen notes in this incisive work, long before Claude Lanzmann filmed Simon Srebnik singing the musical repertoire demanded by his Nazi guards, "Boder understood that remembered songs from the camps were worth pursuing aggressively" (p. 133). When Boder published a book containing the first of the interviews he had transcribed he observed that as horrifying as was the material contained therein, "they are not the grimmest stories that could be told—I did not interview the dead" (p. 141).

Rosen notes that Holocaust remembrance has returned to the situation Boder faced in 1946. The visual once again takes pride of place, with video testimony displacing aural testimony. Yad Vashem's new state-of-the-art facility for viewing video interviews has no arrangement for listening to the thousands of audio interviews in the institution's possession. Many respected scholars relegate audio testimony to secondary importance because, they argue, it disembodies the voice of the survivor. Rosen contends otherwise. In audio recordings people are more open and less self-conscious. Listeners, not distracted by visual images, pay closer attention to the words.

Over the years, as wire recorders were replaced by tape recorders, accessing Boder's recordings became increasingly difficult. The Library of Congress and the United States Holocaust Memorial Museum have recently provided digital access to many of the recordings. Rosen observes that "what took Boder a little over two months to record took" many decades to be played back (p. 165). Boder's interviews are now beginning to receive well-deserved attention, and Rosen's insightful analysis by will accelerate that process.

Concentration camp guards taunted inmates, Primo Levi recalls, by saying that even if they emerged alive no one would believe their stories or want to listen to them. Long before the word Holocaust was common parlance, long before there was a body of research on the topic, and long before there was a spate of memoirs, Boder carried hundreds of pounds of equipment to Europe to interview young survivors. He captured their stories before they had become a fixed narrative. He did so for them. He did so for those who had not been there but who, he was convinced, needed to know. And he did it, as he said, for the dead.

Emory University

CAROLYN J. DEAN. *Aversion and Erasure: The Fate of the Victim after the Holocaust*. Ithaca: Cornell University Press. 2010. Pp. viii, 193. \$29.95.

Over the last three decades the Holocaust, as the ultimate example of evil, has shaped much of the discourse about victims. Many observers have also noted that in the wake of this increased attention and sensitivity to the Holocaust, suffering and trauma have become central to identity in the United States and Western Europe. Heroes and heroic deeds have been supplanted by victims competing for recognition.

The pervasive discourse on suffering and identity in French and American debates about Jewish victims in the Holocaust is the starting point for Carolyn J. Dean's thoughtful, provocative, and original study of the victim in post-Holocaust theory and historiography. She chose to study France and the United States because these countries are home to the two largest Jewish populations outside Israel, and in both countries the discourse on suffering and trauma has been bound up with debates on minority relations. Dean's study asks how we construct and view victims, and how the discussion about the Holocaust and its impact shapes decisions about who is "really" a victim and who is not.

One of the book's central arguments is that to have a claim to victimhood accepted, a victim has to appear to have mastered his or her suffering. Victims who proclaim their injuries too loudly are regarded as having dubious motives, while a "minimalist style allegedly resolves the cultural difficulty of how to speak about having been victimized" (p. 142). Such a minimalist form represents victims as having mastered the symptoms of their suffering. One such example is Primo Levi, who was always praised and celebrated because of his measured approach to his experience in Auschwitz. He believed that emotional control would make his testimony more credible and effective.

But why do we find victims who suffer with dignity more attractive than victims that do not, and why is it that helpless victims make us uncomfortable and evoke complicated responses? Dean answers these questions by arguing that the rejection and sacralization of victims are strategies for coping with the disruption of a putatively secure moral universe. Victims challenge us, and we project onto them values and ideologies; thus the discomfort provoked by passive victims tells us more about those who did not suffer than about the actual experience of victimization. Dean notes that historians' assessments have had a limited impact on debates about Jewish victims' passivity or disempowerment. Instead, the "exemplary victim is inextricable from an ideology of stoicism in the face of pain and suffering with honor" (p. 182).

There is significant overlap between American and French victim discourses, but there are also differences. The author contends that different political cultures and ideologies provide different realities within which victimhood is constructed. Unfortunately this interesting and relevant discussion does not receive sufficient

attention. True, Dean provides an entire chapter on French discourses on the surfeit of Jewish memory, but the book would have benefited from a structured comparison of the two countries.

Dean manages to blend literary theory and historiography seamlessly throughout her study. Although the approach is hardly novel, it is often difficult to execute. The discussion and analysis flow eloquently between, for example, the usability of victim testimony as a source for historians to the issue of causality in the Holocaust. This demands a high degree of familiarity with the subject matter from the reader, as the text is dense and devoid of lengthy explanations and excurses.

At the beginning of her study Dean asks rhetorically if scholars' turn to trauma, and criticism thereof, is a symptom of too much interest in victims. Although the question does not receive a definitive answer, it is an important one, for, as this book clearly shows, scholars, knowingly or more likely unknowingly, help shape the image of the victim.

Aversion and Erasure looks at how victims are constructed and judged. It is a must read for scholars interested in the legacy of the Holocaust, trauma, and victim discourses in the contemporary world.

COMPARATIVE/WORLD

SUSAN GILSON MILLER and MAURO BERTAGNIN, editors. *The Architecture and Memory of the Minority Quarter in the Muslim Mediterranean City*. (Aga Khan Program.) Cambridge: Harvard Graduate School of Design, distributed by Harvard University Press. 2010. Pp. 227. \$24.95.

Drawing on the combined strengths and preoccupations of historians and architects, this new volume proposes that minority quarters in Mediterranean cities should not be considered as isolated sites, but rather that these neighborhoods were implicitly connected to the wider fabric of the cities of which they were part, joined through networks of streets, mixed residential patterns, and vectors of human movement. Editors Susan Gilson Miller and Mauro Bertagnin propose to read the urban "fabric as text" (p. 18), thereby granting the built environment its place as a serious factor in Mediterranean history. This particular contribution is the book's most important one because it makes a true commitment to interdisciplinary methods, rather than a mere nod in that direction, while also highlighting the rewards of scholarly collaboration.

Interest in historic minority quarters around the rim of the Mediterranean is not a new concern, but this book charts an unprecedented path by relying upon a combination of previously untreated textual, architectural, urban, and visual sources, some of which stem from collaborative field projects carried out in cities such as Palermo, Fez, and Istanbul. Thus, the tangible goals of documenting physical structures connect to a

wider interpretive scheme. As outlined by Miller in the introduction, all of the essays respond to the burdens set up by previous scholarship, which has cast minority neighborhoods as artificially cut off from their larger urban settings or as localized aberrations on the brink of disappearance. Moreover, past research focused on the legal status of minority communities from a prescriptive position, thereby overlooking the ways in which everyday interventions on the ground transgressed group boundaries and societal expectations. In direct response to longstanding yet flawed paradigms, contributors to this volume pursue a more integrated line of questioning by looking to the dynamics of community formation, the slippery notion of belonging, the fluid relationships between different groups within the urban sphere, the uncertain status of converts, and the spatial politics of separation. To the credit of the editors, the collection resists the impulse to define the character of the Mediterranean minority quarter in stark or absolute terms, or to treat these sites in an encyclopedic fashion. Although readers may question the book's attention to Jewish over other minority neighborhoods or its exclusion of eastern Mediterranean or Iberian peninsula cities, coverage was not a major concern in this particular endeavor, and the authors signal that future studies may address apparent gaps.

The essays may be divided into three groups, following the geographical contours that they map. The first pair treats minority quarters in Sicily and southern Italy, with William Granara on Palermo and the two editors with Ilham Khuri-Makdisi on Trani on the Adriatic coast. Granara reconstructs Palermo's districts by carefully mapping historical accounts on to more recent plans of the city. Drawing on the information culled from the Cairo Geniza and medieval travelers' and residents' perspectives, he argues for seeing the Meschita neighborhood in Palermo as a cosmopolitan "shared space for Muslims, Christians, and Jews" (p. 36). The following article focuses on the rise and fall of the *giudecca*, or the Jewish Quarter, of Trani, taking the reader inside its three synagogues and locating its role as a magnet for medieval Jewish learning. Although its Jewish community was expelled or forced to convert by the mid-sixteenth century, the structure of this neighborhood has remained relatively intact over the centuries.

The essays on Fez, Marrakesh, and Tangier provide contrasting views on the configuration of Moroccan Jewish neighborhoods. Each traces the growth of the local Jewish community, showing how historic waves of migration created heterogeneous populations that thwart the notion of a monolithic Jewish society. According to Miller and Bertagnin in collaboration with Attilio Petruccioli, the founding of the Fez *mallah*, the first formal Jewish quarter in Morocco that gave its name to later establishments, was progressive and organic, rather than the result of a single act of dislocation as origin myths would have it. This chapter provides a thoroughgoing examination of the *mallah's* buildings and streets, which rely on the same architectural and

spatial paradigms found within the walls of the *madina*. Emily Gottreich follows by tracing the *mallah* in Marrakesh, which was home to local Christians as well. There, the Jewish community was defined by its central commercial role. Thus the *mallah* connected not only to the adjacent *madina* but also to an extended rural trading hinterland. The city of Tangier, as treated by Miller, stands out from the group as a port city that faced outward, having been controlled by the Portuguese, the Spanish, and then the English. Tangier's Jewish community never lived in a separate *mallah*. Rather the hybrid Beni Ider Quarter that Miller outlines was a multiethnic and multireligious domain with its diplomatic residences and Muslim, Christian, and Jewish sacred spaces.

Although it stands alone in dealing with Turkey, Karen Leal's chapter on the Balat district on the Golden Horn of Istanbul fits comfortably into the book's framework. Using court records, travelers' accounts, and the memories of past residents, Leal proposes that identity in Balat was a shifting category, constructed by individuals in varying ways for divergent audiences. She also questions the fixity of the border between the Jewish community in Balat and the Greek Orthodox one in adjacent Fener by looking at the institutions and groups that populated the liminal space between the two neighborhoods.

While the time frame of the volume might appear to be ambitiously long, stretching from the ninth century to the present, this protracted view demonstrates how local political events affected minority groups with unique gravity, such as the equitable thirteenth-century rule of Frederick II when Jewish communities flourished in Palermo and Trani or the intolerant stance of the twelfth-century Almohads who exiled or forced conversion of non-Muslims in North Africa. Evocative biographical portraits of selected city residents, such as Stella Astruc who went to court to gain the right to leave Trani in the thirteenth century, and Haim Benchimol, one of the most prosperous Jews of Tangier who engaged in many business and charitable ventures over six hundred years later, animate the featured cities.

Throughout the volume, plans and drawings serve as important resources for the cities and structures documented, particularly the modest private residences or mundane commercial establishments that have eluded previous interest. Indeed, the historic fabric of these sites, as well as some buildings, such as the Sant'Anna synagogue in Trani, is quickly eroding. In most cases, the authors integrate these visual tools purposefully into their essays, thereby tying the documentary aspect of the project to the analytical one. Even so, readers who are not accustomed to viewing such diagrams may struggle to understand them without the aid of extended didactic captions or more instructive labeling. The same could be said for the provocative historic photographs that could have benefited from further contextualization or interpretation.

I am pleased to see the appearance of a volume that treats urban space effectively as a topic for study, rather

than regarding it as a receptacle for historical activity. By taking architectural forms and urban practices into serious consideration, this book forges new ground, surpassing the proposed limits of the Mediterranean and even the overarching concern with the minority quarter. In fact, the essays presented here will help us to reconsider conventional understanding of urban groups, their institutions, and the borders, boundaries, and barriers that appear to divide them.

NANCY UM
Binghamton University

R. BIN WONG and JEAN-LAURENT ROSENTHAL. *Before and Beyond Divergence: The Politics of Economic Change in China and Europe*. Cambridge: Harvard University Press. 2011. Pp. xi, 276. \$45.00.

This interesting and provocative book uses economic theory to advance a political argument explaining the divergence in the long-run performance of China and Europe. R. Bin Wong and Jean-Laurent Rosenthal disagree with Kenneth Pomeranz about both the timing and the causes of the “great divergence.” In their view, divergence is evident some two centuries earlier and had little to do with the factors (coal and colonies) that Pomeranz emphasizes—hence the word “before” in the book’s title. But they are in hearty sympathy with Pomeranz’s rejection of cosmic and essentialist accounts of the profoundly different economic developments at the far ends of Eurasia, and seek to provide rigorous theoretical explanations for the paths chosen (and they really mean chosen) to replace the descriptive comparisons offered in earlier works—hence the word “beyond” in the book’s title.

Wong and Rosenthal argue that accounts of China’s economic backwardness that rely on Western social theory and that reveal faith in the normative value of the Western historical record have led us astray. These approaches find Eastern inferiority where nothing more than a finding of difference is warranted. The authors propose to replace this vast and venerable literature with falsifiable theories that can explain differences in European and Chinese economic institutions on the basis of rational, optimizing choice. In effect, they argue that Chinese actors, facing the political and geographic environments of Europe and its family structures, would have solved their problems as Europeans did, and that European actors, in a Chinese environment, would have found the Chinese solutions optimal as well.

Their Panglossian assumptions lead Wong and Rosenthal to credit imperial China with economic institutions and customs at least as efficient and growth-promoting as those found in early modern Europe. Despite this theoretical equivalence they concede that economic performance diverged well before the industrial revolution, but they attribute this to a great historical irony: the unintended consequence of what was Europe’s greatest obstacle to economic growth, its po-

litical fragmentation and consequent chronic warfare and insecurity.

Here the authors set the conventional literature on its head. Europe’s political fragmentation is commonly held in high esteem as the source of competition, the guarantor of limited government, and the spur to technological creativity. But to Wong and Rosenthal it is nothing more nor less than the generator of endless warfare, which, in turn, forces a relentless fiscalism on all European states, whatever their particular form. They then proceed to invert the venerable concept of Oriental despotism. In their eyes the vast geographic scale of the Chinese Empire is the source of powerful advantages, among which are physical security, low taxation, imperial devotion to good government, and an ample provision of public goods.

The authors do not attempt to explain the enduring excellence of Chinese imperial rule, but much of their further analysis depends on its existence. The vast size of this peaceable kingdom encouraged long-distance trade. China lacked formal market institutions and commercial courts, but this was perfectly rational since only a zone of fragmented sovereignty (Europe) that limited long-distance trade had a pressing need for such institutions. Likewise, China lacked financial institutions, a public debt, or even mortgage instruments. But Wong and Rosenthal reason from theory that a well-governed empire has no need for a public debt and provides the security to allow for the private, familial conduct of credit transactions. China did not urbanize. It appears that cities accounted for less of China’s total population in 1850 (perhaps three to five percent) than they had six hundred years earlier. Again the authors reason from theory that this was actually a great advantage. Early modern Europe was over urbanized because the endemic threat of war constrained industry to locate behind the high, costly walls of the towns. In China, manufacturing was free to locate in low-cost rural locations, which gave it significant cost advantages.

Here, as in their extended discussion of the economic efficiency of China’s extended families, Wong and Rosenthal are resourceful in developing economic models that show how a rational actor could work around China’s institutional constraints and how the absence of formal institutions addressing commercial law, factor markets, and public accountability need not be seen as anything but the product of the sensible choices of optimizing individuals. Unfortunately, historical evidence that might actually test their theories is largely unavailable. The reader is left with an account of how imperial China was economically efficient in theory, but not in fact.

The authors concede that the excellence, indeed the superiority, of China’s economic institutions notwithstanding, China did not succeed in increasing per capita income. This occurred in Europe, despite its wretched political system, or rather, because of it. Europe owed this breakthrough, they argue, to the indirect effects of its chronic warfare. Industrial production could not locate in rural areas to exploit low cost labor. In cities,

capital is cheaper and labor more expensive than in rural areas, and this led manufacturers to make the best of their "suboptimal" environment by exploring how to lower costs via capital-intensive, labor-saving technologies.

This account of European development, on which so much of the book's larger argument about China depends, might be doubted, and here the facts are actually available to test the authors' claims. European industry did not remain concentrated in cities. In most of Europe, rural manufacturing spread throughout the early modern period to become the dominant form in most sectors; rural insecurity, in most areas, was far less disabling than Wong and Rosenthal assume; investment in public goods (such as transport facilities and schooling) was much more substantial than they claim.

This stimulating book offers a virtuoso display of social scientific reasoning applied to a major historical problem. We now have a theoretically rigorous account of what Qing China could have been. But I am doubtful that we have an account of what it was in fact.

JAN DE VRIES
University of California,
Berkeley

GLENN A. MOOTS. *Politics Reformed: The Anglo-American Legacy of Covenant Theology*. (Eric Voegelin Institute Series in Political Philosophy.) Columbia: University of Missouri Press. 2010. Pp. xiv, 240. \$44.95.

In this concise and erudite book, Glenn A. Moots traces covenant theology from ancient Israel through the American founding period. By setting early modern Anglo-American political thought within this extended theological lineage, Moots suggests that sincere faith and deep communal obligations are compatible with the consensual norms of liberal democracy. The volume could be categorized as a sophisticated work of theology or politics, but its primary claims—that covenantal relationships defined Reformed Protestantism and thereby Anglo-American conceptions of good government—are fundamentally historical.

Moots begins by explaining that covenant theology is a political theology "par excellence," because it honors both the instrumental need for human cooperation and the existential need for transcendence (p. 21). Unlike contracts, Moots explains, covenants are not mere instruments for the promotion of individual interest. They entail a high degree of individual moral direction, collective responsibility, and providential accountability. For the Protestant reformers (as for Jews and Catholics) the first of the two archetypal covenants was unconditional and was made with one people, the Israelites. The second was made with Moses (and by extension all of humanity) on Mount Sinai, and this time there were stated terms to be met. Subsequent covenants followed the conditional pattern established at Sinai. The covenantal approach to relationships requires more than just religion; it depends on the guarantee of a revealed God who rewards and punishes. For

this reason, according to Moots, deism and other post-seventeenth-century varieties of natural theology cannot sustain covenant relationships. Their conception of God is simply too abstract, too much, that is, like the anti-worldly doctrine of Gnosticism. You cannot covenant with "a set of propositions" (p. 19).

The chief protagonists in Moots's book are the sixteenth-century Protestant theologians John Calvin and Henry Bullinger. Each articulated critical features of the covenant tradition. Calvin, the arch-predestinarian, viewed civil tyranny as a just punishment for a sinful society, while Bullinger allowed for a larger measure of human agency in matters of conscience and government. Yet it was Calvin who conceived a theological framework for resistance against unjust rule, while Bullinger excelled in devising forms of accommodation. Inspired by Calvin and Bullinger, the most dramatic expression of covenant theology occurred in Great Britain during the mid-seventeenth-century Wars of the Three Kingdoms. In response to Anglican impositions, the Scots revived the National Covenant and later established the Solemn League and Covenant with England. Their sometime allies, the English independents, were covenanters of another sort, intent on fostering strict, local communities of the saved. The conflict culminated in the execution of Charles I and John Bradshaw's stark accompanying assertion (later embraced by the likes of Benjamin Franklin and Thomas Jefferson) that resistance to tyrants was obedience to God.

In a single succeeding chapter, the book proceeds from the Puritans through the American Revolution. Here, Moots re-evaluates New England's long arguments over baptism, communion, and the proper limits of church membership in light of the Protestant Reformed ideal of the covenant. He maintains that attempts at covenant revival eventually succumbed to religious enthusiasm and lay control, which, ironically, corroded the covenant's utility as a source of broad moral cohesion and identity. This elegant argument requires an implicit identification of Puritanism with Americanism. By making that analytical move, Moots is able to extend the cord of covenantal reasoning from Abraham, through Calvin, Bullinger, the Puritans, and thence to the American founders without an otherwise messy excursion into the morass of colonial politics in less devoutly Reformed outposts of faith and politics such as New York, Pennsylvania, and Virginia. Moots rightly observes that revolutionary-era Americans were sturdily Reformed in their religious and political orientation. But it is not clear that there is a necessary connection between an ecclesiastical mechanism as local as the Half-Way Covenant and early national constitutionalism. The covenant's postrevolutionary decay also begs for explanation. Moots holds the Enlightenment's deracinated, anti-revelatory system of natural theology and, to a lesser extent, contradictions within the covenantal ideal itself responsible. Yet there were clearly other forces—more prosaic, material, and fundamentally social—at play than can be fully discerned in the abstractions of theology or political theory.

But this is just to say that the book under review is a history of ideas on a grand scale, imbued with most of the virtues and a few of the weaknesses of that approach. Moots expertly demonstrates how much the founding era's commitment to the social contract ideal owed to the Hebraic and Reformed Protestant commitment to the covenant. Most impressive, however, is the way he dissects the soteriological concerns that underlay the covenant ideal and connects them to the moderate church-state separation that it sanctioned. On Moots's reading, the covenant holds together humanity's contravening tendencies toward the material and the spiritual; it reconciles works and grace, the civil and the ecclesiastical, the mundane and the transcendent. Perhaps this is too much to ask of a single theological instrument, even a transhistorical one, but it is hard not to admire the scholar who can make the case so persuasively.

ROBIN A. BUTLIN. *Geographies of Empire: European Empires and Colonies c. 1880–1960*. (Cambridge Studies in Historical Geography.) New York: Cambridge University Press. 2009. Pp. xvii, 673. Cloth \$125.00, paper \$54.00.

Robin A. Butlin's book is a wide-ranging yet meticulously detailed survey of the spatial dimensions of modern European "salt-water" empires. Chapters address a variety of topics such as the late nineteenth-century scramble for colonial possessions in Africa, Southeast Asia, and Oceania; the empire-enhancing role of cartography and of geographical sciences; economically motivated movements of peoples across boundaries; and colonial practices and policies regarding land ownership and labor. Based on secondary sources, many published since 2000, the book is a useful overview of European empires' profound impact on the global distribution of power and resources.

Butlin avoids convenient single-factor explanations of territorial scrambles. The geostrategic ambitions and fears of policy makers, commercial and financial interests, domestic politics, and humanitarian motives figure prominently in his narrative. So do individuals, from rulers (Belgium's Leopold II is the most obvious example) to explorers, missionaries, and early settlers establishing themselves on insecure frontiers. People are not lost in what could easily become a story of national-level institutions.

Likewise, Butlin's comparative approach yields instructive conclusions. Britain's strong industrial, financial, and missionary institutions permitted late nineteenth-century imperial claims and the subsequent consolidation of power to be less state-driven and centralized than those of other countries with less pluralistic, less dynamic non-governmental structures. Belgium was distinctive in the role played by one ruler, Portugal and Belgium in the desire to compensate abroad for their small land area in Europe. A common

interest in controlling the behavior of indigenous populations produced varied results and different methods of classification and codification, as in Algeria and South Africa. The British relied more heavily than other metropolises on imported indentured labor to serve their much larger, more dispersed settler population. Such comparisons enable Butlin to avoid overgeneralizing about the causes, nature, and impacts of European rule.

A particularly interesting chapter on geographic societies shows the unique role they played in fostering interactions among diverse actors: explorers, merchants, missionaries, soldiers and naval officers, academics, and government policy makers. Geographic societies were the quiet enablers and coordinators of imperialism.

Unfortunately, the book is marked by several flaws. It is written in a dry, pedestrian style that fails to hold the reader's sustained attention. At times so many details are presented in rapid succession that it is virtually impossible to keep track of them. With this kind of data overload, the forest is lost for the trees, and description trumps analysis and explanation. The author continually cites differing approaches and interpretations in the secondary literature, yet he rarely presents a coherent and sustained argument. His recurring observation that a given topic is "complex," while true, should not be a reason for failure to unravel complexity or to explore which factors might be more important than others in generating a certain outcome. An undifferentiated list of nine factors affecting interactions between colonizers and colonized in the field of medicine (pp. 163–164), for example, is not helpful.

While the book's title cites c.1880 to 1960 as the historical period covered, by far the greatest attention is paid to the period before World War II. Indeed, more pages are devoted to the imperial scrambles of the 1880s than to 1945–1960. This temporal imbalance means that the decline and fall of empires after 1945, and the nationalist movements and leaders behind this trend, are given short shrift. A brief chapter on decolonization is insufficient.

Although Butlin asserts, correctly, that the views and actions of non-Europeans should be given more attention than is common in many traditional accounts of European imperialism, he fails to deliver. He does a thorough job of recounting horrors committed against non-Europeans (for example, huge losses of life in railroad-construction projects in equatorial Africa), but this remains Eurocentric history: what foreigners did to "the natives," not what "the natives" thought or did about what the foreigners were imposing. Because of limited attention to the post-1945 period, when initiatives for substantive change passed to non-European hands, the author misses an opportunity to follow up on his commitment.

The call for a multidisciplinary approach to important, controversial issues is understandable. The field of historical geography is appealing because it deploys analytical tools from several academic fields. Whether it

integrates these fields is another question. A multidisciplinary approach risks becoming undisciplined, in the sense that it sets up a big tent under which all sorts of facts, interpretations, and worldviews are welcomed, accorded more or less equal status, and allowed to mingle uneasily with one another, if indeed they try to engage each other in conversation. Ultimately, Butlin's book does not provide the integrative framework for which many are looking.

To be fair to the author, this is neither his fault nor the fault of historical geography. At heart, the "problem" is empire. Because of its vast temporal and spatial scope, its variability, and the cross-cultural tensions and misunderstandings intrinsic in colonizer/colonized interactions, Europe's decades in the sun defy the academic impulse toward intellectual integration.

MICHAEL R. AUSLIN. *Pacific Cosmopolitans: A Cultural History of U.S.-Japan Relations*. Cambridge: Harvard University Press. 2011. Pp. 315. \$49.95.

Scholars who have followed Michael R. Auslin's earlier work in history and subsequent career move to public policy will be pleased to see that he retains a hand in the study of the past. His first book, *Negotiating with Imperialism: The Unequal Treaties and the Culture of Japanese Diplomacy* (2004), demonstrated the role of cultural factors in Japan's delicate diplomatic dance with the West in the two decades following Commodore Matthew Perry's expedition. Here, he turns his attention to the next century and a half after that encounter, with special emphasis, as the book's title indicates, on those Japanese and Americans at the forefront of the two countries' cultural contacts. Auslin once again draws astute connections between individual and organizational ties and intergovernmental relations. While some of the more popular culture themes would have benefitted from fuller exploration, this book is an outstandingly good look at these aspects of diplomacy.

The first cosmopolitans were certainly not high end. Some, such as castaway Manjirō, were not even deliberate. Trade or, as Auslin rightly calls it, budding American consumerism was the chief driving force behind early contacts. The most famous of these was the Perry expedition, which brought U.S. goods to Japan. Some—baseball, beer, and coffee—caught on. Others—baby carriages—did not. But the impact of Perry was unmistakable, and Auslin traces the first surge of Japanese students going to U.S. colleges to the aftermath of this encounter.

These students would grow into the first generation of elite, transpacific cosmopolitans. Auslin is on firm ground in focusing on education as the root of many branches of cultural exchange. By 1900 the academy had been joined by foundations and learned societies as conduits of culture, although primarily business concerns still played their role, as in the creation of the American Asiatic Association and Japan Society of

New York. These organizations counted among their members a virtual who's who of wealthy and influential Americans such as Henry Taft (brother of William), August Belmont (son-in-law of Perry), and banker Jacob Schiff. One early achievement of these first organizations, the planting of Japanese cherry trees in Washington, remains an important cultural monument a century later.

Other legacies were not so long-lasting. Despite increasingly close contacts within elite circles, popular American dislike of Japanese immigrants darkened relations. Although Auslin's account does not explicitly draw such a connection, it reminds us that official U.S. policy permitted fairly easy access for well-off Japanese and those seeking education well into the 1930s, while turning increasingly harsh on farmers and "coolies" much earlier.

By the 1930s even, perhaps especially, the societies and foundations had turned not so cosmopolitan, emphasizing what Auslin accurately terms "cultural propaganda" (p. 156). There were exceptions. The American-Japan Society took the lead in organizing private Japanese contributions for the victims of the American gunboat *Panay*, sunk near Nanjing in 1937. Japanese-American student conferences continued until 1941. But none of these organizations mitigated the drift toward catastrophe on either side of the Pacific.

The ink was barely dry on the 1952 peace treaty when the Japan Society reopened in New York. At nearly the same time, ground was broken in Tokyo for what would become Japan's International House. Important as these were, Auslin rightly directs more attention to the explosion of academic research and even disciplines devoted to Japanese studies, and the consequent mushrooming of the cosmopolitan population on both sides of the Pacific. The rise of new frictions, this time in trade, resulted in new forms of cultural propaganda led by new centers and foundations, many with substantial government funding. This funding, Auslin argues, was a very mixed blessing not so much in its potential control of cultural exchange as in its loss in times of declining governmental revenues.

Auslin provides a well-balanced, remarkably comprehensive survey of a wide range of cultural contacts centered on the cosmopolitans. For this alone the book is well worth reading. He suggests, although he does not here explore, the further cultural impact of more popular forms of exchange, from baseball to martial arts to McDonalds to sushi bars. Given his research skills, interests in the "soft power" that can result from the interpenetration of popular culture, and hints in this study, one can only hope for a future book on transpacific exchanges at the mass level from this thoughtful scholar who remains, at heart, a historian.

MICHAEL A. BARNHART
Stony Brook University

REBECCA KOBRIN. *Jewish Bialystok and Its Diaspora*. (The Modern Jewish Experience.) Bloomington: Indi-

ana University Press. 2010. Pp. xiv, 361. Cloth \$65.00, paper \$24.95.

In May 1920, four thousand people crowded into the Hippodrome Theatre in New York City to attend an operatic performance of *Rose Raisa*. The event, which was a fundraiser for New York's Bialystok Center, raised more than ten thousand dollars and prompted future journalists to label Raisa "the beloved daughter of Bialystok."

Over two and a half centuries Bialystok fell under the rule of the Polish-Lithuanian Commonwealth, Prussia, France, the Russian Empire, and the Second Polish Republic. The city was a linguistic, ethnic, and religious hodgepodge, populated by Germans, Russians, Poles, Lithuanians, and, especially, Jews, who constituted seventy-five percent of Bialystok's urban residents in 1897. As the city became a major industrial hub, fueled by a flourishing textile industry, its Jewish population expanded still further, reaching 73,950 by 1912. More Jews lived in Warsaw, but arguably in Bialystok their imprint upon the social, economic, and quotidian fabric of the city was deeper, rendering more apt comparisons with Salonika, the so-called "Jerusalem of the Balkans," and a city that boasted a majority Jewish population in the early twentieth century.

Historians of Eastern European Jewry have long been interested in Jewish life in the region's urban, cultural, governmental, and/or industrial hubs, producing detailed, analytical studies of Jewish life and culture in, for example, Saint Petersburg, Kiev, and Odessa. Rebecca Kobrin shares much with her colleagues: an interest in social and labor history, in the politicization of East European Jewry, in Jewish responses to the 1905 Revolution and anti-Jewish violence, in patterns of charitable giving and intracommunal leadership. Her book, however, is a different sort of study. Kobrin's project is to understand Bialystok's Jewish diaspora of roughly one hundred thousand souls as a kind of transnational collective. It was produced by the flood of émigrés who migrated from Eastern Europe in the late nineteenth and early twentieth centuries to new homes in Australia, Argentina, the United States, and Palestine, and was sutured by the bonds of philanthropy, shared (and sometimes embellished) memory, and cultural imagination. Kobrin's book is thus a work of transnational rather than urban history—a book that has no single center of gravity (though it lists heavily toward New York City). She argues that the transnational approach has been underutilized by Jewish historians and that it is a particularly useful tool for students of migration. As she puts it: "one cannot fully understand the havoc wrought by migration on Jewish life during the twentieth century if one solely depicts Jews in dichotomous frameworks dictated by their nation-states" (p. 8).

Kobrin seeks to understand why Bialystok exerted so strong a pull upon women and men like Raisa and her four thousand fans after they had established lives elsewhere. The author also considers how the city's sym-

bolic and material role evolved over time, reflects on how Jewish Bialystok came to have different meanings for different communities within the diaspora, and explores when, why, and how Bialystok's Jewish émigrés saw fit to remember, support, or memorialize their erstwhile home.

The strongest and most original chapters of this work focus on patterns of philanthropic giving that linked Bialystok's cultural tributaries to its urban source (chapter three) and the various modes in which Bialystok was represented in émigré publications, especially *Bialystoker Stimme*, a periodical published in New York (but circulated globally) beginning in 1921 (chapter four).

In the philanthropic realm, Bialystoker Jews were prolific. They raised more than nine million dollars between 1919 and 1939, and these funds went, for the most part, to rebuild communal institutions in Bialystok. For members of the diaspora, philanthropic giving became a means of nurturing a community in need and a vehicle for self-expression—useful, for example, in drawing attention to the giver's elevated class status. In the cultural realm, Jews from Bialystok developed competing visions of the city from which they came: Bialystok could be a motherland, an imperial center, a diasporic home, or a city in crisis. In the resulting conversation Bialystoker Jews in the United States, Argentina, Australia, and Palestine struggled with the question of how one could be a Bialystoker Jew outside of Bialystok and analyzed the myriad ways the city had changed since their migration. How much more acute were these questions after Jewish Bialystok was destroyed? Modes of philanthropic giving and cultural imagining that were established before World War II, Kobrin argues, helped Bialystoker Jews come to terms with the Holocaust and also led them to shift their focus and energies on constructing a new focal point for their diaspora: a Bialystoker center in Israel.

Carefully researched and clearly written, this book offers a rich picture of a transnational Jewish community. Kobrin's novel approach to the study of Jewish history is significant for scholars committed to understanding the complex threads that wove together the early twentieth-century Jewish world. The study is shakier in its theoretical orientation, an orientation hinted at obliquely but never truly explored in depth, and it fails to satisfactorily map out the many local exigencies that differentiated Argentinian Bialystokers from Australian ones, or, for that matter, those in Brooklyn from those in the Lower East Side. To put it another way, the local is sometimes sacrificed in the interest of the diasporic. The book's major achievement is the extension of a new conceptual framework that scholars in Jewish studies and other fields should welcome.

SARAH ABREVAYA STEIN

JAMES P. HUBBARD. *The United States and the End of British Colonial Rule in Africa, 1941–1968*. Jefferson,

N.C.: McFarland & Company. 2011. Pp. viii, 413. \$55.00.

This book is an important and welcome contribution to the growing body of book-length historical scholarship on United States-Africa relations. James P. Hubbard expands on and challenges previously published historical works that examined the policies, actions, and attitudes of the United States in the decolonization of Africa during and after World War II. His well-written, carefully researched and argued study advances our knowledge of American reactions to and involvement in decolonization in the British African colonies. U.S. foreign policy toward sub-Saharan Africa in the age of decolonization has received relatively little attention from scholars, with the bulk of the literature focusing on the Congo crisis.

The book offers important new insights in African colonial history. European colonial rule is one of the most important areas of study in African history. Hubbard examines previously overlooked actors and events to construct a fresh narrative about American foreign policy toward British colonial Africa, the relationship between Britain and the United States during African decolonization, and Britain's new post-World War II colonial policies and methods in Africa. In doing so, he broadens our understanding of why and how colonial rule ended in British Africa, the role of the United States—Britain's closest ally in the North Atlantic Treaty Organization (NATO), the impact of the Cold War, and the relative importance of Africa in global politics during the period of decolonization.

One of the strengths of this book is that the author draws on a wide range of U.S. and British governmental archival records to make a compelling case that although the United States promoted self-determination and independence, and encouraged African nationalist leaders like Tom Mboya of Kenya and Julius Nyerere of Tanzania, it did not intend to accelerate the end of British colonial rule in Africa. This is contrary to most diplomatic histories of the United States that claim that the U.S. government provided help to African nationalist groups because of economic and strategic interests, thus speeding the pace of African decolonization. According to Hubbard, the United States was anticolonial without being pro-African independence. In fact, the United States supported European, particularly British, influence in Africa. Prior to 1965, Africa was a low priority in U.S. foreign policy. Starting with the Roosevelt administration in the 1940s, successive American governments through that of Lyndon B. Johnson in the late 1960s maintained an anticolonial stance without necessarily fully supporting African independence. Cold War considerations, especially the rivalry with the Soviet Union, weighed more heavily in the formulation and implementation of American policies toward African efforts to end British colonial rule. U.S. determination to win the battle for the hearts and minds of African nationalist leaders was an essential aspect of its Cold War strategy.

The book would have benefited from a nuanced discussion of African perspectives regarding the United States' engagement in British colonial Africa between 1941 and 1968. African governmental archival records and oral sources, including interviews with African policy makers, which are absent in the book, could have provided important sources of information in this regard. Contrasting the attitudes, policies, and actions of African nationalist leaders from the different regions under British colonial rule as they related to U.S. foreign policy toward African independence would have further enhanced the work.

Notwithstanding, this book deserves a wide readership. Specialists in African history, scholars of American politics and foreign policy, and anyone with an interest in the Cold War, British imperial history, neocolonialism, and world history will find this it most useful.

ALUSINE JALLOH
University of Texas,
Arlington

GERALD HORNE. *Mau Mau in Harlem? The U.S. and the Liberation of Kenya*. (Contemporary Black History.) New York: Palgrave Macmillan. 2009. Pp. x, 323. \$84.95.

Because most involuntary migrants taken by the Atlantic slave trade came from West Africa, the history of that region remains permanently linked to that of the United States. The struggle of African Americans for freedom and equality, however, equally connects the United States to East African nations on the Indian Ocean, particularly Kenya and Tanzania. In this book, Gerald Horne offers a compelling transnational history of the intertwined struggles of African Americans for civil rights and of Kenyans for independence from British colonial rule. Horne situates his work in the larger geopolitical context of the Cold War and decolonization. Especially important, Horne argues, was the transition from formal colonial rule to informal imperialism, or neoimperialism, with the United States and the Soviet Union functioning as competing hegemony. The Bandung Conference of 1955 indicated a growing struggle for independence from these two Cold War powers, and included countries from Yugoslavia to Egypt to Indonesia. The Suez Crisis of 1956 marked the transition from European imperial domination to new forms of global hegemony exercised by the United States. Global geopolitical ambitions, as a number of historians have shown, made the U.S. government sensitive to criticism from both the Second and Third Worlds, and thus less able to resist internal pressures for African American civil rights. The African American civil rights struggle, in turn, became a reference point for many of the movements abroad that helped it in the first place.

Horne's narrative, set primarily within this larger geopolitical context, focuses on the many personal connections among Kenyan and African American activists and leaders. Based on extensive research in archival

and print sources, it is impossible to capture in a short review the rich narrative Horne offers. At the center of the account is the relationship between Paul Robeson, the famed African American singer, actor, and communist, and Jomo Kenyatta, the Kenyan independence leader whom the British would imprison on disputed charges of leading the Mau Mau insurgency. The two met in London in the 1930s, in one of the great exile communities in history, where a still-leftist Ralph Bunche had a "gab fest" with Eric Williams and Kenyatta, and C. L. R. James gossiped about Kenyatta's friendship with Robeson (pp. 58–69). While Kenyatta's connection to Robeson helped British authorities demonize Kenyan independence as a communist movement, it, like numerous other relationships developed in Africa, Europe, and the United States, also created an important two-way conduit between African American and African freedom struggles.

Horne draws attention to the powerful symbolism of Mau Mau for many in the United States. Mau Mau, which began in 1952, symbolized to some the terrors, and to others the possibilities, of a world order without white supremacy. We see traces of this engagement in the interest of some African American nationalists in learning Swahili, including giving the Swahili term Kwanzaa to the African American holiday, as well as in the analogies Medgar Evers and other militants drew between armed defense against racism in the United States and the insurgency in Kenya.

The United States, Horne makes clear, played a highly ambivalent role in the Kenyan liberation struggle: America was both the country of the struggle for African American civil rights and the country of the Jim Crow racism against which African Americans struggled. The United States, furthermore, challenged British and other European colonial rulers partly out of a desire to become the neoimperialist hegemon of another unequal world order. This ambivalence is revealed especially in the example of Kenyan labor leader Tom Mboya, whom Horne makes a focal point of his narrative. Despite the many suspicions they aroused, Mboya's good relations with the American government pointed, Horne argues, not to neocolonial collaboration but rather to savvy political maneuvering. Mboya, in Horne's words, "solidified an anti-colonial pro-equality front that was to redound to the benefit of Africans and African Americans alike" (p. 182). Mboya's good relations with the U.S. government also paved the way for the 1959 scholarship program whose most famous recipient today is perhaps President Barack Obama's father. Mboya was assassinated in 1969, a murder that some still tie to individuals close to then President Kenyatta. Mboya's political engagements suggest a transnational activism that cut across both international politics and nationalist liberation and included a broad array of labor, anti-racist, and anti-colonial activists. This book reveals the dense interconnections of many actors. Though its detailed

narrative might deter non-specialists, it will be of interest to scholars in many fields of history.

ANDREW ZIMMERMAN

George Washington University

STEVEN J. BRADY. *Eisenhower and Adenauer: Alliance Maintenance under Pressure, 1953–1960*. (The Harvard Cold War Studies Book Series.) Lanham, Md.: Lexington Books. 2010. Pp. xi, 277. \$80.00.

This well-written synthesis of U.S.-German relations explores the "challenges, difficulties, and crises that the German-American alliance faced during the 1950s" (p. 2). The period under study has "sometimes been remembered as the most shining of the alliance's golden years," Steven J. Brady writes. "Yet these were, in fact, years of considerable turmoil" (p. 2). Brady demonstrates that Washington and Bonn shared fundamental objectives for Europe, including Soviet containment, West German and West European economic revitalization, and eventual German reunification. At the same time, numerous events strained the emerging partnership and rendered its success far from inevitable. Joseph Stalin's death, the Berlin uprising, West Germany's entry into NATO, the Suez Crisis, the Hungarian uprising, numerous Berlin crises, and other developments of this Cold War decade at once heightened the imperative of Western unity and exposed fractures within the alliance. "The results were better than they might have been. Indeed, better than they should have been," given the persistence of the "German problem" and of nationalist rivalries in Europe (p. 2).

Building on the scholarship of Detlef Felken, James McAllister, Hans-Peter Schwarz, Hans-Jürgen Grabbe, Marc Trachtenberg, and Thomas A. Schwartz, among others, Brady's contribution to the Harvard Cold War Studies Series serves to remind readers that the Atlantic partnership was not merely dictated by the United States. If the United States forged an empire in Europe, it was at the invitation of the major Western powers, who perceived myriad advantages in the arrangement and who were active participants, not mere pawns, in the collective security apparatus that eventuated. Konrad Adenauer demonstrated this reality particularly well. The confluence of his and John Foster Dulles's visions of an integrated, U.S.-allied Europe made partnership likely on terms favored by the United States. Yet *Der Alte* needed no tutelage from Washington to become an ardent anticommunist, and his vision of European integration long antedated the Cold War. More, even before the Federal Republic became a full-fledged member of the Atlantic "club," Adenauer readily worked to influence transatlantic relations, as shown in his attempts to shape the timing and agenda of the Washington and Berlin conferences respectively (1953) and in facilitating German rearmament and entry into NATO (1955). This determination to affect outcomes continued in the second half of the decade, with some success. Although Adenauer was not able substantively to shape the Geneva Conference (1955) or the London

Disarmament Conference (1956), and although he viewed Washington's response to both the Hungarian uprising and the Suez crisis, formulated with little input from Bonn, as extremely imprudent, the chancellor succeeded in gaining tri-power backing for his proposed reunification note to the Soviets in September 1956. In this instance, "Adenauer's government took the initiative" and "Washington followed" (pp. 181–182). Adenauer regularly "annoyed" his American counterparts by worrying over any possibility that the West might not be deterring communism or affirming Germany's post-war validity strenuously enough, yet "perhaps *no one* could have reassured Adenauer during this turbulent time that his nation was going to be consulted with, and not dictated to" (pp. 166, 182, 249). The persistence of Adenauer's effort, at every juncture, to remind Americans of his own importance and by extension of West Germany's importance to the Atlantic alliance validates the premise that, empire or not, the United States could not simply dictate Cold War policies to its allies. Consultation and negotiation based on mutual respect were imperative to the success of the partnership. When either broke down, cooperation fractured along more fault lines than simple differences of national interest might portend.

Specialists will appreciate Brady's balanced tone, his incorporation of insights from both American and German scholars, and his additional use of French- and Russian-language sources. Some might raise questions about the research base, which privileges American over German archival records. The book also contains a bibliography that lists some literature not cited in the text. Undergraduate instructors offering courses dealing with the Cold War era will welcome this lucid account, which presents a readable overview of U.S.-German high politics during a crucial Cold War decade.

DEBORAH KISATSKY
Assumption College

FLURIN CONDRAU and MICHAEL WORBOYS, editors. *Tuberculosis Then and Now: Perspectives on the History of an Infectious Disease*. (McGill-Queen's/Associated Medical Services Studies in the History of Medicine, Health, and Society, number 35.) Ithaca, N.Y.: McGill-Queen's University Press. 2010. Pp. viii, 243. Cloth \$85.00, paper \$29.95.

Tuberculosis has been one of the most studied diseases from a historical perspective. Emphases have changed over time as scholars investigated specific issues related to the disease or explored its biomedical dimensions in relation to particular social, cultural, political, and economic contexts.

This diverse and vibrant body of literature reveals three lines of inquiry: tuberculosis as a biomedical topic of a revamped history of medicine, as a phenomenon relating to the history of public health, and as a socio-cultural historical problem. Recent approaches to biomedical history tend to avoid the self-celebratory narratives of the traditional history of medicine and try to

contextualize the scientific environments in which some doctors, institutions, and treatments produce certain medical achievements. Historians of public health now focus their attention on power, politics, public policy, the state, the political economy of health, and the medical profession. Finally, the sociocultural history of disease emphasizes material conditions of life, disease metaphors, the process of medicalization, healing alternatives, disciplinary discourses and socio-medical control practices, and the perspectives and responses of the sick.

The book under review is an adequate and convincing example of some of these different narratives and historiographical styles. The editors' introduction, appropriately titled "Tuberculosis and Its Histories: Then and Now," reconstructs key debates, findings, and interpretations as they were framed by Anglo-American historiography, with occasional references coming from German, French, and British Commonwealth scholarship. Tim Boom's innovative chapter explores the complex narratives of tuberculosis—literary, visual, medical—constructed in interwar Britain and the later encapsulation of these narratives in health education films. He contends that the collective experience of the illness has played a decisive role in the way patients organized their individual memories of tuberculosis. David S. Barnes focuses on the San Francisco Bay area in the late twentieth century. He examines the overlaps of epidemiological and social analysis in the search for "patient zero." Barnes describes how a practice developed for acute communicable diseases failed to identify a point of origin for tuberculosis. Flurin Condrau's essay discusses unsuccessful efforts to standardize patients' internment in German and English sanatoriums, revealing that a simplistic use of the Goffmanian concept of "total institution" needs to be tested with concrete and specific historical experiences. Alison Bashford addresses Australian health immigration policies throughout the twentieth century, discussing how perceptions of tuberculosis changed from seeing it as a domestic disease to one primarily associated with foreigners. Her study is particularly sensitive to the specific ethnic and racial framing of tuberculosis in Australian discourse, making clear that this case cannot be taken as an explanation for perceptions in all immigrant societies. John Welshman's study of postwar British immigration policies also underlines the relevance of racial, ethnic, and national factors when specialists assessed newcomers' supposed susceptibility to tuberculosis. Michael Worboys's chapter focuses on the efforts of medical doctors to explain the tuberculosis decline in Britain between 1880 and 1930. This carefully crafted biomedical history avoids anachronisms and maps out a contested field from which it is possible to read the genealogy of the influential McKeown thesis with its stress on the decisive role of social factors in the history of tuberculosis. Peter J. Atkins's essay analyzes the actions of relevant scientific and political discourses and structures of governances that shaped making of policy on bovine tuberculosis in interwar Britain. Helen

Valier's study deals with the collaborative antibiotics trials between the late 1940s and 1960s in colonial and postcolonial India. These trials are discussed as evidence of the complex and politically loaded relations between British research and health policy agencies, the World Health Organization, and local Indian actors. Valier draws attention to the extractive and even exploitative dimensions of colonial medical experimentation embedded with an internationalist humanitarian development project. Finally, the chapter by Jorge Molero-Mesa—the only essay that does not deal with the British or American experience of tuberculosis—discusses anti-tuberculosis policies in Restoration Spain as a component of social medicine that, through the application of technical solutions, attempted to counter radical working-class demands.

The organizing criteria of this book are not totally clear. I perceive a number of tensions among the tone of many of the articles, the emphasis of the introductory essay, the book's title, and the text on the back cover. I will mention two of them. First, this collection deals mainly with the past—the “then” of the title—and only marginally with contemporary aspects of tuberculosis. The misleading nature of the title is consistent with central concerns of many practitioners of the history of medicine who hope to inform current public health interventions with historical knowledge. Second, it seems that the book title as well as the tone of some articles in this volume suggest that a limited repertoire of cases narrowly focused on the United States and the British Commonwealth is sufficient for the purposes of analyzing a global phenomenon. This shortcoming is due in part to the dynamism of the British and American historiographies, as well as their inability to take note of the growing number of studies focused on other parts of the world. It is now possible to begin constructing a more global narrative of this disease that can go beyond the British-American horizon and include the peripheries of the modern world, where tuberculosis is a pressing contemporary concern.

Addressing both the global and local dimensions of the history of tuberculosis involves plenty of difficulties. Simply adding more case studies focused on particular cities or countries will not solve the specific challenges of writing the history of tuberculosis from a global perspective. At the same time, such a global narrative will inevitably sacrifice the contextualizing possibilities offered by localized approaches. This volume makes evident these tensions and is a welcome addition to a growing literature that reaffirms that scholarship on tuberculosis has always been about more than bacilli.

CHRISTIAN GERLACH. *Extremely Violent Societies: Mass Violence in the Twentieth-Century World*. New York: Cambridge University Press. 2010. Pp. xi, 489. Cloth \$80.00, paper \$28.99.

The unprecedented scale of death in the twentieth century spawned the research field of genocide studies. Grim as it may be, Christian Gerlach contends that scholars in the field underestimate how bloody the twentieth century was and neglect the suffering of secondary targets of genocide. As he notes early in the book, “under Nazi Germany . . . Jews were targeted for killings, but so also were disabled people, Roma and Sinti political opponents, Soviet prisoners of war, [and] the Polish leadership” (p. 2). Gerlach maintains that studies of genocide, besides limiting attention to singular racial or ethno-religious targets, focus narrowly on state-sponsored killing, lack historical perspective, and too easily divide participants into perpetrators and victims. Instead, he offers an “extremely violent societies approach” that views mass violence as an expansive, multilayered phenomenon emerging in the midst of profound socioeconomic change and involving both state and civilian actors, past and present social relations, numerous victim groups, gradations of perpetrators and victims, and diverse methods of violence. In focusing on both state action and the arena of social relations, Gerlach understands his approach as contributing to a “social history of mass violence,” which complements the “dominant political histories in the field” (p. 3).

This wider vision of the problem of mass violence courageously challenges the sacrosanct genocide paradigm and delivers a more comprehensive understanding of humanity's capacity for inhumanity. Free from the restrictions of the category of genocide, Gerlach's approach demonstrates that mass violence in the twentieth century was pervasive rather than episodic. It came from a variety of extremely violent societies in which diverse “persecutors”—the term he prefers to “perpetrator”—targeted a range of groups using systematic and unorganized killing, famine, forced relocation, rape, and economic piracy. Consequently, the mass violence endured by Indonesians, Pakistanis, Bengalis, Hindus, Vietnamese, Greeks, and a host of African and Latin American populations emerges from the margins of history and becomes central to the story of mass violence in the last century.

These worldwide experiences of mass violence support Gerlach's call for global histories of the phenomenon. Yet even as he advocates for it, he cautions about swapping the restrictive particularity of genocide for the “overgeneralization” of a new “demi-god: globalization” (p. 264). Gerlach stresses the need for rigorous empiricism, and models this safeguard by amassing an impressive array of sources from all regions of the world. Still, he often tours the world at a dizzying pace. The case studies of Indonesia and Bangladesh, for example, will likely leave non-specialists adrift in unfamiliar history and politics. Chapter five, which treats resettlement, militias, and anti-guerrilla warfare, considers the experiences of no fewer than twenty countries. In a single breakneck paragraph, Gerlach discusses Algeria, Thailand, Vietnam, Guatemala,

Mozambique, Kenya, Kurdistan, Rhodesia, Peru, and El Salvador.

Yet Gerlach's global emphasis—however swiftly he pursues it—raises a problem with the very category “extremely violent societies.” First, the phrase is an essentialist one. Although he writes that “societies are not intrinsically or inevitably violent” (p. 12), the term suggests a distinction between societies that are and are not extremely violent. Second, as Gerlach shows, mass violence typically occurs when long simmering historical antagonisms collide with war, colonization and decolonization, economic modernization, or global ideological conflicts such as the Cold War. By this rationale, nearly every society of the twentieth century was extremely violent or could have been under the right circumstances. In short, Gerlach chronicles not extremely violent societies but an extremely violent world.

This significant conceptual error does not, however, mitigate the importance of the book. Gerlach's expanded picture of mass violence in an extremely violent world reframes the field of genocide studies and forestalls efforts to treat mass violence as an aberrant experience of a few nations and populations. On the contrary, Gerlach expects genocide or mass violence to be a “recurring phenomenon” (p. 288). Prevention of it would require a fundamental reorientation of economic and political international relations to create a global community based upon mutual security, education, and equality rather than imperialism, exploitation, and inequality. Gerlach doubts that such an extremely benevolent world is in our future.

TERENCE DAINTITH. *Finders Keepers? How the Law of Capture Shaped the World Oil Industry*. Washington, D.C.: RFF Press. 2010. Pp. xvii, 500. Cloth \$130.00, paper \$59.95.

This is a multinational study of a rule of private property in the oil, gas, and mineral water business as well as a comparative analysis of the tenacity of the common law doctrine of capture in administrative law systems designed to rationalize subsurface rights. The law of capture endows the finder of a valuable subsurface liquid with the right to produce as much of it as possible, limited only by the capacity of an adjoining driller to pump more liquid out of the ground. The application of the law produced vast waste, overdrilling, and uncollected natural gas. Terence Daintith finds the root of the problem in “the uncontrolled exercise of private property rights in oil and gas that made the law of capture operate with such disastrous effect, and it is the excessive reverence for such rights that sustains unnecessary obstacles to rational oilfield exploitation in the United States at a time when the rest of the world's oil-producing countries have eliminated private property rights, either totally displacing the rule of capture or fitting it into a broader regime of production control” (pp. 12–13).

Daintith marshals examples of the rationalization of the oil patch from Russia, Trinidad, Netherlands, Mexico, Galicia, France, Australia, Canada, Czechoslovakia, Denmark, Greece, Libya, the United Kingdom, the Ottoman Empire, Romania, Norway, and Venezuela. Although he takes a multinational approach, Daintith does not adopt a world history approach akin to Peter Karsten's *Between Law and Custom: “High” and “Low” Legal Cultures in the Lands of the British Diaspora—The United States, Canada, Australia, and New Zealand, 1600–1900* (2002). Daintith's examples are limited to demonstrating that private property regimes are wasteful and that collective systems save oil and gas. In the case of France, mineral water was at stake. Further, “when contrasting the readiness of the French state to engage in legislative adjustments of property rights, in contrast with the profound silence of its American counterparts, we should bear in mind this substantial difference of competitive context, along with the difference in the degrees of familiarity felt by legislators on either side of the Atlantic with the industries they were called upon to deal with” (p. 119). The United States clearly lagged behind Galicia's rationalization of the oilfields with legislation by 1908, Romania's movement toward state control of subterranean resources, and Russia's regulations after 1892. Before the Bolshevik Revolution, “Russian observers of the U.S. oil industry were struck by the remarkable freedom from any kind of official regulation enjoyed by American producers” (p. 166). Perhaps a comparative analysis of legal cultures could explain the differences.

Daintith's view of U.S. regulatory inertia includes state and federal mining laws. Relying on economists rather than historians to supply data for substantiating his argument, he posits that local mining district regulations filled a “legal vacuum” in California circa 1849. In contrast to Daintith's portrayal, a substantial body of literature—including contributions from William Henry Ellison and John Phillip Reid as well as my own books—demonstrates that people brought the law of the East to the West and lived by its principles in early California.

Daintith's engagement with historiography aside, this book has several positive elements. For the specialist, it unearths Trinidad's Great Pitch Lake of La Brea to make important points. In addition, the comparative approach works well in exploring unitization of oil fields, regulations governing the spacing of wells, and conservation measures. Although Daintith does not compare the government systems that produced those different regimes of law, his work may encourage readers to pursue research along this line of inquiry.

ASIA

TSUYOSHI HASEGAWA, editor. *The Cold War in East Asia, 1945–1991*. (Cold War International History Project Series.) Stanford, Calif.: Stanford University Press. Washington, D.C.: Woodrow Wilson Center. 2011. Pp. xi, 340. \$55.00.

It is becoming less and less fashionable nowadays to focus on the Cold War as the main drama in the history of the world after World War II. Instead, such topics as economic globalization and the growth of multinational corporations, decolonization and postcolonialism, decentering of the West and the rise of the non-West, human rights and democratization movements, and environmental and energy crises have claimed the attention of an increasing number of historians, particularly of the younger generation. This is as it should be, given that the Cold War-centric perspective tends to obscure these and many other developments. Even if we grant that the Cold War, defined as the global power struggle among the great powers armed with nuclear weapons, affected the lives of millions of people during the third quarter of the twentieth century, many historians would argue that world history since the 1970s has entered a new phase and so requires a different conceptual scheme.

Why, then, another book on the Cold War, covering the entire period from its presumed origins in 1945 to its termination in 1991? This volume, containing essays by eleven authors, does not do much to help reconceptualize post-1945 history by adding non-geopolitical subjects such as those mentioned above. To their credit, however, all the contributors have made use of a wide variety of non-English-language material from China, the Soviet Union, Japan, and other countries. It used to be that Cold War historiography was either “orthodox” or “revisionist.” The debate is no longer taken seriously in view of the fact that it occurred at a time when most of the studies in contention only looked at U.S. material. The days of mono-archival work are now over, if one may judge from this volume.

It would appear, however, that the use of fresh material adds less to the existing literature on the Cold War than it contributes to our understanding of developments that were only remotely connected to, or products of, the superpower rivalry. Odd Arne Westad’s important study of Chinese modernization, for instance, has much to say about the Chinese leaders’ uses of the Soviet model of industrialization, education, and other programs, but the subject would fit better into the framework of nation-building than that of geopolitics. Nation-building was a far more universal phenomenon than the Cold War, so this chapter would be just as valuable in a collection of essays on post-1945 global modernization.

Likewise, Gregg A. Brazinsky’s essay on the two Koreas skillfully traces South Korea’s success in taking advantage of the waves of global economic forces that began to sweep the region and whole world after the 1970s. This is the only essay in the book that embraces

globalization as a key theme. North Korea was clearly a loser in this context, and Nobuo Shimotomai’s chapter traces how, from the late 1950s to the early 1970s, Kim Il Sung tried to play Moscow and Beijing against one another in order to enhance his own domestic base of power, only to find his country hopelessly falling behind South Korea economically and in world status. Here again, these are studies not so much of the Cold War as of globalization.

Despite such examples, editor Tsuyoshi Hasegawa may still claim that there was a distinctively East Asian phase in the history of the Cold War—although “East Asia” here seems to cover Southeast Asia, not to mention the Soviet Union and the United States. In Hasegawa’s chronology, the Cold War came to Asia in the 1970s, just as the period of détente was dawning on U.S.-Soviet relations in Europe. Toward the end of the decade, he writes, “The line was . . . clearly drawn between the Soviet-Vietnamese alliance and the U.S.-Chinese-Japanese entente” (p. 27). And yet, we read in Vladislav Zubok’s essay that Mikhail Gorbachev was soon to initiate a serious attempt to bring about a reconciliation with the Beijing regime, an undertaking that culminated in his visit to Beijing in 1989. Zubok also notes that Gorbachev’s successes vis-à-vis China were in sharp contrast to his failure to solve any outstanding problem with Japan. He was convinced that Japan would continue to remain a Cold War ally of the United States. To that extent, it must be conceded that the Cold War provides a valid framework for understanding Soviet-Japanese relations. But we know from other essays in this volume how fragile such power equations were. Even the allegedly solid U.S.-Japanese alliance faced a serious crisis when, as Kazuhiko Togo recounts anew, succeeding Japanese prime ministers during the 1970s had so much trouble communicating with President Richard Nixon.

If power equations were constantly variable, even within the allegedly solid geopolitical reality of the Cold War, it is clear that many other factors were shaping and reshaping nations and people of the world. Because in this book the decade of the 1970s is stressed as pivotal in Asian international relations, it is important to keep in mind recent historiography that offers a different view of that decade. Sarah B. Snyder, for example, shows, in *Human Rights Activism and the End of the Cold War: A Transnational History of the Helsinki Network* (2011) that the Helsinki Accords of 1975 began to alter the shape of world affairs in fundamental ways, while *The Shock of the Global: The 1970s in Perspective* (2010), a collection of essays edited by Niall Ferguson and others, chronicles “global” developments throughout the 1970s that transformed East Asia as well as the rest of the world—and the Cold War was not a crucial part of that “global” drama.

The editor and the contributors may nevertheless argue that they are collectively making a contribution to the study of international affairs by focusing on East Asia, given that few such monographs have yet been published, and that those that have are clearly out of

date. Fair enough. But is “East Asia” the right geographical framework? Zubok quotes Gorbachev as stating at a Politburo meeting in 1986 that “the center of development of civilization is shifting toward the Pacific Ocean” (p. 269). It is not clear what he meant by “civilization,” but it is important to note that even as Eurocentric a figure as Gorbachev was beginning to recognize the emerging economic power of the Pacific nations. Such an observation provides ammunition to those historians who have begun to write about “Pacific” as against “Atlantic” history. Bruce Cumings’s *Dominion from Sea to Sea: Pacific Ascendancy and American Power* (2009) and John Price’s *Orienteering Canada: Race, Empire, and the Trans-Pacific* (2011) are good examples. To the extent that the Cold War still deserves to be studied seriously, the Pacific, rather than East Asia, would seem to provide a better geographical context.

AKIRA IRIYE
Harvard University

CAROL BENEDICT. *Golden-Silk Smoke: A History of Tobacco in China, 1550–2010*. Berkeley and Los Angeles: University of California Press. 2011. Pp. xiii, 334. \$49.95.

This is a crossover book that is equally at home in the fields of world history and modern Chinese history. In that sense, it represents an important and welcome trend in both fields: situating global phenomena, such as the near universal spread of tobacco smoking, in a national historical context and showing how, especially in the last few centuries, Chinese history has been made in a global context. Carol Benedict demonstrates that commodity history can throw light on social, cultural, medical, and economic history in a national setting while framing these aspects in a comparative and interconnective global perspective.

Tobacco is admirably suited for this purpose. The importance of its addictive fellow inhalant, opium, has long been central in the narratives of modern Chinese history. Tobacco has not had such prominence or notoriety. There has been no “Tobacco War.” But arguably tobacco has had a longer lasting impact on Chinese economy, society, and even culture than did opium. Certainly more Chinese have used it and died from it, and still do.

Public health consequences are not the focus of Carol Benedict’s book, although she treats them very candidly in the closing pages. The narrative recounts how the Chinese accepted, domesticated, and reacted to tobacco since it first was brought there by European mariners. Benedict emphasizes that the Chinese, far from being passive observers, actively adapted this Western import to domestic conditions. Her book, however, does not focus exclusively on the relationship between China and the West. Benedict demonstrates the importance of trade with and cultural influences from other parts of Asia; the hookah or water pipe are the most notable outcomes of these linkages in this story. She

also makes insightful comparisons to how other colonized or semicolonized societies in the twentieth century dealt with the cultural tensions and economic implications of adopting “modern” (i.e., machine rolled) cigarettes from the West.

Benedict describes the history of tobacco smoking in China as divided into two rather distinct eras of “globalization.” In the first period, from the late sixteenth into the nineteenth century, smoking was a foreign import that had been thoroughly domesticated, or sinicized, as it spread to all social classes in almost every part of the country. Some aspects retained a foreign flavor, such as imported snuff, which became a favorite of Beijing courtiers and some Jiangnan literati in the eighteenth century. (Indeed, upper-class people at both ends of Eurasia distinguished themselves from the pipe smoking rabble by stuffing an elaborately scented and prepared tobacco product up their noses.) The important difference between the two eras of tobacco globalization is that in the cultural confidence of the High Qing era tobacco carried with it none of the concerns about Western dominance and Chinese inferiority that would arise when factory-manufactured cigarettes became potent symbols of modernity and Westernization.

These concerns are thoroughly analyzed and illustrated in Benedict’s later chapters. In one she looks at the ambivalence early twentieth-century literary notables such as Lu Xun, Lin Yutang, and Shen Congwen had about their addiction to name brand, machine-rolled cigarettes—an inescapable part of the modernity they sought (and not just because of nicotine addiction) but also a wound to national and cultural pride.

The chapter on women smoking in China is perhaps the most interesting. Before the twentieth century, many Chinese women of all social classes smoked, although not as many as men. In the republican period, female smoking became a focus of social concern and criticism by nationalist males and then virtually disappeared in the People’s Republic of China (PRC). Benedict’s account of the fate of the short-haired, shorter-skirted *modeng xiaoji* (“Modern Girl”) of the 1920s is one of the highlights of the volume.

But gender questions and perceptions are only part of the complex social and cultural issues raised through the fog of tobacco smoke in a beautifully researched book that ranges through everything from customs statistics to literati reminiscences and poetry to pioneering field studies in the Chinese countryside. There is far more than can be discussed in a short review by a non-smoker.

It is customary for the reviewer to say what more he wished the author had done. My curiosity about that much more famous Chinese smoking habit, opium, was not satisfied. Could the chronology—tobacco smoking widespread among all classes by the eighteenth century and then opium in the nineteenth—suggest any credible basis for regarding that first foreign smoke as a gateway drug? More likely, the social and sexual associations of both drugs may be worth further investigation. But it is clear from this history that they are very

different substances with very different histories in China and elsewhere.

The book essentially stops at the end of the republican period with only an epilogue on the PRC that is divided rather neatly into the Mao era and the post-1978 reform era. In both, cigarette smoke, overwhelmingly male generated, clouds the history, with government recognition of smoking's attendant health costs only coming recently.

JOSEPH W. ESHERICK. *Ancestral Leaves: A Family Journey through Chinese History*. Berkeley and Los Angeles: University of California Press. 2011. Pp. xvi, 374. Cloth \$60.00, paper \$24.95.

This is a marvelous book. Historical works often trace developments from one point to another in time, focusing on events and their interactions, and periodically enlivening their narratives with examples of how individuals experienced the events covered. Joseph W. Esherick's book essentially reverses these priorities. He supplies useful summaries of the important happenings that serve as the book's spatial and temporal anchors. But the heart of the work is made up of the experiences over time of members of a large extended Chinese elite family, surnamed Ye (which means "leaf" in Chinese and is used in the book's title to suggest a number of metaphoric meanings pertaining to the family's historical trajectory). Several generations of the Ye family are tracked from the early nineteenth century to the present. We learn how fathers, mothers, sons, daughters, brothers, and sisters were affected by events, how they responded to them, and in a few cases helped shape them. Esherick is related by marriage to the Ye family, which gave him unique access through extensive interviewing to the personal lives especially of the more recent generations. Because of this ability and the rich array of written sources used—including poems, family genealogies, autobiographical accounts, and diaries—we learn much more about the intimate feelings and experiences of a family's members than is customary in works on Chinese history. Also, because the time period covered in the book spans an era of unprecedented transformation of Chinese society, we discover, among many other things, how attitudes and values changed over time, and how life experiences (education, careers, and so forth) expanded and became more diverse. We also see how the relative balances in societal status between old and young, and especially male and female, shifted, opening doors that had long been closed and occasionally creating tension in intergenerational and intrafamilial relationships. What Esherick seeks to do is give a human face to the vast changes that have shaped modern China. In this undertaking, he achieves a remarkable level of success, treating us to a rare interior view of how one Chinese family coped with the traumas and embraced the op-

portunities presented by the past two centuries of Chinese history.

The book is divided chronologically into three parts, dealing with the late imperial era, republican China, and the People's Republic. This stretch of China's history was anything but peaceful and stable, and some of the most gripping and sensitively wrought parts of the book relate to three periods of massive disruption: the Taiping and other rebellions of the mid-nineteenth century, the Sino-Japanese War (1937–1945), and the tragic upheavals of the last two decades of Mao Zedong's rule. These three traumatic episodes were fundamentally different in nature, and the kinds of stresses and opportunities they engendered among members of the Ye family reflected this clearly. Thus, in the face of the Taiping threat in the 1850s, the family was driven from its ancestral home in the east central city of Anqing and eventually ended up in Shaanxi province to the north. But the leading member of the family, Ye Kunhou, a local level official, by taking an active part in organizing resistance against the Taiping and other insurgents, advanced his career in the process (as did his son and brothers). The death and devastation wrought by the rebellions was horrific and the challenges of fighting—as well as reconstruction after the fighting ended—so consumed Ye and his son, both of whom served deep in the rural interior, that there is scarcely a hint in their writings of the new world crashing in on China's coastal periphery. This perspective, although sharply different from the one commonly encountered in histories of this period, is one that, there is every reason to believe, was widespread among Ye's peers.

In Esherick's accounts of the Sino-Japanese War and Maoist upheavals, we enter the world of Ye Kunhou's grandchildren. It is another world entirely from that of the grandfather, a world in which school ties and political commitments were often stronger than the bonds of family. No longer a Confucian world, it is a world shaped in vital ways by ideas and cultural practices originating in the West that were completely unknown in Ye Kunhou's day. Some of the grandchildren made lasting political decisions during the Japanese war. Some of them, including Esherick's father-in-law, to whom the book is dedicated, were tormented and imprisoned for years during the Maoist terror. Esherick concludes by noting a number of qualities characterizing the Ye family over the generations. The one that is likely to strike readers of this unusual book most forcefully was the family's resilience in the face of crisis, its capacity, however battered and bruised, to move on and even thrive once the crisis passed.

PAUL A. COHEN
Harvard University

ZHONGPING CHEN. *Modern China's Network Revolution: Chambers of Commerce and Sociopolitical Change in the Early Twentieth Century*. Stanford, Calif.: Stanford University Press. 2011. Pp. xxi, 289. Cloth \$55.00, e-book \$55.00.

As historians commemorate the centennial of the 1911 Revolution, some have posed a counterfactual question: had the Qing dynasty (1644–1911) not been toppled and the reforms it launched not been interrupted, what would China be like today? This well-researched book provides a possible answer. Eschewing the technical language (and statistical routines) of network analysis and the “trendy” focus on personal connections (*guanxi*), Zhongping Chen utilizes the concept of associational networks. He investigates how the institutional ties forged by over two hundred chambers of commerce in the lower Yangtze region as part of the dynasty’s reforms in its last years promoted an unprecedented integration of social and economic elites.

Embedded in the long tradition of largely self-regulating merchant organizations such as the *huiguan*, based variously on trade or native place, or both, and reinforced by personal relationships and common business interests, these merchant activists emerged in the country as leaders of the third realm—the public space between the state and the private sphere. Led by the Shanghai General Chamber of Commerce, “the first state-legitimized association in Chinese history” established in 1904 (p. 59), their influence steadily expanded through their sponsorship of local charitable work, militia, fire-fighting brigades, and “exercise” clubs to include regional industrial and economic development through study societies, schools, provincial railroad construction, and nation-wide collective action such as the anti-American boycott of 1905. Protecting their business interests, they shared their expertise by advising officials on economic and monetary matters, organizing a national fair, and even hosting an American delegation of chambers of commerce in 1910.

While the chambers began as part of state-directed reforms, and many of their leaders held official titles or had once served in the bureaucracy (such as Yan Xinhou, the first president of the Shanghai General Chamber), their activities quickly expanded beyond the original intent of Beijing’s policy makers. Although the central government created these chambers as part of its state-building effort, and provincial officials seized this opportunity to expand their turf, these merchant elites in the lower Yangtze region proved equally at home in the language of constitutional reform and politics. Defying official restriction, they built both vertical and horizontal institutional ties from regional centers down to market towns, bringing elite and non-elite merchants together in an institutionalized hierarchy. As local and provincial officials became aware of their eroded authority, being bypassed by Beijing and challenged from below, the merchants’ multiform interaction with the state—cooperation, lobbying, confrontation—fostered a network revolution.

The author is careful to note that not all regions in the country enjoyed the same concentration and integration of merchant elite found in the lower Yangtze region. A systematic comparison with other commercial centers such as Canton, Chengdu, Hankou, and Tianjin might provide further insight as to the regional and in-

terregional dynamics of the network revolution. The lone chapter covering the Republican period (1912–1949) offers a sketch of what happened to the chambers and the merchant networks that gave them strength. Amid the rise and fall of various warlords, some chamber leaders joined the feeding frenzy to line their own pockets; others, unable or unwilling to meet the demands for loans, supplies, and levies, fled or resigned as a bargaining tactic. While chambers cabled each other for support on various issues, regional rivalries also surfaced, as in the scandal surrounding Yang Musen’s election as vice-president of the National United Chamber of Commerce in 1925. Other competing voices also emerged, as in the case of the Shanghai Citizen and Merchant League (*Shanghai shangmin xiehui*), which challenged the General Chamber’s claim to represent its members, while various trade groups and professional organizations championed their own causes by drawing on particularistic ties.

Undoubtedly, the chambers survived as a legitimate institution, but the interstitial space they operated in was being squeezed by the state’s attempts to control or incorporate them. After 1949, chambers of commerce were replaced by the All-China Federation of Industry and Commerce, a state-directed organization, if not a propaganda machine, to contain what remained of private enterprise and the national bourgeoisie. As Chinese capitalism blooms in the wake of Deng Xiaoping’s reforms, another round of associational networking is underway. Much, of course, has changed in China since the early twentieth century, but in rejecting recent efforts to promulgate a new law on chambers of commerce, Beijing still confronts the same dilemma of change and control.

KWAN MAN BUN
University of Cincinnati

YOMI BRAESTER. *Painting the City Red: Chinese Cinema and the Urban Contract*. (Asia-Pacific: Culture, Politics, and Society.) Durham, N.C.: Duke University Press. 2010. Pp. xiv, 405. Cloth \$89.95, paper \$24.95.

In this book, Yomi Braester argues that the city has been a constant preoccupation of Chinese filmmakers and playwrights since the founding of the People’s Republic of China in 1949. The book’s main claim is that visual media help forge the “urban contract”—a notion Braester adapts from Manuel Castells and Jordi Borja’s work to call attention to the power dynamics among different public and private agents involved in building the city, and to the role of filmmakers in this process. A second argument is that spatial arrangements have temporal implications: each chapter elaborates a distinct “chronotope” that emerges from a selected body of works in order to show how particular ways of restructuring space help promote specific historical narratives. The book details the roles of visual media in effecting urban change by discussing over a hundred films and twenty-five plays set in Beijing, Shanghai, and Taipei. With its impressive scope, thorough archival re-

search, and wealth of historical detail based on internal memos, interviews, and filmmakers' accounts, the book is bound to be a standard reference for years to come.

Several scholars have noted the emergence of a "new urban consciousness" in the 1980s, but Braester is the first to trace its roots to Maoist China. What his investigation suggests, however, is that the city in socialist visual culture was more a metaphor for political and economic forces than a concrete place. Most 1950s and 1960s films set in Shanghai reduce the metropolis to a few iconic images: neon lights and high rises stand in for the alluring threat of capitalism, and street parades affirm the victory of the Communist Party. Rare exceptions like *City without Night* (1957) advertise ideological and architectural change, but films made in the 1960s are generally less about urban life as such than about models of revolutionary behavior.

In contrast, plays and films set in Beijing tend to represent the capital as a city of neighborhoods, using a "quasi-ethnographic aesthetics" (p. 47) that zooms in on the vicissitudes of its inhabitants. But even these representations often empty the city of its physical reality. Beijing, like all Chinese cities, was divided into self-sufficient "work units" where people lived and worked, "cities within the city" that "became a leading principle in the layout of urban space" (p. 231). It is striking that these building blocks of socialist urbanism only became subjects of representation when they began to fall apart in the 1980s. Films of the 1950s to 1970s and many theatrical productions up to the 1990s focused instead on icons of political power such as Tiananmen Square and on courtyard houses—the location of the everyday life of the urban proletariat and the symbol of a traditional way of life over which the battle for renewal and preservation was fought.

Overall, the book offers rich insights into how Chinese cinema has responded to urban policies, participating in debates on how the city should develop, disseminating images of power, documenting alternative ways of using public space, and, in recent years, helping preserve historical memory in contexts of rapid change. Chapter five cogently demonstrates the importance of urban themes in the New Taiwan Cinema that emerged in the early 1980s. It defines Taipei as "a palimpsest of simultaneously existing layers" (p. 188), an appraisal inspired by the works of such filmmakers as Tsai Ming-liang, which show the city as a place marked by disappearance. Chapter six illustrates how mainland films of the 1980s to the early 2000s, ranging from independent documentaries to mainstream comedies, have created a visual archive of a city on the brink of demolition, thus drawing attention to the need for preservation. Chapter seven examines the collaboration between real estate developers and filmmakers in a globalized Beijing. The chapter suggests that the documentary impulse has been replaced by a postcinematic aesthetics depending "on a nonmaterial space-time—a postspatial chronotope" (p. 284).

This book raises important questions, which a more extensive conclusion might have helped clarify. The

book foregrounds affinities between different artistic forms and yet suggests that the cinema has a unique power in creating the city. How are we to think of the relationship between the diverse media that the book explores, and how to assess their effects on the ways people perceive and transform urban space? How to prove that 1950s drama and cinema "retooled the audiences' vision," (p. 27) "laying out a future program for the popular perception of urban policy" (p. 41)? How did filmic reappropriations of Tiananmen Square "affect urban change . . . by tilting the balance of power" (p. 186)? In short, how are we to understand the relationship between inventing new visions of the city and actually changing it? Like most claims about the transformative power of media, such statements are inspiring and thought provoking, but difficult to substantiate.

KENNETH J. RUOFF. *Imperial Japan at Its Zenith: The Wartime Celebration of the Empire's Two Thousand Six-hundredth Anniversary*. (Studies of the Weatherhead East Asian Institute, Columbia University.) Ithaca: Cornell University Press. 2010. Pp. xv, 236. \$39.95.

1940 was expected to be an important year of pageantry within the Japanese Empire. Only seventeen years after the 1923 earthquake and a decade after the city's "formal reconstruction" concluded, Tokyo would host the 1940 Summer Olympic Games and other high profile ceremonies associated with the 2,600th year anniversary of Emperor Jinmu's "mythical" ascension. While the Olympics were cancelled, the anniversary programs associated with Japan's founding continued and helped create what Kenneth J. Ruoff suggests was a "heady time" in Japan (p. 18). Using the anniversary celebrations as a starting point, Ruoff endeavors not only to illuminate this woefully understudied instance of national propaganda but also to give readers a better understanding of Japan in 1940. Has he succeeded? Yes and no. In short, he has produced an imaginative, well-researched, yet frustrating study comprised of six chapters that do not always cohere into a well-argued book.

Ruoff begins his study by documenting the "solemn" imperial ceremony of November 10, 1940. Broadcast on radio throughout the Japanese Empire, Ruoff describes it as the "crowning event in what was a nonstop series of spectacles in 1940" (p. 15). Unfortunately, he spends only three pages detailing the ceremony. Chapters one, two, and three, however, provide a thoughtful exploration of how the yearlong anniversary celebrations were constructed and consumed, creating a boom in "national history" and "imperial heritage tourism." These chapters, particularly the one on heritage tourism, are original and stimulating. Ruoff explores how travel "was endorsed as an effective means for patriotic Japanese to improve their understanding of their national heritage" (p. 84). He then illustrates how the prefectural governments of Miyazaki and Nara attempted to exploit the anniversary bonanza to secure more tour-

ist visits. Miyazaki marketed itself as the birthplace of Japan's 2,600-year-old civilization, and Nara constructed its identity as the hometown of national history. Overall, this is an excellent chapter weakened only by what seems to be a throwaway line: "Tourism undeniably had significant political value to the regime" (p. 103). What regime does Ruoff mean: the national government, prefectural governments, or the Japan Tourism Board (JTB)?

Ruoff documents the mass participation and consumption elements associated with various celebrations in more detail in chapter two. Here he does a beautiful job illustrating how "consumer sectors were enveloped by nationalism rather than displaced by it" (p. 79). Department stores marketed the anniversary to sell products. Newspapers launched popular competitions in relation to the anniversary celebrations to increase sales. All the while, people, as Ruoff describes them, were "dutiful" consumers. Does this challenge our understanding of 1930s Japan? Partly. Ruoff suggests that his findings call into question the orthodoxy of moderation, writing that "The dramatic slogans (e.g., "Luxury is the Enemy") bandied about in 1940 that called for unrelenting sacrifice are misleading, at least partially" (p. 80). Why does the author believe they were misleading? Could not appeals to consume coexist with calls for sacrifice?

Chapters four and five are innovative examinations of Japanese tours to Korea and "sacred sites" in Manchuria, but I was left wondering exactly how they fit with the commemoration of Emperor Jinmu. Ruoff admits as much, writing "If I had not already been halfway through my field research in Japan when I decided that I could no longer ignore the topic of tourism, I might have committed this entire book to this theme" (p. 183). The final chapter on overseas Japanese and the "fatherland" is the basis of yet another potential book.

So, what are we left with? In many senses, an original set of studies that are provocative yet never developed fully enough or integrated in a coherent, logical, cover-to-cover package. As a stand-alone book, it is an intellectual tease. But as a tease, it will attract attention. Ruoff implies that his book will complicate notions that the Japanese were trapped in a "dark valley" of militarism and coercion after 1931, and this is important to emphasize. He shows that people were active purveyors and consumers of nationalism and that Japan was not a top-down authoritarian state. What should replace the "dark valley" analogy? Ruoff suggests that it was a time of "dark and light," of "suffering and joy." Perhaps I am being harsh, but this strikes me as an overly simplistic characterization. He even questions whether the constructed identity of the mythical Emperor Jinmu might not have served as a surrogate charismatic leader on par with Adolf Hitler or Benito Mussolini (p. 29). That is a mighty long bow to draw, and there is little in this book that makes me think fascism could be useful in helping us understand what Ruoff claims correctly

were "the diverse experiences of the Japanese in 1940" (p. 18).

J. CHARLES SCHENCKING

ALLAN R. MILLETT. *The War for Korea, 1950–1951: They Came from the North*. (Modern War Studies.) Lawrence: University Press of Kansas. 2010. Pp. xx, 644. \$45.00.

The English-language scholarship on the Korean War is already substantial, with seminal works such as Bruce Cumings's *The Origins of the Korean War* (1981, 1990). Some of these works are concerned with advancing particular characterizations of the war (i.e., civil and revolutionary vs. proxy, local vs. international, limited vs. global, etc.). Some are less theoretical and, for the most part, straightforward narrative accounts of certain aspects of the war (e.g., the use of air power) or the experiences of particular combatants in the war (e.g., a particular brigade). In the present volume, the second in an ambitious trilogy that covers the war from its origins in Korea's partition at the end of World War II to its conclusion with the armistice agreement in 1953, Allan R. Millett makes a significant contribution to this crowded field by providing what is both a comprehensive military history and a sophisticated treatment of the war's diplomatic and political aspects.

Eschewing a particular characterization of the war, Millett emphasizes its complexity: "no conflict should be categorized as simply an interstate war or civil war or even a limited insurgency . . . Understanding the Korean War will provide . . . relevant examples of a war that embodies almost every aspect of contemporary conflict" (p. 7). That said, Millett states his intellectual approach to the war (1950–1953) as "simply the most violent phase of a struggle between two competing visions of a modern, authentic Korean nation" (p. 10) and divides the period from 1945 to 1951 into three phases: phase one (1945–1948) when the two-power occupation of Korea upon Japan's surrender led to the rise of the two rival Korean states; phase two (1948–1950) when South Korea was plagued by leftist insurrections and civil unrest while the two Koreas were engaged in an extended border war; and phase three (1950–1951) when North Korea shifted from the prior strategy of subverting South Korea to an all-out conventional war in its efforts to reunify the peninsula.

What the reader gains from this volume, which covers the period from the war's outbreak in June 1950 to the beginning of the armistice negotiations in June 1951, is an understanding of how this "conventional war of 'liberation' or 'aggression'" (p. 13) was both local and international, limited and global in its scope and repercussions. Protagonists, on the ground in the two Koreas and far afield in Washington, D.C., Moscow, Beijing, and Tokyo, shaped its unfolding in the context of the emerging global Cold War and the particular national and regional exigencies of the time. Millett covers in comprehensive detail the course of the conflict, which

is roughly as follows: Kim Il-Sung's invasion of South Korea with backing from Joseph Stalin and Mao Zedong scored a quick capture of Seoul but led to a prolonged and expanded war for which Kim was unprepared, as the U.S. armed forces under the banner of a multinational UN intervention came to South Korea's rescue; the UN intervention led to the North Koreans retreating north all the way to the areas bordering China, but they were saved by the Chinese military intervention which pushed the UN and South Korean forces all the way south below the 38th parallel. This process eventually resulted in a stalemate along a front that more or less approximated the armistice demarcation line of 1953.

Millett has carefully combed an exhaustive array of English-language source materials, both primary and secondary, and also made use of Chinese, Russian, and Korean sources, which allows him to present a wide-ranging analysis of the conflict from the perspectives of all the participants. He devotes the most attention to presenting a subtle and multilayered analysis of the U.S. involvement, from Harry Truman and his advisors to Douglas MacArthur, Walton Walker, Matthew Ridgway, and down to division and battalion-level commanders and soldiers in specific battles. Millett's use of hitherto underutilized oral history collections such as interviews with U.S. and South Korean officers and the interrogation records of Chinese and North Korean POWs adds a rich human dimension to the narrative. Millett also offers an assessment of the two Koreas' armed forces and their respective performance in the war that is more comprehensive than can be found elsewhere: on balance, Millett gives more credit to the South Korean performance on the battlefield and brings to light more shortcomings in the North Korean offensive, especially in the first week of the conflict, than others have done.

The book contains 463 pages of dense text accompanied by 107 pages of notes, a substantial bibliographic essay, a comprehensive index, eighteen detailed maps, and photo insets supplying images of the war and its participants. The unpublished third volume of the trilogy will cover the years 1951–1953. The generalist reader may feel lost in a few parts of the book, such as in the introduction where Millett reviews the academic literature on war studies and in the main text where he covers specific battlefield artillery and ammunition types. Specialists may take issue with the accuracy of some facts (such as on page 463, where Koryŏ, not Silla, is mentioned as the first unified Korean state). However, this book is a compelling read that will appeal to both the generalist and the specialist.

ERIC T. JENNINGS. *Imperial Heights: Dalat and the Making and Undoing of French Indochina*. (From Indochina to Vietnam: Revolution and War in a Global Perspective, number 4.) Berkeley and Los Angeles: University of California Press. 2011. Pp. xiv, 352. \$49.95.

Eric T. Jennings has written an outstanding book about the city of Dalat in south-central Vietnam from its origins to the present. He begins in the 1890s when French colonialists launched a novel experiment in urban development. Europeans were alarmingly vulnerable to sickness and death in Indochina, an outcome they attributed to bad local food, "murderous" heat, and "unhealthy" soil that supposedly emitted a lethal miasma (p. 6). They excused their "barbarous" treatment of indigenous peoples by citing the native environment, which made them "more nervous, their emotions more extreme and less pleasant" (pp. 24, 22). Seeking a remedy, the intruders set out to create a mountain retreat on the model of a French alpine town in the hope that it would provide a cure for homesickness, illness, and "Indochina itself" (p. 73). Prey to morbid fantasies and wishful thinking, they repeatedly did harm to themselves as well as to others, as when carving out artificial lakes intended to heighten the picturesque ambiance of the site, thereby multiplying the hordes of malaria-breeding mosquitoes that infested the region.

In a riveting sequence of chapters, the author develops a multilayered analysis of life in Dalat, a place where it was hoped women and children could live in peace and allow the colonizers to "recompose European masculinity, domesticity, and social life" (p. 72). Schools, tennis courts, soccer pitches, and golf courses were built, and big game hunting drew crowds of adventurers. Gardens and plantations produced European fruits and vegetables for local consumption and for export, and Dalat became a religious center, as missionaries turned a blind eye to the extravagant leisure activities of their neighbors and extolled the "serenity, contemplation, and conversion" of life in the highlands (p. 205).

Jennings is fascinated by the irrational, near utopian efforts of the French to get away from Vietnam and the Vietnamese. It was a goal that could not be reached, not when local people were needed to carry the goods Europeans required to live—and the Europeans themselves—up treacherous mountain paths to the new town. Thousands of impressed laborers perished while constructing the roadways and railroad tracks that finally connected Dalat to the lowlands in the 1930s. Vietnamese worked as servants and laborers in the city and gradually fashioned places for themselves in the local economy. By 1927, they outnumbered French residents, a trend that forced the colonial authorities to contrive more and more elaborate zoning restrictions. "In the event of an epidemic," declared the head of the Pasteur Institute, "the Annamite village must be easily encircled, isolated, controlled and supervised" (cited on p. 119). At the same time, wealthy Vietnamese, including the Emperor Bao Dai and his entourage, flocked to Dalat and became part of the resort's high society, an amenity that poorer Vietnamese and Europeans could not afford.

The author calls attention to an ethnographic literature from Gerald Hickey and others on the highland peoples who lived all around Dalat, which the French

claimed to have established on an uninhabited plateau. Building on the work of Oscar Salemink in *The Ethnography of Vietnam's Central Highlanders: A Historical Contextualization, 1850–1990* (2003), Jennings shows how the colonizers initially asserted that their presence was required to protect the native population from the Vietnamese. In the 1930s, this conception gave way to the notion that the highlanders who appeared in colonial discourse first as “tribes” instead formed a distinct “nation,” one that ought to be recognized as a free-standing “federation,” again under the protection of France, with Dalat as its capital city.

The idea was stillborn, but Dalat remained under French control during the First Indochina War, in spite of Viet Minh efforts to carry the fighting into a prominent enemy stronghold. Ngo Dinh Diem, who became president of the newly created Republic of South Vietnam in 1955, opted for assimilation of the highlanders under Vietnamese authority and returned Dalat to its previous incarnation as a tourist site. Even in the midst of wartime carnage in 1971 and 1972, Dalat continued to serve as a magnet for vacationing foreigners and Vietnamese. In yet one more surprise in the history of this protean city, so adept at shedding and reassuming identities, the Socialist Republic of Vietnam followed earlier models and heavily subsidized tourism, so that sojourners can continue to relish Dalat’s “lingering yet vague reputation as a colonial haven” (p. 265).

By showing that the French borrowed from what the British were doing in India, the Dutch in the East Indies, and the United States in the Philippines, this book makes a contribution to the literature on colonialism in South and Southeast Asia. The text has important things to say about environmental factors, social and cultural life, wars, regime changes, and a resilient tourist industry. Jennings declines to make the claim, but I conclude by affirming that he has written a “total history” of Dalat.

DAVID BIGGS. *Quagmire: Nation-building and Nature in the Mekong Delta*. Foreword by WILLIAM CRONON. (Weyerhaeuser Environmental Books.) Seattle: University of Washington Press. 2010. Pp. xviii, 300. \$35.00.

Much of the existing scholarship on modern Vietnamese history has taken the nation as its focus, exploring the high politics of revolutionary nationalism and the construction of the postcolonial state through the lens of Vietnamese elites. It has also tended to privilege historical developments in northern Vietnam, often seen as the “cradle of Vietnamese civilization,” with comparatively little attention directed to southern Vietnam. As foundational as this work remains, it elided the very heterodox and historically shifting character of Vietnamese society over time including the impact of varying regional geographies and social structures, multiple religious practices and beliefs, and remarkable ethnic

diversity in shaping what it has meant to be Vietnamese at particular times and places. More recently, historians of premodern Vietnam and cultural anthropologists working on the contemporary period have been increasingly sensitive to the complexities of the Vietnamese past and the interpretative value of approaches that not only interrogate prevailing national narratives but are also attentive to local particularities and broader global structures and forces.

David A. Biggs is one of the first historians to employ these more capacious and fluid analytical frames to twentieth-century Vietnam. He does so in a variety of generative ways, but perhaps the most important of them is his pioneering use of environmental history as well as science and technology studies as the primary conceptual and methodological optics for his project. Throughout this book, Biggs explores the history of the southern Mekong Delta by analyzing encounters among what he terms nation builders (Vietnamese, French, and American engineers, politicians, and map-makers who brought with them new technologies, investment capital, and plans), the delta’s local inhabitants (laborers or settlers invested in the new orders or insurgents and peasants opposed to them), and the natural environment of the region itself. Biggs is especially concerned with the continuities and disjunctures over the *longue durée* in the bottom-up perspectives—what he evocatively terms surface or experiential mental maps—of those who most closely inhabit the shifting hydraulic environments of southern Vietnam.

A number of novel interpretative insights emerge from this shift in perspective. In his first several chapters on French colonial efforts to transform the Mekong Delta, Biggs nicely gets at the ways in which colonial models of development and urbanization were situated in a landscape already in flux from earlier Vietnamese projects of urbanism and land reclamation in the precolonial era, as well as how the ecological crises of the late colonial period prompted a significant reconfiguration of social relations and helped shape the ideational and geographic contours of southern revolutionary activity in the delta. Biggs’s chapter on the French war departs from the existing literature that tends to focus on military and political strategy of the French and the Ho Chi Minh-led Viet Minh government in northern Vietnam. He emphasizes how the increasingly divided physical geographies of the water environment in the south encouraged political fragmentation and the rise of politico-religious groups whose control of broad swathes of territory frustrated both French and Viet Minh efforts to assert control of the Mekong Delta. In his final chapters on nation building during the U.S. war in Vietnam, Biggs brings the legacies of these earlier periods to bear in a revealing discussion of why the on-the-ground modes of development in the U.S.-backed Republic of Vietnam that controlled southern Vietnam after 1954 so often departed from the high modernist sensibilities of its American supporters. He also provides the first major historical account of the ecological devastation wrought

by the militarization of the delta and its impact on social and political relations at the local level. Biggs's persuasive arguments are rooted in impressive research in Vietnamese, French, and English archival sources (he is among the first Western historians to use important archival collections in Ho Chi Minh City on southern Vietnamese society) and a series of oral interviews with local actors, whose voices are sometimes muted in the archives.

This book is a major achievement that fundamentally recasts our understanding of twentieth-century Vietnamese history. Its deftly written chapters, simultaneously expansive in their concerns yet full of nuance and telling narrative detail, will become the new starting point for further research on the history of southern Vietnam. At the same time the broader conceptual framework of environmental history that animates his project allows Biggs to speak beyond specialists in Vietnam and Southeast Asian history to larger cross-regional historical conversations about the complex politics of the natural and built environments.

MARK PHILIP BRADLEY

NANDINI CHATTERJEE. *The Making of Indian Secularism: Empire, Law and Christianity, 1830–1960*. (Cambridge Imperial and Post-Colonial Studies Series.) New York: Palgrave Macmillan. 2011. Pp. xiii, 337. \$95.00.

Moved by the murder of a Christian missionary and his two young sons in India in 1999, Nandini Chatterjee sets out to celebrate the manifold contributions of Christian missionaries to modern Indian culture. The author finds ample traces of such contributions in civil law and English-medium education. The puzzle that this book attempts to solve is the absence of mandated religious instruction even in Christian missionary-inspired institutions in modern India. This absence, as well as the pluralism of religiosity, symbolizes “Indian secularism.”

A twofold argument emerges about its history. The first part attends to the gradual separation of British Indian governments (or “state”) from their administration of Indian religious funds and bodies (representative of “church”). Chatterjee suggests that this separation occurred due to the expansion of religious toleration in Britain from the early nineteenth century; non-Anglicans, especially Dissenters, were enfranchised as citizens of the British nation-state. Their growing numbers and strength in parliament eventually compelled officials of the British East India Company to relinquish their direct administration of Indian religious endowments. The Religious Endowments Act of 1863 finally consolidated this separation, forcing Indian religions to become “private.”

As Dissenting Christians grew in strength in parliament, so did various Indian faith groups in India. In the late nineteenth century, British Indian governments extended legal and educational civic rights to the latter. The results of these extensions were educational institutions such as the Anglo-Muslim Oriental College at

Aligarh in 1875 as well as missionary-funded agricultural colleges of North India in the 1870s and 1880s and the Christian institution that began as St. Stephen's College in 1881. Furthermore, many non-Christian groups emulated Christian missionaries in their methods of fundraising by subscription. Chatterjee offers the Indian Christian Marriage Dissolution Act and the Parsi Marriage Act as examples of the impact that Christian monogamous marriage and divorce had in establishing the legality of other personal laws in the subcontinent. Together these educational and social institutions provided the personnel for colonial and postcolonial governments as well as “model public persona” of the English-educated “Indian.”

The second part of the author's argument refers to the Indianization of Christianity, a subject that has received the attention of Robert Eric Frykenberg, Richard Fox Young, Chandra Mallampalli, and others. Indian Christianity was the historical byproduct of collaborative translation projects, albeit undertaken by racially hierarchized groups of European and Indian Christians in the nineteenth century. Racial, economic, and political differences persisted within Christian communities in India. This lack of unity limited the extent of distinctly Christian contributions to anti-imperialist struggles in the early twentieth century. In fact, a coalition of Protestants demanded freedom from Hindu majoritarian domination in the form of separate electorates from 1919 onward, and eventually secured it in 1931–1932.

Dense footnotes notwithstanding, Chatterjee's argument overlooks significant contrary evidence as well as wider scholarship on the relationship between Catholic and Puritan Christianity and European colonialism after the sixteenth century. Colonialism itself is erased from the author's benign view of English-medium education in the subcontinent. Readers who wonder at the timing and reasons for the English East India Company's administration of Indian religious endowments, or for the selective nature of British colonial recognitions of “religious” communities and laws after the rebellion of 1857, will have to find their answers elsewhere.

Historians of Christianity in the subcontinent will also be puzzled by the author's neglect of Assam, a region annexed by the East India Company government between 1833 and 1838. Colonial Assam was a vast province till 1874; postcolonial regions carved out of that terrain are currently home to the greatest number of Christians. Did the presence of American Baptists and Welsh Calvinist missions through the nineteenth century in colonial Assam lead to veterinarian or agricultural colleges there? Did missionaries alone inspire such institutions, or were there other groups with similar institutions?

It would appear that Chatterjee claims both too much for Evangelical missionaries and too little for non-Christian actors and politics in the same landscape. Neglecting non-Christians means that the audiences addressed by the missionaries remain invisible. Even if we forget “conversion” for the moment, it remains difficult

to explain the reasons for ordinary men and women gathering around a Christian preacher or two. Were they simply curious? Or were they moved by expansive visions of social belonging such as those articulated in early modern traditions of dialogue and debate among Sufis, Jains, Vaisnava, Sikhs, and Buddhists? Had these communicative traditions, methods of interrogation, and engagement survived into the nineteenth century? Such questions deserve greater theoretical primacy in a study of "Indian secularism." Without them, the very hegemony of Christianity in the subcontinent is hard to explain—and Indian secularism impossible to understand or defend as the only path for a multifaith society.

SUMATHI RAMASWAMY. *The Goddess and the Nation: Mapping Mother India*. Durham, N.C.: Duke University Press. 2010. Pp. xix, 379. Cloth \$99.95, paper \$27.95.

In this sumptuously illustrated book, Sumathi Ramaswamy builds an account of Indian nationalism that puts the visual at the center of its analysis. In the process, she combines innovative approaches to South Asian studies including visual history as pioneered by Christopher Pinney, gender studies, and the critical history of cartography. In a survey that encompasses the art of Abanindranath Tagore and M. F. Hussain, as well as the more demotic fields of print, poster, and calendar art, Ramaswamy takes as her subject the evolution of a highly unorthodox new Indian deity—"Mother India" (*Bharat Mata*). Ramaswamy traces the paradoxical emergence of this curious figure, which, though garbed with antiquity, had a life cycle exactly paralleling that of modern Indian nationalism. The plethora of anthropomorphized maps and cartographized matrons flourished from the late nineteenth century to independence, and has resurfaced in the 1990s and 2000s along with renewed contestation of the nature of the Indian nation.

In an illuminating prologue, Ramaswamy argues that "Mother India" was called forth by the need, in the 1880s, to give nationalism a tangible form that could accommodate the subcontinent's great diversity. She attributes the choice of the divine feminine as the embodiment of the national essence to the highly complex role that women and concepts of the feminine were called upon to play in nationalist debates on cultural authenticity and colonial mimicry. Having explained the choice of a goddess figure, the book then explores the journey of the new goddess to find her fixed form. Ramaswamy suggests that this took place over a fifty-year period between 1880 and the 1930s, during which "Mother India" was transformed from the chaste, ethereal maiden of Tagore's revivalist "neo-Bengal" movement into the doughty, lion-flanked warrior woman depicted in mass market prints. Crucial to this process of goddess-making were the popular artists and printmakers Ramaswamy refers to as "barefoot cartographers,"

who subverted not only the tasteful refinement of Tagore's vision, but also the official "scientific" depictions of the Indian landmass associated with colonialism—the products of what the author calls "command cartography."

Ramaswamy suggests, moreover, that the change from virginal ascetic to matronly recruiting sergeant took Mother India through various metamorphoses, associated, she argues, with particular stages or groups within the broader nationalist project. Cartographized "Mother India" manifested herself as various avatars. The most common had her body shape limning that of the whole subcontinent (usually with Kashmir as her head); but she also stood upon the map of India flanked by her various sons (generally not daughters). More ghoulishly, she appeared as a bloodthirsty harpy demanding the severed heads of such martyrs as Bhagat Singh (the Sikh revolutionary). Sanskrit conventions of divine forms were also employed: "Mother India would often appear seated on a lotus petal, leg pendant; and the adoption of certain *mudras* (expressive hand gestures)." Indeed, Ramaswamy is at her most interesting in her discussion of the connections between the evolving aesthetic of this deified "geo-body" and the various stages of nationalist strategy and ideology. It was with the partial eclipse of the Gandhian non-violence moment in the late 1930s and 1940s that *Bharat Mata*'s "geo-form" achieved its most bellicose manifestation with chariot and lion consorts. Meanwhile, Ramaswamy's contrast between the visual "maternalizing" of the nation and the trapping of real women in a rigid definition of their natures as "pure" mothers echoes feminist readings of Indian nationalist culture and politics such as those of Lata Mani and Mrinalini Sinha.

Elsewhere, Ramaswamy considers the possible models for this novel deity. While acknowledging the influence of Britain's Britannia, the French Marianne, and such domestic divine antecedents as Bhu Devi, Kali, and Durga, she suggests that the evolving ideology of bourgeois motherhood—originating in Britain, but eagerly adopted in its South Asian colony—was just as decisive. *Bharat Mata* thus emerged as a veritable visual palimpsest, but one in which the "new woman" was generally the most prominent element.

This fascinating case study successfully synthesizes two important themes in the critical history of Indian nationalism: the relationship between religious and secular conceptions of power, and the appropriation of elite cartographical projects by popular groups. Ramaswamy shows that images are not mere reflections of history but its active agents.

MARIA MISRA
Oxford University

NEETI NAIR. *Changing Homelands: Hindu Politics and the Partition of India*. Cambridge, Mass.: Harvard University Press. 2011. Pp. 343. \$55.00.

The history of India's 1947 partition has largely been examined either in terms of "high politics" or its human

dimension and consequences. A number of senior scholars, including David Gilmartin, Ian Talbot, and Gurharpal Singh, have pointed out the need to integrate these strands in historical writing in order to appreciate fully the partition. Neeti Nair confidently handles the tangled responses of Punjabi Hindu politicians to the issue of minority rights and safeguards in the late colonial era, thereby shedding fresh light on Punjab's relationship to the Indian nationalist movement. She also examines memories of partition among Hindus in Delhi. Nair consults a variety of source materials and offers original interpretations for her readers. Although she teases out differentiation in the attitudes of elite Hindus in this book, she does not probe how non-elite actors understood and experienced partition. This reflects the type of sources, both documentary and human, that underpin Nair's incisive analysis.

Nair interrogates the far too readily accepted view that partition was a consequence of the triumph of "communalism" over anticolonial nationalism in Punjab. She sees the Muslim League's breakthrough in Pakistan's cornerstone province as owing more to "the propitious conditions provided by a wartime colonial state" than to deteriorating "inter-communitarian relations within the province" (p. 258). Here, the book could be usefully read alongside Farina Mir's recent argument (in *The Social Space of Language: Vernacular Culture in British Colonial Punjab* [2010]) that conventional histories have overdetermined the transforming impact of religious reform in the Punjab. Nair argues that it was not religious difference but "shockingly petty political differences" that caused partition in the final instance (p. 260). For Punjab's Hindus there was nothing inevitable about partition. There were missed opportunities for compromise at both the provincial and All-India levels of politics. The concentration on constitutional developments, however, overlooks the underlying economic causes of tension that, rather than religious differences, drove communal politics. Instead of monolithic Hindu and Muslim communities being pitted against each other, there was a struggle for power to alter or maintain the status quo involving the dominant Khatri and Arora Hindu castes, Muslim Sheikhs, and Arains. The extent to which subaltern Hindu and Muslim communities were incorporated into this struggle or were able to mobilize themselves autonomously is beyond the scope of Nair's book—yet this prevents it from being the definitive account of Hindu politics in colonial Punjab.

Nair is most convincing when she explains how changing contexts could encourage cross-community nationalist struggle even in individuals such as Swami Shraddhanand who are conventionally understood as being thoroughly "communal" in outlook. In a strikingly revisionist understanding, she suggests that Shraddhanand's leadership of the anticolonial Rowlatt agitation in Delhi in 1919 remained personally relevant throughout his later "communal" activities in the *shud-dhi* and *sangathan* movements (p. 105). Nair is at pains to produce a more nuanced understanding of Hindu re-

sponses to the prospect of partition than is provided in the juxtaposition of a "secular" Congress with "communal" opponents in the Muslim League and the Hindu Mahasabha. With respect to those congressmen who did ultimately see partition as a means of safeguarding Hindu rights, Nair maintains that they "had no idea it would be accompanied by so much violence and displacement" (p. 259).

This leads to Nair's second theme, which is the bewilderment of many Punjabi Hindu migrants at their uprooting. This is explored through a series of Delhi-based interviews. In common with many oral accounts, the picture emerges of migrants who did not think that they would have to abandon their ancestral homes permanently. There is, as Nair acknowledges, less sense of trauma and loss in these testimonies than in other oral histories of partition because her respondents have "by and large, fared well in the world" (p. 260). Nair reveals a variety of attitudes toward Muslims among migrants, which is significant in the light of the contemporary Hindu majoritarian sentiment. Surprisingly, she does not provide evidence for anticipatory migration among upper-caste Hindus from Lahore, which Ravinder Kaur has discussed in her study of Delhi migrants (*Since 1947: Partition Narratives among Punjabi Migrants of Delhi* [2007]). In sum, Nair provides a nuanced, but by no means total insight into the Punjabi Hindu experience of partition.

OCEANIA AND THE PACIFIC ISLANDS

VANESSA SMITH. *Intimate Strangers: Friendship, Exchange and Pacific Encounters*. (Critical Perspectives on Empire.) New York: Cambridge University Press. 2010. Pp. xii, 323. Cloth \$99.00, paper \$35.99.

This is a bold and welcome contribution to a major theme in East Polynesian history: namely, the high number of friendships formed between Tahitians and foreign outsiders. Despite the book's subtitle, which suggests a wider framework of reference, Vanessa Smith focuses heavily on Tahiti and the Leeward Islands—with some references to Hawaiian history, to neighboring islands, and to New Zealand—in order to explain divergences in the cultural practices of friendship and empire in the Pacific between years 1767 and 1806.

From the outset, Smith concentrates on the epistemological significance of the term *taio* (friend), which was used by islanders to greet visitors. Unfortunately, Smith does so without exploring its cognates as recorded in the 1830s by John Davies in his *Tahitian and English Dictionary* (1851). Davies explained the relationship between the use of the words *tau'a* and *hoa* and the consolidation of missionary power. Smith neglects the political implications of friendships. She acknowledges that what was often at issue was "status reinforcement" but does not explore the political importance of

"bonded friendships." Additionally, I think it would have helped the general reader if Smith had provided a short outline of the historical background in Tahiti for the period chosen.

The book is rich with examples of the importance of personal friendships. Part one, which deals with modes of interaction between naval visitors and Tahitians, provides ample material on collective receptions. These "crowd scenes" were not always friendly and bordered, at times, on opportunistic hostility, as in the case of the grounded ship *Dolphin*. More usually, the public spaces of interaction were regulated by chiefs and commanders who established the terms of market exchanges. These formal expressions of friendship were costly for Europeans to maintain in terms of gifts, but rich in the collection of "curiosities" that still fill natural history museums. Apart from a digression into the historiography of James Cook's demise at Kealakekua Bay, this section is a thoughtful series of chapters dealing with the element of calculation in friendships that interrogates longstanding arguments about altruism and what political anthropology calls "instrumental friendships."

By contrast, I found part two's examples of "Particular Friendships" esoteric and totally unconvincing in its discussion of Tahitian travelers abroad. As Smith does not provide a conclusion pulling together her material, one must be supplied. This new series, "Critical Perspectives on Empire," is to be welcomed. The aim of its first publication, however, to "examine the languages of friendship within the politics of Empire" (p. 10), ignores the background politics in its central example, Tahiti. The author does not evaluate the vital importance of friendship pacts in maintaining political rivalries and solidarity. In broader terms, the "politics of empire" in the region resulted in longstanding British "friends" abandoning Tahiti to France (whose Catholic missionaries Tahitians expelled), opting instead to annex New Zealand, where Maori reception of strangers and settlers had been much less friendly. That, too, calls for some explanation in a series dealing with imperial studies.

Oxford University

CANADA AND THE UNITED STATES

JEROME TEELUCKSINGH. *The Lost Gospel: Christianity and Blacks in North America*. Newcastle: Cambridge Scholars Publishing. 2010. Pp. xvi, 162. \$52.99.

Jerome Teelucksingh's study examines the history of black Protestant Christians in the United States and Canada during the nineteenth century. The volume is centrally concerned with explaining how white Protestant Christian missionaries groomed free and enslaved blacks into Christian civility and church fellowship in an age marked by a protracted struggle between proslavery and antislavery forces. Racial segregation also plays a

major role in his discussion of black Christian history in North America.

The book is chronological in arrangement and opens with two chapters that explain the entry of blacks into Canada via the slave trade, their increase due to slavery and migrations, the rise of abolitionism, and the expansion of Canada's free black population. This sets the stage for the author to examine white Christian missions to black communities within the context of organized opposition to slavery. Teelucksingh explains how various white Christian missionaries and mission societies promoted manumission. Their efforts were stymied by the fact that Christian churches and missions could be found on either side of the slavery debates. Teelucksingh examines the resulting division among white Christians due to opposing views about blacks and slavery. But he seems not to recognize that abolitionism was an extremist, fringe movement that was always at odds with mainstream white (Christian) sentiment. Also, on at least one occasion, he advances an ahistorical claim when he attributes the migration of blacks to Canada to the failure of white churches to oppose slavery in the U.S. South. The issue was not church politics so much as the brutal reality of racial slavery, fugitive slave laws, and the general, ongoing will of blacks to resist the authority of slavery through flight.

In chapter three, Teelucksingh delves into the white missionary schools that provided education to blacks. It is here that the author best represents why blacks were compelled to affiliate with white Christians, since he ably demonstrates the practical exigencies that made Christian affiliation such an effective means of assimilation to white norms and values. His fourth chapter explains the emergence of black Christian leadership as blacks transitioned from being a small minority in overwhelmingly white congregations to constituting a critical mass, subject to segregated seating at the discretion of white parishioners. Crucial here is the rise of independent black denominations and congregations, a development he maps in both Canada and the United States. The fifth and sixth chapters conclude the volume with attention to the political and theological aspects of black Christianity that distinguished it from white Christianity. The author surmises that blacks themselves contributed to racial segregation by forming essentially black-only congregations.

Careful readers may well wonder about a number of peculiarities of the book. The discussion is essentially devoid of theoretical analysis and does not apply social theory to its examination of race as a significant social force on the constitution of religious identity. As a result, the book's aim to present Christianity as essentially race-transcending seems disconnected from the actual history of the religion. Throughout the volume, moreover, the writing is often lacking in depth and frequently assembles factoids without shaping these into a full narrative. Teelucksingh also fails to account for the anthropological, worldly throes of the Christian tradition. Slavery and racism are treated as extraneous to the

Christian church, as mere failures to grasp the religion's true essence. On several occasions, the writer describes white Christian practices of racial segregation and proslavery ideology as hypocritical distortions of the religion (pp. 22, 52, 97). This is even more peculiar given the proslavery excerpts from Christian scripture that preface the early chapters. No less perturbing is the fact that slaves are treated as having no religion until Christianized (p. 52), despite the numerous scholarly studies that examine African religions among African slaves in the Americas. This puzzling disposition toward slave religion likely accounts for the writer's concluding remark that Christianity instilled morality and ethics among black converts—the implication is that Africans who did not convert to Christianity were unethical and immoral. Teelucksingh cites the absence of “verbal outbursts, riots or protests” as evidence that Christianity uplifted the moral status of these black subjects (p. 111).

Readers desiring the most basic introduction to the history of black Christianization in Canada and the United States will find some helpful information in the volume. Teelucksingh's engagement with multiple archives yields important observations concerning the educational role of white missions for free blacks. Beyond this, much of the study seems quite limited in its ability to explicate social patterns of religious and racial power or even to properly construe these patterns.

JOHN CLARKE. *The Ordinary People of Essex: Environment, Culture, and Economy on the Frontier of Upper Canada*. (Carleton Library Series, number 218.) Ithaca, N.Y.: McGill-Queen's University Press. 2010. Pp. xxxiii, 738. \$135.00.

John Clarke's book provides a valuable optic with which to examine the “everyday settler who, through his own sweat and that of his family, was rebuilding his world, the world of *ordinary people*” (p. xxix). This volume serves as a companion to Clarke's earlier study of Essex, a southwestern county in Upper Canada, *Land, Power, and Economics on the Frontier of Upper Canada* (2001). Indeed, in many respects the books should be read together, since the first volume provides the missing elements of this second in the series: the eighteenth-century philosophical conservatism that translated into land policies; relationships among squatters, settlers, and the state; and the equation of land and power among colonial elites, particularly those of the so-called Family Compact.

The book under review suggests how early settlers reacted to the cards dealt them and how they made decisions—where to choose land to invest their labor and how to improve it over time—based on limited environmental knowledge and cultural baggage. The county is well chosen for a case study. Essex continued to have a considerable remnant of early French Canadian col-

onists; close proximity to the United States gave it an immigration source after the American Revolution when loyalists, late loyalists, and, later, escaped slaves and free blacks took up land; and it attracted large numbers of Irish immigrants by the mid-nineteenth century. In many respects, one can only make sense of the decisions and outcomes of settlement according to prevailing understandings of the environment (such as the value of well-drained over poorly drained lands), the legacy but permutation of cultural practices, and the environment itself.

Clarke rigorously applies spatial geographic and historical methods to develop this study, drawing especially on land surveys, assessment roles, censuses (often that of 1850–1851), as well as extensive quantitative statistical analysis. It yields important conclusions. But, beyond heavy mathematical computation and statistical analyses, Clarke consistently gives just due to the wider historical circumstances, world views impossible to quantify, and contemporary environmental understandings difficult to reconstruct. For instance, the heritage of British, if not Scottish, Enlightenment idealizations of “independence” was undoubtedly an important factor in settlement. It played out in the New World through a belief in the value of hard work on cheap lands and combinations of individual and family labor investments through marriage strategies and childbearing. Indeed, given all the temptations to find environmental or universalist economic determinants for early settlement, to use the “actions of economically rational man and the tyranny of distance” (p. 439) to explain land choices, modes of agriculture, adoption of horses over oxen, or mixes of crops and livestock, Clarke raises the importance of individual agency, the continuing influence of culture—itsself adapting to new circumstances—and the changing land itself. The resulting picture reveals a process “more atomistic or seemingly chaotic in pioneer settlement than has hitherto been recognized” (p. 211).

The book expands understandings of this county's common folk, first by discussing circumstances of settlement, including the ways newcomers evaluated the land upon which to squat, take up in share, lease, or patent. Clarke extensively analyzes the county's peopling, from the indigenous and French fur trade era to the mid-nineteenth century, with attention to spatial movements among the leading immigrants, as well as loyalist and “late” loyalist Americans and black, Irish, English, and Scottish settlers. Clarke also sheds light on family sizes, age cohorts, religious affiliations, and occupations for each of these groups. He then examines the “propinquity” of cultural groupings, addressing how and where groups established communities. The greatest analysis, however, is devoted to the emerging mixed farming and subsistence activities and entry into the market with a view to points of origin, time of settlement (and therefore some of the range of choice of soils), and culture. With respect to the ongoing debate of the place of wheat as “king” in Upper Canada, Clarke adopts the more nuanced view that mixed farm-

ing prevailed, and wheat (with corn and oats) was adopted with respect to local considerations, prices, and perhaps cultural and point-of-origin experience. Valuable quantitative work is devoted to the structural and spatial dynamics of agriculture, in which the crux of Clarke's argument is borne out: land was acquired cheaply, but chosen according to its perceived value and the value it achieved with improvement. The perceived and monetary value of land affected the size of holdings and the degree to which proprietors invested human and animal labor into a lot's further cultivation and improvement. As the book's final analysis suggests there were many routes to "independence" for such settlers. These "ordinary people," then, evinced fascinating capacities to survive and search for prosperity in the pioneer environment of nineteenth-century Essex County.

GEORGE COLPITTS
University of Calgary

FREDERICK VAUGHAN. *Viscount Haldane: "The Wicked Step-Father of the Canadian Constitution."* Buffalo, N.Y.: University of Toronto Press, for the Osgoode Society for Canadian Legal History. 2010. Pp. xix, 307. \$65.00.

Frederick Vaughan's exhaustively researched, beautifully crafted, revisionist intellectual biography of Viscount Richard Burdon Haldane will be his enduring legacy to the expansive field of legal history. With a truly remarkable singlemindedness, Vaughan has attained a very laudable academic goal: solving one of Canada's longstanding constitutional conundrums. He offers a credible and comprehensive explanation for the British Judicial Committee of the Privy Council's (JCPC) central role in the wholesale dismantling and reconstruction of Canada's Constitution Act, 1867 (known originally as the British North America Act, 1867). According to Vaughan, JCPC lawmakers, first Lord Watson and then the remarkable Viscount Haldane dramatically transformed a defiantly monarchical, purposefully highly centralized, quasi-federalist constitution into the world's most decentralized and reluctantly republican confederation. Indeed, with the Supreme Court of Canada's controversial ruling on the secession of Quebec (1998), any province can now hold and possibly win a referendum on secession.

Vaughan is a lifelong critic of the JCPC for its deconstruction of Canada's Constitution. Yet he remains convinced that both the liberal nationalist interpretations and the sociological "living tree" explanation for this turn of events are inadequate and unconvincing. Liberal nationalist critics, including John T. Saywell in his acclaimed study *The Lawmakers: Judicial Power and the Shaping of Canadian Federalism* (2002), contend that Watson and Haldane, ambitious Scots who sought advancement through the expansive British Empire, could not understand the true nature of Canada and the need for a strong central government given the centrifugal forces at work in a pluralistic, dispersed, and geo-

graphically immense country. More importantly, Watson and Haldane could not properly comprehend the origins, scope, and substance of the Constitution Act or what transpired with its implementation. They were susceptible to the blandishments and the pressure of Ontario's wily Premier Oliver Mowat, the driving force behind the provincial rights movement prior to 1900. For these reasons, Watson and Haldane reconstructed confederation framers' intent to serve the interests of the empire, the provincial governments, and their own careers. In the several JCPC decisions during the early 1930s, Lord Sankey applied the "living-tree" doctrine to come down on the side of the federal government. These unexpected rogue rulings were decisively repudiated in the *Labour Conventions* decision (1937), which reasserted the watertight-compartments conception of federalism, further diminishing federal power over trade and commerce. Ironically, by the 1970s the "living tree" doctrine was adopted by sociologically minded political scientists, including Alan Cairns, to applaud the JCPC's role in transforming Canada's monarchical constitution via a myriad of rulings favorable to the provincial governments. Early in his career Vaughan excoriated the "living tree" doctrine and academics like Cairns who espoused it.

Vaughan's exhaustive research and analysis of Haldane's intellectual background, education, and career as a lawyer, politician, and civil servant drive him to the conclusion that Haldane became the "wicked step-father of the Canadian Constitution" primarily because he was a germanophile by conviction. He was educated in part in Germany, spent considerable time vacationing there, and as head of the War Office he reformed the British Army along the Hegelian lines of the Prussian Army. Indeed, Haldane was forced to resign the chancellorship in 1915 when Canadian-born Andrew Bonar Law, Conservative Party leader, denounced him as a threat to Britain's security. But far more important to Vaughan's thesis is the fact that Haldane was a prominent Hegelian scholar. Indeed, he contends that it was the nineteenth-century philosopher Georg Wilhelm Friedrich Hegel who was the true wicked step-father of the Constitution. Haldane channeled Hegel's philosophy in his legal, political, and administrative careers, especially his long tenure on the JCPC, where he left a lasting legacy.

A somewhat uncritical Haldane wholeheartedly embraced Hegel's doctrine of historical relativism. As such, he perceived man as a historical being. "Taking the world as we find it," argues Vaughan of Haldane, "meant understanding that history is the rational unfolding of the spirit of freedom" (p. 106). Things are forever changing, and the truth for one generation is not the truth for the next. The constitution (with its component laws) is a "living, organic tree" that needs adjustment to respond to changing times, norms, and values.

Vaughan demonstrates with a great deal of conviction and considerable evidence that it was primarily Haldane's very personal version of Hegelian doctrine,

reinforced occasionally by his Scottish nationalism and his overly ebullient British imperialism, that guided him in all of his fateful rulings concerning the nature and scope of Canada's federal constitution in innumerable cases brought before the JCPC. Haldane, like Watson, viewed the British North America Act, 1867, as a mere statute of the British imperial parliament, not a full-blown constitution. He had no interest in the framers' intent and deliberately repudiated their deeply flawed constitutional work. Haldane also displayed utter contempt for the rulings of Canada's Supreme Court. His role, as he defined it, was to put flesh and blood on the dry bones of Canada's largely unwritten constitution and its quasi-federal system of governance so that his watertight-compartment federalism could better reflect the true needs of provincial governments. Haldane showed complete disdain for the fledgling Canadian community, believing that a strong and united empire best encapsulated and represented the true ethical aims of Canadians.

The least satisfactory aspect of this otherwise enlightening study is the postscript. Vaughan contends that Hegel's historical relativism thoroughly pervades all of the important decisions of the Supreme Court of Canada, especially since the Constitution Act, 1982, with its dreaded, republican-style Canadian Charter of Rights and Freedoms. Picking up where he left off in his highly opinionated *The Canadian Federalist Experiment: From Defiant Monarchy to Reluctant Republic* (2003), Vaughan goes on an unsubstantiated and misguided rant about the stranglehold that Hegelian relativism and modern liberalism's "living" constitution have over Canada's Supreme Court. Canadians, he suggests, are now living in a jurocracy that is subverting majoritarian democracy. A far more balanced assessment can be gleaned from James B. Kelly's remarkable *Governing with the Charter: Legislative and Judicial Activism and Framers' Intent* (2005), which Vaughan conveniently ignores. Nonetheless, this is an enlightening revisionist study that plumbs both the strengths and the weaknesses of a remarkable intellectual who left an enduring, but now rapidly ebbing, legal legacy.

MICHAEL D. BEHIELS
University of Ottawa

LISA ROSE MAR. *Brokering Belonging: Chinese in Canada's Exclusion Era, 1885–1945*. New York: Oxford University Press. 2010. Pp. xi, 230. \$24.95.

Few Canadian scholars or observers of Canadian politics would argue against the centrality of brokerage to the current and historical political system. Works such as John English's *The Decline of Politics: The Conservatives and the Party System, 1901–20* (1977) and Patrick James and Michael Luszti's contribution to the edited collection *Canada: The State of the Federation 2001: Canadian Political Culture(s) in Transition* (2003) emphasize the nature of electoral pragmatism within the dominant paradigm of the party system and its two so-called major parties, the Liberals and the Conservatives.

These top-down approaches have served scholars of elite political processes well, but the trend in the new political history is to examine brokerage politics from beyond these narrow confines.

To that end, Lisa Rose Mar's slim volume examines the history of some Chinese brokers who acted as "intermediaries between the Chinese and Anglo worlds of North America's West Coast" and thus reveals "a process of making history from the middle" (p. 4). Mar demonstrates this negotiated relationship in three ways. First, the story of Chinese brokers moves the issue of exclusion beyond the traditional narrative of politics, the state, and the law; her study places Chinese brokers within this history, rather than on the outside. Second, Mar positions Chinese brokers in a transnational framework including Chinese and North American linkages. Third, the book focuses on the ways that ordinary people and their leaders, working within their institutions, negotiated political relations within this transpacific world. In this way, Mar is able to move scholarship beyond the usual approach, which emphasizes naïve immigrant domination by the host society.

In five neat chapters, Mar examines the story of Chinese exclusion from its beginnings in the nineteenth century to the collapse of the exclusion period in the late 1940s. Using a case study approach supported with underutilized Chinese source materials, Mar effectively demonstrates the agency of Chinese immigrant power brokers in their negotiations with Anglo-Canadian society. Chapter one focuses on a power rivalry between Yip On and David Lew as well as their collaboration with various Anglo politicians regarding illegal Chinese immigration. Chapter two explores the means by which Chinese brokers, in this case Chinese legal interpreters (also known as Chinese lawyers), contended with a discriminatory legal system and effectively worked to make life "both possible and tolerable" in the shadow of anti-Chinese policies (p. 50). Though disenfranchised and unable to practice law, according to Mar's analysis, these Chinese legal interpreters navigated the informal confines of the ethnic dispute resolution process as it interacted with the formal justice system. Chapter three places the year-long mass protest movement against public school segregation within a much wider populism taking root across the Pacific world. Alongside the works of Belinda Huang ("Teaching Chineseness in the Trans-Pacific Society: Overseas Chinese Education in Canada and the United States, 1900–1919" [Ph.D. diss., Princeton University, 2009]) and Timothy J. Stanley (*Contesting White Supremacy: School Segregation, Anti-Racism, and the Making of Chinese Canadians* [2011]), Mar demonstrates how a new generation of brokers—intellectuals, labor leaders, and civil rights activists—brought grass-roots activism into Canadian brokerage politics.

Chapter four, the most innovative, recounts how intellectuals attempted to reshape public discourse about Chinese in North America by "fixing" the interview data collected by researchers affiliated with the Survey of Race Relations, directed by Robert E. Park of the

University of Chicago. In particular, the Chinese community in British Columbia cooperated with brokers to "fix knowledge" by obscuring the data that researchers would find. Instead of a stratified group of participants, researchers primarily spoke with brokers who, through a community-wide plan to manage the visiting Americans, presented a tightly coordinated viewpoint of Chinese society in an effort to alter West Coast racial politics in their favor. Lastly, chapter five outlines how a variety of brokers mobilized Chinese Canadians to protest discriminatory treatment; these included boycotting military service to protest disenfranchisement, Chinese worker dissent, and campaigns to pressure the federal government to yield on the policy of sending relief remittances to relatives in China.

Throughout her book, Mar provides helpful directions to future researchers, indicating where additional forays into ethnic brokerage politics may be made, including investigations into how these political brokers and their ideas circulated in the wider transpacific world. This highly innovative work has many merits. It only occasionally loses its way, missing the opportunity from time to time to indicate how these brokers were viewed by the Anglo-Canadians with whom they dealt. Because brokerage politics is seen as crucial to the Canadian nation-building project, it would have been helpful to have more specific links between the actions of the Chinese brokers and the reactions of Anglo-Canadian elites. This would also have bolstered Mar's efforts to place her overall emphasis on interactions as much as exclusions. In sum, this study of politics from the middle will shape the way political, immigration, and ethnic historians view power politics.

STEPHANIE BANGARTH
King's University College,
University of Western Ontario

JON PARMENTER. *The Edge of the Woods: Iroquoia, 1534–1701*. East Lansing: Michigan State University Press. 2010. Pp. xlix, 474. \$49.95.

For obvious reasons, the Iroquois League has attracted far more attention from historians of early America than any of the other peoples of the native Northeast. Over the last two decades, historians such as Daniel K. Richter, Matthew Dennis, and José António Brandão have re-evaluated the interactions among the Iroquois League, their Native neighbors, and Europeans in the period from the sixteenth to the eighteenth centuries. In this book, Jon Parmenter addresses many of these same encounters, ranging from the first contact between the St. Lawrence Iroquoians and Jacques Cartier in 1534, to the Grand Settlement negotiated with New France and the English colony of New York in 1700 and 1701.

Historians of early America, and of the Iroquois in particular, will find that much of this is familiar, well-plowed ground. However, Parmenter's approach differs from previous efforts in that he emphasizes the changing spatial configuration of Iroquoia during this

period. Framing his tome around the five elements of the Iroquois condolence ceremony, Parmenter traces the League's mostly successful efforts to manage diplomatic, military, and trade relations while maintaining unity between their own distant communities, while controlling and defining the shifting borders of their homeland in an era of dynamic change.

Most previous scholarship dealing with the Iroquois treats the borders of their homeland as being fairly static throughout this period: In the roughly traditional schema, Iroquoia stretches west from the confluence of the Mohawk and Hudson Rivers, encompasses the Finger Lakes region beyond Lake Onondaga in central New York, and usually terminates somewhere in the vicinity of the Genesee River. By contrast, Parmenter demonstrates that the boundaries of Iroquoia changed greatly over the course of the seventeenth century, depending on the League's trading, diplomatic, and military goals of the moment. In Parmenter's telling, at the beginning of the seventeenth-century Iroquoia confined itself largely to the Finger Lakes area in present New York state; by 1667 the Iroquois reconfigured their homeland to encompass nearly all of Lake Ontario, with the Hudson River as their approximate eastern border. By the end of the century, southeastern Pennsylvania had become Iroquoia's southernmost point, and its western boundary had been reconfigured and shortened, taking in only the eastern portion of Lake Ontario.

In some ways, Parmenter's work is similar to Pekka Hämäläinen's *The Comanche Empire* (2008). Like Hämäläinen, Parmenter emphasizes how a powerful group of Native people utilized their military prowess and adroitly employed diplomacy in a long term effort to expand and, at other times, to contract their domain in response to actions by European colonists, traders, and other Native groups. Like the Comanche, the Iroquois controlled and extended trade networks. For both peoples, expanded trade could be a blessing and a curse. On the one hand, it gave them access to useful items of European manufacture, but, on the other, it encouraged dependency on their suppliers while also serving as a pathway for old world pathogens to enter their communities. The parallel between the two books is very interesting. Reading them together makes for a fascinating comparative study of two powerful, but distinct, Native American groups whose members took similar actions at different times and in different geographic contexts.

Since the nineteenth century, historians have often noted the ability of the Iroquois to project military power over vast distances; they ranged as far south as the Carolinas, as far north as Hudson's Bay, and west beyond the Mississippi River. Parmenter observes that warfare, as well as trade and diplomacy, involved the Iroquois controlling and expanding the boundaries of Iroquoia.

As one would expect in a book that deals with notions of space, there are many maps in this volume (more than twenty, if one counts the old maps listed as illus-

trations). Most of them portray the changing shape of Iroquoia, trade routes, and military campaigns by the Iroquois and their foes.

Parmenter stops his study at 1701, a watershed year in Iroquois history. Given the activities of the Iroquois in the eighteenth century (involvement in the Walking Purchase and the 1768 Treaty of Fort Stanwix come immediately to mind), one wonders about the potential for a follow-up spatial study. Overall, Parmenter has written a book that will be a fine addition to scholarship on the Iroquois, and one that I could see being used in graduate-level courses in both early American and Native American history.

ROGER M. CARPENTER
University of Louisiana at Monroe

CARY MILLER. *Ogimaag: Anishinaabeg Leadership, 1760–1845*. Lincoln: University of Nebraska Press. 2010. Pp. vii, 314. \$50.00.

In this book Cary Miller decisively challenges a long-standing scholarly interpretation of Anishinaabeg social organization as “band-level or acephalous societies, communities with a heightened degree of egalitarianism marked by weak and/or fluid leadership” (p. 2). This understanding, she contends, rests on a literal reading of accounts by fur traders, missionaries, and government officials who portrayed Anishinaabe political and social organization as limited to small family groups. These same colonial records also assumed a separation of religious and political structures, leading scholars to conclude that the Anishinaabe belief system, like its Western counterpart, distinguished between sacred and profane. Miller persuasively argues to the contrary that the village was the most meaningful social unit for the Anishinaabeg; that political relations within and between villages were at once systematic, flexible, and fluid; and that the sources of religious and political authority were one and the same.

Miller’s work rests on a careful rereading of the colonial records of Ojibwe people in Wisconsin and Minnesota between the Seven Years’ War and the arrival of missionaries, who pressed for conversion to Christianity, and government officials, who agitated for land-cession treaties. Miller also draws on twentieth-century ethnographies and indigenous oral traditions. Her study thus encompasses the rise of American hegemony in the western Great Lakes region but ends before forced relocations of Ojibwes and their confinement on reservations altered indigenous leadership structures. Although she focuses on Wisconsin and Minnesota Ojibwes, Miller does not intend to limit her argument to them alone. The Ojibwes are one of the Three Fires of the Anishinaabeg, linked to the Odawas and Potawatomis by language, culture, and kinship. Nevertheless, the distinct geopolitical circumstances that have shaped each nation should suggest some caution in generalizing from Miller’s case study to other times and places.

Ogimaag is organized into five substantive chapters,

four of which treat the Ojibwe world structurally as a cultural whole and draw on evidence across the entire chronological and geographic range of her study. The fifth chapter details the fraught dealings of Edmund F. Ely, a missionary for the American Board of Commissioners for Foreign Missions (ABCFM), with the *gichi-anishinaabeg* (headmen) at the Fond du Lac Ojibwe community. The first chapter is devoted to a lengthy explication of the Ojibwe world view and its ramifications for the organization of all lifeways. Fundamental to this world view is the Ojibwe understanding of power, the means by which the people can live long lives without want or suffering (*minobimaadiziwin*). Power is the gift of the creator to the *manidoog*, persons-other-than-human on whom the Anishinaabeg depend for survival. Power is always in flux, flowing from those who have it to those in need; human beings demonstrate their association with powerful *manidoog* entities by their ability to care for others. This understanding of power organized Anishinaabe life as a series of interdependencies based on gift giving and reciprocity among real and fictive kin. It also organized political and religious leadership structures.

Miller identifies three overlapping forms of Anishinaabe leadership that served the three constituencies of adult society: women, young men (or warriors), and old men (or headmen or chiefs). The first of these are the *ogimaag* (singular *ogima*), or hereditary leaders, who are the subject of chapter two. Occupying a position that often passed from father to son, the *ogimaag* organized village life, settling use-rights inherent to the seasonal round of sugaring, planting, gathering, and hunting, and conducting diplomacy with other villages and people. Following Max Weber, Miller characterizes other leaders, treated in chapters three and four, as charismatic. *Mayosewininiwag*, or military leaders, tended to be young men, who achieved their position by demonstrating their power in warfare. *Gechi-midewijig* occupied the higher ranks of the *Midewiwin*, or Grand Medicine Society, to which most healers and other religious practitioners belonged. These three categories of leadership were not mutually exclusive, and they together created a politics of consensus with clear lines of authority. *Ogimaag* might first come to prominence as *mayosewininiwag*, and they were often also lower-ranked members of the *Midewiwin*. If they could not usually themselves become *ogimaag*, *mayosewininiwag* and *gechi-midewijig* nevertheless played essential roles in the conduct of village life. Women could number among these leaders, but Miller does not consider the extent to which they did so. The last substantive chapter of her book shows this leadership structure in action during an episode involving a missionary’s unauthorized attempt to build a house on Ojibwe land. The chapter depicts the emergence of a new *ogima* and provides a deep reading of the different village leaders’ cost-benefit analysis of the Reverend Ely’s presence in their midst. It is a persuasive demonstration of the power of Miller’s analysis to reshape how scholars understand

encounters between Anishinaabeg and Americans from the Anishinaabeg point of view.

SUSAN E. GRAY
Arizona State University

CRAIG THOMPSON FRIEND. *Kentucke's Frontiers*. (A History of the Trans-Appalachian Frontier.) Bloomington: Indiana University Press. 2010. Pp. xxiv, 369. \$34.95.

Craig Thompson Friend's book on the transformation of the trans-Appalachian frontier known as Kentucke into the state of Kentucky provides a detailed analysis of a narrow slice of time from the 1720s to the first decade of the nineteenth century. Opening with a brief discussion of the latest cultures of prehistory antecedent to the Native American tribes that settlers encountered, he situates readers in a chaotic, mutable world shaped by regional politics, shifting alliances, population displacement and redistribution through disease, warfare, and colonial pressure, and the rise of new but often uneasy economic relationships between colonial settlers and indigenous people. His first chapter chronicles the factors that transformed the Kentucke territory and the Ohio River Valley into a military frontier. In chapters two and three, he describes how the introduction of land-hungry settlers who began carving out tracts created a new imprint of ownership, which greatly disturbed the indigenous peoples who had long claimed the land for their own. As anti-imperialist sentiments and the Revolutionary War heated up, Kentucke became a place of increasing violence with a heightened racial atmosphere in which Indians were perceived as an external threat and enslaved people of color as a potential internal threat.

Acts of terrorism abounded on both sides, leaving a profound psychological impact on men, women, and children who felt beset by danger and either trapped inside their defensive forts and stations or exposed outside of them. In the midst of the perils of Indian attack, the settlers were frustrated by Virginia's inattention to their plight and their inability to crack open markets to the west because the Spanish prohibited navigation on the Mississippi River. As chapter five explains, political factions began to solidify as the hue and cry increased for the formation of a separate state. "Competing visions" in the 1790s led to a "multitude of expectations" (pp. 170–171), ranging from antislavery proponents fighting a losing battle against proslavery adherents and separatists who distrusted the federal government to supporters of continued union and disagreements over how to craft a mature, civilized social order in the new republic.

The final steps of the transformation of Kentucke to Kentucky, explicated in chapter six, came with the peace secured by the Treaty of Greenville and the establishment of Kentucky as the fourteenth state. The new state emphasized the empowerment of white men and the establishment of patriarchy at the expense of women and people of other races, enslaved or free. Contentious relations with the federal government over

excise taxes on whiskey, which could not be sold because of inaccessible markets, continued to plague the new commonwealth for a number of years. Ultimately, Friend contends in the seventh chapter, Kentucky made the choice to become southern by virtue of its adoption of slavery, the establishment of an agrarian economy with strong ties to the Deep South, adherence to largely Protestant Christian values, and embracing a lifestyle of gentility and refinement. The Indian threat faded, only to be replaced with the specter of slave rebellion. As time dimmed the intimate memory of frontier reality, white Kentuckians reimagined their frontier history as a heroic endeavor in a space contested between civilization and savagery, a contest in which they felt victory was preordained.

Friend's deft and fine-grained historical analysis utilizes a plethora of historical data intricately woven into a fascinating reconstruction of a world and a time that, in his view, inflicted "long-term consequences of fear and terror on the American mind and American culture" (p. 291) that resonate in our post-9/11 reality. I was particularly struck by his acknowledgment of the importance of a complex web of reactions influenced by race, age, and gender to frontier conditions. Much remains to be done concerning research on the experiences of women and children as well as the role of slavery in frontier contexts. While I could quibble over some of Friend's interpretations of specific evidence (his distinctions between Mississippian and Fort Ancient Culture, for example, or his characterization of Daniel Boone's long hunts as abandonment), these are minor disagreements and do not impinge on his reasoning or conclusions. He advances many thought-provoking ideas that should, and I hope will, spur other scholars to delve further into this foundational period in Kentucky and American history.

GEORGE HARWOOD PHILLIPS. *Vineyards and Vaqueros: Indian Labor and the Economic Expansion of Southern California, 1771–1877*. (Before Gold: California under Spain and Mexico, number 1.) Norman, Okla.: Arthur H. Clark Company. 2010. Pp. 387. \$45.00.

George Harwood Phillips's book is a welcome and sophisticated addition to the literature on California history, and it follows a long line of significant contributions from this accomplished scholar. The book documents the experiences of Indian people in southern California, and specifically the Los Angeles region, from the earliest Spanish activities in 1771 to the formation of Indian reservations in 1877, after almost three decades of U.S. control in the area. The book does not focus primarily on settlers with Native Americans lingering as a side story, but rather emphasizes the fundamental role of indigenous peoples in the history of the region. Phillips makes that happen with a primary focus on labor as he follows Native Americans through various colonial and settler institutions such as mis-

sions, ranchos, the pueblo, and then the city itself. In fact, he makes it clear that Indian labor was fundamental to them all.

The author's goal is neither to document a history of victimization nor to recount a story of heroic Indian survival. Instead, Phillips focuses on the complexities of labor: how Native Americans engaged with it positively and negatively, how it was used and abused by those in economic and political power, how it laid a foundation for the development of Los Angeles, and how it contributed to the persistence of Indian people and culture in southern California. Understanding labor requires nuance, which Phillips offers by maneuvering between the historiographic poles of (as he terms them) defenders and denigrators, romanticists and realists, and Americanists and Hispanicists.

This focus on labor marks the major contribution of the book, as it not only recognizes a shared characteristic of these institutions and settlements but also highlights the fact that the primary relationship between "Indians and intruders" (to borrow a title phrase from one of Phillips's earlier books [1993]) revolved around labor. Phillips does a masterful job documenting these dimensions with both primary and secondary sources. As he reveals, the tenor, nature, opportunity, and severity of labor relations varied depending on several dimensions, such as whether one was a neophyte (mission convert) or an unconverted "gentile"; whether one labored as a *vaquero*, field hand, domestic servant, vineyard worker, skilled craftsman, etc.; whether one worked voluntarily or under coercion; and whether one toiled for soldiers, ranchero families, padres, or highest bidders in auctions to sell off the labor of incarcerated Indian people. Phillips makes one of his most important points when he articulates clearly that laboring in missions, pueblos, and ranchos did not translate directly into loss of Native culture (p. 323). Native Americans could add new labor practices (just as one can add new material culture) without necessarily counteracting or subtracting indigenous elements.

Phillips appropriately begins the book's core history by illuminating the cultural, economic, and labor patterns of southern California's Indian people—the Gabrielino/Tongva—to better understand their engagements with the colonial and settler labor relations they encountered. As he recognizes, though, his research does not translate into a "tribal history" per se, but rather forms an "Indian worker history." This is an important aspect to recognize and an important history to narrate. It is also critical, however, not to downplay the identity angle; at times these individuals likely saw themselves as workers, but perhaps at other times they may have seen their labor as something they did rather than who they were. For this reason, I would not quite support Phillips's assertion that "There is, however, a neutral term that fits all adult Indians—'workers'" (p. 329). The term does a good job of orienting analysis, but neutrality ends if it inappropriately homogenizes peoples and identities in terms of the economic context im-

posed upon them. This, though, is a research and political challenge all historians face.

My appreciation of this book as quality California and labor history should be apparent, but Phillips's study also offers a wealth of information for the allied disciplines of anthropology and archaeology. He makes explicit links across those disciplinary divides by drawing on pertinent archaeological and ethnographic work. I appreciated this multidisciplinary approach. I also found myself wondering about the archaeological potentials that might exist for the many specific locales in which he identifies Indian workers during the nineteenth century.

In sum, Phillips's book provides first-rate scholarship, a narrative accessible to academic and non-academic audiences, and a solid intervention in the understanding and conceptualization of both Native and colonial/settler histories in California. It should be required reading for California historians, labor historians, historical archaeologists, Native scholars, students, and the general public. Importantly, the book will go a long way toward further reestablishing California Indians in academic and popular histories that have often sidelined them and their labor.

PAUL W. MAPP. *The Elusive West and the Contest for Empire, 1713–1763*. Chapel Hill: University of North Carolina Press, for the Omohundro Institute of Early American History and Culture, Williamsburg, Virginia. 2011. Pp. viii, 455. \$49.95.

Paul W. Mapp has taken a subject we think we know—imperial rivalry over access to the interior of North America—and shown not only how little *we* know but how little *anyone* in the eighteenth century knew. As Mapp reveals in this wide-ranging book, limited and/or erroneous perceptions of the geography and peoples of North America were particularly influential in shaping the behavior of European diplomats.

Central to Mapp's argument is the Spanish desire to protect both silver and territory. Anxiety about French ships in the Pacific during the War of the Spanish Succession led to a provision in the 1713 Treaty of Utrecht that forbade non-Spanish shipping in that ocean. Over the next several decades, the French and the British sought access to the Pacific, the French mainly across the interior of the continent and the British through Hudson's Bay to the north and Darien (Panama) to the south. Mapp's story climaxes with the seemingly erratic behavior of the Spanish during the Seven Years' War. Worried about aggressive French expansion in North America, sparked by the arrival of French traders Jean Chapuis and Louis Feuilli in New Mexico in 1752, as well as the suddenly ubiquitous British, especially the George Anson naval expedition in the Pacific (1740–1744), the Spanish were desperate to maintain a tripartite balance of power in North America. Fear of the

French led them to remain neutral throughout much of the war. Fear also led them to reject the French cession of Louisiana in 1761 and then turn around and accept it a year later, when it became clear that the French Empire in North America was at an end.

Lacking anything approaching reliable information about topography and distances, anxious Europeans were susceptible to all kinds of fantasies about their rivals. The appearance of a couple of French men in Santa Fe hardly constituted an incursion on the scale of Americans a century later. But it was enough to push nervous officials into dubious decisions. Far from masters of North America, Mapp's characters are at the mercy of rumors and speculation. Contingency conjoins with irony in a chilling portrait of immensely powerful men making decisions with consequences for millions of people like blind men groping in a dark room, startling at sudden noises, conjuring apocalyptic scenarios, thinking the worst because their brains do not have the information that might calm their emotions. Reason without evidence was reason unarmed against terror.

The most compelling parts of Mapp's book investigate why North America remained unknown to Europeans as late as the middle of the eighteenth century. Blending diplomatic, intellectual, cultural, and economic history, Mapp develops fascinating comparisons with European experience in other parts of the world. The Spanish and French were perfectly capable of acquiring solid information about the Incas and the Aztecs as well as the topography of Russia and China. Technique and instruments were not the problem in western North America, nor was the diversity of peoples and languages. The real dilemma lay in "an unfavorable ratio of possible rewards to manifest difficulties" (p. 43). In the interior of North America there were no established structures to facilitate the collection of data. Native peoples, moreover, were often untrustworthy sources, perhaps intentionally on some occasions, and probably because they themselves rarely traveled long distances. In the end, "the presence or absence of empire is a critical variable . . . Spanish and French experiences suggest that a relationship of co-operation or conquest—and conquest actually involved a good bit of cooperation—with an empire that had already or was currently engaged in investigating, organizing, and delineating space could make terrestrial reconnaissance much easier" (p. 257).

Deeply researched and carefully argued, this book succeeds in overcoming one of the major challenges of recent historiography: integrating multiple perspectives into a compelling narrative that favors no one viewpoint over the others. As comfortable with Spanish and French sources as he is with those in English and taking American Indians seriously as historical actors, Mapp patiently weaves a coherent argument out of bits of diplomatic, intellectual, and cultural history. Not surprisingly, given his familiarity with the human tendency for individuals to believe what they want to believe, Mapp approaches maps, published texts, and official correspondence cautiously. If he sometimes

engages in informed speculation, he rarely overargues his points. As important, he avoids a whiggish anticipation of the United States or any sense that the period he studies matters only because it eventually gave way to the American Revolution. Mapp's great contribution is his persuasive case for the significance of eighteenth-century North America on its own terms, as a vital dimension of global imperial history that was as much about the Pacific as the Atlantic, as much about China as Great Britain, and as much about desperation as design.

ANDREW CAYTON
Miami University

THOMAS S. KIDD. *God of Liberty: A Religious History of the American Revolution*. New York: Basic Books. 2010. Pp. vi, 298. \$26.95.

In 1966, Alan Heimert's *Religion and the American Mind: From the Great Awakening to the Revolution* challenged a longstanding consensus that liberal, Enlightenment thought inspired and guided eighteenth-century American revolutionaries. Instead, he argued, the impetus for revolution came from anti-authoritarian and visionary "evangelicals" with a millennial ideology and a vision of social equality. Edmund S. Morgan and Sidney E. Mead replied with dissenting reviews, and in 1970 Bernard Bailyn insisted that it was a "gross simplification to believe that religion as such, or any of its doctrinal elements, had a unique political role in the Revolutionary movement" ("Religion and Revolution: Three Biographical Studies," *Perspectives in American History* 4 [1970], p. 85). By 1976, however, Mark A. Noll, Harry S. Stout, Patricia U. Bonomi, and William G. McLoughlin, among others, had begun to advance subtle arguments linking religion to the American Revolution, even while Gordon S. Wood and Jon Butler continued to question its political force.

Thomas S. Kidd therefore ventures into a thicket when he argues for the "evangelical roots of Revolution" (p. 75). He does not follow Heimert in depicting liberals as self-satisfied defenders of the status quo, but he contends that the mobilization of "the people at large required a broader, [more] religiously urgent appeal" than rationalists could produce (p. 91). A consensus about religious liberty united rationalists and evangelicals and provided a "key to the success of the Revolution," but Kidd emphasizes the activities of the "evangelicals" (p. 6).

The argument begins with an assertion that five principles—religious disestablishment, belief in a creator God as the guarantor of human rights, and convictions about sin, virtue, and divine providence—united rationalists and evangelicals and encouraged American defiance. The sermons, apocalyptic sensibility, religious egalitarianism, and anti-Catholicism of the Great Awakening left a legacy that lingered in colonial culture, and the subsequent battle for religious liberty united evangelicals, liberals, and deists. Opposition to the appointment of an Anglican bishop and rage at the

1774 Quebec Act then undermined confidence in England's authority and king, so that by 1773, when battles over taxation and representation intensified, Americans were prepared to defy British administrators.

New awakenings in the 1760s reintroduced colonists to "evangelical ideas of resistance" (p. 81), and even rationalist agitators like Thomas Paine adopted a religious rhetoric. Great Britain became the Beast of the Apocalypse, and language employing this and other biblical themes mobilized resistance. Protestants, moreover, especially evangelicals, popularized an ideal of virtue that allied them with non-evangelical republicans, while the revolutionary armies attracted chaplains (mainly evangelical) who promoted religion and virtue among the soldiers while depicting the war as providential. In addition, a widespread conception of equality before God had powerful political and social consequences and fueled early opposition to slavery.

The evangelical-rationalist alliance, with evangelicals in the lead, disestablished the state churches. This led not to decline, as some had feared, but to revivals after 1775. In the battle over the Constitution, many evangelicals supported the Federalist option as well as the 1791 amendment that protected religious freedom while preventing the federal establishment of a specific denomination. (Kidd does not discuss the argument that the First Amendment was more general in scope.) While evangelicals divided over Thomas Jefferson's election nine years later, they liked it when he eschewed strict separation, accepting chaplains in Congress and the armies and allowing worship in federal government buildings.

Kidd is explicit about his larger cultural and political aims. In his epilogue, he asks secularists not to eliminate religious symbols and language from the political sphere, and he asks evangelicals to avoid a nationalist providential rhetoric, especially one that justifies war (for example, the "farce" [p. 252] of the defense of the Iraq war), to refrain from imposing their views through government institutions, and to work alongside people who do not share their religious commitments.

The book is well-researched and lucid, and a clear argument guides it. But who was an evangelical? Sometimes Kidd uses the term for revivalist groups, sometimes for opponents of religious establishments. But many clergy and laypersons who defended the Congregational establishments in Connecticut and Massachusetts saw themselves as proponents of "evangelical" doctrine, preaching, and piety. The term evangelical rarely functioned as a noun in the eighteenth century. In using it as a noun, Kidd follows a familiar historical convention—historians must categorize—but unless the aim is to link (diverse) eighteenth- and twenty-first-century "evangelicals," why not refer simply to denominational names or "Protestants" (some revivalist, some not), designations more common in the eighteenth century? And while the book is a "religious history," would not greater attention to liberal and Whig ideology and economic and demographic forces help us gauge the degree of religious influence? The American Revolu-

tion was not, after all, primarily about religion. Nonetheless, readers who want a guide to the revolutionary proclivities of eighteenth-century Protestants will find this book useful and deeply informative.

BARBARA CLARK SMITH. *The Freedoms We Lost: Consent and Resistance in Revolutionary America*. New York: The New Press. 2010. Pp. xvi, 272. \$25.95.

Barbara Clark Smith has created a sophisticated new synthesis of the transformation of governance and consent in the American Revolution, challenging both popular notions and scholarly frameworks. This is an important book, which will be closely read, carefully considered, and widely debated.

Two approaches dominate the interpretation of the American Revolution in recent literature. Gordon S. Wood's colonials are a timid, deferential bunch, who burst through a republican moment to liberal democracy; T. H. Breen's revolutionaries—and Jon Butler's—are already liberal Americans, fulfilling their preordained destiny in an easy rejection of empire. In a sharp dissent, Smith restores George Rude? and E. P. Thompson (and a hint of the popular republican synthesis) to the American historiographical landscape. Smith's revolution was launched in a defense of the antique freedoms, freedoms that were lost—and replaced—as the revolution came to a close.

In her first two chapters, Smith describes the freedoms enjoyed, by white males, in eighteenth-century America. White men of all ranks acted in public to enact their collective self-governance, deploying "local knowledge" and "common judgment" on juries, witnessing the execution of power, and retaining the right to withhold consent in violent crowd action. Since sovereign power was exercised in the name of a distant monarch, colonial Americans were particularly free to resist, upholding their understanding of English liberties. That understanding included defiance of great men who might act to undermine the common good of the people and their households. Samuel Adams captured the essence of Smith's commonwealth "republican" understanding of a moral economy when he challenged efforts that would "put a whole Country in Two or Three people's pockets," and invoked James Harrington's "Agrarian Law" to protect the equality necessary for true liberty (pp. 81, 83, 84).

In her next two chapters, Smith rejects the model of an elite-led revolution. In her words, patriot resistance was "about the popular presence in execution of the law" (p. 87). The people's defense of traditional freedoms challenged gentry leadership and evolved directly into the agents of the revolution: the committees and conventions that protected the practices of American self-governance from British imperial reform. In particular, resistance targeted British efforts to subvert popular institutions' traditional surveillance of power, singling out those individuals taking oaths to act within

this reformed system. And the “Common Cause” of liberty required public sacrifice and cooperation, not liberal choice, manifested first in the non-consumption movement and then in public support for paper money.

Paper money is critical to Smith’s broader analysis. With its origins in colonial commonwealth expectations (pp. 77–80), government-backed paper currency emissions lay at the center of what Smith sees as the social contract uniting a “First Patriot Coalition” of 1774–1780. The common people would make sacrifices in the labor of revolution, while the gentry would sacrifice in its financial support. As she pointedly quotes Thomas Paine, “While the war was carried on by emissions . . . the poor were of equal use in government with the rich” (p. 181). In her trenchant interpretation, “the meaning of the money, as its value, thus rested on the highest Patriot authority: ‘common consent’” (p. 186).

The interpretive hinge to Smith’s book comes with the price-control crisis of 1778–1779 and the “Fort Wilson affair,” when armed violence broke out in Philadelphia between merchant gentry and common militiamen. From the early 1780s, a “Second Patriot Coalition” emerged, marginalizing the popular tradition of “common consent” and participatory governance, unifying moderate patriots—men of wealth and standing—and returning Tories into a common program of governance through finance capitalism. In states, and then the new nation, popular authority once exercised in defiance of alien monarchical power was reduced to the right to vote for a “government by the people” against which there would be no further recourse.

This book thus presents a challenging vision of the trajectory of the American Revolution, plumbing some wonderful, long-ignored materials. It is, however, not without some problems. As Smith herself admits, this is a book about the liberties of white men, generally if not exclusively propertied. Women appear in a supporting role occasionally; enslaved or free African Americans virtually never. Then, as do many books on the American Revolution, Smith focuses on northern states and New England, especially in her account of the revolutionary economy in chapter four. What is needed here is an explicit discussion of popular consent and governance in each of the regions, rather than an assumption that northern events can stand for the whole. And in skirting the revolutionary South, Smith has avoided both slavery and the extremely low rates of southern service in the Continental Army. When the next book covers this terrain, it will have to grapple with the ways in which the policing of slaves defined popular self-governance among white males in the revolutionary South.

JOHN L. BROOKE
Ohio State University

JOHN L. BROOKE. *Columbia Rising: Civil Life on the Upper Hudson from the Revolution to the Age of Jackson*. Chapel Hill: University of North Carolina Press, for the Omohundro Institute of Early American History and Culture. 2010. Pp. xiii, 629. \$45.00.

John L. Brooke’s new tome brilliantly demonstrates just how messy, chaotic, corrupt, dishonest, fragile, and contingent was the establishment of republican government and its attendant “public sphere” in the microcosmic universe of one Hudson River locale, Columbia County, New York. The experiences of that emerging county, in turn, shaped the cultural formation of Martin Van Buren, architect of what would one day be called Jacksonian Democracy, a cornerstone of the “rising” American regime of freedom. And while Brooke’s take on the revolutionary settlement in the Hudson Valley will bring little comfort to modern nation builders (they know about chaos already), it should be required reading for policymakers, generals, pundits, and wonks who today are so quick to compare the failings of others with a fictitious, triumphal American founding.

Ever since Lewis Namier published *The Structure of Politics at the Accession of George III* (1929), historians have known that a key to understanding eighteenth-century English politics lay in details of local connections among friends and family, patrons and clients: officers with hands on the levers of power. And for all its peculiarities, colonial politics bore a resemblance that has frustrated all who would read back into our revolutionary movement the kind of bipolar structural orientation that, since Andrew Jackson’s day, has defined the U.S. system. Most historians choose to fly over the formative period at a great altitude (confidently lecturing about Federalists and republicans) while others sink to their knees in local details of faction and intrigue that seem to defy categorization. Seldom have we managed to connect the two perspectives.

Now Brooke offers to map the emergence of a revolutionary settlement and the rise of legitimate structures of political affiliation, this time using “civil society” as the intermediate goo, the stuff from which habits, institutions, and expectations were molded and tempered until the newness wore off and the risk of regime change gradually receded. One sees in Columbia County all the perils of nation-building that so frustrate Western powers today: powerful old elites clinging to land and privilege; fiery revolutionaries desperate to install a new order; dispossessed crowds looking for private advantages; excluded groups begging admission; midwives in the form of newspaper editors, educators, commercial promoters, clergymen, lawyers, and clubmen; and, of course, assorted vultures hoping to rise on the turbulent updrafts. At one level Brooke’s story cannot be other than local history, with a cast of characters so numerous that a roster of players appended at the back proves essential. At another level Brooke tries to show readers the way from the “crisis politics” of the immediate postwar era toward a “routine politics” that could contain conflict without the threat of renewed catastrophic upheaval—a story that introduces us to dozens of clubs, prints, and organizations that eventually would constitute a modern civil society. Finally, Brooke wants to explain what made Van Buren believe and behave the way he did by the time of the Jackson presidency.

The founders' concept of popular sovereignty posited a government based on "the people" unmediated by class, dependency, or subordinate affiliation, but such a people proved illusory. In practice, political parties emerged as a necessary medium of negotiation between the governors and the governed—but so too did many other forms of civil society and association. All of them began as illegitimate, extraconstitutional, "self-created" societies engaged in a grand struggle to organize the people, to give them voice and hands to seize the reins of government. According to Brooke, Van Buren saw his Democratic Party not as one among many associations, but as the one legitimate intermediate association, desperate to disable competing institutions before they seized power and subverted the people's will forever. Because he experienced the construction of a political settlement and civil society in a locale where the fight was bitter, the stakes especially high, Van Buren carried to the end of his life a fear of rival authorities that gave his partisan rhetoric a peculiar bite—an urge to delegitimize the opposition—that left an indelible stamp on U.S. politics.

No short review does justice to a 600-page work. This book is an important contribution to our ongoing effort to understand nation-building at the turn of the eighteenth century. It offers crucial lessons for the present as well.

JOHN LAURITZ LARSON
Purdue University

DAVID JAFFEE. *A New Nation of Goods: The Material Culture of Early America*. (Early American Studies.) Philadelphia: University of Pennsylvania Press. 2010. Pp. xv, 400. \$45.00.

This physically beautiful book, with the gorgeous *Girl in Red Dress with Cat and Dog* gracing its cover, glossy pages, and dozens of handsome illustrations in both black and white and color, makes a powerful statement about material culture in its own right before one reads a single word of text. But to ignore that fulsome text with its sweeping synthesis and challenging argument would be a serious mistake. David Jaffee's interdisciplinary interrogation of American material culture from the 1790s to the 1850s makes an important contribution to the history of the market, consumer culture, and industrialization in nineteenth-century America.

To understand "the cultural work of nation-building" (p. xii), Jaffee insists that his readers look to the provincial artisans in the rural towns, villages, and river valleys of New England—not to the master craftsmen and merchants of New York City or the shoe and textile manufacturers of Lynn and Lowell—to trace the transformations in production, distribution, marketing, and consumption that collectively came to constitute the market revolution. In a series of case studies of ambitious artisan-entrepreneurs in four crafts (portrait painting, chairmaking, clockmaking, and book production and printing), Jaffee explains how new generations

of men and women took luxury goods and, by incorporating economies of scale, utilizing standardized parts, and altering divisions of labor, transformed them into mass-produced objects. Innovation was the name of the game; the reduction of grandfather clocks to mantel size offers just one example of how ensuring ease of transport and lower costs generated new patterns of consumption in far-flung communities where itinerant peddlers persuaded rural people they needed the latest goods more than simple necessities.

What is so striking about these rural artisan-entrepreneurs is the speed with which they assumed cultural authority within their region. Rather than recognizing themselves as the children of the Enlightenment like their revolutionary-age progenitors, they redefined status through their new business pursuits and their new educations in the fast developing local press, lyceums, libraries, clubs, and schools. The world of change that Jaffee paints is inexorable, harmonious, and generally meritocratic. Even the risk-takers who failed in this changing economic landscape, he suggests, accepted this newly emergent middle-class society's tenets where "cosmopolitan communities" were forged out of regional self-improvement cultures. Central to this transformation was the spread of literacy and the accessibility of print culture via a new provincial press. Jaffee suggests that in the process this two-fold democratization of commercial expansion and cultural transmission generated an enthusiastic backcountry nationalism.

By the 1840s, more and more of these artisan-entrepreneurs found themselves at the mercy of economic panics and recessions, technological transformations like steam power and mechanization that left many of them behind, and manufactories and internal improvements that undermined their market. The window of opportunity in the rural village communities where industrial transformation began, Jaffee argues, closed sharply on the subsequent generation. On the eve of the Civil War and thereafter, urban manufacturers reaped the rewards of innovations that village communities had sown, including streamlined production, improved marketing methods, deeper networks of distribution, and broader patterns of mass consumption.

Jaffee's interdisciplinary approach and prosopographical methodology serve his argument well. The depth of his knowledge of the four crafts he highlights is laudatory. His inventive reading of sources, including his ability to cross-examine material objects in multiple contextual lights, deserves emulation. His argument resets understandings of the origins of industrial development. But the book also invites further questions and new investigations. Jaffee's subjects wholeheartedly embraced Benjamin Franklin's insistence on the rewards to be secured through ambition, a driving work ethic, and innovation. Missing from Jaffee's analysis are the poorer sorts who lacked the education and the opportunity to take advantage of "the Village Enlightenment." How did the changes taking place in the workshop and in the division of labor reframe their social, cultural, and economic relationships? Jaffee's argu-

ment also presumes that the cultural transformation that spawned the market revolution was a decidedly New England phenomenon pressed south and westward in search of new mass markets. But was that the case? What was the role of changing cultural authority in the emergence of new patterns of production in the rural trade towns of the upper South, the growth of entrepôts that served the newest planter communities in the deep South, or the mushrooming of rural villages across the Ohio River Valley? To what extent did a slave society alter the trajectory of mass consumption unleashed in rural New England, and what new forms of production and marketing developed in their place? Jaffee's exhaustive work invites further investigations into how the processes he has documented in New England took shape elsewhere and in what ways they influenced these more familiar market forces.

MICHELE GILLESPIE
Wake Forest University

WENDY BELLION. *Citizen Spectator: Art, Illusion, and Visual Perception in Early National America*. Chapel Hill: University of North Carolina Press, for the Omohundro Institute of Early American History and Culture, Williamsburg, Virginia. 2011. Pp. xviii, 351. \$45.00.

Wendy Bellion's new book studies the political valences of vision as they were mediated by the cultural forms of illusion in early America. Bellion, an art historian, contends that the dialectical nature of visual perception—its capacity for judgment and susceptibility to deception—was a central political and cultural concern for postrevolutionary Americans. Her book traces the development of an early national culture of illusion across a remarkably diverse range of optical devices, trompe l'oeil pictures, and popular spectacles of deception that, Bellion claims, resonated with, contradicted, and at times parodied republican political desires for rational discernment. Chapter one examines how early nineteenth-century Philadelphia's eclectic material culture of optical illusions—its solar microscopes, camera obscuras, magic lanterns, phantasmagoria, peep shows, and cosmoramas—transformed everyday taverns, parlors, and assembly rooms into theaters of visuality. Where the first two chapters demonstrate how some cultural forms of illusion, such as Charles Willson Peale's 1795 trompe l'oeil painting *The Staircase Group*, idealized visibility as a condition of republican order and close looking as the duty of virtuous citizens, chapters three and four consider how other artifacts—such as the landscapes of William and Thomas Birch and the trompe l'oeil drawings of Samuel Lewis—challenged these notions by emphasizing the embodied and contingent nature of vision. In chapter three, for example, Bellion provocatively reads the Birches' *Views* of Philadelphia (1798–1800) not as an objective document of what the city looked like, but as a subjective record of how the city was looked at. The Birches' unsuccessful attempts at rendering perspectival space are not representational failures for Bellion so much as “a way of

seeing and knowing incumbent upon the observer's corporeal situation in the environs of a specific place” (p. 122). As a result, the *Views* signal a new order of representation that prized the subjective experience of looking over an ideal system of depiction.

The book closes with two chapters documenting how the audience for and the model of looking generated by the cultural forms of illusion would continue to evolve over the first quarter of the nineteenth century. Chapter five examines how the most popular illusionistic spectacle of the era—the Invisible Lady—exposed the gendered terms of early national ideologies of vision. While the scrutiny produced by the Invisible Lady's bewildered viewers was ultimately a faculty attained at the expense of women's vision, its active and incisive mode of looking, Bellion contends, stands in contrast to the more passive models of spectatorship generated by rival forms of visual illusion (such as the panorama). The tension between these competing modes of discernment and their respective active and passive, near and far practices of looking, Bellion suggests, would continue to characterize cultural forms of illusion for years to come. The book's final chapter finds illusionistic paintings such as François-Marius Granet's *Choir of the Capuchin Church in Rome* (1814–1815), Rembrandt Peale's *Patriae Pater* (1824), and Raphaëlle Peale's *Venus Rising from the Sea—A Deception* (c. 1822) indicative of a more general transformation in the cultural history of illusion in early America, one in which the spectator's self-awareness of looking has been replaced by her deep immersion in a picture somehow insulated from the profound political, social, and economic changes of the 1820s.

The evidence used to support some of Bellion's larger claims, particularly those pertaining to the political inflection and national scope of the kinds of looking elicited by illusionistic objects, may not satisfy every reader. The author is the first to admit this limitation, conceding that her study focuses primarily on Philadelphia and that “evidence of actual spectators' encounters with objects of illusion” is slim (p. 21). Yet, this point of criticism should not diminish the book's many accomplishments. It is a welcome addition to a growing body of scholarship exploring the relationship between politics and early American material and visual culture. With its careful contextualization and detailed, historical analysis of the cultural forms of illusion, this book firmly locates its discussion of early national visuality within the cultural practices of everyday life and thus makes a substantial contribution to the empirical history of spectatorship in the United States. Bellion's wide-ranging account of the development of a self-conscious, active, and embodied mode of looking—one actively engaging both eyes of the spectator and well in place prior to 1830—will also prompt readers to reconsider the extent to which early nineteenth-century visual culture was dominated by the camera obscura and its passive and incarnate model of observation.

SAM W. HAYNES. *Unfinished Revolution: The Early American Republic in a British World*. (Jeffersonian America.) Charlottesville: University of Virginia Press. 2010. Pp. x, 378. \$29.95.

In this fresh new treatment of the early U.S. republic after the War of 1812, Sam W. Haynes argues that the next thirty years “would find Americans more preoccupied with who they were, as a nation and a people, than at any other time in their history” (p. 22). Why? Because the patriotic fervor that followed the Treaty of Ghent—conventionally identified as the moment when the United States assumed a newfound sense of nationhood, and Americans for the first time began to see themselves and behave like a continental power—actually deepened the nation’s consciousness that it remained a cultural and economic satellite to Britain. According to Haynes, Americans emerged from their second war of independence more aware than ever of incomplete separation from their parent country.

It is not news that Americans remained unduly preoccupied by their former mother country during the second quarter of the nineteenth century, a conflicted fascination described by one bemused British visitor as hovering between anglomania and anglophobia. Nor is it news that leading Americans in the period before the Civil War were anxious to see the new nation complete its transition from a colonial to an independent economy, or that the diplomatic and military successes of the years surrounding the war with Mexico—the end of Haynes’s period—ushered in a new era of national self-confidence and a greater willingness to recast Britain as an equal.

What is new is Haynes’s argument that the colonial orientation of Americans, “the transatlantic axis” of pre-independence, persisted for decades after 1815 rather than being put to rest by a successful outcome in the second round of Anglo-American conflict (p. 10). Americans during this period were still driven by perceived external threats from a British superpower rather than becoming the “arbiters of their own destiny” (p. 2). As a result, the strenuous process of identity formation that took place over the next thirty years inevitably focused on Britain. “Like many societies that would emerge from long periods of colonial rule,” Haynes writes, “the American republic harbored an innate distrust of any policy associated with the imperial parent” (p. 174). And such policies were not hard to find, because whether real or imagined, Britain’s influence was felt in each of the many tensions that were embedded in life in the United States.

In a wide-ranging, readable, and impressive volume, Haynes looks at how anglophobia permeated debates on every important issue of the period: cultural life, commerce and banking, the political controversies of the second party system, the Bank War, slavery and abolition, sectional conflict, westward expansion. In three particularly engaging early chapters, Haynes describes how Britain cast its gigantic shadow over the new nation’s cultural development, not only its emerging lit-

erature and performing arts, but also American domestic manners, which were widely pilloried in British travel literature to the intense discomfort of the nation. Viewing the entire period through the lens of anglophobia, Haynes draws imaginative connections. His astute treatment of Andrew Jackson’s charismatic appeal in chapters on party politics and political economy demonstrates that Old Hickory’s “paranoid” detection of British influence among the stockholders of the Bank of the United States, in Mexican-held Texas, and among the Indian tribes east of the Mississippi struck a deep chord in a young nation whose “sense of precariousness” is no longer easily recovered by modern Americans (p. 117). The fears of encirclement that pervaded U.S. analysis of British intentions in the West distinctly echo the defensive mentality of colonial Americans toward the French at the outset of the Seven Years’ War. The pressure on public figures like John Quincy Adams to distance themselves from their English associations dovetails neatly with earlier discussion of the emergence of the effete English aristocrat as a stock burlesque stage type in a national culture that was rapidly becoming more democratic and aggressively recasting as foreign elite cultural forms that had persisted since independence. By the 1850s, Haynes argues, Americans had finally shaken off their obsession with their former imperial metropole only to be confronted with the fact that the serious issues dividing the nation could no longer be projected onto a foreign scapegoat.

Haynes argues convincingly that the early United States had much in common with other developing nations emerging from colonial rule, but he does not offer explicit comparisons. Perhaps that is a subject for another book, but such comparisons would enrich his picture of a fledgling nation gripped by a compulsive process of identity formation, reminding readers that the American Revolution was unusual among colonial rebellions in that it began without independence as its goal. U.S. nationalism was not a cause but a consequence of the war. Contemporary British observers often commented that the American colonies had achieved nationhood prematurely; James Fenimore Cooper was irritated to meet people in London who still believed the new United States would soon break apart. This skepticism was unconsciously echoed across the Atlantic during the long goodbye portrayed in Haynes’s book.

JULIE FLAVELL
Independent Scholar

GEORGE WILLIAM VAN CLEVE. *A Slaveholders’ Union: Slavery, Politics, and the Constitution in the Early American Republic*. Chicago: University of Chicago Press. 2010. Pp. 391. \$39.00.

We live in the era of constitutional originalism, begun by Ronald Reagan’s “strict constructionist” Justice Department to restrain liberal judicial activism and more recently refurbished (“New Originalism”) by—among others—the Federalist Society to grant conservatives a

judicial activism of their own. To establish beyond doubt the text at issue, "the Constitution as understood by those who wrote it and their contemporaries" (Charles Krauthammer, *Washington Post*, January 7, 2011), the House of Representatives began the 112th Congress by reading it aloud. Most of it. No three fifths clause. No fugitive clause.

To be a serious juridical hermeneutics, originalism must grapple with the scholarship of George William Van Cleve and others—Robin L. Einhorn, Mark A. Graber, David Waldstreicher—who in the last five years have brought us serial accounts of the Constitution's original meaning: a pact between sections that created a slaveholder's union and then for the better part of a century protected an expansive slave economy from the possibility of government intrusion. Van Cleve's book is the most comprehensive and, as such, the most convincing. Calmly and remorselessly, Van Cleve eviscerates the long-ascendant "ideological" account of the making of the American Republic (in the index of which slavery does not appear) not by frontal attack, but rather by painstaking demonstration of the sheer implausibility of any account of "the actual political and legal accommodations made to create and expand the Republic" (p. 5) that is *not* centered on the problem of slavery.

A problem it was. Demographically dynamic, the slave economy grew rapidly both in size and territorial extent throughout the founding era. The American Revolution had meant no inevitable extinction of slavery; indeed "as a political institution" (p. 7) slavery grew stronger, comprehensively secured by the Articles of Confederation. Northern gradual abolition conveyed no northern commitment to general abolition; what the sections jockeyed over in Philadelphia was the distribution of power within their new federal union, the weighting of representation and accommodation of comparative economic advantage. In all respects the political economy of slavery was carefully protected: by the three fifths clause, which approximated and provided representation for property in slaves (p. 117); by the fugitive clause; and by preservation of the prior Confederation's "legal status quo ante on slavery," measures collectively guaranteeing the slave economy the opportunity "to expand for at least an entire generation" after the Constitution's adoption (p. 9).

Expand it did, first into the Southwest territory and subsequently into the vast Louisiana territory. Throughout the republic's first thirty years, each section concentrated on preserving opportunities to migrate its political economy westward without disturbing the sectional balance hammered out in Philadelphia. Missouri shattered this accommodation. Standing north of the Ohio River line, Missouri's admission as a slave state, Van Cleve argues, was no ideological dispute over slavery but "the first 'free labor, free land' conflict over sectional expansion" (p. 10). A dispute neither side wished to see resolved by constitutional "rule of law" means, the Missouri conflict brought forth

a new union so far as slavery was concerned, a purely political bisectional balance of forces.

This book is not a complete history of the law and politics of slavery in the early republic. It does not delve into state-level slave law or labor systems or provide a detailed account of race relations. Rather, in Van Cleve's words, "it combines evidence drawn from public law and the history of a series of pivotal moments in slavery's evolution"—slavery in the British Empire and Lord Mansfield's *Somerset* decision (1772), revolution and confederation, the Philadelphia convention, abolition debates north and south, westward movement, the Missouri crisis—"to provide a better integrated account of slavery's relation to politics and law in the early Republic" (p. 3). Though readers will find new and important perspectives on the activities of familiar figures, such as Thomas Jefferson and James Madison, Van Cleve's aim is analysis and explanation at the most general level that his extremely thorough and persistent empirical research can support. His central concern is to show how thoroughly the republic's fundamental law simultaneously protected slave property and translated it into political power. The results are highly convincing.

This study carries considerable authority. It is the product of a mature and highly disciplined intellect, honed by thirty years of legal practice. A graceful writer and careful scholar, Van Cleve is at once dispassionate, seeking no more than "the truth of things done" and profoundly committed to history as civic education. His book arrives at an important moment. Living in an originalist age, we currently find ourselves surrounded by the noises of an originalist politics, a "constitutionalism," in Krauthammer's description, which "bases its call for minimalist government . . . in the words and meaning of the Constitution." Well and good. Let us, however, ensure that we have a complete understanding of that text's words and the reasons for its minimalist government. Let us not cut and paste our text to obscure its original intent.

CHRISTOPHER TOMLINS
*University of California,
Irvine*

W. JASON WALLACE. *Catholics, Slaveholders, and the Dilemma of American Evangelicalism, 1835–1860*. Notre Dame, Ind.: University of Notre Dame Press. 2010. Pp. ix, 200. \$30.00.

The premise of W. Jason Wallace's book is that an intriguing triangle of recrimination was established in the antebellum United States when northern abolitionists' critiques of southern slaveholders began to sound increasingly like their denunciations of America's growing population of Roman Catholics. The abolitionists decried not just what they saw as inherent tyranny (masters over slaves, hierarchs over the faithful) but also the gross incompatibility of both slavery and Catholicism with American democratic ideals. Catholic bishops and defenders of the South's peculiar institution

replied in similar terms, claiming that the abolitionists threatened both orthodox Christianity and political stability.

If this book does not fully exploit the potential of its premise, it nonetheless offers solid insights about its three antagonists. Wallace nuances the complaints of abolitionists against slaveholders by noting that authors like Francis Wayland of Brown University advocated for both democratic liberty and moral coercion enforcing traditional Protestant ethics. His treatment of northern anti-Catholics highlights the general polemics of Samuel F. B. Morse (*Foreign Conspiracy against the Liberties of the United States* [1835]; *Imminent Dangers to the Free Institutions of the United States through Foreign Immigration* [1835]) and Lyman Beecher (*A Plea for the West* [1835]) as well as the abolitionists' frequent use of medieval history to document papal tyranny. In their historical polemics, abolitionist evangelicals devoted much attention to Pope Gregory VII's eleventh-century excommunication of Emperor Henry IV, they seem rarely to have mentioned the St. Bartholomew's Day Massacre of 1572, and they saw Europe's 1848 revolutions as anticipating the demise of the papacy.

A chapter on southern Protestant defenders of slavery rehearses the well-known defense of "republican freedom" originally articulated by the likes of John C. Calhoun and powerfully interpreted in recent studies by Eugene D. Genovese and Elizabeth Fox-Genovese. It also shows that a few southerners, like William Brownlow of Tennessee, could be as vituperative as his northern counterparts in chastising Catholics and Democrats as irremediably despotic. Yet even as they continued to insist on the superiority of Protestantism to Catholicism, most southern evangelicals were somewhat muted in their criticism of all things Catholic. Wallace also records that the American (or Know-Nothing) Party made some progress in the South, but without the intense anti-Catholic animus that drove its northern development.

Wallace's chapter on Catholic responses to the charges of northern evangelicals is the book's strongest. It shows how Bishops John England of Charleston, Francis Kenrick of Baltimore, and John Martin Spaulding of Louisville and later Baltimore offered extensive refutations of Protestant interpretations of Catholic history, even as they defended the compatibility of their faith with the American separation of church and state and the institutions of a democratic republic. The highlight of this argumentation was Bishop England's clever defense of Gregory VII's deposition of Henry IV. According to England, once one realizes that the pope was defending the people of the Holy Roman Empire against their monarch's unjust usurpation of power, the pope's actions could be praised as a defense of freedom similar to the actions of American patriots who threw off the yoke of British tyranny. England thus turned into knots the standard argument of northern abolitionists that the American Revolution established principles of freedom that all Catholic history contradicted.

The book would have been stronger if more attention

had been paid to actors at the time who commented on the parallels that Wallace perceives between northern antislavery and northern anti-Catholicism. The author might have explored how the arguments of the three polemical factions were affected by considerations of race and by the role of the Democratic Party as the political home of most slaveholders and most Catholics. Comparisons from the era's public Catholic-Protestant debates might also have been instructive. For example, were there differences in tone or substance between the mid-state confrontation of Alexander Campbell of the Christian Church and Bishop John B. Purcell of Cincinnati (published in 1837 as *A Debate on the Roman Catholic Religion*) and the northern clash between Presbyterian John Breckinridge and Bishop John Hughes of New York (*Controversy . . . Relative to the Existing Differences in the Roman Catholic and Protestant Religions* [1833])? In addition, while the book is solid on American Protestant interpretations of the Catholic Middle Ages, it does not discuss what the same Protestants thought about the anti-liberal pronouncements of Popes Gregory XVI and Pius IX. Finally, some use of the best conceptual study of the long Catholic history of wrestling with slavery (John T. Noonan, Jr., *A Church That Can and Cannot Change: The Development of Catholic Moral Teaching* [2005]) and the best monograph on many of the issues treated in this book (Michael Hochgeschwender, *Wahrheit, Einheit, Ordnung: Die Sklavenfrage und der Amerikanische Katholizismus, 1835–1870* [2006]) would have strengthened Wallace's analysis.

MARK A. NOLL

University of Notre Dame

MARGARET ABRUZZO. *Polemical Pain: Slavery, Cruelty, and the Rise of Humanitarianism*. (New Studies in American Intellectual and Cultural History.) Baltimore: Johns Hopkins University Press. 2011. Pp. 330. \$55.00.

Margaret Abruzzo focuses on antebellum debates over the institution of slavery to illuminate how malleable and contested were notions of humanitarianism in the early republic. She begins her study by exploring the emergence of several strands of humanitarian reform in the late eighteenth and early nineteenth centuries. Both Quaker leaders and Scottish moral philosophers, argues Abruzzo, drew on changing ideas about God, benevolence, sympathy, and suffering to excoriate the practice of slavery. The author, however, is quick to note the limits of this antislavery movement. Late eighteenth-century critics of slavery generally cared more about how this institution corrupted slaveholders than how it hurt slaves.

Abruzzo views the 1830s as a turning point in Americans' evolving conceptions of humaneness and enslavement. She discusses how white abolitionists increasingly focused on the sufferings of slaves and urged their countrymen to eradicate slavery rather than merely pity its victims. The author offers a brief yet insightful dis-

cussion of how abolitionists used slave narratives and photography to mobilize public opinion against the "peculiar institution." She also explores a broad range of antislavery critics, including John Woolman, Theodore Dwight Weld, and Harriet Beecher Stowe.

Abruzzo discusses the abolitionist crusade in a richly layered analysis. Yet what makes this book especially innovative is the author's discussion of how humanitarianism undercut efforts to end slavery and to grant African Americans basic civil rights. Abruzzo first addresses this issue when she examines how colonizationists denied slaves a sense of agency by portraying them as passive sufferers. A "rhetoric of victimhood" made it easier to argue that there was no place for freed blacks in the United States and that the only humane alternative to slavery was the emigration of former slaves to Africa. Colonizationists' emphasis on the cruelty of the slave trade, cogently argues Abruzzo, elided whites' responsibility for the persistence of slavery. It also made slaveholders appear as humane people who merely inherited an evil institution.

Abruzzo's monograph is especially compelling when it investigates the proslavery polemicists who invoked humanitarian ideals to defend slavery during the 1830–1860 period. The author discusses not only notable apologists for slavery such as George Fitzhugh and James Henry Hammond but also lesser-known figures, including southern student activists at Princeton University. She details how these polemicists turned the tables on abolitionists by depicting slavery as a benevolent institution, one that allegedly provided the enslaved with material comforts, necessary labor, and Christian values. Notions of humanitarianism were so fluid and capacious, argues Abruzzo, that proslavery writers even defended whipping as a relatively benign and essential form of discipline, especially when used in moderation on unruly slaves. By the 1850s scientific racism with its claims that Africans were naturally suited for enslavement bolstered polemicists' defense of slavery as humane.

As she explores the sectional politicization of ideas about the cruelty of slavery, Abruzzo conveys how pro and antislavery writers invoked shared humanitarian values to defend their respective positions. She also examines divisions within each camp. The author discusses, for example, how members of a radical wing of the proslavery movement in the 1850s provoked dissension in their ranks when they defended the African slave trade, a practice long denounced as cruel by both northerners and southerners. Abruzzo also explores disagreements within the abolitionist camp. She notes, for example, how some antislavery writers feared that emphasizing the physical cruelties of slavery would obscure how this system stripped all slaves, even those relatively well treated, of their most basic human rights and dignity. Some abolitionists called for publicizing a basic theme: "slavery's true horror lay in 'its death-stab into the soul of the slave'" (p. 152).

Abruzzo's text shows that ultimately humanitarianism had multiple, contradictory meanings in antebel-

lum America. While documenting this theme, Abruzzo examines what she calls the "geography of suffering." Many white northerners, she stresses, avoided confronting their complicity in the slave system and their failure to tackle racism in their own communities by focusing on the sufferings of slaves in the South or West Indies.

In her epilogue Abruzzo suggests how sectional differences over the humaneness of emancipation polarized northerners and southerners during the post-Civil War era. While many northerners heralded the end of slavery as a triumph for human progress, former slaveholders denounced emancipation as cruel. They claimed that blacks endured misery when no longer protected by their former masters. Of course such arguments rested on an idealized view of slavery. They also masked the terrorism and exploitation newly freed African Americans suffered at the hands of southern whites.

Abruzzo's book is an important work of scholarship, especially for those interested in the history of slavery or humanitarian reform. Discussion in the endnotes of the historiographies of pain, sympathy, and slavery adds to its value.

MYRA C. GLENN
Elmira College

STEVEN LUBET. *Fugitive Justice: Runaways, Rescuers, and Slavery on Trial*. Cambridge: Belknap Press of Harvard University Press. 2010. Pp. 367. \$29.95.

Steven Lubet has produced a well-written narrative about the fugitive slave trials of the 1850s that arose out of the Christina slave riot in Pennsylvania, the rendition of Anthony Burns in Boston, and the rescue of John Price in Oberlin, Ohio. Historiographically, the book seems a bit dated. Lubet shows little interest in following the example of H. Robert Baker, who in *The Rescue of Joshua Glover: A Fugitive Slave, the Constitution, and the Coming of the Civil War* (2006) used a fugitive slave trial to explore the workings of popular constitutionalism in the antebellum period. Rather, Lubet challenges Stanley W. Campbell's decades-old argument that the Fugitive Slave Law of 1850 was routinely enforced and that historians had overestimated its role in the escalating sectional crisis (*The Slave Catchers: Enforcement of the Fugitive Slave Law* [1970]). Although he acknowledges that most fugitive slave cases passed without incident, especially in the years before 1854, Lubet portrays the cases he studies as significant parts of the sectional conflict.

Lubet's interest centers on using court records to explore the way in which trial lawyers challenged a hostile federal legal system by defending the actions of runaway slaves in a manner that stayed within the bounds of public opinion. His argument is straightforward: individual African Americans, through a combination of their decisions to abscond from slavery or to help others do so and the misfortune of their getting captured, found in their trials "highly visible political platforms"

from which to denounce slavery. Their efforts over the course of the 1850s helped intensify the sectional conflict and led the country closer to civil war (p. 2). Shifting public opinion, moreover, enabled trial lawyers to move from narrow challenges regarding the law's application to complete denunciations of the act as the 1850s progressed.

Lawyers defending Castner Hanway, the only person to stand trial of the forty-one people indicted for treason in the wake of the 1851 Christina riot, took a narrow approach. The riot had enabled a Maryland runaway, William Parker, to flee to Canada while leaving a Maryland slaveowner dead and two of his associates seriously wounded. Facing an administration determined to enforce the recently passed Fugitive Slave Law, a hostile court, and cool public opinion, Hanway's counsel accepted the law as legitimate and focused on demonstrating that the facts did not support the case against their client. Arguments that the Fugitive Slave Law violated a higher law than the Constitution were available to Hanway's lawyers, but they consciously eschewed them. One of his attorneys, Thaddeus Stevens, even declined to address the jury because of his well-known abolitionist leanings.

By 1854, however, some trial lawyers proved more willing to mount a direct assault on the act. Defenders of Anthony Burns, a runaway from Virginia apprehended in Boston, did not challenge the act's legitimacy, but they did urge the court to yield to public opinion and interpret the law in a manner that would effectively nullify the statute. Judge Edward Greely Loring refused, and Burns was escorted by a contingent of armed men to a ship bound for Virginia. Loring then faced the wrath of public opinion, losing his teaching post at Harvard and eventually his judicial position.

By 1858, the sectional crisis had escalated to such a level that trial lawyers could flatly denounce the Fugitive Slave Law in open court. Thus, when thirty-seven people from Oberlin faced indictment for their successful effort to rescue John Price, a runaway from Kentucky, lawyers in the case drew on higher law principles, proudly defended their clients' open defiance of the law, and invited the judge and jury to reject the law. As in Boston, these lawyers worked against a backdrop of favorable public opinion, which enabled them to take a more confrontational stance against the Fugitive Slave Law, and the resulting tension contributed to the coming of the Civil War.

Lubet's chronological progression might not withstand close scrutiny. His strongest examples of opposition to the Fugitive Slave Law come from places like Boston and Oberlin—both locales that exhibited levels of sympathy toward African Americans that were hardly typical of the antebellum North. Lubet's entire account may in fact be more a matter of geography than chronology. Aside from this shortcoming and its lack of historiographical ambition, his book provides a good introduction to some of the most sensational trials of the 1850s. Specialists will find little here that is new, but

I would recommend it to non-specialists without reservation.

AUSTIN ALLEN

University of Houston–Downtown

DAVID GOLDFIELD. *America Aflame: How the Civil War Created a Nation*. New York: Bloomsbury Press. 2011. Pp. 632. \$35.00.

One paragraph into the introduction and David Goldfield's thesis is clear: "The Civil War was both the completion of the American Revolution and the beginning of a modern nation . . . The Civil War is also America's greatest failure." The cause of this failure follows immediately: "The political system could not contain the passions stoked by the infusion of evangelical Christianity into the political process" (p. 1). Goldfield here takes an old thesis identified most famously with Avery O. Craven, that the Civil War was a "needless blood-bath," and infuses it with a new cast of characters led not by bumbling politicians but by evangelical Protestant Christians.

Unlike many recent religious histories of the Civil War, Goldfield's recognition of the religious factor in hyping patriotic gore brings with it an unconcealed contempt for all things evangelical, at least in the North. Thus, for example, in looking at northern antislavery and abolitionist rhetoric, he blasts a peculiar northern evangelical "immersion" in bigotry that is utterly reprehensible because of "the blindness of self-righteousness, its certitude, and its lack of humility to understand those who disagree" (p. 3), even as he recognizes the evil of the "peculiar institution." Incredibly Goldfield distances southern evangelicals from this characterization. They were not bigots, and they did not harbor ill feelings toward Catholics and immigrants (p. 5). Yet even a cursory reading of Confederate sermons reveals a mentality equally anti-Catholic and anti-immigrant (as well as anti-Mormon, anti-spiritualist, anti-Transcendentalist, anti-Liberal, and more).

Judged as a military history of the Civil War and political history of Reconstruction, Goldfield's book offers a reliable account grounded solidly in the secondary literature, including his own. But judged as religious history, this monograph must be accounted a failure. It is clear that Goldfield detests northern evangelicals so much that he does not really care to engage them on their own terms as he does so many other commentators (Walt Whitman comes especially to mind, along with Harriet Beecher Stowe, Frederick Douglass, Abraham Lincoln, and Alexander Stephens). As political actors, evangelicals "infiltrate and influence the political process" in a "toxic" process not unlike insurgents bent on sowing mayhem and destruction everywhere (p. 3). Goldfield has clearly not mined the primary sources of evangelical Protestantism in any depth, preferring instead copious quotations from secondary sources. (This is not to say his quotations are not fully and reliably cited.)

Goldfield acknowledges that the South became side-

lined in the aftermath of the Civil War, but he does not always recognize ways in which this book contributes to the South's marginalization. His characterizations of "American" culture, moving away from evangelical religion to science and Charles Darwin, are really characterizations of northern liberal Protestant culture, a minority Christian cohort even in the North. Left out of the picture is southern American culture where evangelical religion entered an explosive area of growth after the Civil War (identified closely with the Lost Cause) that has continued stridently down to the present.

Goldfield assumes that the meaning and nature of evangelicalism is so self-evident that he needs offer no definition. But one wonders if this is because Goldfield himself cannot provide one. The individuals that fall under his evangelical umbrella include a weird mélange of characters who were often anything but evangelical. Incredibly, the Transcendentalist and Unitarian minister Theodore Parker, is identified as part of "the evangelical Christian community" (p. 47).

Once Goldfield gets over his animus for northern evangelicals in the war, he actually produces a well-written history of postwar events. Religion largely disappears in favor of a masterful account and indictment of the culture and politics of Reconstruction. Even here Goldfield cannot resist a swipe at the evangelicals, this time not Henry Ward Beecher, his chief clerical whipping boy during the war, but Dwight L. Moody, the evangelical urban revivalist who "murdered syntax in his sermons and was not half the spellbinding orator that Beecher was" (p. 510). Goldfield also apparently objects to the fact that Moody only pretended to make his revivals seem spontaneous when in fact they were carefully scripted. Even the most cursory reading of evangelicals and revivals would confirm that this was true of everyone from George Whitefield to Billy Graham. Apparently Goldfield is judging Moody and others against a standard they never attempted, namely intellectual respectability in the manner of Parker, Jonathan Edwards, or Reinhold Niebuhr. But this is like damning popular political orators because they did not opine in the manner of Henry Kissinger or George F. Kennan.

As a recentering of Civil War historiography from battles and politics to religion and culture, this book makes a contribution to a growing trend in the profession. All the more pity then that the religion reviewed and pilloried is viewed from a distance and not within the dusty archives of sustained historical research.

HARRY S. STOUT
Yale University

DAVID SILKENAT. *Moments of Despair: Suicide, Divorce, and Debt in Civil War Era North Carolina*. Chapel Hill: University of North Carolina Press. 2011. Pp. x, 296. \$45.00.

The experience of the Civil War and emancipation, David Silkenat contends, fundamentally "transformed the

moral framework through which North Carolinians interpreted their world" (p. 1). Examining attitudes toward suicide, divorce, and debt between 1820 and 1905, he argues that these moments of despair "functioned as barometers of change reflecting the relationship between the individual and society" and that said relationship was increasingly "predicated on race" (p. 2).

Part one examines suicide. In the wake of the war, North Carolina's newspapers brought word that the state's veterans and their families were succumbing to suicide in ever greater numbers. As reports became more frequent, Silkenat argues, local attitudes toward self-destruction began to soften to the point that many white North Carolinians came to understand decisions to die taken by former soldiers wrecked by war as "tolerable, albeit, regrettable choice[s]" (p. 10). Among the state's many black residents, however, the experience of emancipation led them in the opposite direction, eviscerating the formerly tolerant attitude toward self-destruction, which Silkenat finds among members of antebellum slave communities ravaged by physical and psychological torture.

In part two, attention turns to divorce. White women initiated two-thirds of divorce proceedings in antebellum North Carolina, though, because of the social and religious stigma attached to them, such proceedings were comparatively rare. After the war, everything changed. Returning veterans filed unprecedented numbers of divorce petitions against their estranged wives; soon enough, Silkenat suggests, divorce rates had soared and the stigma surrounding the legal dissolution of marriage had decreased dramatically. Given the realities of plantation slavery and Reconstruction, recovering even rudimentary divorce statistics for black North Carolinians is far more problematic, although Silkenat concludes that black clergymen active in the postwar period did all they could to sanctify faithful, monogamous marriage as a central institution of black life.

Part three offers an examination of various strategies for coping with debt and here, too, Silkenat identifies fundamental transformations. After 1865, personal bankruptcies among white North Carolinians began to surge while new credit-granting institutions, including general stores and pawnshops, began to replace the informal gift economy. As all this unfolded, there arose "a new understanding of the role of debt that emphasized the needs of the individual over those of the society" (p. 138). Among black residents, the social meaning of credit was also in flux, as former slaves became freedmen who could legally contract debts. Yet, Silkenat argues, while their newfound access to credit offered a valuable path to material improvement and upward social mobility, most freedmen did their best to avoid running up debts, for fear of economic enslavement to their former plantation masters.

There is much to admire in this wide-ranging account of cultural revolution. Silkenat is at his best when reconstructing moments of despair in individual lives, such as those of Hillsborough planter Dr. James Webb

and of Alice Houston, Julia Graves, and Ida Beard, three debt-stricken boardinghouse owners. This monograph draws on a refreshing variety of sources, including church and charity records, company account books, asylum log books, diaries, newspapers, grave markers, census surveys, county court divorce proceedings, the occasional poem, and even a register of artificial limbs.

From this raw material, Silkenat crafts a series of synthetic claims. First, that white antebellum North Carolinians regarded suicide, divorce, and debt as disruptive acts posing existential threats to community integrity. Second, that in the wake of the Civil War—indeed, in part, as a direct result of it—the social stigma that whites attached to these harrowing events subsided as their incidence rose and as allied processes of social atomization loosened collective bonds. Third, that among black North Carolinians, the same processes operated in reverse. As free black populations searched for order and stability after emancipation, their leaders lashed out at any act or behavior that seemed to prize individual authority over the interests of the nascent community.

To make such assertions, Silkenat has to overcome considerable obstacles. For one thing, the peculiar structure of his monograph—its three subject-specific sections, its repeated chronological reversals, and its constant switching between white and black subjects—works to undermine analytical cohesion. Moreover, the logic of the decision to build a study of changing moral sentiments around these three traumatic life events is not self-evident. Debt, after all, is rarely a momentary experience but rather a continuing condition subject to different discursive practices and rhetorics than either suicide or divorce. As a result, the four chapters on debt seem disconnected from those they follow. Likewise, the treacherous problems associated with counting suicides and with assessing the state of domestic unions among North Carolina's black population make it difficult to substantiate some of the claims offered here. That said, the book under review offers readers an interesting new perspective on an incontrovertible old truth: that the Civil War was a monumental watershed in southern history that produced lasting repercussions in the lives of both whites and blacks.

DANIEL S. MARGOLIES. *Spaces of Law in American Foreign Relations: Extradition and Extraterritoriality in the Borderlands and Beyond, 1877–1898*. Athens: University of Georgia Press. 2011. Pp. xi, 427. Cloth \$69.95, paper \$24.95.

This book traces the course of territorial issues in U.S. law and foreign policy from the 1870s through the 1890s. It focuses on the ways in which the United States approached jurisdictional disputes with foreign states. This is the first book to study extradition not only as a

legal system, but as one of the main aspects of American foreign relations in the late nineteenth century, when the United States began to exercise its economic, military, and legal dominance worldwide.

Daniel S. Margolies presents a series of theoretical concepts that guide the study of legal spatiality in U.S. foreign relations: territoriality, extraterritoriality, jurisdiction, extradition as a foreign policy, extradition in terms of governance, and borderlands as artificial constructions for specific policy purposes. He explores the inner workings of U.S. extradition relations, examines questions of sovereignty, citizenship, and exception in the U.S. approach to governance, and explains the expansion of the activist state in foreign relations. The author also shows how extraterritorial criminal claims, treaty negotiations, trade conflicts, boundary line disputes, extradition controversies, transborder abductions, and interdiction efforts were used to construct global influence as an imperial power.

The book is based on an impressive array of archival sources, government documents, and periodicals. The text is organized thematically and covers significant aspects of U.S. involvement in extradition and in territorial and jurisdictional matters between 1877 and 1898, when the United States imposed its hegemonic power on legal spaces across the transnational system of the time. Part one focuses on the U.S.-Mexico borderlands, and part two explores extradition as a foreign policy practice in a wide variety of international relations.

First, Margolies evaluates American responses to jurisdictional, geographic, criminal, and interdiction challenges, such as extradition disputes, water-use controversies, trade competition, Chinese migration, boundary line confusion, and extraterritorial jurisdictional claims. Then, he examines the governance of the U.S. extradition system from various perspectives, including definitions of extraditable crime for violent and financial transgressions, terrorism, and dynamite bombing, among other crimes. He also considers extradition surrenders and controversies in terms of the challenges to extraterritorial jurisdiction, the rules of double criminality and specialty, and the impact of critical state and U.S. Supreme Court decisions.

The author observes that American extradition relations with foreign states formed a unique system in which American interests were safeguarded. This system was founded on the principle of double criminality, which means that in order for a crime to be extraditable, it had to be considered a crime in both the requesting and the receiving countries. The reciprocal nature of extradition, says Margolies, struck a balance between the right to request surrender of a fugitive and the right to refuse that request, but this choice was an attribute of sovereignty.

Special attention is given to the politics of extradition regimes based on the meaning of citizenship in disputes, and to the role of asylum and sovereign exception in the construction of the legal spatiality of American foreign relations. The author explains how extradition

exchanges were heavily larded with jurisdictional conflicts over citizenship, so that the United States had to argue for a global regime on fugitive surrender in which citizenship afforded no protection from the reach of American sovereignty.

Margolies explores how transborder conflicts consumed U.S.-Mexican relations during the 1870s and 1880s, causing a series of violations of territorial sovereignty on both sides of the line. He shows that the most important yet difficult issues between the United States and Mexico were migration, raids, smuggling, and fugitive escape across the border. He also illustrates how American policy makers believed that the region was more violent and lawless than others because they sensed that the justice system in Mexico was corrupt and inoperable, hence their distrust of Mexican authorities.

The author contends that the United States needed to have territorial and extraterritorial jurisdiction in order to achieve unilateral control on the border with Mexico. That is why, in the final decades of the nineteenth century, American policy makers decided to go beyond merely securing U.S. borders on a strict territorial sovereignty basis, advocating instead for a broader redesign of the balance of power, authority, and trade along the Rio Grande. They looked for order, prosperity, and social peace in the region, Margolies asserts.

He argues that the extradition relations between the United States and Mexico stood as an exception to the system developed for all other countries, because geography and governance invited local control. But, in the author's opinion, not all jurisdictional exceptions were tolerated by politicians, who believed that Mexico had no sovereign right to determine its own economic policy along the border.

As the political offenses triggered the need to carve out spaces for asylum within territorial sovereignties, asylum was considered another form of exception. Nevertheless, the author explains that recognition of a right of asylum could be seen as an attack or a limitation on sovereignty, while the denial of asylum could be cast as a reification of sovereignty.

Margolies concludes that all actions taken in the U.S.-Mexico borderlands had economic, racial, and ideological meanings that were often difficult to identify when determining the political nature of a crime. In his view, that is the reason why clear definitions of political acts in the U.S.-Mexico border were only rarely achievable, and became even less so with increasing revolutionary activity in the early 1900s.

In sum, this book's analysis on legal spatiality and territoriality and its explanation on how to conceptualize extradition in terms of foreign policy, governance, and borderlands are significant contributions to the history of American foreign relations and to U.S. legal history.

MÓNICA TOUSSAINT

Instituto de Investigaciones Dr. José María Luis Mora

EDWIN R. SWEENEY. *From Cochise to Geronimo: The Chiricahua Apaches, 1874–1886*. (The Civilization of the American Indian Series, number 268.) Norman: University of Oklahoma Press. 2010. Pp. xiii, 706. \$39.95.

Edwin R. Sweeney's colossal book is a nearly day-by-day—and often even an hour-by-hour—narrative of the final twelve years of the Apache wars in the U.S. Southwest and northern Mexico. Beginning with the death of Cochise in 1874 and ending with Geronimo's surrender in 1886, Sweeney's intricate work relates the struggle of American colonialists to dominate the will of the Apache people.

This book is a throwback to an era in which western historians offered a grand chronology with little theory or cultural interpretation. Sweeney's style presents a crowded narrative that concentrates on names, dates, numbers, weapons, routes, raids, and battles. This history of men with guns does not dwell on the heart of the era's violence to explain what prompts humans to perpetuate such profound brutality. Rather, the book's central contribution is a careful, archive-driven retelling of these extraordinary events. Sweeney clearly does not want to judge men for their deeds; he just wants to say "This is how it was."

The Apache wars were an epic tragedy of cultural misunderstanding, flawed legal and political policies, hubris and avarice, bigotry and intolerance, and a horrifyingly endless bloodlust. This war was fed by American settlers' desire for Apache lands, the U.S. government's unyielding commitment to controlling American Indians, and the Mexican authorities' desperate use of genocide as a tactic of war. The Apaches, too, were guilty of mistakes and misjudgments, thefts and murder. But Sweeney's book shows how the actions of a few homicidal Apaches led to the near annihilation of all the Apache nations. Most Apaches were willing to accept the invaders' terms, if this meant peace, a small piece of land, and a future for their children. But the acquiescence of the majority of Apaches was undercut by the resolve of a minority who refused to relinquish their absolute freedom and who were willing to steal and kill for it.

Despite Sweeney's admirable attempts to incorporate Apache accounts when possible, this is a story told from the conqueror's viewpoint. A few Apache remembrances told to Grenville Goodwin and other twentieth-century anthropologists are engulfed in the sea of words written by U.S. and Mexican citizens, soldiers, and government agents as these events unfolded. These Americans, of course, were not neutral but deeply invested in the Apache people's fate. As a result, in spite of Sweeney's efforts to maintain a neutral tone, the book is subtly but consistently biased to the American perspective.

For example, Sweeney writes that Lieutenant Britton Davis, who "probably knew Geronimo better than any American," characterized the infamous Apache as a "thoroughly vicious, intractable, and treacherous man."

His only redeeming qualities were courage and determination. His word, no matter how earnestly pledged, was worthless" (p. 403). The problem is that this kind of assessment of an Apache character is never balanced with a sincere Apache assessment of the soldiers. We will never know what Geronimo, in turn, really thought of his persecutors, such as Davis, because archives do not include documents from 1874 to 1886 written by Apaches, for Apaches, in the Apache language. The Apache viewpoint of this period, when it can be plumbed at all, is filtered by time and translation; narrating the Apache wars will always be partial and incomplete. History, in this case, really does go to the winner.

Furthermore, Sweeney's style avoids an analysis that aims to make sense of the carnage that characterized this conflict. Yet, the cyclic violence of this period was twisted, the moral chaos evident at every turn in the story. Consider the Chiricahua Apache Espida (also known as Speedy). He was nearly killed by his own people while fighting them as a scout for the U.S. government; but, Espida had previously executed Charley McComas, an innocent Anglo captive child; but, Espida perpetrated this murder out of revenge for the murder of his guiltless mother by Western Apache scouts (p. 451). What are we to think of Espida? Rather than addressing these complex moral dimensions of the Apache wars—the fundamental question of the Apache response to American imperialism—Sweeney elects to present history as simple chronology. The strength of this approach is that it produces a detailed and straightforward narrative of this saga that is not mired in questions of accountability; the weakness is that it provides little understanding of who was ultimately responsible for these years of bloodshed and what can be done today to repair past injustices.

Still, these critiques ultimately do not detract from the book's impressive feat. To write such an in-depth and dense account of this key moment in American history is a major accomplishment. Sweeney's book, ambitious as it is monumental, is a remarkable piece of detailed archival research.

CHIP COLWELL-CHANTHAPHONH
Denver Museum of Nature and Science

MARK J. NOONAN. *Reading The Century Illustrated Monthly Magazine: American Literature and Culture, 1870–1893*. Kent, Ohio: Kent State University Press. 2010. Pp. xix, 235. \$65.00.

In a narrow sense, Mark J. Noonan's book is an institutional history of *Scribner's Monthly*, a mass-market literary magazine that was launched in 1870 and became, in 1881, the *Century Illustrated Monthly Magazine*. At its most ambitious, the book is a history of American literature during the last third of the nineteenth century, a feat made possible by the fact that the *Century's* lineup of writers was unquestionably remarkable. During the 1870s, the magazine was a key outlet for such noted women writers as Rebecca Harding Davis, Mary Mapes

Dodge, and Helen Hunt Jackson. During the 1880s, the *Century* was at the forefront of the rise of regionalism and realism, publishing southerners such as George Washington Cable, Edward King, Thomas Nelson Page, and Joel Chandler Harris, and regional hybrids like Mark Twain and Paul Laurence Dunbar. For three decades, the *Century's* influence was profound, and it was a direct ancestor of the mass-market middlebrow magazines that came to define the emerging consumer culture of the early twentieth century.

This book attempts to survey a vast number of complex themes, embodying in many respects the promise of "periodical studies." Periodical studies is a relatively new subdiscipline of literature that has emerged from the larger field of research on print culture and the history of the book. Although Frank Luther Mott wrote comprehensive studies of newspapers and periodicals going back to the 1930s, and since then there have been numerous studies of "little magazines" and editorial and literary coteries, the study of a single periodical such as the one Noonan undertakes is more recent and self-consciously theoretical. Noonan demands consideration for the periodical as an object worthy of analysis rather than something that is simply a carrier to individual authorial output, and contends, like fellow historians of print, that studying literature in this manner collapses artificial distinctions between canonized writers and their contemporaries, and allows literary works to be read in both their ideological and material context. This monograph illustrates both the promise and the challenges of "periodical studies."

The sheer number of questions Noonan tries to address is staggering. He surveys the *Century's* institutional and editorial history, places it in its political and cultural context, and offers individual readings of the stories, novels, poems, and non-fiction work that appeared in the magazine. But Noonan's study also cuts deeper, critically, than traditional periodical histories. In particular, Noonan is interested in the way in which race, gender, and high literature's aesthetic politics intersected in a period of canon formation and reformation.

Reading The Century documents the magazine's importance both as an outlet for women writers and as the progenitor of a new literary culture that rejected the antebellum era's insistent sentimentality and brought about the post-Civil War eclipse of women writers. This late-century pivot in gender and aesthetics was carried out, Noonan argues, in the name of "realism." Noonan claims that realism was both aesthetically and ideologically anti-feminine, and particularly didactic in its gender politics. Efforts by the *Century's* southern and western regionalists to "reproduce" authentic dialects and folk literatures was one element of the magazine's push for a new sort of literature that was "self-consciously free of melodrama" and depended "more on analysis of character than on story for its effects" (p. 90). Realism, he concludes, was about the education of female readers, stripping them of their romantic delu-

sions and, along the way, establishing male aesthetic authority over the form.

The *Century's* critique of feminine sentiment was part of a broader attack upon the antebellum spirit of humanitarian reform, a second major theme of Noonan's study. The *Century*, arguably, was the literary branch of postbellum liberalism that feared democracy, rejected racial equality, and hoped to restore the power of learned elites over the masses who were made restive by labor conflict and civil war. At times, its anti-sentimental aesthetic and its opposition to humanitarian reform were wedded. Southern regionalist fiction, Noonan shows, depicted emancipated blacks as figures without reason and incapable of self-government. Romantic, feminine, and sentimental reform, unlike "realism," was simply incapable of grasping the world "as it is."

The *Century's* conservative literary and racial politics were, at least in part, shaped by its desire to reach the southern market, even if it did publish dissenters like George Washington Cable who, in the spirit of antebellum reform, called for comprehensive equality in the South. In fact, one of the great strengths of Noonan's work is the deft way in which it handles the tension between the magazine or newspaper's ideological unity and diversity. A generation of literary theory has taught that meaning is generated, at least in part, intertextually and through the dynamics of reception. Noonan positions the *Century* ideologically, but notes at the outset that a periodical could be a site of "ideological battle[s]" and "rupture[s]" (p. x). The result is an ambitious effort to depict the history of a single magazine, in all its varied intellectual, regional, and historical contexts. Although not every question it poses is answered as comprehensively as one might like, this book deserves an audience among historians and literary critics alike.

HELEN LEFKOWITZ HOROWITZ. *Wild Unrest: Charlotte Perkins Gilman and the Making of "The Yellow Wall-Paper."* New York: Oxford University Press. 2010. Pp. ix, 251. \$24.95.

Charlotte Perkins Gilman's 1892 novella, *The Yellow Wall-Paper*, has become a classic in American women's literature. Widely read and taught as a feminist allegory, the story has been seen as a protest against the rest cure and a critique of patriarchal medicine. But this interpretation comes from the vantage point of hindsight, taken from reflections in Gilman's autobiography and her mature political writings, as Helen Lefkowitz Horowitz shows in her new book. Horowitz instead looks forward from the events leading up to Gilman's writing of the famous tale. And from this standpoint, she offers new and fascinating insights.

Based on Gilman's own struggles with mental illness, *The Yellow Wall-Paper* is the story of a woman who suffers with nervous disease. She undergoes a version of the "rest cure," a regimen of inactivity and isolation

prescribed by her physician/husband. Told in the first person, the narrator describes her declining mental state, made worse by her treatment and the hideous yellow wallpaper of her sickroom that seems to haunt and taunt her. Ultimately, in a fit of rage and resistance, she tears the paper down. Years later, Gilman claimed the story reflected her own experience under the care of Philadelphia neurologist, S. Weir Mitchell, in 1887, and that the story's purpose was to spare others from such treatment.

But in Horowitz's study, the story takes on new meaning, as she traces the experiences of the young Charlotte (purposely using her first name) before she became known as the feminist, Charlotte Perkins Gilman. She examines her life prior to Mitchell's treatment, as she struggled with the gender conventions and financial constraints of the time. Horowitz consults the sources of Charlotte's private life, including her daily journals, drafts of poems and essays, and intimate letters, and compares them to the diary accounts of her first husband, Charles Walter Stetson. She also mines Charlotte's diaries for notes on her reading and shows how specific poetry, fiction, and popular science shaped her consciousness and understanding of sex and gender, health and illness, emotion and intellect. Horowitz delves inside the mind and private life of Charlotte to explain the very public outpouring of emotion in *The Yellow Wall-Paper*.

As a result, Horowitz makes some bold and compelling arguments. She builds a strong case to show that *The Yellow Wall-Paper*, in its original form, did not represent a literal protest against Mitchell and his treatment. Rather, it emerged from Charlotte's troubled relationship with her husband, Walter, personified in the story's physician. In demanding a traditional wife, Walter denied Charlotte personal freedom, squelched her intellectual energy, and exacerbated her illness. The story, as Horowitz writes, "distilled, compressed, and dramatized the destructive power of nineteenth-century marriage and the ideal of true womanhood" (p. 209). *The Yellow Wall-Paper*, she argues, also resulted from Charlotte's financial needs and literary ambitions. Desperate to raise her own money so that she might live independently, and wanting to make her literary mark, Charlotte channeled her mental anguish and marital troubles into a riveting story that pleased publishers and attracted readers.

In her gripping analysis, Horowitz brings readers along to experience Charlotte's journey, through her times of high hope and down into the depths of mental illness. She helps readers feel Charlotte's "wild unrest," her personal struggle to resolve two competing sides of herself. On the one hand, she felt pulled toward marriage and motherhood; on the other, she needed autonomy and to be freed from the dictates of sex and gender. Horowitz shows this conflict to be both personal and intellectual, as she traces Charlotte's theoretical and literary grappling, especially with Herbert Spencer and evolutionary theory.

Horowitz's study adds to the literature aimed at com-

plicating Mitchell and contextualizing treatments for hysteria. But while Mitchell deserves reconsideration and should not be demonized, he remains a figure at odds with notions of female equality and autonomy. And while Charlotte found more fault with her husband than her physician at the time of Mitchell's treatment, she clearly chose to portray a regimen of rest in unflattering terms a few years later, and was echoed by other feminists.

This book is particularly interesting for its dual biographical dimensions, following two lives in the making, that of a feminist and that of a text. In the process, Horowitz properly historicizes *The Yellow Wall-Paper* by reconstructing the steps leading up to its composition. Interrogating and cross-checking sources, she writes with a watchful eye to the mythologies surrounding the novella. And yet, she maintains and illustrates the importance of this famed story. Horowitz illustrates how it reflected Charlotte's most painful mental afflictions and deepest gender conflicts, painting a vivid portrait of the circumstances that would not let her rest.

CARLA BITTEL

Loyola Marymount University

CYNTHIA GRANT TUCKER. *No Silent Witness: The Eliot Parsonage Women and Their Unitarian World*. New York: Oxford University Press. 2010. Pp. viii, 344. \$29.95.

This study of three generations of the first family of the American Unitarian Association traces William Greenleaf Eliot (1811–1887), Abigail “Abby” Adams Cranch Eliot (1817–1908), and their descendants as they moved the Unitarian Church and its organizations across the West to Saint Louis, Portland, and then back to Boston. In her group biography, Cynthia Grant Tucker focuses on the “full throated” women who left records of their commitment, courage, and longings in diaries as well as in letters to their kin. Standing at the church’s “center of gravity—sacrificing to keep churches running and rearing the next generation of clergy,” these women, Tucker maintains, often felt like “outsiders looking in from a parallel universe” (p. 3).

Tucker’s book highlights gendered responses to deaths of infants and children as a crucial spiritual divide in Eliot parsonages. William and Abby had arrived in St. Louis in 1837 when he answered a call to become minister of Church of the Redeemer. Believing that there could not be enough Eliots, Abby gave birth to fourteen children, only five of whom lived to adulthood. Tucker eloquently captures Abby’s searing grief and her sense of dissonance with her husband’s determination to return to work immediately after each child’s death.

Tucker is blunt about the family’s class prejudices. Angling to have their children associate with the “right sort,” most members of the Eliot family shared Social Darwinist attitudes. When the Great Railroad Strike of 1877 spread to St. Louis, Abby felt that “Satan . . . in all his glory had arrived” (p. 45). Later she confessed to

Thomas and Henrietta Eliot, her son and daughter-in-law, that if folks like her cook went to heaven, “I don’t want to be with ’em!” (p. 46).

Not until Christopher Rhodes Eliot, the third surviving son of William and Abby, married Mary Jackson May in 1888 did an Eliot family break free from conventional perspectives on class and gender. A “warm-hearted, deep feeling” partner “born with insurgency” (p. 176) in her blood, Mary found the answer to her yearning for a joint parish ministry when she and Christopher visited settlement houses in London in 1892. With Mary’s blessing, Christopher eagerly accepted an appointment at Bulfinch Place Church in Boston’s West End in 1894. Following Jane Addams’s vision of the social settlement as a subjective necessity as well as an objective value, Mary Eliot relished her church work with the West End’s immigrant community and found her heaven on earth by straddling Beacon Hill and Bulfinch.

Tucker paints a glowing picture of Mary and Christopher’s two daughters, Martha and Abby, who bolted from Radcliffe’s secret society of social elites in 1913, chose women as lifelong partners, and followed professional lives. Abby became a kindergarten researcher and teacher. Martha, who described herself as a “social doctor,” extended to medicine a version of her parents’ parish ministry. With Yale Professor Edwards Park, who had also grown up in a Unitarian parsonage, she developed a community model for eliminating rickets. Opposed to the fee-for-service practice of medicine, Martha worked with the Children’s Bureau, ultimately becoming its director.

A historian may not always feel rooted in time in this book. Tucker, for example, is off by twenty-four years in recording the birth of Thomas Lamb Eliot in the genealogical chart of Abby and Will’s family. Readers learn of Martha establishing a scholarship in memory of Mary May Eliot before they are informed of her death. In addition, when certain Eliot female descendants in the 1920s hesitated to open their family’s writings to the public, Tucker describes them as “women who lived in a false, separate sphere” (p. 242). She contrasts them with Abby (the granddaughter) and Martha, who deposited their journals and records with the Schlesinger Library at Radcliffe.

As intriguing as the Eliot women are as individuals and as a family, scholars will be concerned that Tucker uses Trinitarians as a foil for Unitarians. She flattens other Protestant denominations rather than interpreting their theology as ranging across a spectrum. The reader never knows precisely who the “evangelicals” are. At times, Tucker uses Trinitarianism to signify evangelicalism and “liberal” as interchangeable with Unitarian. In reality, the parsonage, manse, or rectory—from the home of Martin Luther and Katharina von Bora to the Wesley family’s Anglican Epworth Old Rectory and those of a multitude of American denominations—functioned as a Protestant semipublic space. In terms of parsonage women’s dealing with dissonance between sermon and praxis, grief and hope, belief and

doubt, Unitarians and Trinitarians shared common ground.

The photographs are marvelous, and Tucker's writing soars with literary eloquence in places. Historical analysis, however, gets lost in details. And ultimately, Tucker's paradigm of progress from false to professional in writing about women's lives across almost two centuries is less than enlightening.

ELIZABETH ANNE PAYNE
University of Mississippi

BENJAMIN L. HARTLEY. *Evangelicals at a Crossroads: Revivalism and Social Reform in Boston, 1860–1910*. (Revisiting New England: The New Regionalism.) Hanover, N.H.: University Press of New England, for University of New Hampshire Press. 2011. Pp. xi, 288. Cloth \$85.00, paper \$39.95.

When it comes to religion, Boston might be one of the most interesting and well-studied cities in America. Boston's seventeenth-century Puritans, their nineteenth-century heirs—Congregationalists, Unitarians, and Episcopalians—and nineteenth- and twentieth-century Roman Catholics have been the subjects of a number of fine historical studies. Yet the revivals and the social reforms of Methodists, Baptists, and Salvation Army evangelicals had a major impact on Boston in the late nineteenth and early twentieth centuries. In this fascinating study, Benjamin L. Hartley brings to light the important role that these “evangelical late-comers” had during a critical period of socioeconomic and political change in the city.

After an introduction that situates the work in its larger historiographical context, the first chapter examines Dwight L. Moody's famous 1877 revival in Boston. Before his dramatic conversion, Moody worked as a shoe salesman in the city. After gaining international fame in the transatlantic Protestant community, he returned to Boston on the final stop of a two-year evangelistic tour. Hartley uses Moody's visit to Boston as a helpful way of framing his study, as the evangelist's campaign in the Hub City helped to draw together Protestants of several different traditions into a common cause. With Protestant memories of how slavery had recently been destroyed, Hartley contends in the second chapter, “upstart evangelicals” set out to eradicate poverty in the years following the Civil War. Inspired by holiness and theological convictions concerning the possibility of eliminating sin from one's personal life, evangelicals collaborated with one another and persons outside of the revivalistic Protestant community to build a host of institutions to address pressing social needs. This chapter reviews the work of Henry Morgan, Eben Tourjée, and Charles Cullis and the founding of the Home for Little Wanderers, Boston University, and the New England Conservatory of Music. These late nineteenth-century Protestants blended evangelism and social reform in institutions they established in the neighborhoods of Beacon Hill, the North End, the South End, and Roxbury. The third chapter pays care-

ful attention to the late nineteenth-century Boston political context. This was a time when the Irish and Boston Brahmins struggled for control of city hall. The chapter reveals that the “upstart evangelicals” were militantly anti-Roman Catholic and at the same time outspoken advocates of the growing labor movement. The fourth chapter focuses on the Salvation Army invasion of Boston and the prominent role that women played in it as well as in various foreign missionary societies and domestic reform organizations, such as the Methodists' Deaconess Home and Training School. Whereas the rise of higher criticism of the Bible, premillennialism, and the Social Gospel fractured many Protestant denominations in the late nineteenth century, as the sixth chapter demonstrates, Methodists took a more mediating and pragmatic position bridging the burgeoning conservative and liberal divide. The sixth chapter offers a case study of evangelical revivalism and social reform in the North End of Boston during the 1890s. As Italian and Jewish immigrants and migrants from rural America displaced the older Irish community, the area's reform organizations and institutions adapted to their new social context. The final chapter explores the citywide evangelistic revivals of Gipsy Smith in 1906 and J. Wilbur Chapman three years later. Hartley uses these two events as an effective way to measure the changes that had taken place not only within Boston but also inside the “upstart evangelical” community. Some within these evangelical traditions continued to stress evangelism while others focused on social reform. But the days of preaching the gospel in word and deed had come to an end. Like other Protestant traditions, the “upstart evangelicals” concentrated on one or the other as the most effective means to achieve spiritual ends.

This book is outstanding for several reasons. Not only does it provide a useful corrective to studies of the late nineteenth-century evangelical movement that interpret it through the lens of the early twentieth-century fundamentalist/modernist controversy, but it also uncovers the influential role that the Wesleyan Holiness movement played in the larger evangelical movement. For this reason, Hartley's study nicely complements Margaret Lamberts Bendroth's *Fundamentalists in the City: Conflict and Division in Boston's Churches, 1885–1950* (2005). Hartley also casts new light on the important place that religion played in urban America, demonstrating that religion was inseparably intertwined with sociopolitical and economic commitments and that changing social conditions affected religious practices and institutions. Finally, the volume sheds new light on the historic origins of the contemporary divide among Protestants over the importance of evangelism and social reform. The dynamics between the “upstart evangelicals” and the Protestant old guard might have been more thoroughly examined, along with the role of the movement to rid the city of vice manifested by the work of the New England Watch and Ward Society, an ecumenical Protestant organization that drew leaders from both the Brahmin community and the recent

"latecomers." These omissions, however, do not detract from the study's overall value. Well researched and masterfully written, Hartley's book makes an important contribution to the study of American religion.

Grove City College

EDWARD P. KOHN. *Hot Time in the Old Town: The Great Heat Wave of 1896 and the Making of Theodore Roosevelt*. New York: Basic Books. 2010. Pp. xv, 288. \$27.95.

In this book Edward P. Kohn weaves the events of the summer of 1896 together into a compelling narrative about Theodore Roosevelt's efforts to build his political career, William Jennings Bryan's run for the presidency, and the extraordinary heat wave that blanketed New York City—as well as the rest of the country. What emerges is a riveting portrait of time and place in American history. Kohn provides an understanding of the lives of the people living in New York's crowded tenements, as well as a taut account of the era's key political figures.

Kohn sets his story in the New York of the 1890s, which emerges as a central character in this drama. As the temperature inched upward, New York's tenements sweltered at the center of the city's island of heat. Already vulnerable to disease without ready reserves of water or resources and stuck in cramped airless quarters, the poor suffered and died in record numbers. Kohn takes a creative and insightful look beneath the statistics of the health department to reveal the scale of the disaster, which dwarfed estimates of the time. Without clear direction from public officials or health experts, only a couple of officers, including Roosevelt, suggested affirmative steps to ameliorate the impact of the heat, such as distributing ice and letting the poor sleep out of doors in public parks. Even so, these actions came at the end of the heat wave.

Kohn's synthesis of contemporary politics proves both satisfying and insightful. Most interestingly, Kohn contrasts Bryan's political campaign with William McKinley's 1896 front porch bid. Bryan's oratorical skills met the heat head on. Traveling through Ohio and Pennsylvania, he found himself moving, as he wrote, deeper into the "enemy's territory." Bryan's campaign grew more difficult as he and his audiences struggled with the weather. At the height of the heat, Bryan delivered a speech in Madison Square Garden that was poorly received, and his fortunes never recovered. The heat provides an alluring context—metaphorical and real—to the broad tenor of the political season, but it is doubtful that the responsibility for the failure of Bryan's campaign can be attributed solely to the weather.

Kohn's discussion of Roosevelt is equally engaging. He emerges on the page as a man striving to salvage a political career. Roosevelt struggled to find his position within a party, as well as a city political machine, where his moral rectitude, vis-à-vis corruption, made him the odd man out. After the heat wave hit New York, however, he emerged as one of the few public officials who

sought to provide some relief to city residents. Through the police department, Roosevelt handed out ice to the poor, but his efforts were largely behind the scenes. Indeed, as Kohn notes, the precinct house's ice distribution happened unevenly, and Roosevelt himself spent much of the crisis out of the city, at his home on Oyster Bay. It is not clear, then, how Roosevelt's response to the crisis was so decisive, public, or notable that it changed his political fortunes. The book's subtitle does not seem entirely justified.

Kohn's analysis of the heat wave as a disaster is perhaps the least compelling aspect of the narrative. In no small part this is because the disaster's context is less well wrought than the political context. For example, Kohn seeks to distinguish between human and natural catastrophes, a distinction not made in the broader historiography. The scholarship clearly recognizes how disaster, from its impacts to its meanings, is defined by sociocultural contexts. Kohn compares the tragedy that befell New York City in the summer of 1896 only to the city's experience the following summer. Surely, it would have helped to have known more about the heat wave's effect beyond New York or how it compared to many New York summers and not just one season.

Ultimately, although I was not persuaded that Roosevelt's political career was "made" by the 1896 heat wave, I found this book satisfying. Kohn has produced a well-wrought synthesis that provides a new appreciation for place and time, bringing both the presidential politics and the hot New York summer of 1896 to life once again.

MARK TEBEAU
Cleveland State University

JAMES J. CONNOLLY. *An Elusive Unity: Urban Democracy and Machine Politics in Industrializing America*. Ithaca: Cornell University Press. 2010. Pp. xiv, 264. \$39.95.

In this book, James J. Connolly has discovered something that sounds so obvious that it has to be original: cities are full of "people." Looking at cities in the late nineteenth and early twentieth centuries, Connolly talks about the quest for a usable public in an age when the two things all cities had in common were their diversity of economic and ethnic groups and divergence of interests.

Everybody talked about "the people," but, as Connolly makes clear, that term meant different things to different groups. The definition generally applied to themselves and anyone else who thought like them, which, in the case of reformers, usually meant a fraction of the whole population too insignificant to take or hold power for long. The notion of pluralism was anathema; the concept of various overlapping publics just about unthinkable. There could only be one public good, whether the corrupted and ill-informed grasped its reality or not, and those who saw it must speak for the whole. Women's groups reached out from the middle class to make common cause with the less fortunate. Settlement house workers stretched to build a sense of

community that knew no confines of class or party, a "place where everybody feels at home:/ Forgets the external/ And gets fraternal."

Try as they might, however, city dwellers could not frame a cause that would unite forces that were, by their nature, determinedly separate. Binding themselves to the class character of their movement, unions and municipal labor parties defined themselves as "the people," as opposed to "the interests," only to find themselves helpless to persuade the middle class, the press, or even most workers that their agenda was the common good. Only the hard-nosed, crabby liberals like E. L. Godkin talked of defining a "people" by trimming a large share of the population off and eliminating their say with property requirements for voting.

Accommodating themselves to the critics, political machines by the turn of the century had begun to sell themselves as the closest semblance of the people's will: the brokers between various groups with various interests that, together, amounted to a whole. Reaching out to businessmen by selling the boss as an administrator, the chief executive officer handling the political equivalent of a conglomerate, appealing to women by repackaging ward chiefs as shaped by a mother's hand, the machine politicians managed to convince even some reformers and a later generation of historians that they were something more than narrow and selfish scramblers who, having clawed their way to the top, cracked the treasury crib for themselves and their choicest friends, invariably white. Their embrace of pluralism as opposed to a common goal found its echo in Progressive activists, only a few of whom came to see that even at its most inclusive, the reformers could not and the Tammanys would not find room for everyone, and that the powerless and voiceless were those surest to be left out. Nor could the Jane Addamses and Edward Wards make a dent in other civic reformers' illusory chase after a civic consensus.

This book covers the hunt for a moral consensus well, and its appreciation for how the city bosses adapted their image in the 1890s and how far social scientists besotted with pluralist theory bought into it as the reality is a discernment long overdue. As one might expect from Connolly's previous study, *The Triumph of Ethnic Progressivism: Urban Political Culture in Boston, 1900–1925* (1998), Boston plays almost as large a role as New York, with Chicago lagging somewhat behind (except for its Progressive-era reformers), Philadelphia and San Francisco still further in the distance, and most other big cities practically invisible. But one cannot fault a scholar for looking for treasure where the light is better. The thoughtful conclusions Connolly comes to would apply to civic movements in general, and most likely to machines in places ungraced by such misread and meritorious novels as *The Last Hurrah*. Scholars of boss politics or urban reform should not let Connolly's book elude them.

EVELYN NAKANO GLENN. *Forced to Care: Coercion and Caregiving in America*. Cambridge: Harvard University Press. 2010. Pp. 262. \$29.95.

Has it really come to this? Evelyn Nakano Glenn's excellent study convincingly connects caring and coercion in a long history rooted in the coercive labor of slavery and indenture. Our present crisis in providing care in a variety of situations saddles a broad range of Americans with responsibilities for child care, care of the disabled, and elder care. Over time, coercion has varied in form and severity, but it has been directed mainly at women. It has limited their choices and cheapened their labor so that they are expected to care for family members for free. Exploitation of women's labor has been undergirded by legal barriers, limited employment opportunities, and the domestic ideal of breadwinning husbands and bread-baking wives. While men's paid labor became the family's economic bulwark, women's economic dependency and unpaid caring—domestic chores, child care, and consumption—became "priceless and worthless" (p. 35).

Glenn presents a new framework to understand caring labor by examining the experiences of three groups of women—Native Americans, convicts, and immigrants—and women reformers' efforts to change each group. Specifically, Glenn analyzes how these groups shared a significant experience in reforming women's caring behavior at the same time that women's citizenship expanded. Imposing the dominant culture's gender norms played a pivotal role in the reforming process. For example, the Indian boarding school system trained Indian boys in agriculture and trades while girls learned housekeeping, child care, and domestic arts. Similarly, women prison reformers introduced more humane and kinder methods, such as moral uplift and training in domestic tasks to replace the physical and sexual abuse of women prisoners. "Americanization" classes for immigrant men focused on government, judicial systems, and voting while programs on homemaking, childrearing, and nutrition encouraged immigrant women to create patriotic American homes and families. Female reformers shared a common ideology and goal; they emphasized the importance of the home and the female role of domesticity in "civilizing" and then incorporating "outsiders" into the social order.

Notions about family, home, women, and caring have been traditionally linked. Until the second half of the twentieth century, most women accepted the obligation, indeed the duty, to care for their families and kin. Glenn argues that beyond the social norm of women's natural, innate, caring abilities, the state endorsed and codified women's domestic and nursing roles. Using court decisions and state statutes since the middle of the nineteenth century, Glenn demonstrates that society and the law often expected women, and especially wives and mothers, to provide unpaid care even for disabled dependents. Paid caring in the home, however, often conflicted with long-held and cherished beliefs of the special character of the home as a haven and refuge

from market transactions. This profoundly disadvantaged paid home-care workers and devalued their work as unskilled help, a labor of love, and not true work. This ideology, coupled with notions about gender, race, and class relations buttressed a separation of home and market and influenced legislation and court rulings which excluded home-care workers from labor law protection and from organizing. Remaining outside the modernization of labor relations, home-care workers were treated as dependents and denied social citizenship rights and protections such as minimum wage, overtime, safety standards, unemployment insurance, workers' compensation, and anti-discrimination laws.

Glenn expands her analysis and tackles today's enormous problem of hospitalized patients returning home sooner and much sicker. One of Glenn's sources is her own experience in using home care for her mother. With deinstitutionalization of the chronically ill, disabled, and frail elderly, the home has returned to the role it played in the early twentieth century. Glenn notes this "full circle" phenomenon with the striking differences of more acute care and complicated technological machinery in today's homes (p. 155). Missing from this discussion is the role of nurses, who in the early twentieth century—in contrast to today—found more employment in private homes than in hospitals. Glenn addresses rather fleetingly this job so identified with caring and women. In one instance she seems to infer that nursing professionalization happened in the early twentieth century, when the second half of the twentieth century would be more accurate (p. 40). This is a minor oversight, though, for a study that contributes to a more nuanced understanding of caregiving, which feminist scholars have been exploring for more than three decades. Glenn broadens the meaning of caring without romanticizing it, especially within the domestic realm, and introduces the role of nationhood and our understanding of full citizenship while focusing on paid and unpaid workers within labor market relationships.

With the numbers of elderly, disabled, and dependent individuals sharply increasing and the numbers of caregivers decreasing, Americans are facing a crisis. Glenn recommends creating a caring society, valuing care as real work, sharing caring responsibilities, and making "care central to the rights and entitlements of citizens" (p. 190). These are laudable but elusive goals in today's political climate, which favors attacking rather than increasing "entitlements." Nevertheless, Glenn provides a timely study and an insightful history of a problem that should concern all of us.

REBECCA SHARPLESS. *Cooking in Other Women's Kitchens: Domestic Workers in the South, 1865–1960*. (The John Hope Franklin Series in African American History and Culture.) Chapel Hill: University of North Carolina Press. 2010. Pp. xxix, 273. \$35.00.

In her excellent new history of African American cooks in the U.S. South, Rebecca Sharpless argues that cooks in private homes experienced their work primarily as employment. This is an important argument because black women's work in white families' homes has, since at least the antebellum era, been represented by white writers as an act of love rather than self-sustenance. White writers have also consistently assumed an innate racial talent for food preparation. Sharpless offers a fresh perspective on food, presenting it as the material of a particular kind of work that is itself learned and sometimes honed but always a means to a prosaic end—payday.

Sharpless provides irrefutable evidence that African American women approached cooking as work, rather than as an expression of either talent or love, and not particularly attractive work at that. They negotiated conditions to whatever extent was possible, gaining ground over time whenever individual circumstances favored them. Her most persuasive evidence that African American women saw cooking as but one form of unappealing employment is that as soon as possible they left it in great numbers for other kinds of paid employment, some even preferring agricultural labor to kitchen work.

Using a wide range of sources neatly woven together, Sharpless brings into vivid focus the many ways in which work of this particular kind was just one part of the lives of many African American women in the South after the Civil War. As often as possible, Sharpless tells the story of kitchen work in the words of the women who performed it. Finding their stories in oral histories, memoirs, court records, letters to public officials, and sometimes in fiction, Sharpless's work undermines the central trope of Kathryn Stockett's novel *The Help* (2009), which is that cooks were voiceless. Sharpless also uses accounts of cooks' actions that were either written by white women in black women's voices or directly by white women as employers for what they can tell us about the motives of all parties concerned, and unpacks their racial and class attitudes.

This monograph brings together primary and secondary sources effortlessly, constructing a multi-voice conversation in which cooks interviewed by the Federal Writers' Project and critics such as bell hooks participate as equals, so that the book reads as a collective effort. One of the most important points Sharpless makes is that African American cooks did not suffer in silence but made common cause through attempts to unionize and to take advantage of new worker protections in the 1930s. Despite the day-to-day isolation of cooking in private homes, they were in touch with contemporary issues in labor and also with other local workers. In letters sent to Franklin and Eleanor Roosevelt, African American cooks complained that work conditions were unfair and that racism made them worse. L. G. Huff, for example, wrote to Eleanor Roosevelt asking her to "organize something that will cause these dear house wives whom we work for" to "realize we are human even if we are a Black race" (p. 66).

The book is divided into sections by issues of employment rather than chronology, with change over time addressed in each section. Sharpless divides the cooks' experiences into the following categories: getting work, which includes acquiring training; the materials of work—food and equipment; conditions of employment, focusing on hours and pay; the ways in which domestic workers created a sense of home for their employers; and the impact of domestic work on the employee's own home life. In conclusion she emphasizes that black women escaped white kitchens as soon as they were able. The author's method allows readers to understand how different facets of working women's lives overlapped more and less problematically. She lets readers see work as part of life and life as part of work. So, for example, we get access to the white employers' relatively lavish larder through the eyes of the domestic worker who had trouble feeding her own family on the wages that she earned preparing this better and more plentiful food.

More interestingly complicated than just a restoration of agency to African American cooks, Sharpless's book offers a valuable model for labor historians, as it portrays work and life as inextricably linked but not mutually definitive. Although Sharpless does not make much of connections between the experiences of African American cooks in the postbellum era and those of housekeepers in the contemporary era, she gives us useful analytic tools to do so ourselves.

Queensborough Community College

TRACEY DEUTSCH. *Building a Housewife's Paradise: Gender, Politics, and American Grocery Stores in the Twentieth Century*. Chapel Hill: University of North Carolina Press. 2010. Pp. 337. \$35.00.

Tracey Deutsch's well-written and impeccably researched book is a major contribution to studies of mass retailing and the politics of mass consumption. Deutsch examines how a new emphasis on low prices and self-service displaced older expectations of full service and personal attention and altered relations of power between grocery stores and women shoppers. While women in the early twentieth century asserted their authority over food pricing, "the older notion that food shopping . . . could be a route to broader economic and political authority . . . all but disappeared from public policy, business strategy, and social movements" by the late 1960s (p. 226).

In a fascinating opening chapter, Deutsch makes visible what the modern supermarket, with its emphasis on convenience and efficiency, concealed: women's work as food procurers. In the late nineteenth and early twentieth centuries, rudimentary refrigeration and inadequate space for storing perishables made food shopping a daily labor. To economize and avoid being cheated, women studied wholesale prices before venturing into public markets, shopped around for cheaper meats, and bargained for the best price. Shoppers and

small neighborhood grocers developed personal relationships, but such interactions were not always marked by trust. Because prices were negotiable and clerks selected goods for customers, shoppers worried that grocers might foist overpriced or inferior goods on them.

Deutsch's middle chapters analyze the rise of grocery store chains in the 1910s and 1920s and the emergence of consumer cooperatives and supermarkets in the 1930s and 1940s. Chains like Kroger, A&P, and National Tea Company offered women less personal attention and fewer services, but women liked them because they lowered prices and allowed shoppers to select goods themselves. Limited individual service also spared African Americans and other minorities from discrimination.

Despite such innovations, organized resistance to the new mass retailing and older family-run independent stores mounted during the 1930s and 1940s. Various groups took up the cause of protecting consumers' interests, including the General Federation of Women's Clubs, Consumers' Union, labor unions, and African American organizations, which encouraged patronage of black-owned businesses and lauded nondiscriminatory cooperatives. Consumer cooperatives evaluated and labeled goods by quality and hosted folk dances and camps to "build ties among members and inculcate egalitarian values" (p. 123). Despite these progressive impulses and women's prominent managerial roles, cooperative societies (and their critics) portrayed women as gullible consumers and unreliable political actors. Such attitudes, Deutsch argues, undermined attempts to construct consumer-directed alternatives to conventional mass retailing.

During the Great Depression, mass food retailers adopted new strategies in the face of anti-chain taxes, falling sales, and mounting suspicion of big business. They closed unprofitable stores, started selling meat alongside dry groceries, and aggressively courted upper- and middle-class consumers—partly to avoid providing in-kind relief to aid recipients. Chains encountered new price competition from supermarkets, even larger mass retail institutions that added shoe repair services, hair-styling salons, and bakeries. Chains resented supermarkets for selling below cost, and criticized them for attracting transgressive "can-opener cooks" who shopped at suspicious evening hours. Such critiques lost traction, however, as supermarkets adopted upscale features like wheeled shopping carts and feminine store décor.

Deutsch presents a fresh and compelling take on the possibilities and limitations of women's consumer activism during World War II. Although the government entrusted women with responsibility for policing retailers' compliance with food rationing and price controls, policymakers did so reluctantly, fearing that women shoppers might become overly politicized or weak enforcers. Many women proved to be effective price monitors, but shortages of goods and time pushed others to violate government mandates. Women were reluctant to report neighborhood grocers for price violations, because doing so might eliminate any chance of obtaining

future exceptions from them. Office of Price Administration (OPA) officials allied with centrally controlled stores to impose food and price controls on women customers. Not only could such stores assign staff to master and implement changing regulations, but they also proved easier to keep in line, as women were more likely to report violations when they lacked personal ties to stores.

In post-Cold War rhetoric supermarkets became emblems of American freedom, consumer choice, abundance, and women's liberation from drudgery. This vision did not fully square with reality. Processed and preserved foods eased food preparation, but women spent more time shopping in and driving to supermarkets. Postwar boycotts of supermarkets, though infrequent, revealed women's dissatisfaction with their inability to negotiate prices.

In a revealing comparison of supermarkets and hardware stores, Deutsch convincingly demonstrates how gender ideologies shaped the structure and design of mass retailing. Because hardware proprietors viewed home repairs and remodeling as challenging masculine labor and "worked to please men by focusing on their individualism," they long resisted abandoning personal attention for self-service models of retailing (p. 208). Deutsch's richly detailed and rigorously analyzed study will find an appreciative audience among historians of gender, business, labor, and consumer culture.

PETER M. RUTKOFF and WILLIAM B. SCOTT. *Fly Away: The Great African American Cultural Migrations*. Baltimore: Johns Hopkins University Press. 2010. Pp. xv, 408. \$45.00.

Like many scholars before them, Peter M. Rutkoff and William B. Scott reject the decades-old assertion that Africans were stripped of their culture in the Middle Passage. Examining "four pathways" from Charleston to Harlem, Birmingham to Pittsburgh, Houston to Los Angeles, and the Mississippi Delta to Chicago, they recount African Americans' journey, both physically and spiritually, from a rural to an urban world. Not only did Africans—and later African Americans—preserve a vibrant West African culture, through the Great Migration (1910–1970) they "challenged the deference of Americans toward European civilization and enabled them to take the first steps toward a multiracial, culturally eclectic society, open to a globalized world" (p. 12). For Rutkoff and Scott, this cultural legacy represents African Americans' "gift" to America and the world (pp. 3, 13).

Weaving together a rich body of secondary sources on African American migration and culture and numerous archived and exclusive interviews, the authors examine the characteristics of African American expression in language, religion, "black baseball," and music—including blues, gospel, jazz, zydeco, and

rhythm and blues. Along each "pathway" African Americans developed a distinct culture that they brought with them when more than half of the southern black population migrated north and west (p. 13). By 1930, more Mississippi-born blacks lived in Chicago than any city in Mississippi (p. 203). Following the observations of John Blassingame (*The Slave Community: Plantation Life in the Antebellum South* [1972]), Rutkoff and Scott argue that racial segregation and "white hostility" led blacks to "close ranks as a people," creating a culture that served as a refuge even as it influenced American culture as a whole (pp. 85, 194, 256). While numerous scholars have examined the relationship between migration and the emergence of black culture outside of the South, *Fly Away* is unparalleled in its depth, and detail, encompassing two phases of the Great Migration in eight different cities. In their emphasis on migration to Charleston and Birmingham, the authors direct historical attention to black migration within the urban South, which is often overlooked.

The authors' assertion that "as West African culture helped define the rural South, so the culture of African American migrants helped define twentieth century urban America" is undeniably true (p. 103). Yet, this book does little to expand our historical understanding of why black culture was and continues to be so influential in American society as a whole. By framing African American's cultural influence as a "gift," Rutkoff and Scott avoid difficult and important questions of collaboration, appropriation, exploitation, and the role of capital in the production and consumption of black cultural expressions. They are similarly silent on the question of why black cultural forms have been so appealing to mainstream white America, while black people themselves were not. Instead, they note that black culture "crossed over" or that "white Los Angeles youth quickly claimed rhythm and blues as their own—re-named rock n' roll," yet the role of power in these uneven cultural exchanges is never adequately addressed (pp. 99, 320).

Despite persistent inequalities in incarceration rates, educational attainment, and employment rates and increasing residential segregation, this book concludes that by and large, African Americans successfully migrated to attain "the American middle-class dream" and that their culture "forced all Americans to reconsider the nation's ideals and unequivocally to reaffirm human freedom and equality" (pp. 334, 347). While it can be debated whether or not the United States has "unequivocally" affirmed freedom or equality, Rutkoff and Scott do achieve their objective of demonstrating the perseverance of West African culture. Although the authors' neglect of the importance of power in shaping the contours of African Americans' cultural influence limits the efficacy of their study, their penetrating discussion of black migrants' culture will prove eye-opening for many general readers. For scholars of African American migration or African American culture, this monograph offers few original insights. Nevertheless, given the elegance of their narrative and the liveliness

of its wide-ranging coverage of migrants' culture, Rutkoff and Scott's book is likely to become a staple in undergraduate courses in African American and American Studies.

LUTHER ADAMS
University of Washington,
Tacoma

CHARLES H. MARTIN. *Benching Jim Crow: The Rise and Fall of the Color Line in Southern College Sports, 1890–1980*. (Sport and Society.) Urbana and Chicago: University of Illinois Press. 2010. Pp. xxiv, 374. Cloth \$95.00, paper \$30.00.

Sports hold an interesting position in American society. Teams provide communities with an identity. Games offer escape from difficult life situations or epitomize celebratory moments. Sports can legitimize cities and regions through boosterism, allow for the challenging of social morals, or strengthen one group's control over society. In the history of the American South, all of these themes played out in the racial segregation of college sports.

Charles H. Martin's book deftly examines the racial history of southern college sports. His main purpose "is to describe and analyze the shifting racial policies and practices at historically white southern universities, from 1890 through 1980" (p. xix). Following this framework, the book divides the timeline into distinct periods based on common themes. The first period focuses on the establishment of college sports programs at southern universities and the insistence on racial segregation in all activities involving school teams. Challenges to the system arose during the 1930s and 1940s. In this second period, the racial exclusion policies of southern schools came into conflict with the schools' desire for intersectional contests and national prominence. Following World War II, major social changes, such as the civil rights movement, led to the gradual integration of southern teams during the third period. The last half of the book examines the specifics of integration in the three major southern athletic conferences: the Southeastern Conference (SEC), the Atlantic Coast Conference (ACC), and the now defunct Southwest Conference (SWC). Martin discusses the individuals and events involved with desegregation at each member school. To add contrast to the policies of the other southern universities, he describes the success achieved by Texas Western University (TWU), now the University of Texas at El Paso, as the first major university in a former confederate state to actively recruit African American athletes, culminating in the school's 1967 National Collegiate Athletic Association (NCAA) basketball championship.

Martin analyzes integration at smaller colleges in the South, but because of the sheer volume of material he focuses on the major athletic conferences, which dominated southern culture. The inclusion of TWU and its national championship team, whose five starting players and two reserves were African American, provides

a nice counter to the other universities' resistance to integration. The impact of TWU's success on the larger South is debatable, though, considering El Paso's geographic distance from the region's major metropolitan areas, and TWU's existence as an independent university unconnected to any of the important conferences.

Martin uses a wide range of secondary sources, newspaper articles, university archive material, and some interviews. For such a broad topic, his monograph provides a clear picture of the complex story. Segregation was not enforced in a uniform manner, and integration did not progress in a straightforward pattern. Martin explains events without editorializing. In doing so, he tells a good story, one that will be interesting to fans of sports and regional history, as well as to supporters of the universities discussed.

ROB FINK
Hardin-Simmons University

SHELLEY SANG-HEE LEE. *Claiming the Oriental Gateway: Prewar Seattle and Japanese America*. (Asian American History and Culture.) Philadelphia: Temple University Press. 2011. Pp. xi, 256. \$58.50.

Shelley Sang-Hee Lee argues that Seattle, and in particular its Japanese American residents, used the ideal of cosmopolitanism to frame the city as a zone of multiracial, multiethnic, and international encounters. A flexible discourse deployed by boosters to encourage transpacific trade, city officials to manage a diverse populace, and Japanese Americans to bolster their position in a racially hostile environment, cosmopolitanism envisioned Seattle as a modern, worldly metropolis perched upon the Pacific Rim where people of different races and nationalities could coexist, trade, and prosper. Seattle's claim to be the "gateway to the Orient"—in the pre-World War II era during which Japan was the most powerful and important nation of that region—often pivoted on Japanese Americans and their uneasy racial and national positionings.

The 1909 Alaska-Yukon-Pacific Exposition (A-Y-P) showcased possibilities for Japanese commerce. Thousands of Seattleites, cheering and waving Japanese and American flags, greeted the arrival of the Japanese delegation, which disembarked from a steamship and drove through a *torii* (Japanese ceremonial gate) erected on the dock. Although the A-Y-P glossed over anti-Japanese racism (the exclusionary Gentlemen's Agreement had been arrived at only two years earlier), local Japanese Americans sponsored parade floats and hosted receptions for Japanese dignitaries. In doing so, they hitched their fate to the exposition's cosmopolitanism, arguing that their Japaneseness should not exclude them but rather rendered them desirable citizens of Seattle.

In one of the book's most interesting chapters, Lee revives the Seattle Camera Club (SCC), a largely Japanese American group that rose to international prominence in the world of pictorialist photography during the 1920s. Members of the SCC exhibited nationally

and internationally, earning dozens of awards and shaping the image of Seattle in international eyes. Commentators inevitably praised their work in essentialist terms, arguing that they brought a Japanese sensibility to American subjects. The photographers themselves tended to concur, which demonstrates one of Lee's central assertions: that Japanese Americans negotiated their position in Seattle by acquiescing to being cast as foreign or racially other in exchange for being included under the rubric of cosmopolitanism.

Lee also shows how Japanese Americans used cosmopolitanism to counter anti-Asian sentiments in public schools and athletics. The selection of Fred Kosaka to play George Washington in a Presidents' Day celebration and the naming of Tadao Kimura as valedictorian of Franklin High School in 1924 sparked nativist backlashes assailing the assimilability of Japanese Americans. In the face of such racism, the Japanese American community actively cultivated progressive administrators and teachers, sending a few on educational missions to Japan to enhance their appreciation of Japanese history and culture. Japanese Americans also negotiated their identities on the ball fields and in the gymnasiums of Seattle, where international issues and local realities clashed. Going beyond interpretations that point to the role of sports in building ethnic solidarity, Lee argues that Japanese Americans used sports to confront and negotiate "racial, ethnic, spatial, and geographic boundaries" (p. 144). An ethnic baseball circuit connecting regions within the United States, Canada, and Japan enabled Seattle's Japanese Americans to consolidate their regional and national identities as they played against Japanese from elsewhere. One of Lee's most intriguing sections concentrates on interethnic competitions. She finds that Chinese American teams consistently participated in and even dominated the Japanese American league. As Sino-Japanese tensions arose across the Pacific in the 1930s, Seattle's Japanese and Chinese Americans continued to play amicably as fellow "Orientals"—a clear indication of the local or national nature of racialization.

Lee's account is engaging and original. Drawing upon a wealth of archival and interview-based sources, it extends Asian American historical understandings of the oft-ignored Pacific Northwest. However, contextualization of the Seattle case would be useful, because it was decidedly the third city among Japanese Americans after Los Angeles and San Francisco, both of which also vied for Pacific Rim supremacy. Lee's most important contribution is to connect discussions of Japanese American ethnic identity (by historians such as David Yoo and Lon Kurashige) and Asian American transnationalism (by scholars such as Yong Chen, Madeline Hsu, Dorothy Fujita-Rony, and Eiichiro Azuma) by arguing that Japanese Americans crafted their identities, even local ones, with scrupulous attention to international configurations. But historians have long noted that Japanese Americans in the prewar era envisioned themselves as a bridge between East and West and were influenced by sociologist Robert S. Park's marginal man

theory; hence, additional clarity about the relationships among cosmopolitanism, the bridge ideal, and marginality would be beneficial. Overall, the book under review argues convincingly that Japanese Americans fought for their place in the United States in part by locating themselves as part of a cosmopolitan, Pacific Rim city, and in doing so, helped to shape the city itself. Lee's narrative of negotiations over race, nation, and space is a welcome addition to regional, urban, and Asian American historiography.

DARYL JOJI MAEDA

University of Colorado at Boulder

DARYL J. MAEDA. *Chains of Babylon: The Rise of Asian America*. (Critical American Studies Series.) Minneapolis: University of Minnesota Press. 2009. Pp. xviii, 203. Cloth \$60.00, paper \$20.00.

Daryl J. Maeda's book highlights the self-recognition of shared experiences of racial oppression as key to the Asian American political consciousness that emerged in the 1960s and 1970s. It succeeds as a cultural history of political activism during the period, when such consciousness went from incipient to full-blown.

The introduction, "From Heart Mountain to Hanoi," documents Pat Sumi's development as a radical activist and follows her from her white, middle-class community origins to a position as U.S. People's Anti-Imperialist delegate who accompanied Eldridge Cleaver to form global alliances. Maeda posits that Asian American racial identity was triangulated between blacks and whites and gained further definition within a third world versus civil rights paradigm. Sumi's international travel and her involvement with political organizations and African Americans prefigured her third world, feminist, Asian American, and cross-racial approach.

Chapter one, "Before Asian America," familiarizes readers with basic information about pre-1960s Asian American racialization. Maeda details Asian American migration and legal encounters, ranging from exclusion to citizenship, and including anti-miscegenation laws, social racialization, discrimination, racism, and comparisons across Asian American ethnic groups and other racialized minorities. He addresses pre-1960s nationalist immigrant organizing, second generation organizing, and radical organizing, suggesting that early efforts were not pan-ethnic, the 1950s were relatively inactive years, and connections between pre-1960s and 1960s radicals were limited.

Chapter two, "'Down with Hayakawa!' Assimilation vs. Third World Solidarity at San Francisco State College," concerns controversial figure S. I. Hayakawa, the semanticist who, as acting president of San Francisco State University, clamped down harshly on political activists during the Third World Liberation Front strike. Maeda traces Hayakawa's racialization and his assimilationist administrative politics and self-positioning contra whites, blacks, and Asian Americans, including Japanese Americans. Hayakawa's view that language helps unlock racism parallels Gunnar Myrdal's view

that if only well-meaning liberal white people learned about racism, it would eventually disappear.

While chapter three, "Black Panthers, Red Guards, and Chinamen: Constructing Asian American Identity through Performing Blackness," focuses primarily on the Red Guard Party and Frank Chin, it demonstrates how Asian American radicals relied upon black radical politicians as models of how to reject assimilation and claim a radical politics while asserting Asian American specificity. Chin critiqued the Red Guard Party for mimicking blacks, and he drew distinctions between blacks and Asian Americans, while also borrowing from black power to recuperate an Asian American phallic, heroic cultural tradition.

In chapter four, "'Are We Not Also Asians?' Building Solidarity through Opposition to the Viet Nam War," Maeda writes about the Bay Area Asian Coalition against the War (BAACAW), Asian American antiwar groups, and popular culture (e.g., plays and newspapers) that, together, produced an anti-imperialist consciousness, linking the experience of Asian American racism at home with Vietnamese suffering from U.S. imperialism abroad. BAACAW asserted a multi-ethnic identity, underscoring the interlinked plights of Asian Americans and Vietnamese. Maeda then illustrates how Asian Americans both opposed the war and fought in it, sometimes resulting in unique psychological traumas for Asian American vets.

In chapter five, "Performing Radical Culture: A Grain of Sand and the Language of Liberty," Maeda discusses the multi-ethnic musical group A Grain of Sand (1970–1974), which infused political content into music and adopted an anti-imperialist, anti-racist, multi-ethnic, cross-racial, and transnational musical politics. Part biography, part intellectual history, the chapter traces members' shifting consciousness, communist connections, and alliances with Asian American activists, Black Panthers, Young Lords, and the Native Americans who occupied Alcatraz.

The final chapter, "Fighting for the Heart of Asian America," makes three arguments about the Asian American movement: it produced the politically useful term "Asian American," it created a "usable past" meaningful today and in the future, and it rejected arbitrary boundaries between Asian Americans and other groups, creating alliances defined politically rather than ethnically.

The book features biographical, political, and intellectual contributions—especially on politics and art—by key political groups and figures such as Sumi, Hayakawa, Chin, Melvyn Escueta, Nobuko Miyamoto, and Chris Iijima. Activists became committed to principles of domestic and international collective activism. Domestically, collective activism developed through knowledge of and experiences with other racial minorities. Internationally, U.S. imperialism in Vietnam led to antiwar activism that paid attention to both Vietnamese and American experiences.

The book presciently draws attention to activists whose politics prefigured contemporary Asian Ameri-

can scholarly interests in transnationalism, anti-essentialism, empire, and ethnicity, as well as the unities among the cultural, the affective, and the personal as political.

KENT A. ONO

University of Illinois at Urbana-Champaign

RICK BALDOZ. *The Third Asiatic Invasion: Empire and Migration in Filipino America, 1898–1946*. (Nation of Newcomers: Immigrant History as American History.) New York: New York University Press. 2011. Pp. viii, 301. Cloth \$79.00, paper \$25.00.

Following on the heels of Chinese and Japanese exclusion, Filipino immigration to the United States was often referred to by twentieth-century American nativists as the "third Asiatic invasion." Rick Baldoz's book explores the ramifications of Filipino immigration understood as a kind of ongoing war on white society. The U.S. invasion and occupation of the Philippines opened up the pathways for Filipino labor migration to Hawai'i and the United States between 1906 and 1934. The increasing number of largely male migrants—at one point, estimated to be near 50,000 in the West Coast alone—was seen by nativist groups as a kind of invasion and colonization of the United States by its own colonial subjects. Filipino migrants were stunned and dismayed at the racial discrimination and harsh working conditions they were subjected to in the metropole. Baldoz traces the history of this other Filipino-American war as it set in motion a series of conflicts: among nativists seeking the exclusion of Filipinos and Filipino immigrants insisting on their right to civil recognition, and between local officials and federal judges struggling to parse and clarify the profoundly ambiguous status of Filipinos as "nationals." As Baldoz points out, such conflicts highlighted the irresolvable contradictions between domestic fears of non-white immigrants contaminating white society and the imperial project of territorial expansion and the colonial uplift of racially heterogeneous populations.

In 1901 President William McKinley authorized the recruitment of Filipinos to the U.S. Navy, thus inaugurating a long history of employing America's colonial subjects to fight the country's wars. By 1906, the first group of contract laborers was recruited by the Hawai'i Sugar Planters Association to fill the vacuum created by the exclusion of the Chinese. Filipinos soon formed unions and in coalition with Japanese workers conducted a series of costly strikes through the mid-1920s. Seeking to escape the hardships of plantation labor, many Filipinos were drawn to jobs in the booming agricultural industry of the West Coast. They were soon followed by thousands of single Filipino young men, a workforce highly sought after by growers in California, Oregon, Washington, by the canneries in Alaska, and by hotels and restaurants to perform jobs that whites were unable or unwilling to take on.

This book provides insight on the foundational roles of race, labor, and immigration in U.S. history. Drawing

upon a wide array of sources that include court documents, newspaper accounts, personal memoirs, and Congressional records, Baldoz produces a gripping narrative of nativist efforts to socially isolate and physically exclude Filipinos along with Filipino attempts at refusing such efforts. The war between nativists and immigrants amounts to a displacement and continuation of other wars, from the Civil War to the wars of 1898. The debate between imperialists and anti-imperialists, as Baldoz points out, grew out of the vexed legacy of Reconstruction: to wit, were whites capable of incorporating and civilizing non-white populations or were the latter irrevocably backward, thereby threatening the integrity of white civility? While imperialists would win the argument, their victory was fragile. Empire would always be shadowed by its anti-imperialist nativist sibling as seen in the history of Filipinos in the United States.

The ongoing tension between imperialists and anti-imperialists was in part predicated in the way by which the American invasion and occupation of the Philippines produced a new and highly ambiguous identity for Filipinos. Juridically and racially, Filipinos were neither citizens nor aliens, but “nationals” who were not “Mongolians” but “Malays.” Armed with this novel identity, Filipinos eluded racial quotas on immigration, traveling freely in and out of the United States. But freedom of entry contrasted sharply with the severe restrictions on their mobility imposed by the color line. Mobilized by the fear of contamination and racial death, nativists sought to counter the rising tide of Filipinos with legal and extralegal means. They passed laws on residential segregation, banned miscegenation and ownership of property, sought to reclassify Filipinos as “Mongolians,” and, when these efforts were frustrated, resorted to mob violence, bombings, and lynching from 1927 to the early 1930s. But Filipinos refused to back down. They sought legal recognition as citizens rather than colonial subjects entitled to the same rights as whites, openly kept the company of white women, argued for the right to marry across racial lines, formed unions often allied with the Communist Party, and struck for better working conditions.

Seeking the exclusion of Filipinos, nativists along with labor and agricultural interests lobbied Congress for relief. Forming an odd and uneasy alliance with Filipino representatives working for independence, nativists finally succeeded. Congress passed the Tydings-McDuffy Act in 1934, which reclassified Filipinos as aliens barred from the United States. With the Japanese invasion of the Philippines, the United States turned once again to its colonial subjects for military service and received an enthusiastic response. Baldoz provides a penetrating analysis of the ways Filipino military service during World War II complicated the racial basis of American citizenship. Existing laws had to be revised to allow “nationals” to join up and subsequently become entitled to veterans’ benefits and naturalization. The Rescission Act of 1946 reneged on the promise of equal pay and assistance for Filipinos who

had served in the U.S. military. Thus war shaped and was shaped by the color line, constructing its contours, eroding its edges, but only to reconfigure its force. In closely tracing the complexity of this most telling theme of the twentieth century, Baldoz’s book contributes to our understanding of both U.S. and Philippine national histories as irrevocably linked to the vicissitudes of colonial power and imperial projects. It truly deserves a wide readership.

DAVID GOODMAN. *Radio’s Civic Ambition: American Broadcasting and Democracy in the 1930s*. New York: Oxford University Press. 2011. Pp. xx, 337. \$49.95.

ALEXANDER RUSSO. *Points on the Dial: Golden Age Radio beyond the Networks*. Durham, N.C.: Duke University Press. 2010. Pp. xi, 278. Cloth \$84.95, paper \$23.95.

In the 1930s, an American broadcasting system—characterized by the rise of commercially controlled radio networks and national in scope—coalesced in the United States. In their respective studies, David Goodman and Alexander Russo challenge this widely held notion. While neither overturns fundamental understandings of radio before World War II, both help complicate those understandings and, at their best, demand that readers rethink their presuppositions.

Goodman’s is the more ambitious of the two books. He sets out to refute the notion that private ownership of radio networks wholly shaped American radio in the 1930s. He rejects the idea of American broadcasting as simply a for-profit system, cast entirely in opposition to contemporary state-run systems. Instead, Goodman argues, the desire to ward off potential government reform structured broadcasting practices in the United States. Wary of intervention, broadcasters accepted that they had civic responsibilities and built public service into the commercial system. Consequently, a powerful counter to commercial concerns emerged: the civic paradigm, Goodman calls it.

This civic paradigm lies at the heart of Goodman’s argument: it was instrumental in shaping radio through the New Deal era. According to this line of thinking, the purpose of radio was to make listeners better citizens. By that, believers in the civic paradigm meant radio should foster thinkers who were active and critical, rational and tolerant, able to form their own opinions and respectful of diverse views. Put another way, radio should mass produce individualism by presenting all views and perspectives and letting listeners make decisions for themselves. It is, Goodman explains, an appealing ideology, but not one without flaws. Through the 1930s, he argues, the pluralism of the civic paradigm could not find a way to include the thinking of those who found the idea of tolerance for multiple views itself troubling. In the end, then, the civic paradigm divided America and broke apart, leaving broadcasting without a clear public role in the aftermath of World War II.

To develop this argument, Goodman insightfully juxtaposes a staggering array of ideas and sources. He brings an amazing wealth of research to bear, often showing familiar materials in a new light. The book moves between building the argument and demonstrating how it plays out in specific instances; for better and for worse, some of the chapters read as much like independent essays as parts of a larger whole. After defining the civic paradigm and where it came from, Goodman explores his themes through case studies of classical music and discussion forum programs. In considering where the civic paradigm fell short in the late 1930s, he looks at Orson Welles's *War of the Worlds* broadcast. In the concluding chapters, he examines the breakdown of the civic paradigm in World War II and its aftermath, including a terrific discussion of intellectual debates over the proper role of media in the post-war world. Goodman's work contains a tremendously provocative line of thinking. As the argument unfolds, readers familiar with the materials and debates will be forced to wrestle with Goodman's ideas and their own.

Many readers, however, will find Goodman's argument more stimulating than persuasive. The case for the resonance of the civic paradigm relies on several unexplored assumptions. Certainly, some genres of civic programming that existed on the air in the 1930s declined after World War II. But does that indicate the power of the civic paradigm or the evolution of an economic model in which companies increasingly sought to buy airtime? A consideration of economics, vital to the point, is lacking. Similarly, Goodman asserts that broadcasters adopted the view that radio should represent diversity on the air without consideration of either the many contemporary critics who claimed radio failed to do just that, or radio's poor record on representing African-American perspectives. On a narrower level, Goodman's case studies periodically veer away from supporting the argument. The chapter on classical music, for instance, is an excellent investigation into that genre of programming and listening, but it does not always make the case for the power of the civic paradigm. Moreover, despite Goodman's impressive research, some specific claims are oddly under sourced or the sources do not fully speak to the point in question.

Equally significantly, it is not always clear whose story Goodman is telling. The implication is that the civic paradigm represents the view held by a consensus among the middle and upper classes. But, while Goodman at times surveys a large array of voices on radio, frequently the study focuses on the radio industry's rhetoric about itself, uncritically accepting the industry's statements as representative of common views. When Goodman refers to "radio," it is not always clear if he means the industry, the programs, listeners' experiences, the contested social and culture space the medium occupied, or some combination.

Russo, in all likelihood, would levy one more critique: that in focusing on the programming and rhetoric of the national networks, Goodman implicitly presumes those national systems dictated the way listeners re-

ceived radio. Russo argues that American radio in the 1930s and 1940s should not be understood only as a national system; regional and local alternatives were very much alive too. There is modesty to this claim: Russo does not reject the importance of national networks. He argues instead that a hybrid system existed with a variety of means of distributing programming regionally and locally as well as nationally.

This, Russo suggests, had important implications. Radio in the pre-television era was not homogeneous. It might foster a national imagined community, but at the same time it could also encourage regional or local identities and connections. Radio, even in the network era, could address both mass and niche audiences. The longer story of radio's structural history, then, features more continuity than often noted, as many practices that embodied radio in the age of television can be traced to the 1930s. Even at the peak of the national system, Russo explains, broadcasters found a variety of ways to define audiences and commodify the attention of those audiences.

Developing this argument, Russo focuses on the structure of the industry, particularly the ways stations and networks got programs and advertisements to audiences. He provides a very fine examination of how material was actually disseminated, eclipsing the picture of national networks using phone lines. Individual affiliate stations, Russo notes, could reject or modify network programming on occasion. Alternatives existed. Russo traces the rise of regional networks—particularly in New England—which supplied stations with programming distinct from national offerings. Similarly, the development of recorded programs, Russo notes, allowed for the comparatively inexpensive distribution of programs, again outside national network control. Individual stations also occasionally defied the network model that bundled programs with commercials, through the sale of spot advertisements, which they interspersed throughout programs. In each of these cases, Russo details the presence of regional and local programs and advertisements, creating the possibility of regional or local communities. His final chapter, on advertisers' efforts to capture the attention of inattentive listeners, does not fit that point, but it further illustrates that even before television, radio began developing a new model of programming, and, as with the rest of the book, it argues against a homogeneous radio experience.

That Russo has written a history of advertising by radio more than a history of audiences is both a strength and a limitation here. His narrow focus enables him to craft a thorough and very sound account of the business of radio, with an eye toward how that structure shaped radio's impact. But without a consideration of the question of what listeners heard, readers will wonder how significant these counters to a national system truly were at the time. Ultimately, Russo admits these alternatives did not overthrow network dominance. But because he has couched his argument narrowly, Russo can allow that and still present a convincing case.

Russo's book does not demand that we rethink what we already know about radio. By setting up the idea of radio in the network era as fully homogeneous and national, Russo has created something of a straw man to knock down. Media scholars have long known that alternatives to network radio abounded in the 1930s and 1940s. The presence of studies emphasizing network radio reflects the reach of those networks and the sense that national broadcasting represented something new in the United States, not that alternatives were lacking. The originality and strength of Russo's study lies in providing real insights into how those alternatives worked, not in arguing for the existence of a hybrid system.

For students unfamiliar with the basic understandings of broadcasting in the 1930s that these books revise, Goodman and Russo may make their cases too forcefully. For scholars in the field, however, both works provide new insights into fundamental issues related to radio's meaning and, in Russo's case, structure. Russo's picture of non-network means of disseminating radio content is new and detailed. And whether one finds Goodman's work fully convincing or not, it pushes readers to rethink what they know about the ideology of radio in the 1930s and the possibilities for media in a democratic state.

BRUCE LENTHALL
University of Pennsylvania

JAMES J. COOKE. *Chewing Gum, Candy Bars, and Beer: The Army PX in World War II*. Columbia: University of Missouri Press. 2009. Pp. 186. \$39.95.

In June 1943, the Camp Van Dorn Post Exchange (PX) sent out a plea for more supplies, noting that "Beer without a doubt, is one of the biggest morale builders a Post Exchange can offer to an enlisted man" (p. 87). Soldiers appreciated chewing gum and candy bars, but they craved beer and cigarettes. In the first comprehensive study of the development of the Army PX during World War II, James J. Cooke argues that it quickly grew into the "world's largest department store . . . run by civilians in uniform" (p. 10). He explains the need for a PX and describes the Army's efforts to supply nicotine, low-grade alcohol, and other "comfort items" to individual fighting men on a regular basis (p. 7). Cooke has produced a detailed military history that focuses on morale, that intangible yet essential quality of a strong fighting force.

Cooke traces the early history of the PX back to Civil War "sutlers" who sold their wares to needy troops from tents. These tents later gave way to canteens, and during World War I the Young Men's Christian Association (YMCA) offered "comfort items" to men in uniform. General John J. Pershing, however, insisted that soldiers eschew "charity" (p. 14). Army rules required the YMCA to charge for even the smallest items, while other agencies ignored this rule and gave free candy bars to service men. These shifting practices betrayed an overall disorganization in the Army, angered soldiers, and lowered morale. The Army Exchange Service

(AES) emerged in 1941 both to provide soldiers with a steady supply of affordable nicotine, alcohol, and sweets and to confirm military awareness that troop morale mattered. The AES competed for shipping space with well-meaning non-profits and a few disreputable enterprises that wanted to send cigarettes to soldiers. Shortages of domestic tobacco and beer stymied AES attempts to keep PXs stocked abroad and at home. Soldiers settled for Army beer, which contained 3.2% alcohol, but demanded "Lucky Strike, Chesterfield, Camel, and Phillip Morris" cigarettes over all others (p. 107). The AES met challenges from the Women's Army Corps to stock PX shelves with makeup and other personal items. Thanks to the PX, all American soldiers "appeared to be rich" at the time of liberation in Europe (p. 143). GI dependence on the organization led to its expansion and solidified its place in Army life after the war.

Cooke derives the bulk of his evidence from government documents and soldiers' letters to friends and relatives back home. The narrative is at its liveliest when drawing from these letters. The author takes a chronological rather than a thematic approach to the topic, and this limits the book's scope for analysis. For example, servicemen, like many Americans at the time, smoked cigarettes, but unlike civilians, servicemen depended on the Red Cross and later the Army PX to make cigarettes available to them. Congress investigated cigarette shortages in the Army, because soldiers deserved their "fair share" of civilian comforts (p. 8). A discussion by the author of the negative effects of constant nicotine withdrawal on the soldier's capacity to perform might have connected this work to the literature on medical history. Cooke's book compares favorably to earlier studies on the central role alcohol has played in military life. It is engaging and informative, especially for those interested in a thorough account of the Army's need to create an efficient distribution system during wartime. Readers interested in issues of morale-building, masculinity, systems and individuals, and World War II will find important evidence here.

MEGHAN K. WINCHELL

RICHARD LENTZ and KARLA K. GOWER. *The Opinions of Mankind: Racial Issues, Press, and Propaganda in the Cold War*. Columbia: University of Missouri Press. 2010. Pp. vi, 349. \$39.95.

The connection between domestic events and foreign relations in U.S. history is a relatively new scholarly emphasis. In some respects, it is understandable that researchers have often overlooked this connection. After all, it might well seem counterintuitive to posit a relationship between, say, an obscure occurrence in a remote area of the United States and a strained diplomatic dialogue between the White House and a developing nation. Yet with the tremendous acceleration of communication technology since the 1940s, such connections are increasingly possible. Nowadays, local

events can swiftly attract international attention, and they can thereby become bones of contention among international actors.

In this book, Richard Lentz and Karla K. Gower investigate the means by which seemingly out-of-the-way incidents in the civil rights struggle of the 1950s and 1960s grew into foreign-policy dilemmas. In a general sense, the project thus reiterates findings on the international implications of the movement, as in work by Thomas Borstelmann, Mary L. Dudziak, Azza Salama Layton, Doug McAdam, and John David Skrentny, among others.

Yet Lentz and Gower's account adds a new wrinkle to these explorations by stressing the relationship of the civil rights battles to the Cold War propaganda struggle. In a well-researched examination of archival sources and period media, they convincingly demonstrate that even the remotest incidents of racial hatred in the Deep South frequently became fodder not only in widely disseminated communist criticisms of the United States but also in the press reports of developing nations whose favor both sides coveted. As the book astutely observes, it was difficult for American diplomats to woo nations with troubled colonial histories when the Soviets were using the latest racist occurrences in Dixie to denounce the United States as "the land of the Fettered and the home of the Bigot" (p. 12).

The study draws a complex and fascinating picture of civil rights incidents on their journey from local news to international condemnation to subsequent domestic reactions. No domestic news sources could afford to support reporters in every locale, and foreign publications were even further removed. Thus, descriptions and photographs of racist abuses at a local protest march or sit-in generally emanated from nearby reporters, at least initially. These reports and pictures were spread domestically by wire services and then sent abroad. There, friends and enemies alike used the news as they wished, as when photographs of Bull Connor's police dogs attacking peaceful demonstrators became the basis for vicious propaganda attacks from communist publications. Curiously, however, such foreign criticisms often produced a backlash from the very same media sources that had initiated the reports, leading to commentary that stressed the alleged progress of racial relations in the United States and implored domestic racists to quit embarrassing the country.

As the book gradually progresses from 1946 to 1965, this pattern recurs again and again. Civil rights activists repeatedly find new places and ways to stretch the color line, racists react violently, local reporters break the story, news wires spread the information, the news goes international, foreign propagandists use it to attack the United States, and the whole cycle results in much hand-wringing at home, press accounts claiming that race relations are not *that* bad, and increased pressure on the government to make changes. Frankly, the cumulative effect of this repetitious cycle on the reader is somewhat numbing, eventually leading one to wonder

if any of those involved were aware of their contributions in prolonging it.

At length, this numbing effect becomes the primary drawback to Lentz and Gower's account. Most of the chapters vary primarily in the circumstances that generated the local civil rights incident(s). The subsequent cycle of reporting, disseminating, propagandizing, and reacting, however, almost always comes across as being quite similar from year to year and from chapter to chapter. The result is a repetitive narrative trajectory, leaving individual chapters with surprisingly little to distinguish them from each other. Of course, this is how much of the history occurred, so it is unfair in some respects to expect an analysis of that history to avoid falling into the same cycle. Yet perhaps it might have been advisable to combine several of the chapters, or to otherwise change up the shape of the narrative elements as a means of differentiating events for the reader.

This criticism notwithstanding, the book is undeniably a valuable contribution to our understanding of the events in the civil rights struggle within a much broader context. While it might have been easy for those involved in that struggle to be unaware of the international impact of their actions, it is incumbent on those who look back at the fight to recognize that events in Selma, Greensboro, and Little Rock reverberated far beyond their local origins, ultimately helping shape the propaganda salvos of the Cold War itself.

Seton Hall University

MICHAEL E. LATHAM. *The Right Kind of Revolution: Modernization, Development, and U.S. Foreign Policy from the Cold War to the Present*. Ithaca: Cornell University Press. 2011. Pp. ix, 246. Cloth \$69.95, paper \$22.95.

In recent years, the study of development has taken off in international history and particularly in the related field of U.S. foreign relations. Michael E. Latham was one of the earliest contributors to this lively discussion with his incisive *Modernization as Ideology: American Social Science and "Nation Building" in the Kennedy Era* (2000). His latest work continues this trend by opening a window on the variety of new scholarship on the issue in this excellent primer on the place of modernization in U.S. foreign relations.

Joining other recent scholars, Latham argues that modernization was not a pure product of the Cold War but part of a longer tradition of development ideas that have deep roots in U.S. and world history. Nevertheless, the global Cold War and the complications of a worldwide rush of nationalist, anticolonial revolutions demanded a revised approach. The United States had to compete with Soviet (and later Chinese and Cuban, among other) communist visions of modernity. They responded with what was "fundamentally a liberal idea" (p. 123). Latham describes modernization as a sort of "global New Deal" to "create capitalist, market-based

economies and liberal states" that Americans offered the nationalist regimes of the "new nations" (p. 7).

Through case studies that include Kwame Nkrumah's Ghana, Gamal Abdel Nasser's Egypt, and Jawaharlal Nehru's India, Latham shows that this vision did not include all that these leaders (and their people) wanted. Facing resistance and increasingly worried about dramatic population growth in what had become known as the "Third World," American planners intensified their reliance on technocratic fixes, from ambitious population control programs to the innovations offered to world agriculture by the "Green Revolution." In places like South Vietnam and Guatemala, modernization ideas were enlisted to tamp down insurgent movements and the ideas that motivated them.

The results were ironic. Programs to support a liberal vision turned out to sponsor and propagate violence and oppression. Technologies that Americans put great stock in to solve problems had a host of unintended consequences, often creating tensions and instability in the very societies the United States was attempting to steady.

The assumptions behind modernization broke down under the pressures of war in Vietnam and the critiques of modern society intensified by the global upheaval of the 1960s. Many came to doubt the efficacy of these policies and the ideas behind them, and they fell from favor. However, Latham, like other scholars, asserts that they merely lay dormant in U.S. and international affairs. Neoliberal policies, particularly those offering a specific type of "globalization," repositioned basic assumptions of modernization in their view that all peoples were moving in one direction toward a certain type of high-tech, modern society dramatized by the West and epitomized by the United States. The latent attractiveness of modernization ideas meant that they quickly asserted themselves when, at the start of the twenty-first century, the United States embarked on "nation building" and counterinsurgency efforts in Afghanistan and Iraq that echoed similar odysseys during the Cold War. Latham suggests that these efforts might not have much more success than their predecessors.

Writing with clarity and verve, Latham makes complicated topics accessible and diverse situations comparable. His précis of the origins of modernization theory and its rapid spread across the American social sciences is fluent and does much to explicate why the concept seemed like an attractive solution to so many problems for policy makers and scholars alike. He makes clear that modernization was not just an activity conducted by the American state. It had considerable support from a collection of non-governmental advocates that included universities, foundations, and missionary groups. Latham also gives room to the governments and leaders of those countries the United States sought to modernize, reminding readers of their agency. However, at points the development projects themselves are overshadowed by accounts of the diplomatic wrangling between the United States and the regimes it sought to influence. This is a weakness in one

respect, but in another it is a strength. Such emphasis connects modernization to the established narratives of U.S. policy during the Cold War. It demonstrates how often complicated political and social problems were viewed through the lens of development in Washington and among the host of non-governmental groups committed to the cause of modernization.

Latham has captured and synthesized the fresh and exciting scholarship on this rich issue, while adding to it in a manner accessible to students and stimulating for scholars.

Tufts University

LINDA SARGENT WOOD. *A More Perfect Union: Holistic Worldviews and the Transformation of American Culture after World War II*. New York: Oxford University Press. 2010. Pp. ix, 339. \$49.95.

In this book Linda Sargent Wood "contends that one of the most powerful visions to guide Americans between World War II and the mid-1970s was a holistic, communal, and often utopian worldview" (p. vii). To make this argument convincing, Wood focuses in six chapters on five individuals and one institution. The chapters take up Rachel Carson, R. Buckminster Fuller, Martin Luther King, Jr., Abraham Maslow, Pierre Teilhard de Chardin, and the Esalen Institute in Big Sur, California. Wood believes that a holistic worldview "fundamentally altered American history" (p. 6). She sees holism as cooperative and ethical, knitting together science and religion, body and soul, individual and society. It fostered civil rights activism, environmentalism, feminism, health movements, and more.

The book's strength comes from Wood's wide and careful reading of published sources and her new angle on post-World War II cultural shifts. Its weakness lies in the broadness of its thesis, which is completely focused on a holistic worldview. But "holism" itself is an elastic term, as Wood candidly admits. She marvels at its "amazing plasticity" (p. 16). Only one of her protagonists—Maslow—even used the word. Yet instead of seeking precision, Wood expands holism to include ecology, technological utopianism, race relations, New Age spiritualism, and everything in between. In a German framework holism is often placed within a romantic and even antisemitic context, as in Anne Harrington's *Reenchanted Science: Holism in German Culture from Wilhelm II to Hitler* (1996). In Wood's usage, any social or religious thinker who appealed to the health of the whole society could be classified as a holistic. For Wood, both Carson, a technological skeptic, and Fuller, a technological enthusiast, are holistic thinkers, but what separates them might be larger than what unites them. Indeed, Wood spends no effort in justifying the choice of those to whom she dedicates chapters; and it would not be difficult to draw up another list of influential writers who were prominent in the sixties and who might be judged holistic, such as

John Kenneth Galbraith, Jane Jacobs, and Lewis Mumford.

Wood is well aware that her argument on the centrality of holism might vanish in a cloud of smoke, and repeats it relentlessly, as if repetition makes it more convincing. She cites Aristotle—"The whole is more than the sum of its parts"—but this idea might be reversed for her book. The parts are better than the whole. When she is farthest from her thesis, the book is the strongest. When she is closest to it, the book flags. Her effort to link Carson and King as companion holistic thinkers is strained at best. "While Carson imagined food chains and connections between wind, water, and soil, [King] focused on human beings of every stripe . . . united by love and bound together by bonds of mutuality. She employed her holism to fight the chemical industry; he used his rendition to combat economic, political, and social institutions that perpetuated racism" (p. 84). Where she is least convincing her prose gets convoluted. "King read the problem [racism] holistically because he saw the world and community relations holistically" (p. 101).

The chapter on the Esalen Institute may be Wood's best. The links to holism are also most obvious if only because psychologists like Frederick "Fritz" Perls became a resident guru. Perls, a refugee from Germany, had studied and written about Gestalt psychology, which has a legitimate claim to be called holistic. By the 1960s, however, Perls moved far from the original Gestalt psychology to group psychology and psychodrama. His shift reflected a general trend at Esalen, which became a bazaar for therapists hawking self-liberation, gurus preaching mystical religions, and doctors selling holistic health. Again, Wood is well aware of the vagaries of Esalen, but she gamely insists that its story "has much to tell about holism" (p. 173). It does, but it hardly supports Wood's main argument. In fact the opposite thesis is more convincing. Whatever holism can be found in American thought, it rapidly succumbs to good old American individualism. Esalen's "holism" devolved into self-help, yoga, and health manias that entered the mainstream. When Wood cites the holistic slogan of the upscale grocery chain Whole Foods, which has fought unionization—"Whole foods, whole people, whole planet"—we see that her thesis that holism transformed American culture has been turned on its head. Nevertheless, Wood has written a thoughtful exploration of several thinkers and one institution that flourished in the early 1960s.

RUSSELL JACOBY
*University of California,

ROBERT A. JACOBS. *The Dragon's Tail: Americans Face the Atomic Age*. (Culture, Politics, and the Cold War.) Amherst: University of Massachusetts Press. 2010. Pp. xii, 151. Cloth \$80.00, paper \$24.95.

It is hard to fight the feeling that the atomic age and its attendant anxieties have already become somehow ir-

relevant, relegated to the irradiated dustbin of history. Despite the continuing presence of massive nuclear arsenals, now morphed and subsumed into post-9/11 weapons of mass destruction, and despite recent trenchant warnings about the dangers of nuclear energy and technology, as in Japan's tsunami-ravaged Fukushima nuclear power plant, nuclear discourse and iconography now seem arcane and even quaint relics of an increasingly distant Cold War past. Thermonuclear weapons and bomb shelters, Bert the Turtle and mutant Alamogordo giant ants appear to have lost their power to inform and to inspire terror, especially for younger generations of Americans.

Robert A. Jacobs has stepped into this amnesiac nuclear breach to remind readers of the time when such language and icons did speak to Americans learning to enter a newly dangerous and transformative age. Jacobs revives interest in the historical and cultural links between atomic age culture and the Cold War through what he deems the "alchemical narrative," the "primary nuclear narrative" that guided understandings of nuclear weapons as "signifiers of transformation or fundamental change" (p. 3). Tying nuclear science and nuclear imagery to notions of alchemy allows Jacobs to explore how nuclear narratives veered into the realm of the fantastic, the magical, and the mythic, and he argues that most Americans indeed experienced nuclear weapons through such lenses. This approach works particularly well for discussions about radiation, given its invisibility yet deadly dangerousness and its real and imagined capacity for mutation.

Jacobs centers attention on the era of atmospheric or above-ground nuclear testing and claims logically enough that these years rendered nuclear weapons most visible and their attendant release of radiation—however invisible—most apparent and appalling. Looking in particular at the impact of the tests conducted at the Pacific Proving Ground and the Nevada Proving Ground (later the Nevada Test Site) throughout the 1950s and into the early 1960s—until the Limited Test Ban Treaty of 1963 moved the tests underground—Jacobs examines science fiction, civil defense literature and film, social science, bomb shelters and survivalism, atomic soldiers and downwinders, and American youth experiences in order to assess both fantastic nuclear narratives and the government's more mundane counternarratives about its "good" or "clean" bomb (p. 94). Because the 1954 Bravo test of the hydrogen bomb at the Bikini atoll had made fully and fearfully public the range and danger of nuclear radiation, the government—and the Atomic Energy Commission in particular—relied on its narratives about good, clean American bombs (smaller explosions yielding less radiation) in order to forestall worries for the atomic servicemen and civilians operating in or living downwind of the Nevada Test Site.

Government counternarratives appeared especially necessary in Nevada because, as Jacobs points out through an analysis of the mutant irradiated monsters of 1950s popular culture, the "Nevada desert had be-

come a mythic zone where supernatural events could be *expected* to happen” (p. 37, emphasis in original). Jacobs misses an opportunity to complicate his treatment of the presumably supernatural Nevada landscape, however, when he ascribes construction of counternarratives about the freakish, fantastic terrain of the Nevada Test Site largely to the federal government alone. Some Americans, especially Las Vegas residents and tourists, provided a stunning (and somewhat freakish) counternarrative of their own, as an atomic bomb-test watching craze erupted in the desert. This was, after all, an era of profitable atomic tourism for Las Vegas, which hospitably provided atomic cocktails, atomic hair-dos, and the 1957 Miss Atomic Bomb contest along with the vistas necessary to see the atomic flashes and mushroom clouds from the Nevada Test Site.

Jacobs’s fine study of the multiple narratives informing the era of atmospheric nuclear testing is a lean and concise one, and greater depth of analysis may have been sacrificed for brevity’s sake. One of the book’s most effective sections, dealing with “the atomic kid” (p. 99) and the 1951 civil defense film *Duck and Cover*, is compelling because of its deep reading of the text and its ability to make a bygone icon like Bert the Turtle return to a place of complex cultural relevance for Americans beyond the baby boom generation. *The Dragon’s Tail* may pique the curiosity of those unfamiliar with early atomic age culture, but for baby boomers and historians already schooled in the subject this study will seem familiar as it covers a nuclear time and space treated in other historical works on atomic age culture and technology. It is nonetheless a welcome addition to the literature and an intelligent recapitulation of the cultural narratives swirling amid the above-ground nuclear tests conducted by the United States.

CAMPBELL CRAIG and FREDRIK LOGEVALL. *America’s Cold War: The Politics of Insecurity*. Cambridge: Belknap Press of Harvard University Press. 2009. Pp. 439. \$26.95.

In their book, Campbell Craig and Fredrik Logevall accomplish something amazing: in a mere 370 pages of text they present a cogent, well-written, highly informative, yet accessible narrative of the forty-five-year history of the Cold War. Of course it helps immeasurably that both authors are eminent historians and leading scholars in their respective subfields. Logevall is the author of the classic *Choosing War: The Lost Chance for Peace and the Escalation of War in Vietnam* (1999); Craig is the author of three previous books, most notably *The Atomic Bomb and the Origins of the Cold War* (2008) with Sergey Radchenko and *Destroying the Village: Eisenhower and Thermonuclear War* (1998). Together they bring a level of expertise to more facets of the Cold War than the vast majority of single-authored works could possibly emulate.

The book is divided into nine chapters beginning with

the interwar period of the 1920s and 1930s, when America’s commitments to the world were limited and opposition to involvement in European affairs remained firm. It then discusses the origins of the U.S.-Soviet confrontation, the significant intensification of the Cold War in the aftermath of the communist victory in China and the first atomic bomb test by the Soviet Union, and, of course, the Korean War. The study examines President Dwight D. Eisenhower’s efforts to stem the massive surge in conventional military spending through heavy reliance on nuclear weapons. Meanwhile Eisenhower would “evade” nuclear war during the numerous Cold War crises of the 1950s through adoption of an all-or-nothing strategy—either the United States would launch a massive nuclear strike or it would not use nuclear weapons at all. Eisenhower steadfastly refused calls from his own military command, his secretary of state, and the academic community to explore the use of limited nuclear options in order to provide a third option. This strategy would come into play during the two Quemoy-Matsu crises of 1954 and 1958 as well as the Berlin Crisis of 1958. John F. Kennedy’s administration tried its best to sidestep the all-or-nothing paradox through the doctrine of Flexible Response designed to give the president both conventional and limited nuclear options, but it too lacked the strategy or capabilities (especially conventional) that were required to support it. Craig and Logevall explain how the Kennedy administration was able to resolve the Berlin and Cuban missile crises through compromise and negotiation rather than nuclear brinkmanship.

The authors then tackle the tragedy of Vietnam. Logevall presents an excellent summary of the case he made in *Choosing War*, demonstrating that Lyndon B. Johnson’s public rationale for the Americanization of the war was not even accepted by his administration’s foreign policy leadership and that Johnson himself possessed grave doubts regarding the morality of sending young Americans to die in a war he recognized as unwinnable. The consequences we all know: a devastating war that caused the deaths of over 58,000 Americans and nearly two million Vietnamese while maiming countless others. The economic consequences were similarly dire; deficit spending to pay for the conflict caused inflation that would ultimately force the United States to abandon the gold standard and float the U.S. dollar freely on the world market, effectively scuttling the Bretton Woods economic system that had operated since the end of World War II.

From Vietnam the book turns to Richard Nixon and Henry Kissinger’s efforts to create détente with the Soviet Union, open relations with China, and resolve the Arab-Israeli conflict. It also chronicles the demise of the Nixon presidency over the Watergate Hotel break-in. Logevall and Craig examine the impact of Jimmy Carter’s presidency and the importance he placed on promoting human rights, an emphasis Carter primarily conceived of to distinguish his foreign policy from the realpolitik of the Nixon-Kissinger years. The narrative focuses on the collapse of détente in the mid-1970s that

culminated in the revival of the Cold War. The authors then cover the Cold War's ultimate end with rapprochement between President Ronald Reagan and Soviet leader Mikhail Gorbachev. In a powerful and thought-provoking conclusion, Logevall and Craig assess the Cold War, agreeing that it ended in total victory for the United States but at a cost far higher than necessary had the U.S. government stuck to the limited containment policies of George F. Kennan.

There is much to applaud in this work and the authors will, I am sure, reap many accolades because of it. Due to its brevity and jargon-free writing style the book will be especially useful for undergraduates as well as the general public, but even specialists will find it worth reading.

Arnold A. Saltzman Institute of War and Peace Studies

JONATHAN P. HERZOG. *The Spiritual-Industrial Complex: America's Religious Battle against Communism in the Early Cold War*. New York: Oxford University Press. 2011. Pp. xi, 273. \$34.95.

Jonathan P. Herzog has made a valuable scholarly contribution to what appears an emerging subgenre of Cold War studies focused on the role of religion. Herzog builds on existing scholarship, adding a great deal of detail and new material from a wide range of sources and archives that he has effectively mined to produce a compelling narrative, informed by thought-provoking perspectives. Erudite, well written, and a very good read, the book will appeal to a wide audience. It will fascinate and entertain scholars within the field as well as a more general readership.

Complementing scholarly publications examining the significance of religion in U.S. foreign policy, Herzog's meticulous exegesis emphasizes developments on the home front. Certainly some of the material will be familiar to those well versed in the domestic Cold War and the McCarthy period. The value of the book, however, resides in its focus on religion and its explication of how and why religion assumed such importance. Herzog explores the instrumentalization of religion according to a Cold War rationale that subsequently had profound consequences for American politics and society and American Christianity.

Herzog's title is, of course, a clever wordplay on the military-industrial complex against which Dwight D. Eisenhower warned in his farewell address. The president was himself deeply implicated in using religion as part of his own Cold War initiatives at home and abroad. Herzog illustrates how what he terms the "spiritual-industrial complex" manufactured a religious revival born in board rooms. It was a product of commercial and government interests intended to serve Cold War purposes. Earlier religious revivals had spread from the bottom up; this one, like McCarthyism, came from the top down. Herzog contends, however,

that in the long term binding religious faith to the communist threat served to weaken mainstream religion.

In part one Herzog reviews the process by which secular institutions assumed those functions that were once the primary domain of religion and how the idea that communism was a religion evolved. Herzog argues that had the latter not happened, religion would have remained peripheral to the ideological struggle that emerged between the United States and the Soviet Union during the Cold War.

In part two Herzog examines the spiritual mobilization of American society, including the rhetoric, policies, and actions that constituted the spiritual-industrial complex and the way in which American propagandists came to recognize that religious belief could be highly instrumental in the Cold War struggle. His analysis embraces individual leaders, political institutions, national security institutions, and areas such as education, the media, corporations, voluntary associations, and entertainment.

The final part evaluates the outcomes and achievements of the spiritual-industrial complex and why the endeavor faded by the beginning of the 1960s. Herzog's final analysis explores the legacy of the spiritual-industrial complex, suggesting that it created a platform from which both modern religious and political conservatism grew.

Herzog's study is as important for American religious history as it is for studies of the Cold War. An important theme that informs the study is the tension "between America the secular nation and American the covenant nation" (p. 9). At a time when secularization is a fiercely debated topic and scholars are contesting the degree to which the United States did or did not succumb to it, Herzog's approach is guaranteed to invoke some debate. Noting that scholars often study the process by which covenant societies become secular ones, Herzog claims to be doing the reverse, examining how a postwar secular United States strove to become a covenant nation. Herzog concludes that the Cold War and its early leaders "altered the relationship between sacred and secular in America by rallying to the belief—doubted once by secular prophets, religious leaders, and common folk—that religion could be of use not only to individuals but to society as well" (p. 216). One response from the contested area of secularization will be that this was always America's dominant discourse. It is a conclusion that will undoubtedly be challenged by scholars who discern more continuity than change in the historical relationship between sacred and secular America, including, of course, opponents of the secularization thesis.

Herzog has produced a welcome study that will undoubtedly provoke a good deal of scholarly debate and disagreement in a number of fields, most especially among the growing cohort of scholars looking at the Cold War's religious dimension. My major criticism is not of the author but of the publisher. As with any piece of worthwhile scholarship, the book is based on diverse archival research and a wide range of secondary

sources, making the inclusion of a bibliography of immense value to its academic audience. But this book lacks a bibliography. Certainly Oxford University Press is not alone in sacrificing the bibliography to the word count. It is unfortunate that commercial considerations can compromise a pioneering study such as Herzog has delivered. As the book is likely to be a popular addition to undergraduate reading lists, it is to be hoped that future editions will rectify this lamentable omission.

DARREN DOCHUK. *From Bible Belt to Sunbelt: Plain-Folk Religion, Grassroots Politics, and the Rise of Evangelical Conservatism*. New York: W. W. Norton. 2011. Pp. xxiv, 520. \$35.00.

Southern California became a land of promise during the middle decades of the twentieth century. Industrial development beckoned millions of sojourners from Texas and Tennessee, Arkansas and Oklahoma, men and women whose religious outlook would “southernize” evangelicalism in their new home and promote portentous changes in the politics of the state and, later, the nation. The origins of the religious Right, as Darren Dochuk explains in this nimbly written book, owe much to these Southland evangelicals.

By 1970 more southern-born residents lived in California than in any other state outside the South, and they had been moving there in droves ever since the Depression. Jobs drew them, and with the coming of World War II, booming defense industries turned the corridor between Los Angeles and Long Beach into the second largest industrial area west of Chicago. “Okies” and “Arkies” settled there as well as in the San Fernando Valley and Orange County, creating raw, sprawling, blue-collar communities composed of a hodgepodge of factories, dairy and citrus farms, and small homes and clustered around nothing in particular. The newcomers also built churches as soon and as cheaply as they could manage, and entire neighborhoods often identified as Southern Baptist, Church of Christ, Pentecostal, or Nazarene. Dochuk finds that these southern plain-folk transplants showed a distinctive religious disposition: they were rigid on doctrinal matters but inventive and pragmatic in their methods of proselytizing, which included regular revivals and door-to-door campaigns. The passage of time would sand off the rougher edges of their theology (as well as their racism), while their limber approach to spreading the gospel would foster a dynamic religious culture characterized by entrepreneurialism and experimentation.

If southern evangelicals in the Southland had a firm sense of their beliefs and mission, the first generation of sojourners had no clear political imperatives. The great strength of Dochuk’s analysis is illustrating the process by which their political attitudes coalesced, their objectives sharpened, and their strategy evolved during the postwar decades. In his view, plain-folk evangelicals were “Jeffersonians” who embraced pris-

tine capitalism, individualism, and localism—values which made them wary of labor unions and the New Deal state. But that these southern Democrats of the late 1940s would bond with a burgeoning conservative movement celebrating untrammelled free enterprise and condemning big government was anything but a foregone conclusion.

Dochuk shows how and why they did in a series of fascinating chapters that vividly evoke the people and institutions who brokered that alliance during the 1950s and 1960s. In the vanguard of those bridging the distance between southern plain-folk and secular conservatives were evangelical preachers, entrepreneurs, and entertainers. There was Billy Graham, who made the southern evangelical message more beckoning to a rising middle class; there was Billy James Hargis, who preached Christianity as a bulwark against communism; there was E. V. Hill, the charismatic African American preacher who criticized the civil rights movement and argued for eliminating racial prejudice one reclaimed soul at a time. Among business leaders there was George Pepperdine, the auto supply magnate whose charity funded the college (later university) that became the intellectual center for Christian libertarian thought, and Bill Bright, the candy manufacturer whose ingenuity hatched the Campus Crusade for Christ. As these latter efforts suggest, targeting the young through evangelistic and educational outreach was key to the strategy of the emerging religious Right.

By the time of Barry Goldwater’s run for the presidency in 1964, southern California’s evangelicals had entered the orbit of the Republican Right, and their first triumph came two years later with the election of Ronald Reagan to the governorship. Southern evangelicalism had ceased being a poor person’s religion, Dochuk pointedly observes, and that description no longer fit many of its adherents in the Southland. Prosperity had turned their hardscrabble settler communities into comfortable suburbs, and makeshift churches had given way to worship palaces like the Crystal Cathedral.

Dochuk’s narrative loses some momentum once it moves into the 1970s, when his southern evangelicals begin to think and act like political insiders. And southern California drifts from the center of his story as the successful political synthesis of religious and secular conservatives goes national with Richard Nixon’s drive for the presidency. But those are minor disappointments in a book that more than delivers on its opening promise to persuade the reader that the religious Right did not emerge full-blown from the ambitions of Jerry Falwell and Pat Robertson in the late 1970s. On the contrary, that awesome political force slowly gathered power as southern California became another notch on the Bible Belt and the engineers of that evangelical crusade made unexpected alliances with Republicans taking a hard turn right.

ANTHONY BURKE SMITH. *The Look of Catholics: Portrayals in Popular Culture from the Great Depression to the Cold War*. (CultureAmerica.) Lawrence: University Press of Kansas. 2010. Pp. xi, 284. \$34.95.

Anthony Burke Smith's outstanding study treats the intersections of U.S. religion, culture, and politics from the 1930s to the 1950s. He demonstrates how mass media portrayals of Catholics indicated shifting emphases in American life, from the Depression era's affirmation of the "public good" and its positive disposition toward social reform to the Cold War era's privileging of private prosperity and security and its resurgence of social and political conservatism. On the one hand, the book examines nonsectarian depictions of Catholics, including *Life* magazine photo-essays and feature films distributed by MGM and Universal. On the other, it analyzes identifiably Catholic subjects like the familiar radio and television personality Fulton J. Sheen and Academy Award-winning director John Ford, both of whom pursued Catholic perspectives in their popular productions. Ultimately, Smith argues persuasively that Catholicism—long suspect in Protestant-dominated America—supplied a powerful symbolic language for articulating and promoting key developments in national life during the decades before John F. Kennedy's election to the presidency.

Depression-era Hollywood's portrayals of Catholics commonly pursued two themes: their strong sense of ethnic identification and their uneasiness about inequality in industrial society. Expanding on the work of Lary May, Smith points out that both of these themes provided a means for engaging broad popular interest in communal solidarity in 1930s America, an interest that undergirded the New Deal. For example, he argues that the recognizably Catholic characters of the gangster and the priest in *Angels with Dirty Faces* (1938) voiced a shared critique of capitalism for leaving many to suffer in dens of urban poverty and iniquity. Other contemporary films, including *Boys Town* (1938) and *San Francisco Docks* (1940), explored the same message through Catholic characters. Appealing to broad audiences, such depictions, Smith writes, indicated "an extended Catholic moment in the country's collective psyche" (p. 15), a moment during which Catholicism would be a favored vehicle for exploring the meaning of American identity. In the earlier part of this "Catholic moment," religion was regarded as crucial to both cultivating a sense of shared social identification and challenging economic disparity.

But by the early 1940s, depictions of Catholics changed. Where previously Catholicism had signaled broad social commitments, it would become a medium for celebrating privacy and familial security during World War II and the Cold War. In making this point, Smith echoes Robert B. Westbrook's insights about how war stirred Americans' private, home-centered interests, even as they cheered far-flung military battles against totalitarianism. Blockbusters like *The Song of Bernadette* (1943) and *Going My Way* (1944) empha-

sized a privatized faith: in the former case, a religion that sustained devout individuals hemmed in by a world of doubters and secularists; in the latter, a religion that one could comfortably embrace within the domain of lace curtains, finely appointed dining tables, and general middle-class good taste. By the era of the Cold War, Smith argues, this shift toward Catholics representing private values mirrored a diminished popular interest in economic disparity and a more conservative turn in national politics. Of course, it also paralleled Euro-American Catholics' movement into the middle class and their subsequent abandonment of tight-knit urban, ethnic enclaves.

Smith indicates that American Catholics took pride that their faith could articulate American values, regardless of whether they were of a communitarian or individualist variety. Yet, he also demonstrates that popular culture's identification of Catholicism with communal aspirations did not entirely disappear in the 1940s, a point affirmed by James T. Fisher's recent study of *On the Waterfront* (1954). Smith shows that Fulton Sheen—in whom he sees a perverse emphasis on the spiritual value of the individual's physical and emotional suffering—championed private and interior dimensions of faith but also used radio and television to impress upon 1950s audiences their social responsibilities. He examines how John Ford, son of Irish-Catholic immigrants to Yankee New England, used religion in his films to advance his vision of a just society that could encompass a range of groups perceived as inassimilable "outsiders," a vision carrying 1930s concerns forward into the Cold War era.

In an intriguing chapter on Henry Luce's *Life* magazine, Smith shows how this Protestant media magnate saw Catholicism as a means to advance his vision of an "American Century" of global capitalism bolstered by military might. Another chapter on the oeuvre of Leo McCarey, the man behind *Going My Way* and other Catholic-themed films, traces this influential figure's conflation of religious piety, individualist values, and patriotic anticommunism.

This is a rich, sophisticated book that will help frame a broader narrative of religion and public life extending into the era of the "religious right," when American evangelicals and fundamentalists would take important cues from Catholics.

JAMES P. MCCARTIN
Seton Hall University

MARK S. MASSA. *The American Catholic Revolution: How the Sixties Changed the Church Forever*. New York: Oxford University Press. 2010. Pp. xvi, 191. \$27.95.

RICHARD LINTS. *Progressive and Conservative Religious Ideologies: The Tumultuous Decade of the 1960s*. Burlington, Vt.: Ashgate Publishing Company. 2010. Pp. viii, 244. \$89.95.

Each of these books is written with clarity of style and reflects an impressive and well-documented erudition.

Each in its own way takes readers beyond conventional stereotypes of progressives and conservatives and presents them with a deeper and more nuanced vision of the religious and cultural conflicts of America in the 1960s, which, in turn, provides insights into later cultural developments.

Mark S. Massa's "American Catholic revolution" began in November 1964, when the changes to the celebration of the Mass mandated by the Second Vatican Council (1962–1965) were first implemented. Most obviously, the Mass was now being said in the vernacular, not in Latin as had been the rule for hundreds of years. This and other changes made it abundantly clear that the Roman Catholic Church evolves. Once awakened, however, historical consciousness took on a life among the laity different from what the bishops of the council had anticipated, precipitating an identity crisis among U.S. Catholics that has generated conflict between progressives and traditionalists ever since.

Massa intends his book to be read as an essay in the history of ideas, with the crucial idea being historical consciousness. This well-established idea carried such explosive force for Catholics because for centuries the ecclesiastical hierarchy had insisted that the church was uniquely the place where one encountered that which did not, and indeed could not, change: the supernatural.

The subjects to which Massa devotes individual chapters are exceptionally varied and include the role of Father Frederick R. McManus in persuading priests and others through his writings that there were sound historical reasons for the changes Vatican II had called for in the forms of Sunday worship; the papal encyclical *Humanae Vitae*, which condemned contraception; the fate of Father Charles Curran, a leading theologian who publically dissented from the teaching of the encyclical; the actions of one order of religious sisters in response to Vatican II's general call for the renewal of religious life; the use of civil disobedience by a group of nine Catholics including two priests, Daniel and Philip Berrigan, to protest the Vietnam War; and the complex career trajectory of the Catholic priest, theologian, and later cardinal Avery Dulles. This variety not only makes for a rich and engaging narrative, but it also enables Massa to demonstrate the explanatory power of the idea of historical consciousness.

Particularly impressive is Massa's handling of the controversial encyclical *Humanae Vitae*, which was promulgated by Pope Paul VI in 1968. Massa is admirably lucid in his presentation of both the traditional natural law reasoning used by the pope and the arguments used by those moral theologians who wrote in response to the encyclical. He argues persuasively that not only major critics but also major supporters found Paul VI's natural law arguments wanting. In discussing responses to the encyclical, Massa summarizes the basic contentions put forward by an array of major Catholic moral theologians over the next quarter century. In its scope and subtlety, this chapter is a tour de force.

Since Massa focuses on change within the church, his

book would benefit from a discussion of the work of John Courtney Murray, S.J., a major American theologian and the chief architect of Vatican II's *Declaration on Religious Freedom*. This was the most controversial of all the documents of the council because its teaching, while declaring itself to be a "development" of previous church theology, appeared to many to represent a sharp break from it.

If there is one serious flaw in Massa's thesis that Catholicism since Vatican II is discontinuous with pre-Vatican II Catholicism, it is his failure to examine arguments for essential continuity, such as those of Popes John Paul II and Benedict XVI. To give an example, Massa briefly summarizes the reaction of John Paul II to the results of the council, suggesting that he attempted "to put the historicist genie back in the bottle" (p. 27). But John Paul II was a serious thinker and surely deserves more careful consideration than this. The same problem may be viewed from another angle at the end of the first chapter, where Massa discusses the profound issues raised by some of the bishops' decisions. Although liberal/progressive Catholics welcomed change, they would soon face the daunting specter of historical relativism. Massa frames the question vividly: "Was the gospel itself just another historically conditioned project, soon to be displaced by a better message?" (p. 14). But he never adequately answers it. Massa ought to have made it plain from the outset that the Catholic Church has always understood itself to have been entrusted by Christ and the Apostles with a message that must be handed on faithfully till the end of time.

So long as readers are alert to its onesidedness, Massa's book is worthy of a wide audience. Readers will find it illuminating, instructive, and wonderfully readable.

Richard Lints has also written an illuminating and instructive book dealing with the religious conflicts that arose between progressives and conservatives in America in the 1960s. Like Massa, he sees the 1960s as a revolutionary period with an unmistakable "before" and "after." He too wears his learning lightly. But the chief similarities with Massa's book end there. Whereas Massa focuses on internal developments within the U.S. Catholic Church, Lints focuses on external influences on American religion and culture; whereas Massa uses the idea of historical consciousness as the key to interpreting his material, Lints uses the categories of modernity and postmodernity.

Before introducing his wide range of subjects, Lints explores the assumptions of "the postmodern state of mind." Notable among these are globalization (and with it a growing sense of religious relativism), democratization (including a drive toward greater individual autonomy), and commodification (which renders all things marketable). Some of the subjects that Lints discusses are linked with concrete events: the civil rights movement, second-wave feminism, the anti-war movement, and the Jesus movement. Other topics are more abstract and deal with ideological controversies: the critique of mass culture and the prematurely heralded

"end of ideology"; the end of epistemology and the death of foundationalism; and the Death of God movement. There is also a chapter on how the philosopher Alasdair MacIntyre, then an atheist, grew increasingly critical of secularity throughout this period.

Lints persuasively demonstrates that the cultural upheavals of the 1960s in America were inspired by a hope for change to the status quo, even while the voices of protest were voices of retrieval. The civil rights movement provides perhaps the clearest illustration of this phenomenon. Although it was a protest movement, it simultaneously hearkened back to the impassioned call for individual rights that had fueled the American Revolution. It was thus, paradoxically, "a progressive movement whose core arguments were entirely traditional" (p. 52).

Lints argues that "the standard cultural war typology of religious conservatives versus secular progressives does not tell the full story" (p. 31). His analysis of evangelicalism in the 1960s provides a compelling illustration of this view. Although popularly perceived as having been a conservative force in American culture, evangelicalism found itself "a surprising ally with secular foes of religion in the fight against the establishment powers of the 1960s" (p. 9). Far from seeking a safe haven from the world, evangelicals were engaged in a revolution to overthrow the powers that be. The story of the evangelical movement told by Lints reinforces his thesis that the 1960s were marked by significant complexity and ambiguity.

This is a very interesting book on what its subtitle calls "the tumultuous decade of the 1960s." The use of the term "religious" in the main title, however, is problematic inasmuch as religion is secondary to much of the book. For example, the chapter titled "The Critique of Mass Culture and the End of Ideology" is not obviously linked to religion at all. Had the main title omitted the word religious altogether, it would be a more accurate reflection of the book's contents. Lints's study is best categorized as a work of cultural analysis, with religion arising from time to time in the course of that analysis. That said, the book is erudite and wide ranging and offers interesting insights on virtually every page.

University of Scranton

MARK HULLIUNG, editor. *The American Liberal Tradition Reconsidered: The Contested Legacy of Louis Hartz*. (American Political Thought.) Lawrence: University Press of Kansas. 2010. Pp. ix, 285. \$34.95.

In his principal contribution to this stimulating and erudite collection of essays, editor Mark Hulliung contends that Louis Hartz's *The Liberal Tradition in America* remains "a great book, fully deserving the attention it has received" since its publication in 1955 (p. 46). What the essays convincingly demonstrate is that continued attention to Hartz's basic thesis allows scholars in various humanities disciplines to cast considerable light on the political development of the United States

between the revolution and the present, even as the collection leaves the reader even more ready to relinquish Hartz and his rigid theorizing.

In Hartz's view, the United States, in contrast to all of Europe, was politically dominated by a form of Lockean liberalism that sprang from the lack of a feudal past in the American colonies, leaving the new nation locked in the embrace of a universally understood doctrine of private property rights, venture capitalism, limited government, and individual rights. Not only did the young nation avoid the class-based, violent social upheavals of countries such as France in the late eighteenth and early nineteenth centuries, but in fact the whole history of the United States up to Hartz's day was marked by a thinly veiled political and social uniformity. Oblivious to the social dislocations that feudalism bequeathed to the Old World, the United States could never create political space for socialism or other forms of radical politics.

While some of the distinguished contributors to Hulliung's volume find parts of Hartz's thesis valuable in a limited way, all of them spend much of the space allotted to them contesting or qualifying it in detail. To an historian, this is hardly surprising, and definitely welcome. As James T. Kloppenberg argues in his graceful and incisive essay, Hartz's picture of the broad sweep of American history is deeply problematic because it lacks due attention to questions of religious affiliation and belief, racial and ethnic disunity, governmental regulation of economy and society, and bitter fights for economic power between classes and interests. Most importantly, and most obviously for a historian, Kloppenberg points to the contingency of the historical record: even if historical actors and movements failed to press their entire program on a diverse nation, they often did change the course of America's political development in important ways, a fact obscured by an insistence upon a totalizing and unbending thematic framework that dismisses or downplays important organizing strands of the country's past. After Hulliung's analytical overview of Hartz's theoretical framework and its relationship to earlier intellectual readings of American history, Kloppenberg, Rogers Smith, Desmond King, Marc Stears, and Alan Gibson all point to the complex ways in which political reformers and state actors have driven constitutional and political change, influenced by economic imperatives, racial ideologies, and socially egalitarian programs at different times in history that have at least as much credibility as Hartz's partial and (in Kloppenberg's view) maddeningly imprecise reading of eighteenth-century liberalism. Richard J. Ellis and Carol Nackenoff argue that twenty-first-century politics and jurisprudence illustrate deep social and religious divisions over what America is about. Such conflict defines the nation today just as plausibly as some barely disguised consensus masquerading as political debate.

What gives this volume its intellectual power and coherence is not principally its wide-ranging critique of Hartz's perspective on American history, although all

the essays contribute to such an endeavor. Rather, the contributors use Hartz as a launching pad for their own exegesis of American political development, focusing variously on political philosophy, key historical episodes in American history, constitutional jurisprudence, or national politics. In addition, several essays prompt scholars to read Hartz with a view to understanding the political passions of 1950s America more clearly. King and Stears accomplish this particularly well when they argue that Hartz was keen to play up a national fear of the state in the post-Civil War years because he wanted to explain and contest the irrational fears of anti-statists and McCarthyites in the early 1950s. A number of essays work well as stand-alone pieces on the place of race and the South in American political development or the significance of progressivism and social reform to twentieth-century American politics, two themes that particularly impressed this reader. Occasionally I found the necessary explanations of Hartz and his limitations repetitive, but I was consistently impressed by the essays' high quality and intellectual reach. Although I will not be returning to Hartz's *Liberal Tradition* itself, I will return to this lively and wide-ranging collection of essays that testify to the richness and complexity of both the historical American political experience and the scholarship that helps us understand it.

CARL MIRRA. *The Admirable Radical: Staughton Lynd and Cold War Dissent, 1945–1970*. Foreword by HOWARD ZINN. Kent, Ohio: Kent State University Press. 2010. Pp. xvi, 224. \$34.95.

Carl Mirra has written a sympathetic biography of historian and radical activist Staughton Lynd, a prominent dissenter who paid a dear price for consistently expressing sometimes controversial views on a range of political and social issues in the latter half of the twentieth century. Mirra seeks to share the radical dissenter's perspective on a turbulent era involving anticommunist politics, the civil rights movement, the Vietnam War, and other social upheavals. The author's chief contribution is to provide the dissenting Left's view of these events. By focusing on one prominent individual in different contexts he offers readers a better grasp of these complex but interrelated happenings. The Lynd that emerges is a principled man, unapologetically political but not necessarily politic.

Mirra skillfully outlines Lynd's radical vision as an architect of the New Left, thereby highlighting difference from the Old Left. In their landmark sociological study of the 1920s, *Middletown*, Robert and Helen Lynd wrote of the "mainstream" tendencies in American society and culture. As members of the Old Left, the Lynds walked among intellectual elites who valued bureaucracies and top-down, coordinated activism. Their son, however, spent much of his life as an outsider who severed ties to many establishment organizations and

searched for kinship in alternative communities at the grass-roots level. He claimed, for example, conscientious objector status during the Korean War and the army discharged him; he fled a middle-class existence among intellectuals in favor of a utopian commune in rural Georgia; offered an Ivy League appointment, Lynd instead joined the faculty at a historically black college; he battled Democratic Party liberals because he believed their concessions slowed progress on civil rights; and his antiwar activities alienated his liberal colleagues at Yale, who denied him tenure. Lynd's life reminds us that radicals often clashed with liberals as much as with conservatives.

Although Lynd's communities changed, Mirra argues that his ethics remained remarkably consistent. Others evolved; Lynd often remained static and certain. Even as a young man in his twenties, Lynd had developed a clearly defined worldview built upon ideas of collective social justice and activism. He and his wife Alice recalled their time at the Georgia commune as the "definitive experience of their lives" (p. 32), but it soon broke up when other members embraced religious fundamentalism. In the 1960s, a leader of the Students for a Democratic Society (SDS) referred to Lynd as a "moral lodestone" (p. 78) who attracted younger activists. For someone who tenaciously questioned the motives of the mainstream, Lynd apparently rarely examined himself or his own assumptions. There are few instances of Lynd's personal introspection or intellectual evolution, even when events warranted it. During the Korean War, for example, the conscientious objector served as a medic. By assuming a supportive role in the military, had he discovered a way to participate in a war that he opposed? In later years, when Lynd vigorously protested the Vietnam War, did he ever express reservations about his earlier decisions? Readers are left to speculate.

The author crafts an image of Lynd as a moral-minded and committed activist who, despite knowing the consequences for his candor, challenged Americans to live up to their democratic ideals. Yet in his defense of Lynd, Mirra resists opportunities to scrutinize his subject's motives. Lynd eschewed movement elites in favor of the grass roots, but by the 1960s, he had become a celebrity who embraced high-profile conflict. He and other radical activists undertook a controversial and well-publicized fact-finding mission to Hanoi in 1965. Since then, Mirra complains that historians have taken unfounded, "backhanded swipes" at them (p. 101). A more evenhanded observation might acknowledge that Lynd was naïve to believe that his self-interested hosts welcomed him to further understanding; they appreciated his visit for propaganda purposes, not for an honest exchange of ideas. Mirra makes an exhaustive study of Lynd's tenure case and rightly looks at the event in terms of academic freedom, but he fails to address Lynd's role as a willing victim. Later, when Lynd sought the presidency of the American Historical Association, other leftist historians disapproved of the "theatrics" surrounding his candidacy (p. 155).

As the title suggests, Mirra views Lynd as a heroic prophet who often came down on the right side of history long before other Americans adopted his convictions about the aggressive tactics of anticommunists, the need for integration, and the hopelessness of the Vietnam War. The author's unprecedented access to Lynd's papers and private correspondence provides excellent insight into Lynd's thoughts and motivations; and while Mirra's personal relationship with Lynd and his wife enriches the book, such access has resulted in something approaching a personal memoir. "I do not conceal my admiration for my subject," Mirra boldly admits, yet he seeks to avoid "creating an exalted figure" or "sentimentalizing him" (p. 3). Readers may appreciate the author's candor, and enjoy a book with many merits, but they may also wonder whether the author successfully walked the fine line he set out for himself.

ERIC MILLER. *Hope in a Scattering Time: A Life of Christopher Lasch*. Grand Rapids, Mich.: William B. Eerdmans. 2010. Pp. xx, 394. \$32.00.

From the mid-1960s until his death in 1994, Christopher Lasch was a major force in American historical writing and on the public scene. His *The New Radicalism in America, 1889–1963: The Intellectual as a Social Type* (1965) was a brilliant rereading of the Progressive impulse, tracing a line of frustration with estrangement from "real life" from Jane Addams through the *New Republic's* fervent support of World War I to the realists just then plunging the nation into war in Vietnam. His *Haven in a Heartless World: The Family Besieged* (1977) was an angry historical account of the bourgeois family as beset by the forces of capitalism, post-Freudian feminists, and, above all, the expert legions of the therapeutic state. *The Culture of Narcissism: American Life in an Age of Diminishing Expectations* (1978), his bestselling and deeply pessimistic reading of the hollowed-out ego of the modern self, caught the ear of President Jimmy Carter, who recycled a variant of its rhetoric in his "malaise" speech. In his last, knotty, and difficult book, *The True and Only Heaven: Progress and Its Critics* (1991), Lasch came back to hope. Not through faith in progress, whose promise of infinite improvement he thought a liberal bamboozlement, but through a tradition of valuing limits, sufficiency, justice, and immediate moral and social relationships that he cored out of the American intellectual past and associated particularly with its populist, lower-middle-class, small-producer countercurrents. Few have driven a path through historical scholarship as broad as Lasch's, as fully in the public eye, or as sharp in its shifts in mood and direction.

Lasch was a public intellectual and an unceasingly political one. He moved in and out of dozens of efforts to remake the political-cultural Left and give it new intellectual heft and substance. He passed through intel-

lectual allegiances with similarly restless dissatisfaction: Karl Marx, Sigmund Freud, the New Left, and the antifeminist cultural Right. He was a brilliant essayist, reviewer, and polemicist. He was "the Richard Hofstadter of our generation," John Patrick Diggins wrote (pp. 378–379). But that catches only half the political-intellectual passions of Lasch's work or the controversies it left in its wake.

Lasch has been the subject of many essays of criticism and recollection. Now in *Hope in a Scattering Time* Lasch's turbulent work and times have been given a first-rate history. Lasch was a prolific letter writer, who left behind an extraordinarily rich record of his life and ideas. But the value Eric Miller has added can in no way be underestimated. He draws an affecting portrait of the painful rift between Lasch's political-intellectual trajectory and the much steadier Left-Progressive positions of his parents. He recounts well the way in which the effort to construct a critical mass of left-wing historians at the University of Rochester burst apart in bitter recriminations. Miller downplays none of the anger, the polemical excesses, the bruises, or the feelings of betrayal that Lasch both inflicted and felt himself.

Above all, Miller offers consistently insightful readings of Lasch's books and ideas. More than others who have been attracted to Lasch's work, Miller has an interest in Lasch's gradually growing appreciation of religious faith, but he does not exaggerate or overplay the theme. He sets Lasch deftly in the intellectual and political currents that swirled around him. In doing so, Miller resists the temptation to make Lasch into a representative figure of his scattering and urgent times. With a mind this full of contradictions and a final destination this quixotic, he was no more representative of his times than Henry Adams was of his. Miller leaves us with no well-trussed and buttressed edifice of Laschian thought. He shows us something more important and more difficult for the biographer to describe: a person thinking his way through his times with passion, engagement, and painful shifts in direction.

Published by a firm that specializes in religious titles, *Hope in a Scattering Time* has not received the attention it should have attracted. Miller recaptures a critically turbulent moment in the past of the American historical profession. This important book merits a wide and diverse readership.

PAUL T. MILLER. *The Postwar Struggle for Civil Rights: African Americans in San Francisco, 1945–1975*. (Studies in African American History and Culture.) New York: Routledge. 2010. Pp. xvi, 167. \$95.00.

The study of African American urban communities following World War II remains one of the most exciting fields in American history. Indeed, many excellent monographs have appeared in the past two decades. Thomas Sugrue's magisterial work, *Sweet Land of Liberty: The Forgotten Struggle for Civil Rights in the North*

(2008), challenged scholars to reconsider the southern framework that they have adopted in assessing the civil rights movement. Few historians have paid careful attention, however, to a parallel civil rights movement in the western states and territories. Paul T. Miller's brief book reveals that black westerners waged a civil rights struggle every bit as vigorous as that of their northern counterparts. Although the book is largely a work of synthesis, Miller has effectively mined local newspapers, particularly the San Francisco *Sun-Reporter* and the San Francisco *Chronicle*, in his effort to reconstruct the black community's attempt to gain full equality.

Like that of many West Coast cities, San Francisco's African American population exploded during the World War II era as southern migrants poured into the bay cities in search of work in wartime defense industries. The bay area shipyards proved especially attractive to African Americans because they paid high wages and actively recruited black southern migrants. Yet black wartime workers also brought a new militancy and desire to end racial discrimination in wartime industries. Thus Joseph James, a black migrant and president of the San Francisco branch of the National Association for the Advancement of Colored People (NAACP), successfully organized black shipyard workers to fight their relegation to a segregated auxiliary union in a case that reached the California Supreme Court.

One of Miller's contributions is a meticulous description of black leadership's persistence during the postwar years in demanding an end to employment and housing discrimination, as well as an improvement in the quality of education for black children in San Francisco's public schools. Although the war years opened many doors for black San Franciscans, they also unleashed a torrent of hostility toward black migrants, the majority of whom remained in San Francisco and challenged whites and Asians for employment, housing, and public space. African American workers slowly began to make inroads in many skilled, white-collar, and professional jobs. But San Francisco's unions closed their doors to the vast majority of African American blue-collar workers and permitted only a small number of skilled blacks to become members. Black and white leaders challenged these policies through Carleton Goodlett's *Sun-Reporter*, a weekly black newspaper every bit as militant as the Chicago *Defender* or the Pittsburgh *Courier*. The San Francisco chapter of the NAACP, which formed in 1915 and had carried on a long struggle for racial equity prior to World War II, spearheaded the postwar campaign for full equality. Through its local branch and the newly formed West Coast regional office, headed by Franklin Williams, the NAACP succeeded in breaking down many racial barriers in San Francisco.

Miller paints a convincing picture of San Francisco as a city in crisis during the 1960s and early 1970s as it tried to come to terms with de facto discrimination in public schools, police brutality, and urban renewal. The author's extended discussion of how white policy makers led by Justin Herman, who headed the city's redevelop-

ment agency, earmarked large sections of the Fillmore district as blighted in order to attract middle-class whites to this area and to ease traffic flow for white commuters to their jobs downtown is the book's most significant contribution. Urban renewal or "Negro removal," as many of its critics dubbed this policy, tore the social fabric of one of the largest black communities in San Francisco, a practice that redevelopment officials would replicate in other American cities.

Miller's book will be useful to students of urban and western history, and his research uncovers some fresh material in the Labor Archives and Research Center. For example, he examines the unrest in 1968 at San Francisco State College that led to a prolonged student strike and ultimately to the creation of the first Black Studies Program in the nation. Unlike many foundational works in black urban history, Miller's study offers no comparisons with events in other cities. Nor does he examine how other racial and ethnic groups fared relative to African Americans in San Francisco and the nation, and he does little to explain the significance of class within the city's black community. Despite these reservations, both students and scholars will find much to admire in the book.

Texas A&M University

SHANA BERNSTEIN. *Bridges of Reform: Interracial Civil Rights Activism in Twentieth-Century Los Angeles*. New York: Oxford University Press. 2011. Pp. xi, 339. \$24.95.

MARK BRILLIANT. *The Color of America Has Changed: How Racial Diversity Shaped Civil Rights Reform in California, 1941–1978*. New York: Oxford University Press. 2010. Pp. xii, 364. \$34.95.

Since the Kerner Commission's 1968 declaration that the United States was becoming two unequal societies of black and white, historians have devoted extensive research to understanding the roots of racial inequality and the failings of American democracy. However, a biracial approach has proved inadequate to grapple with the dynamics of the nation's increasingly diverse character. New books by Shana Bernstein and Mark Brilliant add to a now significant body of literature viewing the multi-ethnic histories of twentieth-century Los Angeles and California as precursors to our nation's present and future.

In a parallel universe, Bernstein and Brilliant could and perhaps should have worked cooperatively on a single monograph. Moreover, although their findings appear contradictory on the surface—Bernstein stresses interracial unity, whereas Brilliant foregrounds divergence—they are really two sides of the same coin and best considered jointly. Alas, Bernstein and Brilliant (like most of us) exist in a professional orbit that mandates the production of single-authored monographs. So let us consider how these two books fare side by side.

In *The Color of America Has Changed*, Brilliant examines examples of litigation and legislation mainly in-

volving black, Mexican, Chinese, and Japanese Americans in postwar California to highlight “the unique challenges and disparate shapes of civil rights making in multiracial places” (p. 6). In contrast with the book’s ambitious scope, Brilliant advances a modest thesis that “different axes of discrimination” necessitated “different avenues of redress” for the respective ethnic groups (p. 14).

While this argument mostly reinforces those of prior works, the author’s case studies offer some interesting insights. For instance, while National Association for the Advancement of Colored People (NAACP) leaders prioritized fair employment and housing, Asian and Mexican Americans were more likely to push for measures that either extended rights to the foreign-born or served the social needs of immigrant communities. Historians as well as policy makers will have to wrestle with the tensions Brilliant describes. At the same time, I suspect some readers may want Brilliant to explain further how and why he chose the legal and historical cases he analyzes, what makes them pivotal over others not considered, and how they fit within the longer historical trajectories of the communities under study. Still there is no disputing his basic assertion that a shared general interest in ending discrimination did not guarantee full cooperation in practice. In some cases, the pursuit of different avenues of redress put communities of color into direct conflict with each other. In perhaps the book’s most intriguing and complicated chapter, Brilliant notes that the NAACP’s desire to disperse students throughout the San Francisco school district in the interest of promoting integration was questioned by Chinese American parents pushing for a neighborhood school with resources for bilingual instruction.

Multiracial coalitions did not always congeal from the grass roots, but certain forms of multi-ethnic political strategy emerged consciously or unconsciously from the top down. Whereas liberal Democrats like Pat Brown often prioritized the concerns of black political leaders, given that community’s relatively high rate of citizenship and electoral participation, conservative Republicans like Ronald Reagan responded by championing issues like bilingual education to attract Latinos and Asians and thereby split the “minority” vote. Ultimately the GOP’s Golden State resurgence hinged more on its ability to play up white victimhood and win over voters who viewed civil rights measures as an impediment to individual freedom and a form of reverse discrimination. Ironically, resisting that brand of revanchism would provide a new basis of interethnic solidarity for the post-civil rights era, although such consideration is beyond the scope of this book (which surprisingly does not reference any of the paradigm shifts in racial identity and politics that arose with the black, brown, and yellow power movements of the 1960s).

By contrast, “interracial civil rights activism” and coalition building are the core subjects of Bernstein’s *Bridges of Reform*, which focuses its geographic scope on Los Angeles. While Bernstein is concerned with

many of the same groups as Brilliant—the NAACP, Community Service Organization (CSO), Japanese American Citizens League—her conclusion differs from his. “Interracial cooperation,” she contends, “shaped the public consciousness on civil rights, fostered careers, and generated influential local and national civil rights initiatives and even victories that, though limited, represented significant transformations” (pp. 8–9).

The first difference here is one of emphasis: Bernstein sees the glass of interracial unity as half full. This is partly because her discussion of “interracial unity” more explicitly draws attention to the central role Jewish leaders played in civil rights organizing involving communities of color. In this regard, her primary research has been bolstered by mining California State University Northridge’s Jewish Federation-Council of Greater Los Angeles’ Community Relations Committee archive—a massive and invaluable collection that was being catalogued when she was a doctoral candidate. Jewish leaders believed that the best strategy to fight antisemitism was a broad-based one that promoted tolerance and understanding more generally.

In addition, Bernstein trains her eye more on mass-based community organizing efforts that invited popular participation and less on the type of litigation and lobbying efforts that tended to remain the preserve of professionals and specialists. The former lend themselves to inclusive discourses more than the latter. For instance, in a manner that Bernstein suggests foreshadows the Obama era, Edward Roybal won election to the Los Angeles City Council as an insurgent who worked with the CSO to register a wave of new voters and consciously strove to link his base in the Mexican American community to a multiracial coalition of supporters.

While Brilliant’s book is significantly longer and more detailed, Bernstein’s book does more to situate its case studies within historical and political contexts. Although both studies revolve around civil rights discourses shaped by Cold War liberalism, Bernstein shows how the stances adopted by anticommunist civil rights activists represented both continuity with Popular Front-era organizing and a repudiation of certain Left principles and people perceived as taboo. One need not valorize the general program or ideology of the organized Left to recognize that it was a key progenitor of expressions of multiracial solidarity and organizing campaigns that brought diverse Americans into dialogue for the first time.

Bernstein defends the move by anticommunist liberals to claim the vital center and critiques previous scholarship (my own could be included here) for not fully investigating their achievements. But she also provides ample evidence for readers to judge for themselves whether the choices of civil rights liberals should be viewed as pragmatic or parochial. In this sense, she also helps us to see how the differences of approach and interest between the groups described by Brilliant represented competing attempts to promote visions of reform that fit within the narrowing parameters of Cold

War liberalism. Notwithstanding Bernstein's recuperation of Earl Warren (whose rallying cries for Japanese American interment she portrays as an exception to a consistent commitment to civil rights), American liberalism has always traded in false universalist discourse, and its repudiation of white supremacist exclusion meant subjecting minorities to a regime of unequal and differential inclusion.

Whereas Brilliant tends to take the differences between the civil rights leaders he studies at face value, Bernstein seeks to historicize them in a manner that places her book relatively more in line with ethnic studies and postnationalist American studies scholars such as Eric Avila, Clement Lai, Natalia Molina, Laura Pulido, Greg Robinson, George Sánchez, and Daniel Widener. She goes to greater lengths to explore how transnational developments influenced ethnic identities and community agendas. She also takes more cues from scholars who have studied race as a relational construct, demonstrating, for instance, that blackness is defined by how it is positioned with reference to whites, Asians, and Latinos. As such, she devotes more effort to making sense of the production of racial knowledge and the production of difference itself.

Taken collectively, these two books ought to signal a crossroads moment in multi-ethnic studies of California (and the United States). The imperative to think in multi-ethnic terms and employ a multipolar analytical framework has now been firmly established. These works will encourage new generations of scholars to take on more case studies revealing the complicated history of diversity. While this remains necessary work, it must be connected to the theoretical and epistemological debates on race, culture, and politics that have animated cutting-edge research in ethnic studies. For those seeking to learn more about the intricate details of legal cases and legislation involving land rights, interracial marriage, fair employment and housing, school integration, and bilingual education, Brilliant offers a well-researched and documented source book. To put these phenomena in the context of social history and social movements, use Bernstein's book as a pathway into a much larger body of developing literature and analysis.

SCOTT KURASHIGE
University of Michigan

HOWELL S. BAUM. *Brown in Baltimore: School Desegregation and the Limits of Liberalism*. Ithaca: Cornell University Press. 2010. Pp. xv, 274. Cloth \$75.00, paper \$24.95.

Howell S. Baum's book begins with a description of how Baltimore desegregated its public schools after the Supreme Court's ruling in *Brown v. Board of Education* (1954). Almost immediately after the high court made its decision, Baltimore modified a long-established open enrollment policy that had allowed black and white students to attend any school that had been designated for their race. Henceforth, students were al-

lowed to attend any school without regard to race. Black leaders welcomed this freedom, either as a first step toward racially balanced integration or because they did not object to racially disproportionate enrollments, if such enrollments were not compelled by law. "Many blacks who remembered legal segregation did not want anyone of any race ever again telling them where to go to school" (p. 184).

Due to white flight, racial enrollments in Baltimore went from sixty-three percent white and thirty-seven percent black in 1954 to eighty percent black thirty years later. Some schools became almost all black while others remained mostly white. This prompted liberal activists and federal civil rights lawyers to demand what they considered a better balance in racial enrollments: a racial mix in each school that did not depart too far from the citywide racial ratio. Baum concedes that the sequence of "interim plans, plans, and revised plans . . . And the back-and-forth of these proposals and federal critiques could numb the mind." This indeed is the case. Baum's detailed description of these developments is thoroughly researched but not a book that one would read for pleasure. Fortunately, however, it also illuminates what Baum calls the "big picture" of school desegregation (p. 184).

In the 1950s and early 1960s, Baltimore was widely praised for complying with *Brown*. Baum, however, finds fault with those who defined desegregation as freedom from coercive racial discrimination. He does so because free choice allowed white students and strong black students to gravitate toward predominantly white schools, and this allegedly damaged other black students. It would have been better, Baum maintains, if liberals had rejected "egoistic individualism," had embraced the "obligations of a collective identity," and had assigned students by race to achieve racially balanced enrollments at individual schools (p. 16)..

Baum implicitly censures Chief Justice Earl Warren for wording the implementation order, known as *Brown II*, to call for an end to racial discrimination rather than an end to racial imbalance. Baum believes that liberals were mistaken to think "that school enrollment should be a matter of individual choice, free of coercion by local or national government" (p. 184). He believes that these mistakes eventually led to "resegregation"—not only in Baltimore but also in other cities such as Washington, D.C., thirty miles south of Baltimore, where after *Brown* all students were required to attend schools in their neighborhoods, but the overall enrollment shifted from sixty percent black and forty percent white in 1954 to ninety-five percent black and three percent white twenty years later.

Baum rejects sociologist James S. Coleman's explanation of the trend: that it was "quite understandable" for whites and middle-class blacks to avoid schools with sizeable black enrollments, since many of these schools "failed to control lower-class black children" and had to spend "90 percent of the time . . . not on instruction but on discipline" (Coleman, quoted in *National Observer*, June 7, 1975). Baum concedes that some Baltimore par-

ents were concerned about “rumors of sexual promiscuity, drug abuse, and violence” (p. 130). He acknowledges that whites became especially apprehensive after the race riots of 1968, which in Baltimore involved 1,208 major fires and the destruction of 1,049 businesses, along with 6 killed, 600 injured, and 5,512 arrested (“nearly all black”) (p. 135). But Baum’s emphasis is on two other points: the shortcomings of a liberalism that extolled individual choice and “repudiated a public interest in racial mixing” (pp. 79–80), and a persistent white racism—a pattern of “irrational thinking that led whites to resist contacts with blacks” (p. 221). According to Baum, whites acted with “sheer irrationality” (p. 5). They refused to recognize that “social research showed” that children of both races benefited if they attended schools that were racially balanced (p. 10).

Some scholars have seconded Baum’s views, but others have dissented, among them David J. Armor, Christine H. Rossell, Nancy St. John, Abigail M. Thernstrom, Stephan Thernstrom, and Herbert J. Walberg. As Chief Justice John G. Roberts noted in *Parents Involved in Community Schools v. Seattle School District No. 1* (2007), there is no consensus when it comes to “whether racial diversity in schools in fact has a marked impact on test scores . . . or achieves intangible socialization benefits.” Baum, however, neither refutes nor even mentions the work of what might be called “the dissenting scholars.” He simply asserts a proposition that is debatable if not demonstrably false: that research shows that black children benefit, and white children do not suffer, from attending racially balanced schools. This is a weak foundation for the sort of coercion that Baum recommends.

RAYMOND WOLTERS
University of Delaware

JAMES T. PATTERSON. *Freedom Is Not Enough: The Moynihan Report and America’s Struggle over Black Family Life—from LBJ to Obama*. New York: Basic Books. 2010. Pp. xvii, 264. \$26.95.

James T. Patterson offers a book-length consideration of the U.S. Department of Labor study from 1965 that has been remembered as the “Moynihan Report.” Patterson surveys the arguments that the report’s author, Daniel Patrick Moynihan, made before the report was published, in the report itself, and on behalf of the report in the years that followed. Patterson places Moynihan’s claims in historical context and treats some of them skeptically. He also endorses some of Moynihan’s arguments directly and discusses sympathetically other well-known actions and utterances by Moynihan, such as his call for the “benign neglect” of urban problems while an official of the Nixon administration.

Long-term readers of social policy scholarship will find much of the ground covered here familiar. As in some public discussions of poverty and family patterns, Patterson claims that the discussions of illegitimacy and single parenting in the Moynihan Report were “prophetic” (p. xvi) and “prescient” (p. 63). He describes

negative reactions to the report as products primarily of misunderstanding: readers focused too much on Moynihan’s treatment of African American behavior and his language about sex and gender. But Moynihan’s “central message,” Patterson insists, “blamed white racism and structural forces” (p. 62) for African American poverty and the relatively low levels of marriage among African American parents. According to Patterson, the brief period in 1965 during which Moynihan completed his report and President Lyndon B. Johnson called for “equality of result” in a commencement speech at Howard University represented a high-water mark for the consideration of expansive social policy in the United States. The widespread rejection of Moynihan’s report, Patterson continues, had negative effects: it helped foreclose the possibility of new macroeconomic policies that would have made jobs available to low-income men, and it generated an unnatural silence in which “many liberals and civil rights leaders . . . avoid[ed] talking about many black family issues” (p. xvi). Patterson argues as well that Moynihan has been vindicated. Renewed interest in the behavior of African American poor people since the 1980s, including the rise of the troubled but influential category of “the underclass” and the castigation of black fathers by public figures such as Bill Cosby and Barack Obama, demonstrates to Patterson that the tide turned and intelligent opinion came to accept the main features of the Moynihan Report.

Most problematic is this book’s limited engagement with critiques of Moynihan’s ideas, including those by Patterson’s scholarly colleagues and especially by feminists. Patterson references the work of black feminists from the 1970s, such as Michele Wallace and Joyce Ladner. But he does not engage the work of more recent feminist historians or social policy scholars who have written about the Moynihan Report, Moynihan’s Family Assistance Plan initiative from the late 1960s, the Family Support Act of the 1980s, and theories similar to Moynihan’s such as those of sociologist William Julius Wilson. Such critics have argued that Moynihan, Wilson, and others who have focused on African American sexual and family behavior treated African American women’s poverty as a social problem not worth solving in itself, except insofar as its solution demanded educational or workforce investments directed at men.

Although Patterson claims otherwise, in the years after the Moynihan Report was published, no scholarly consensus emerged about the relationship between poverty and family structure. Feminists continued to argue that governmental efforts to reduce women’s poverty should focus on the labor market and public benefits, as well as on efforts to ameliorate sexism, racism, homophobia, and the unfair treatment of disabled people. Historians of the debate over the Moynihan Report should note that feminists in the 1970s, 1980s, and 1990s tried to direct research and public policies away from the question of whether women were married or unmarried, and toward questions such as women’s educational access, segregation in employment, levels of

unionization, experiences of intimate violence, and child care costs. Policies designed to create or sustain marriages, feminists predicted, would probably fail; they would also run the risk of making it more difficult for women (and men) to exit violent or unworkable relationships. By contrast, public benefits that provided a floor of decent support for poor women and labor market policies that interrupted segregation and provided access to education could reduce women's poverty.

Patterson writes of the "destructive controversies that followed release" (p. xii) of the Moynihan Report. From the perspectives of women's and African American history, however, the controversies may have been more productive than destructive, calling into question stereotypical characterizations of black parents that had circulated among both scholars and non-scholars for many years.

PHILIP F. RUBIO. *There's Always Work at the Post Office: African American Postal Workers and the Fight for Jobs, Justice, and Equality*. Chapel Hill: University of North Carolina Press. 2010. Pp. xxiii, 446. Cloth \$65.00, paper \$24.95.

Given the recent attacks on the rights and livelihoods of public sector workers and the cut backs in the United States Postal Service (USPS), Philip F. Rubio's book on postal workers is a timely reminder of the historical struggle waged by public servants for social justice. His analysis of racial politics and workplace rights in the USPS, one of the largest employers in the United States, deserves a prominent place in a growing historiography on public sector workers. Even though federal workers have neither the protection of the National Labor Relations Act nor the right to strike, they have been active participants in the labor movement, as evidenced by Rubio's analysis of the 1970 postal worker strike, "the largest nationwide wildcat strike in U.S. labor history" (p. 7). Despite the need for clarity in some of the arguments presented, Rubio's book illustrates how public workers advanced the cause for labor and civil rights in the twentieth century.

Rubio—a former postal employee with a feel for the ethos of postal work—casts his gaze on black postal workers, who have long leveraged their employment for economic stability and a toehold in the middle class. Using the myriad postal unions as his focal point, Rubio argues that African American workers, especially those in the National Alliance of Postal Employees (later the National Alliance of Postal and Federal Employees [NAPFE]), served as a powerful force for labor and civil rights from the early twentieth century to the 1970s. Toward the middle of the book, he advances a secondary but critical thesis concerning the obstacles faced by progressive unions during the 1940s and 1950s.

Rubio takes issue with historians who "blame the cold war" for destroying the black-left-labor coalitions that had emerged during the Great Depression (p. 76).

Instead, he stresses that the NAPFE continued to pursue civil rights unionism despite an inhospitable environment, pointing out that the difficulties it faced in achieving its fair employment agenda had more to do with the white supremacy prevalent among all-white unions and postal supervisors than with anticommunism. If this were the case, then why did white supremacy, which clearly predated this era, intensify during the late 1940s and 1950s? Was racial prejudice amplified by Cold War anticommunism? Later in the book, Rubio acknowledges that Jim Crow and McCarthyism were "mass-based interlocking systems that enforced conformity of political thought and action, and reinforced the system of white privilege and black discrimination" (pp. 114–115). This conclusion seems compatible with the views of blame-the-Cold-War historians (whose identities are rather vague and frequently missing from end-notes), who would concur that white supremacists often used anticommunism to maintain racial hierarchies. Moreover, the latter assertion more clearly recognizes that anticommunism, antistatism, and racism frequently blended seamlessly; at times, for instance, anticommunist attacks on federal authority undercut the ability of activists to use the federal government to end local Jim Crow practices. Finally, Rubio's chapter on McCarthy-era loyalty purges in the post office provides ample evidence of the relevance of anticommunism to the fate of social justice activists. Ultimately, a more succinct, direct analysis of the complex interplay of race and class in the post office and its unions may have clarified how his argument truly differs from other historical treatments of the topic.

Among the strongest chapters in the book are those dealing with the 1970 wildcat strike, a compelling and untold story of worker outrage and courage. Reading this section, one senses how poor pay, difficult working conditions, and a feudalistic management culture led postal workers, who since 1962 had only very limited collective bargaining rights and no right to strike, to walk out in March 1970. Starting in New York City and quickly spreading to other key cities, the spontaneous strike strangled the mail and commerce for over a week. It ended with a significant pay raise and other concessions, but it also marginalized the postal service industrial unions, especially the NAPFE, and could not halt the partial privatization and corporatization of the post office. Despite its history of civil rights unionism, NAPFE leaders did not support the strike, although many of its members did. Rubio offers an exceptional discussion of how NAPFE embraced some but not all aspects of the black power movement. Similarly, he emphasizes the role played by militant black veterans and black postal workers in framing the strike, their demands, and organization, although NAPFE remained in the background during the strike. Its ambivalence suggests the tangled relationship between civil rights activism and the causes and aims of the walkout. In sum, Rubio's book mines new and necessary areas of study and points to the instrumental role black public workers

played in the American labor and civil rights movements.

TOBIN MILLER SHEARER. *Daily Demonstrators: The Civil Rights Movement in Mennonite Homes and Sanctuaries*. (Young Center Books in Anabaptist and Pietist Studies.) Baltimore: Johns Hopkins University Press. 2010. Pp. xxi, 360. \$65.00.

Tobin Miller Shearer's study of the two largest Mennonite denominations, the (Old) Mennonite Church and the General Conference Mennonite Church, which had 88,947 and 36,458 members respectively in 1971, makes a useful, if not always convincing, contribution to growing scholarship about the response of religious groups to the U.S. civil rights movement. Largely eschewing conventional organizational history, Shearer combines traditional sources such as archival collections, diaries, and interviews with analysis of photographs and Mennonite costume to produce case studies intended to broaden our conception of civil rights movement participation and place Mennonites at its center. Shearer seeks to redefine civil rights movement activity to include what he calls "daily demonstration," meaning "interracial off-street action" (p. 238) in Mennonite homes and churches that, in his view, constituted "active sites of, rather than staging grounds for, civil rights activity" (p. xii) and "made possible a historic transition in post-World War II American society" (p. ix).

Following an overview of Mennonites and race between 1918 and 1971, Shearer devotes chapters to African American and white female Mennonite opponents of segregation in the Mennonite Church, black children who stayed in white Mennonite rural homes for one to two weeks in the Fresh Air program, Mennonite pastor and civil rights activist Vincent Harding, Mennonites and racial intermarriage, church integration, responses to the Black Manifesto, and a thematic summation claiming to advance "A New Civil Rights Story" (p. 221). Many of Shearer's findings are in line with studies of other predominantly white denominations. For example, church leaders and officials were generally ahead of their white congregants in accepting racial change, African American and white members were diverse and not monolithic in their response to racial discrimination, and Mennonite attention to race declined significantly after 1971.

While some black and white Mennonites participated in civil rights marches during the 1960s, most Mennonites opposed such action, predominantly on the traditional Mennonite grounds of separation from a sinful society and refusal to promote change through coercive methods. Harding, an African American New Yorker who advocated direct action, endured jail for participating in a civil rights demonstration in Albany, Georgia, and worked with Martin Luther King, Jr., left the General Conference Mennonite Church in the mid-

1960s frustrated by the failure of his vociferous advocacy to align the church behind the civil rights movement. Shearer acknowledges that Mennonite churches and missions typically mirrored secular *de facto* and *de jure* segregation in the North and South, most white Mennonites continued to oppose racial intermarriage when their church accepted it, and paternalism pervaded Mennonite treatment of African Americans. He is also attentive to differences between Mennonite denominations. More committed to evangelism, the (Old) Mennonite Church gained more African American members than the General Conference and consequently developed an African American leadership that challenged racism in the church but proved unable to eliminate it.

Unfortunately, Shearer often overstates his case, overestimates the significance of the Mennonites in civil rights history, and advances some dubious assertions in search of interpretive novelty. He argues that Mennonites were "disproportionately influential across the nation" but does not explain by what criteria (p. xvii). He promises "new insights about the civil rights movement" but does not define the movement and seems unfamiliar with much of its historiography (p. 231). He advances claims for novelty with phrases such as "than previously thought," "than is usually suggested," and "than traditional scholarship has suggested" but often without footnotes (pp. 231–232). His claim to offer a "new story of the Second Reconstruction [that] flattens out the civil rights timeline" misses a wealth of scholarship (p. 233). To argue that Mennonites "took part in the civil rights movement whilst staying at home and going to church" makes the movement too amorphous and deprives it of analytical precision (p. xx). Shearer's assertion that "Those who ventured across racial lines in intimate settings displayed courage equal to that of demonstrators who faced fire hoses and attack dogs" is highly doubtful (p. ix), and his argument that "white Mennonites demonstrated on a daily basis to bring an end to segregation in the church" is unsubstantiated (p. 220).

Shearer sometimes overstates an argument and then retreats from it. He asserts that African American children who participated in the Fresh Air program "disrupted the lives of their hosts to such an extent . . . that they changed their hosts' racial attitudes" (p. 61), yet subsequently concedes "Many . . . hosts . . . remained disinterested in the racial lessons proffered by their young guests" (p. 92). Shearer also contends that "Fresh Air children demonstrated on the front lines of the civil rights movement" (p. 240) and "brought the movement to communities untouched by adult organizers" (p. 228), although his evidence suggests that the children were seeking a vacation and did not regard themselves as civil rights participants.

MARK NEWMAN

CLIVE WEBB. *Rabble Rousers: The American Far Right in the Civil Rights Era*. (Politics and Culture in the Twen-

tieth-Century South.) Athens: University of Georgia Press. 2010. Pp. xi, 301. \$24.95.

In recent years, David Chappell, Kevin Kruse, and George Lewis have followed in the footsteps of Numan Bartley and begun to analyze in depth the southern massive resistance movement that emerged in the wake of the *Brown* decision in 1954. For the most part, these historians have focused on mainstream segregationists and paid little attention to the white militants who openly advocated violent resistance to racial integration. Now Clive Webb, who previously explored black-Jewish relations in the civil rights-era South, has broadened and deepened our understanding of massive resistance by shining a spotlight on the racial extremists who, ironically, may have ultimately damaged and discredited the segregationist cause through their virulent rhetoric and violent actions.

Webb focuses on five individuals in particular. Bryant Bowles of the National Association for the Advancement of White People and John Kasper of the Seaboard White Citizens' Council mobilized grass-roots resistance to school integration in Delaware, Virginia, and Tennessee. Rear Admiral John G. Crommelin repeatedly (and unsuccessfully) ran for public office in his home state of Alabama after he left active duty and participated in a network of far right organizations. Major General Edwin Walker, who had commanded the 101st Airborne Division during the Little Rock Crisis of 1957, later led the violent opposition to the admission of James Meredith to the University of Mississippi in 1962. Both men also consorted with a cabal of retired senior military officers who flirted with the idea of overthrowing the government. Finally, J. B. Stoner spent six decades travelling the South and promoting (if not practicing) violence in the name of white supremacy.

Webb offers a number of interesting and compelling insights. First, he documents convincingly how anti-semitism permeated the far Right and constituted a significant difference, at least in degree if not in kind, between militant and mainstream segregationists. Second, Webb asserts logically, although with less hard evidence, that white extremists strengthened the segregationist cause by making southern conservatives appear more moderate and respectable in comparison. Finally, the author argues persuasively that it is overly simplistic and reductionist to dismiss the individuals in question as pathological and unprincipled. On the contrary, he contends, they were products of their environment and heritage who sincerely believed in the offensive ideas and causes they espoused.

Here Webb perhaps pushes his argument too far. While it is undoubtedly correct to see these militants as products of their racist and antisemitic environment, it is equally hard not to see them as at least partly pathological in their views given their at times bizarre personal histories. Kasper, for example, had a twisted relationship with the controversial poet Ezra Pound (based on their personal correspondence) and may have been bisexual, with black lovers of both sexes. In

short, it seems quite possible that these extremists were both pathological and products of their society. Webb also makes claims for their influence that seem exaggerated or unproven. He frequently generalizes about how racial militants energized and mobilized large numbers of grass-roots southern whites. Yet none of these individuals attracted mass followings, and when Crommelin and Stoner ran for public office, they always lost by large margins. This may indicate how *sui generis* they were, although in fairness the extremist message was probably co-opted to an extent by more "respectable" and popular segregationists.

Nevertheless, Webb's monograph adds significantly to our knowledge of the far Right in the civil rights era. The author might have mentioned that Asa Carter, who worked with John Kasper, served as a speechwriter for Alabama Governor George Wallace, and helped create the slogan "Segregation today, segregation tomorrow, segregation forever," later became a novelist and, under the pen name Forrest Carter, wrote two bestsellers, *The Rebel Outlaw: Josey Wales* and *The Education of Little Tree* (purportedly the memoir of a Native American). But Webb has performed a real service for the profession by wading through documents, speeches, and pamphlets that others might not want to touch, let alone analyze. Certainly it is difficult to read these racist, fascist, and antisemitic claims and not come away with a deep sense of disgust and revulsion, combined with a renewed appreciation for the courage and conviction of those who opposed them.

MICHAEL FLAMM

Ohio Wesleyan University

WILLIAM S. CLAYSON. *Freedom Is Not Enough: The War on Poverty and the Civil Rights Movement in Texas*. Austin: University of Texas Press. 2010. Pp. x, 210. \$55.00.

In this work William S. Clayson draws several lines of argument. First, he identifies the unintended but inextricable relationship between President Lyndon B. Johnson's War on Poverty and the civil rights movement in the 1960s. He notes that the Office of Economic Opportunity (OEO), created just one year after the passage of the Civil Rights Act in 1964, was designed to promote "the colorblind ideal in regard to the War on Poverty" (p. 9). In other words, poor whites as well as poor minorities were to benefit from the OEO's various programs. In spite of that intention, whites clearly identified the War on Poverty with minority groups, including those deeply involved in the civil rights movement, and so avoided taking part in OEO-sponsored programs. As a result, not only were impoverished African Americans and Mexican Americans the main beneficiaries of agencies such as Volunteers in Service to America (VISTA), Head Start, and Job Corps, but they also became the local administrators of these organizations—that is, insofar as a number of younger, militant, and anti-assimilationist leaders were able to supplant middle-class, white idealists.

A second point "is to demonstrate how significant the

War on Poverty was to Texas in the 1960s" (p. 6). Clayson cites both positive and negative outcomes. For example, OEO-based programs in Texas achieved a record of lifting up a sizable percentage of economically marginalized populations from poverty. However, serious tensions surfaced between Mexican Americans and African Americans as each group competed for limited government funds that they hoped would help accomplish their respective goals of self-determination.

Last, the book challenges the view commonly held by earlier scholars that the War on Poverty was a colossal failure in the history of U.S. public policy. On the contrary, Clayson argues that the War on Poverty succeeded insofar as it strengthened or gave birth to antipoverty efforts at the grass-roots level. He substantiates this claim by pointing to the gains of vibrant action groups such as Communities Organized for Public Service in San Antonio (COPS), the El Paso Interreligious Sponsoring Organization (EPISO), and The Metropolitan Organization in Houston (TMO).

This book has at least two major strengths. First, its beginning chapters provide non-specialists with helpful overviews of Texas politics, economics, and race relations in the 1950s and early 1960s and the general impetus, legislation, and implementation of the War on Poverty, including the Texas scene. Second, the author skillfully compares the establishment, objectives, and results of various OEO programs within the distinct contexts of three urban centers—San Antonio, El Paso, and Houston—highlighting both similarities and differences. As Clayson also notes, Texas serves as a particularly useful "statewide case study" (p. 5) in that such a large proportion of its residents were poor in the 1960s and its identity both as a southern and western state uniquely highlights relationships among Mexican Americans, African Americans, and white bureaucrats. That the originator of the War on Poverty, President Johnson, was himself a Texan provides even more justification for examining its development in that state. One possible weakness of the book is its failure to provide detailed characterizations of some of the leaders of the War on Poverty in Texas. While hardly necessary, including personal vignettes may have helped to shed more light on the motives and strategies of those most intimately involved in local antipoverty measures.

This study joins a growing body of literature that seeks to recover the positive aspects of the War on Poverty. In contrast, earlier studies tended to dismiss any lasting success on the part of the OEO. Their authors often approached the War on Poverty from a limited perspective that focused mainly on goals and outcomes as envisioned by leaders and administered by bureaucrats on the national level. When a conservative backlash led to the dismantling of the program—commencing with the Nixon administration—the War on Poverty was interpreted as little more than a dismal failure. By approaching the War on Poverty as it was fought in specific locales, however, Clayson contributes to the rehabilitation begun by scholars such as Robert Bauman (*Race and the War on Poverty: From Watts to East L.A.*

[2008]) and the contributors to *The War on Poverty: A New Grassroots History, 1964–1980* edited by Annelise Orleck and Lisa Gayle Hazirjian (2011).

ALAN J. WATT

Independent Scholar

WILLIAM S. BUSH. *Who Gets a Childhood? Race and Juvenile Justice in Twentieth-Century Texas*. (Politics and Culture in the Twentieth-Century South.) Athens: University of Georgia Press. 2010. Pp. x, 257. Cloth \$59.95, paper \$24.95.

William S. Bush's book is a detailed history of juvenile corrections in Texas through most of the twentieth century, based on extensive archival research. Race partially shapes the story, as it often seems that "therapeutic rehabilitation" was only for younger white juveniles and "correctional retribution" for everyone else (p. 108). Only the former might receive the consideration due children or adolescents. Bush regards adolescence as, ideally, an extended, protected childhood. Race and gender are, however, secondary themes. Oppressive institutional regimes that denied juvenile delinquents a sheltered adolescence and the struggles to defend or alter those regimes occupy center stage. Most boys and girls, whether lower-class white, African American, or Latino, endured prisonlike discipline and extensive physical abuse (boys somewhat more than girls) in the large correctional institutions that constituted the state's main response to juvenile delinquency. These training schools and the fates of their inmates form the book's main subject, although a chapter also describes community-based programs in Houston.

The book is loosely structured around multiple cycles of tentative reform (in the 1910s, 1940s, and from the 1960s through 1980s), followed in each case by panic over juvenile crime and backsliding into regimentation and brutality. Located in rural settings far from the big cities that supplied most inmates and supervised by bureaucrats and business-dominated boards who cared mostly for control, the training schools proved resistant to change until the 1970s. Bush blames drastic underfunding by the state legislature plus an alliance of "recalcitrant townspeople" and ill-paid staff, most locally recruited, for whom a high school diploma constituted solid credentials. He identifies civic groups, women's clubs, and social scientific professionals as reformers but seldom reports enduring successes. Although the author ably describes national trends in juvenile justice, in most instances Texas followed, if at all, very slowly. Indeed, he offers only brief descriptions of most developments he considers successes. The greatest reform triumph came with *Morales v. Turman* (1974), which Bush discusses at length and which not only forbade corporal punishment but soon forced the closing of the two most egregiously repressive schools for boys. Yet by the 1990s Texas was again gripped by panic over juvenile predators and nearly tripled its capacity to incarcerate youngsters.

Juvenile courts are peripheral to this account; indeed, their judges sometimes criticized the training schools and were reluctant to send youths there. Skeptical judges and many other critics of training schools repeatedly called for smaller treatment centers that would provide individual remediation and be located closer to the young people's homes. Bush shrewdly details how, again and again, administrators in league with supportive boards and politicians either ignored reformers or counterattacked in the legislature. Bush even treats readers to the angry marginalia with which one splenetic administrator decorated critics' reports.

Physical violence was endemic. The author's research yields almost a plethora of well-told stories from bruised and frightened inmates, who talked even though complaining to outside investigators often meant further beatings and commonly doomed any immediate chance for parole. Besides punches, kicks, and strapping, obstreperous teens endured isolation or monotonous labor and enforced silence. Although girls at one or two schools received fairly decent treatment, in 1952 a sixteen-year-old girl was released under court order after spending 186 of 210 days in a "steel-lined isolation cell" euphemistically termed the "reflection room" (p. 111). At Mountain View, the most oppressive of the schools, squads of boys on punishment detail in 1972 spent entire days in total silence, chopping in unison with heavy hoes on barren ground.

Bush examines juvenile corrections from multiple perspectives: analyzing media images of delinquents (from the rambunctious boy next door to the predatory gang member); sketching changing theories of adolescence, delinquency, and penology; reporting statistics on age, race, gender, and inmates' offenses; supplying what amount to brief curriculum vitae of corrections officials, consultants and other experts, reformers, and some inmates; and at least hinting at changing political climates in Texas. The level of detail can, however, overwhelm a reader at times. Many paragraphs are rather long, assembled from disparate topics. Abrupt shifts of focus and digressive passages sometimes leave one wondering where the discussion is heading. Still, the book under review is an immensely informative account of the complexities of reform and repression within the training schools of a state known for its tough penal culture.

DAVID I. MACLEOD
Central Michigan University

ANDREW L. JOHNS. *Vietnam's Second Front: Domestic Politics, the Republican Party, and the War*. Lexington: University Press of Kentucky. 2010. Pp. x, 434. \$40.00.

Andrew L. Johns has written an important book that contributes significantly to our understanding of Vietnam and American politics. Covering the period of escalation through Vietnamization, Johns maintains that domestic political calculations were central to the policies adopted by Presidents John F. Kennedy, Lyndon B. Johnson, and Richard M. Nixon, leading each to

wage a war they regarded largely as futile. Constant pressure from Republican lawmakers, party elders, and media outlets led Kennedy and Johnson to expand the American commitment to Saigon, fearing the ramifications of a Democratic defeat in Southeast Asia. Nixon, too, worried about a right-wing backlash; his pursuit of "peace with honor" stemmed from the presumed consequences, both political and geopolitical, of a hasty withdrawal from Vietnam. Yet Congress was just as culpable as these presidents for America's entrance into the conflict and its persistence in waging it. Johns's attention to this complicity, particularly on the part of the GOP, establishes his book as a valuable resource for expanding our understanding of the war on the "second front."

Of those advocating for war, it was Nixon who shaped U.S. policy on Vietnam more significantly and more persistently than any other figure in the Republican Party. Moving from the right to the center of the political spectrum, Nixon secured the presidential nomination in 1968 without having to adopt a specific position on Vietnam. Once in the White House, politics continued to inform his efforts at winding down America's involvement in Southeast Asia. "Nothing drove him more than the thought of his second term," Johns argues, as all aspects of Vietnamization were geared to that electoral triumph (p. 282).

Johns situates Nixon's machinations within a broader context of Republican maneuvering on the war, offering vivid descriptions of intraparty challenges as well as of political careers won and lost. The GOP fractured along hawkish, dovish, and centrist lines, creating bipartisan coalitions for a more aggressive war-fighting posture as well as for a cease-fire and withdrawal of American troops. Those camps were never static, with legislators moving in and out of them during the course of the conflict. By 1968, the party itself was moving to the right, as Ronald Reagan's selection to lead the Republican Governors Association heralded a conservative tilt that, through ebbs and flows, would emerge triumphant in 1980. Indeed, as Johns argues, Vietnam created the conditions for Reagan's ascendance just as it would for Nixon's resurgence, serving the uncompromising, anticommunist vision of one and the peacemaking aspirations of the other. Not as fortunate were one-time presidential hopefuls George Romney and Nelson Rockefeller, both of whom proved unable to navigate the politics of Vietnam. Johns's depiction of their struggles, which he offers in great detail, injects helpful nuance into the 1968 presidential campaign. While that year's general election is often regarded as one that turned on issues of "law and order," the primary season revolved around Vietnam.

Republicans were particularly interested in de-Americanizing the conflict, an objective that emerged well before Nixon sought more famously to Vietnamize the war. Scholars have long recognized Melvin Laird's contribution to that process, but Johns demonstrates that talk about de-Americanization was common among hawkish as well as dovish GOP lawmakers prior

to the Nixon presidency. Laird himself emerges as a vigorous advocate of that position, one that became politically attractive during 1968 as party members sought to offer fresh ideas on ending the war. By focusing on Laird's stances during his time in Congress as well as in the Nixon administration, Johns advances our understanding of Laird's connection to de-Americanization and to the endgame of the war itself.

Despite his focus on the politics of Vietnamization, Johns is relatively silent on the decent interval thesis, the notion that Nixon timed the withdrawal of American troops to the 1972 presidential election, allowing him to reap the electoral benefits of forging the peace while avoiding responsibility for Saigon's expected collapse. Given his claims about Nixon's utterly political approach to the war, Johns might have engaged this matter more forcefully. A more concrete and sustained discussion of how Vietnam intersected with the Great Society might also have illuminated the precise manner in which Johnson, as Johns rightly argues, sought to manage multiple and shifting constituencies. Finally, stray errant statements, such as a reference to Senator Eugene McCarthy's "stunning upset" (p. 217) of President Johnson in the 1968 New Hampshire primary—a contest that Johnson actually won—are minor blemishes on this splendid, deeply researched account of the war and its partisan components. It is a powerful reminder, if one is still needed in this day and age, that politics does not stop at the water's edge.

University of Virginia

THOMAS L. AHERN, JR. *Vietnam Declassified: The CIA and Counterinsurgency*. Foreword by DONALD P. GREGG. Lexington: University Press of Kentucky. 2010. Pp. xxiii, 450. \$40.00.

Thomas L. Ahern, Jr.'s minutely detailed history of the Vietnam War is a noteworthy addition to the scholarly literature on the war. The book offers an in-depth analysis of how the Central Intelligence Agency (CIA) understood and operated a host of rural pacification and counterinsurgency programs in South Vietnam. The longstanding efforts the CIA made to win the "hearts and minds" of the Vietnamese people have been chronicled by others, but never in such detail. That this story is told by a former CIA operations officer makes it particularly intriguing.

The origins of the book lay in Ahern's tours of duty as a CIA officer in Vietnam. When he left Vietnam in 1965, he recounts, "I knew we were losing, but I had no idea why the Saigon government was in retreat in the countryside, and the VC ascendant" (p. xviii). This book, then, offers something of a meditation on that sense of loss and the CIA's pervasive ignorance of its enemy. This is no memoir though: "my account of the CIA pacification programs there adopts a field perspective, not only to describe the programs and their effect but also to illuminate agency assumptions about the nature of the insurgency and about the means best suited

to counter it" (p. 4). The work is comprehensive in scope and provides a powerful rebuttal to the growing list of revisionist works about the Vietnam War that argue that the U.S. could have won.

Originally published as an in-house, classified history of the CIA, this study offers a counterpoint to other recent histories of the CIA. While Tim Weiner's *Legacy of Ashes: The History of the CIA* (2007) chronicled one disaster after another, Ahern's story of the CIA in Vietnam is far different in tone and content. It is not filled with bumbling fools who concocted harebrained schemes. The CIA officers portrayed here were aware of the limits of their actions, possessed a seasoned respect for their adversaries, and were free of excessive optimism concerning the progress of the war. How, then, can one explain the failure? For Ahern the CIA never took the time fully to appreciate the source of the Viet Cong's power and was often dragged into internecine bureaucratic battles within the South Vietnam government. Given these strategic and tactical errors, victory remained elusive.

Ahern's work begins with the first U.S. involvement in Vietnam after World War II and continues until the last helicopter left Saigon in 1975. With each passing year the CIA became increasingly involved in the war, yet it was only partially successful at providing accurate analysis and pacification strategies. The reasons for this failure are by now familiar: its enemy, the Viet Cong, was genuinely admired by the bulk of the South Vietnamese population; its allies, a series of South Vietnamese governments, were riddled with corruption and incompetent leadership; and its patron, the U.S. government, was filled with individuals who could only see the conflict through a Cold War lens and did not understand the nationalist aspirations of its foe. In other words, the CIA was very bad at intelligence, at analysis, and at getting others to see the war in a different light. In this sense, then, Ahern's work bears more than a passing similarity to the harsher critique leveled against the CIA offered by Weiner.

JONATHAN NASHIEL
Indiana University,
South Bend

CATHY MORAN HAJO. *Birth Control on Main Street: Organizing Clinics in the United States, 1916–1939*. Urbana and Chicago: University of Illinois Press. 2010. Pp. x, 251. Cloth \$75.00, paper \$25.00.

Birth control has long been at the center of contested policy and political debates in U.S. history. Claimed by feminists and socialists before World War I as a tool to help eradicate class and gender oppression, after the war birth control became an instrument of professional demographers, social workers, and physicians. Some of these professionals, particularly those influenced by eugenics, hoped that increased contraceptive availability and government funding for birth control could be used to manipulate populations both at home and abroad. Important histories of these national political and pol-

icy debates surrounding birth control include Linda Gordon's foundational *Woman's Body, Woman's Right: A Social History of Birth Control* (revised as *The Moral Property of Women: A History of Birth Control Politics in America* in 2003) and Carole McCann's *Birth Control Politics in the United States, 1916–1945* (1994). These works spotlight national birth control organizations like the American Birth Control League and Sanger's Birth Control Clinic Research Bureau, an approach that, according to Cathy Moran Hajo, places disproportionate attention on national political debates and a narrative of the professionalization of the birth control movement. Hajo concentrates instead on what she describes as "local concerns, smoothed over in the descriptions of clinics made both by the national birth control movement and by most historians" (p. 3). To get at these local concerns, she relies on birth control journals with descriptions of local birth control leagues and neighborhood clinics, newspapers, medical journals, and the Margaret Sanger Papers Project, for which the author is an associate editor.

Hajo's attention to local concerns uncovers a proliferation of birth control centers (over 650) between 1916 and 1939 that were created and operated by laywomen activists without medical training. These female birth control activists were the "wives of professional men, amateur social workers, and local philanthropists" (p. 73) who organized birth control leagues and founded freestanding clinics independent from hospitals or state public health services. Preferred by patients, many independent clinics provided care designed to help their female patients feel more comfortable discussing sensitive sexual matters. While local leagues and independent medical centers often received initial inspiration from Sanger and the American Birth Control League, local birth controllers usually shaped their clinics to meet community needs. The community focus of these independent clinics is offset by what Hajo refers to as "institutional clinics," linked to "hospitals, settlement houses and public health agencies" (p. 28), which did not provide birth control as a first priority. Rather, birth control activists pressed these pre-existing organizations to add birth control to their repertoire of services. Institutional clinics expanded rapidly in the 1930s with antipoverty funds aimed at those hit hard by the economic downturn. Yet, according to Hajo, these centers were less successful than the independent clinics, particularly when they existed in hospitals, because birth control was not their primary aim and was often perceived as unprofitable and too controversial to expand beyond marginal consideration.

Hajo's close examination of the operation of local birth control centers also reveals that laywomen birth control activists usually adhered to relatively conservative and narrow visions of the purpose of birth control and who should have access to it. Most clinics emphasized contraception as a family planning tool that would strengthen a married woman's ability to perform her primary tasks as wife and mother rather than liberate her to pursue autonomous goals. The author also finds

that clinic activists were not motivated by racist desires to reduce the number of immigrants, working-class, or people of color. Instead, the targeted clinic patient was white, married, and already the mother of several children. If anything, women of color were excluded from many local clinics. The ideal patient could not afford a private physician and thus sought access to a reliable method of contraception at community health centers because she was highly motivated to prevent or defer further childbearing. Birth controllers promoted this image to dispel stereotypes of contraception as immoral and the cause of premarital or extramarital sexual liaisons.

Hajo's book brings a fresh perspective to the history of birth control by focusing on the birth control clinics both founded and operated by women in their own communities. These women raised money for birth control, volunteered in clinics, and handled all of the operational logistics other than actual medical care of patients. According to Hajo, these women maintained control over their centers throughout the 1930s because most of the men who controlled the national movement were interested in broad policy and political debate rather than in the daily tasks of clinic operation.

JENNIFER NELSON

University of Redlands

ELAINE TYLER MAY. *America and the Pill: A History of Promise, Peril, and Liberation*. New York: Basic Books. 2010. Pp. vii, 214. \$25.95.

While many scholars have tackled the birth control pill as a topic for historical inquiry, Elaine Tyler May's book is the first to offer a succinct yet comprehensive analysis of its role in America's last half century. Upon its approval for contraceptive use by the Food and Drug Administration (FDA) in 1960, proponents touted it as the solution to world hunger, marital dysfunction, and poverty. Opponents feared it would lead to moral decay. While the pill failed to live up to any of these claims, it did play a central role in some of the "most profound developments in both public and private life," according to May (p. 168). May's history captures the complexities of what has become the most popular form of birth control in the United States.

Although male scientists John Rock and Gregory Pincus were primarily responsible for the pill, their efforts would not have existed without the vision and determination of Margaret Sanger. Despite Sanger's involvement in the eugenics movement, her motives for ensuring the creation of a birth control pill were grounded in feminism, May argues. With the financial backing of philanthropist Katharine McCormick, Sanger ensured that the development of an oral contraceptive would attract both popular and scholarly attention.

Once on the market, the pill's most vocal champions were not scientists or feminists but population control advocates. Fears of overpopulation escalated in the 1960s, buttressed by Paul Ehrlich's 1968 best seller, *The*

Population Bomb, which sold two million copies by 1974 (p. 44). Oral contraceptives were promoted as a tool to curb population growth, thereby reducing poverty and the competition for natural resources. As May points out, however, the pill did not bring an end to world hunger or overpopulation.

A slightly quieter storm was brewing among the women actually taking the pill, whose voices, initially at least, had trouble being heard over the clamor of population controllers. May echoes the arguments of other historians such as Elizabeth Watkins and Andrea Tone that the pill did not actually cause the sexual revolution as much as benefit from it. Those most likely to have access to the contraceptive in the first decade of its availability were married women, not newly liberated singles. As in other sections of her book, May effectively portrays the mixed reception that the pill received among sexually active women in search of the perfect contraceptive. Some celebrated the pill's ability to separate the sexual act from procreation, while others demanded more information about the potential risks and side effects of a drug that millions of healthy women swallowed daily. Angered by the dismissal of women's own experiences on the pill in scientific studies to determine its safety, some women joined the growing women's health movement that demanded more information and influence over contraceptive research and regulation.

Those familiar with the scholarship on the birth control pill will not be surprised by May's findings, though the juxtaposition of different voices—from Sanger to Hugh Hefner to those promoting the development of male birth control—is refreshing. Adding to the book's originality is the inclusion of respondents to May's internet questionnaire regarding women's experiences on the pill in the recent past. These fascinating accounts provide additional evidence of the pill's continuing influence on a new generation of women, who reflect on everything from side effects to sex education.

May's study is not only informative; it is also fun to read. May draws on a wide range of sources, from song lyrics and television shows to scientific studies. She includes her own story as well, as both a participant in a clinical trial for the pill, and the daughter of a clinical researcher who played an important role in the FDA approval of the pill (she did not realize the extent of that involvement until she began research for this project). The book will undoubtedly entertain and educate those interested in the history of sexuality and reproductive rights, and its brevity and price should facilitate widespread classroom use as well.

WENDY KLINE
University of Cincinnati

WENDY KLINE. *Bodies of Knowledge: Sexuality, Reproduction, and Women's Health in the Second Wave*. Chicago: University of Chicago Press. 2010. Pp. xiv, 202. \$22.50.

In the late 1960s, feminist activists, forerunners of what would become an influential women's health movement, began to develop a forceful critique of medical expertise and the doctors who embodied it. Angered by a medical system which, they concluded, privileged (male) expertise over (female) experience, these activists "challenged, expanded, and reinvented constructions of the female body and in particular reproductive health" (p. 3).

Bodies of Knowledge consists of five case studies, each one illuminating an important feminist reproductive priority in the 1970s and 1980s: the demystification of the female body, abortion, the depersonalization of women patients, hormonal birth control, and childbirth. A chapter on the origins and evolution of *Our Bodies, Ourselves* (1973) analyzes the ways in which women's own experience of their bodies was presented as a new model for understanding reproductive health and disease. The lessons of the early editions of *Our Bodies, Ourselves*—trust your own experience, be extremely skeptical of the medical establishment—also guided the lay midwives profiled in another chapter. Kline suggests that many women during this period, feminist or not, wanted to "transform the process of childbirth by reclaiming it as a natural rather than a medical event" (p. 127). However, personal experience never did succeed in eclipsing expertise completely. In addition to antagonisms between midwives and obstetricians, internecine conflicts emerged between lay and professional midwives, and between advocates of home births and hospital-based birthing centers.

Two chapters document the ways in which women's experience was initially privileged, but later challenged, as a guiding paradigm for feminist health activism. One deals with an unusual teaching program at Harvard Medical School in which feminist health activists, serving as "model patients," attempted to teach medical students "'a healthy way to perform a well-woman gynecological examination with non-sexist, nonheterosexist, nonelitist assumptions'" (p. 53). This controversial program became even more so when the activists refused to work with male medical students. Then they demanded that women medical students agree not only to learn how to conduct pelvic examinations but also be subject to them. Unsurprisingly, the medical school refused. And Kline's chapter on the transformation of "Jane," Chicago's underground feminist abortion-provider group, into a reproductive rights action network once *Roe v. Wade* (1973) legalized abortion, effectively illuminates the difficulties inherent in any attempt on the part of one group of women to enforce a unitary model for feminist health activism.

Kline's study of the Food and Drug Administration's (FDA) Board of Inquiry hearings in 1983 on the safety of the injectable contraceptive Depo-Provera weaves together many of the book's major themes. The Depo-Provera controversy followed earlier contentious debates over oral contraceptives and the Dalkon Shield intrauterine device. When Congress had held hearings on the safety of the birth control pill in 1970, women

activists were not permitted to testify, even though the hearings had been inspired by one of them, Barbara Seaman, author of *The Doctors' Case against the Pill* (1969). But Hugh Davis, the male gynecologist who wrote the foreword to Seaman's book, did testify, using his time to extol the safety and effectiveness of the Dalkon Shield. Hundreds of thousands of young women fled the pill for the Shield. Davis had, however, lied to Congress when he claimed that his views were unbiased. In fact, he not only invented the Dalkon Shield but also falsified the data that supposedly demonstrated its safety. The pill was dealt a temporary blow by the 1970 hearings; the Dalkon Shield was felled by lawsuits. By 1974, more than two hundred thousand documented cases of serious complications from the device forced its removal from the American market.

For the 1983 Depo-Provera hearings, the FDA invited women's health activists to testify, an indication of their growing influence. Convinced that first-person testimonies would persuade the FDA to disapprove Depo-Provera, the activists were taken aback when their legal counsel demurred. Concentrate instead, they were told, on scientific studies and expert witnesses. They agreed, and this strategy worked, at least for the short term. However, in the end, Kline argues, in the Depo-Provera controversy and in feminist health activism in general, this kind of decision—to take on the medical and scientific establishment on its own terms—left feminists with something less than they had hoped. Women did achieve greater access to the medical profession, as more women became doctors and researchers. Kline concludes, however, that this victory “weakened the movement's ideological basis—albeit slippery to begin with—by undermining the notion that knowledge and power are rooted in the biological body” (p. 125).

Crisply argued, creatively researched, and with enough controversy to provoke discussion within and beyond feminist scholarship, this fine book deserves a wide audience among health care professionals as well as scholars.

MARGARET MARSH

CAROLYN HERBST LEWIS. *Prescription for Heterosexuality: Sexual Citizenship in the Cold War Era*. Chapel Hill: University of North Carolina Press. 2010. Pp. xi, 228. \$34.95.

Recently scholars like Margot Canaday and David Johnson have revealed the significance of heterosexuality to conceptions of national security and state formation in the postwar United States. In her book, Carolyn Herbst Lewis builds on their work by contending that the Cold War's combined preoccupations with civil defense, national security, and moral decline led to a policing of what she calls “sexual citizenship,” which placed a premium on heterosexual maturity for both men and women. What sets Lewis's study apart from earlier works is her subject: physicians. Drawing on

both general and specialized journals published by medical societies (along with popular periodical literature), Lewis aims to show that doctors—especially family physicians—played a constitutive role in determining the parameters of healthy sexuality in the Cold War era. The result is an engaging, lively book that successfully draws on the histories of medicine and sexuality to illuminate the larger history of Cold War culture.

Lewis's study proceeds from two entwined premises: that the Cold War needed doctors, and that doctors needed the Cold War. In the first case, medical practitioners defined themselves as “the guardians of the sexual well-being of Americans” at mid-century (p. 5). This guardianship was important, Lewis contends, because Cold War rhetoric identified the familial realm as the seedbed of strong citizenship: a healthy, strong nation required healthy, strong citizens, and the white, heteronormative family was the linchpin that connected the individual to the larger society. Such a family required that both men and women exhibit the hallmarks of sexual maturity, and it was up to the family physician to help them achieve that goal. At the same time, Lewis points out that the Cold War enabled physicians to solidify their own professional authority at a time when it was being undermined by other fields and institutions, including psychology and psychoanalysis, organized religion, and the public schools. Indeed, part of what makes Lewis's analysis so interesting is that this moment represented, as she puts it, “both the height and the last gasp of medical authority over sexuality” (p. 6).

The chapters of the book are organized around both the ailments and treatments that received sustained attention in the era's medical literature. Two chapters focus on the parallel problems of female frigidity and male impotence. Lewis shows how family physicians believed that both ailments signaled a failure to achieve full sexual maturity. Reflecting the influence of Sigmund Freud at mid-century, most physicians understood female frigidity as a failure to achieve a vaginal (rather than clitoral) orgasm from penile penetration. Meanwhile, they sought to understand both the causes of and effective treatments for male impotence, which they defined (somewhat paradoxically) as both an ever-increasing problem and, more reassuringly, as a periodic occurrence even in the healthiest marriages. The book's later chapters look at two common treatments of the time. The first, pelvic exams, were often part of premarital sex consultations. Medical practitioners argued that these exams mitigated fears of penetration among their (presumptively virginal) female patients, but in truth physicians used the exams to shore up their own authority. The second procedure was artificial insemination. Physicians served as gatekeepers of what at the time was a cutting-edge reproductive technology by ensuring that only “suitable” (i.e., married, heterosexual) couples had access to the procedure. Doctors also believed that insemination should remain a guarded secret, thus helping to maintain fictions of biological fatherhood. A fascinating case study of the intersections

between culture and technology, Lewis's discussion of artificial insemination illustrates how—thanks to family physicians—a technology that would later undermine the heteronormative family initially helped to secure its borders.

While this book offers an incisive look at the roles of elites in policing sexuality, it has a key shortcoming, indeed one that Lewis herself suspects. At the end of her introduction, she acknowledges that her story reveals little about what actually happened in physicians' offices. The rules protecting patient confidentiality, among other things, limit her ability to uncover whether—and how—family doctors put their prescriptive medical literature into practice. In short, we do not get a sense of how patients responded to their physicians' recommendations. Indeed, the patients are largely absent from this study. While Lewis's research difficulties in this regard were no doubt formidable, I found myself wishing she had found creative ways to fill this void. The most powerful historical accounts of expert discourse, such as Linda Gordon's *Heroes of Their Own Lives: The Politics and History of Family Violence* (1988), are those that manage to uncover the complex interactions between experts and laypeople, as well as the counterintuitive ways that laypeople have appropriated expert advice. What makes this absence doubly frustrating is that the feminist health movement of the 1970s—something that Lewis alludes to in her conclusion—emerged partly in response to women's experiences in their doctors' offices in the 1950s and 1960s. This limitation notwithstanding, Lewis has written an elegant book that illuminates the intersection of medicine, sexuality, and citizenship in the Cold War era.

HEATHER MURRAY. *Not in This Family: Gays and the Meaning of Kinship in Postwar North America*. (Politics and Culture in Modern America.) Philadelphia: University of Pennsylvania Press. 2010. Pp. xvii, 289. \$45.00.

Heather Murray traces the transformation of relationships between North American adult gay children and their parents during the second half of the twentieth century, when homosexuality, once a hidden and taboo topic, became increasingly public and political. She argues that the constant throughout these years—regardless of whether gays felt obliged to be covert and lie to their parents about their sexuality or to be confrontational and flaunt it—was an intense desire for attachment.

Murray's chronology begins with the socially conservative post-World War II years, when an emerging self-awareness on the part of gay people was accompanied by well-founded concerns about revealing themselves to their families. As Murray shows through letters, diaries, and articles in popular magazines, some parents were sympathetic when they learned that their adult child was homosexual, even admonishing other parents

of gays that they must overcome their shocked senses and offer support; but parental distress was the more usual response. Murray talks about the dire "cures" for homosexuality to which stunned and grieving parents were willing to submit their children in the late 1940s and the 1950s, including lobotomies. Even into the 1960s, popular culture suggested that the revelation that an adult child was homosexual was a family calamity, as horrific as if that child had been taken away by death.

By the later 1960s and early 1970s, many gay people, influenced by civil rights movements, drew parallels between the oppression of racial and ethnic minorities and their own oppression, and they adopted a "liberation" perspective. Influenced too by hippie freedom, they abandoned "discretion," insisting that the term implied shame. They declared that it was the family that needed to change to accommodate its gay children and not the reverse. They were critical of the very notion of the nuclear family and viewed their parents as ambassadors of a repressive society and banal sexuality. The irony of this portrait of parents, Murray asserts, generalizing rather sweepingly, "is that it highlights, in its vehemence, the abiding hold of the family [on gay people] and [their] longing for family life that it seems to belittle or diminish" (p. 43).

Murray devotes an interesting chapter to lesbian feminism in the 1970s, a phenomenon that was particularly confusing to the parents whose daughters had previously identified as heterosexual and who now flaunted their new-found lesbianism as a political choice. "If people are gaited that way, OK," one mother typically argued with her daughter, "but I can't see why anyone would want to cultivate it" (p. 87). Daughters argued back that their mothers were complicit in accepting oppression from men, and they even suggested that their mothers would be better off if they too chose to become lesbians. Bolstered by powerful lesbian feminist writing, Murray says, the decade of the 1970s was perhaps the first time many lesbians were able to adopt a "rhetoric of confidence" (p. 93) in the viability of their lives as lesbians. The personal correspondence between parents and children that Murray presents in this and other sections of the book is particularly poignant.

Gay people's increasing openness with their families led eventually to significant changes in the attitudes of many parents. As early as 1972, some parents started taking an activist role in the gay movement, even marching in gay pride parades with signs that exhorted "Parents of Gays Unite" and "Support Our Children." They agitated for gay rights as well. For example, Murray discusses a parent group in the mid-1970s that was a precursor to Parents, Families and Friends of Lesbians and Gays (PFLAG) and was instrumental in getting the Civil Service Commission to lift its ban on employment of gays.

The AIDS crisis in the 1980s—when parents sometimes learned that a son was gay at the same time that they learned he was afflicted by the devastating disease—had various effects on the relationships between

parents and their gay male children. Some parents banished their ill sons permanently from their lives. Others struggled between fear of contamination and the desire to show compassion. Yet others, becoming closer than ever to their gay sons, battled discrimination and were resolute activists, demanding changes in the health care system, fighting for the availability of life-prolonging AIDS drugs, and working to make the public acknowledge that AIDS sufferers were also family members. Murray shows that the crisis sometimes brought about what had been unthinkable in earlier eras—a family blending: that is, the AIDS patient's biological family and his chosen gay family came together in order to care for and support him. The liberation movements of the late 1960s and 1970s and AIDS in the 1980s virtually put an end to the gay closet, Murray concludes. By the early 1990s, gays felt an "obligation to confess," and telling the family became "a central, necessary stage of self-revelation" (p. 193).

Emerita
California State University,
Fresno

BROCK THOMPSON. *The Un-Natural State: Arkansas and the Queer South*. Fayetteville: University of Arkansas Press. 2010. Pp. xi, 247. \$29.95.

In his new book Brock Thompson makes a surprisingly compelling case that Arkansas—a state that is widely regarded as one of the most backward places in the United States—may be lesbian and gay historiography's next big thing. His study also aims to improve understanding of U.S. lesbian and gay history by upending several widely accepted beliefs about it.

Thompson's monograph is obviously not the first word on the history of queer life below the Mason-Dixon Line, nor is it likely to be the last. But it is an important contribution to what is finally starting to be an actual conversation thanks to the growing number of scholars who are beginning to recognize that our conception of queer history has been shaped over the past several decades by assumptions that arguably occlude even as they help to reveal. The first and most obvious of these is the widely held belief that "homosex" and gender nonconformity are somehow distinctly urban phenomena. They are not, and Thompson's study makes this abundantly clear. The second is the belief that places like Arkansas—deeply southern, often predominantly rural—somehow lag behind the bustling American metropolises. They do not. In fact, if Thompson can be said to pursue one argument more zealously than others, it is precisely the claim that "Arkansas was never behind; Arkansas never played catch-up to modern alternatives found elsewhere in the nation. Rather," he contends, "Arkansas offered and operated under specific social and cultural conditions that shaped it as an alternative modernity" (p. 9).

Organizationally, Thompson arranges his investigation of Arkansas's "alternative modernity" into three

sections, each with a unique thematic lens. For example, section one traces the emergence of gay male drag culture in Arkansas from a much older tradition of rural folk performance known as the "womanless wedding." Section two investigates the unexpected connection between what sociologist Laud Humphreys famously dubbed the "tearoom trade" and Arkansas's surprising decision to write a brand new anti-sodomy statute in 1977 after having removed its existing anti-sodomy law just one year earlier. Section three focuses on the woefully understudied history of lesbian separatism. Additionally, it tells the remarkable story of Eureka Springs, a small village in the heart of the Ozarks that was pulled back from the brink of municipal extinction during the 1970s and 1980s by the revitalizing and unexpectedly synergistic effects of Christ-centered entrepreneurialism and new age sexual liberationism. In short, Thompson's book is an assemblage of unexpectedly queer southern histories, none of which can be said to represent the whole story where the history of "homosex" and gender nonconformity in "the natural state" is concerned, but none of which can be left out of that history either.

Of course, anyone who is familiar with the existing literature on the history of gender and sexuality in the American South will feel inclined to compare Thompson's book to John Howard's *Men Like That: A Southern Queer History* (1999). And given that Thompson was one of Howard's students, it should probably come as no surprise that there are some similarities. For instance, like Howard, Thompson attends primarily to the postwar period. He also takes another important cue from his mentor by reiterating the importance of movement and mobility in non-metropolitan contexts. But Thompson's text is more than Howard redux. Among other significant differences, Thompson dedicates a third of his study to a discussion of the experiences of women. An Arkansas native, he also adopts a conspicuously autobiographical approach to his subject in some places, a strategy that actually works surprisingly well from an organizational standpoint, and, crucially, a strategy that affords Thompson the opportunity to be uncommonly expressive and even eloquent at times.

Ultimately, what Thompson's book establishes most persuasively is the fact that Arkansas is not, and never has been, New York, San Francisco, or any of the other gay metropolises about which historians of queer life in the United States have taught us so much. And that is precisely why we should all be queuing up to buy a copy and read it.

COLIN R. JOHNSON
Indiana University,
Bloomington

DEWAR MACLEOD. *Kids of the Black Hole: Punk Rock in Postsuburban California*. Norman: University of Oklahoma Press. 2010. Pp. ix, 177. \$19.95.

Punk rock is finally getting its due attention from historians, much as the 1960s counterculture got its treat-

ment earlier. Dewar MacLeod's fine book tells a story about punk's development and changes in Los Angeles over a short period of time, from about 1977 to the early 1980s. There are important insights and stories about *Slash* magazine, the creation of venues like the Masque, and the formation of bands who had lasting resonance like the Dickies, X, and the Plugz. MacLeod traces out the inherent tensions when a "subculture" dedicated to "authenticity" also struggles to remain open, flexible, and inclusive to the new and bizarre (p. 39). The author pays attention to intellectual debates about the "meaning of punk," especially the rambling writings of Claude Bessy, chief editor of *Slash* (p. 67). There was always, MacLeod argues, a "contested nature of the definition of punk," especially as some bands started to break big and gain popularity (p. 75) and as something called "New Wave" (with bands like the Go-Gos and the Knack) cracked mainstream culture in the late 1970s. This has been the struggle of rebellious cultural experimenters throughout the American past: aspirations to change society clashing with the desire to remain pure or true to founding principles.

After setting out the earlier parts of the story of Los Angeles's punk, MacLeod turns to "Hardcore" music, the final episode in his rather short story. Bands like the Middle Class and Black Flag, who were faster and more confrontational in their music and stage antics, started to break. These bands never bothered to try to play to or impress the earlier subculture that centered around Hollywood; instead they remained attached to "the suburban towns of the Valleys and the South Bay area in Los Angeles County and in the coastal and nearby towns of Orange County" (p. 3) and the Huntington Beach area. With an embrace of violence and confrontation, witnessed especially in the troubling antics of Henry Rollins, the lead singer of Black Flag who enjoyed punching and getting punched by his fans, hardcore "emphasized punk's exclusivity," MacLeod contends (p. 96). There were also increased confrontations between punks and police that started to define punk's struggle for self-definition. Herein lies MacLeod's declension narrative. "Violence" had become "endemic to the 'scene' and to the creation of that scene" (p. 130). It was also a "male music" scene, utterly limited in its capacity to reach out, unlike the looser, earlier punk renditions.

Some might object that MacLeod's take on the later hardcore scene fixates on violence and exclusivity. How does one explain the interest that the band Minutemen—a working-class, politically astute group that eschewed violence—had in playing with groups like Black Flag? Maybe there was more openness than MacLeod suggests. Other readers will be put off by the book's style, or rather its chaotic styles, which do not always work well together. The book starts off almost as a memoir of MacLeod's own interaction with the Los Angeles punk scene but then slides into heavy theoretical ponderings (punk created "a postmodern 'bricolage,' a random assembling of the best and detritus of society" [p. 16]). The musings about "postsuburbia" (a term that

still appears vague at the end of the book) and the esoteric ramblings of the Situationist International writers do not illuminate the activities of a local punk rock scene as much as MacLeod would like. These quibbles aside, however, the book makes an important contribution to understanding a vital if contested subculture in U.S. history.

KEVIN MATTSON
Ohio University

SCOTT CHRISTIANSON, *The Last Gasp: The Rise and Fall of the American Gas Chamber*. Berkeley and Los Angeles: University of California Press. 2010. Pp. xiv, 325. \$27.50.

Scott Christianson's book is more than a study of the American gas chamber as a site of execution. It covers the modern transatlantic history of killing with gas, from the trenches of World War I in early twentieth-century Europe to the introduction of the gas chamber in Nevada in 1921 and its subsequent adoption in several American states. The book continues to explore the transatlantic network of the chemical industries on both sides of the Atlantic in the interwar period and the systematic annihilation of European Jews in the Nazi gas chambers during World War II. Christianson then takes his readers to the ongoing use of lethal gas in the death penalty systems of various American states, even after the Shoah. He discusses the general criticism of the death penalty in 1960s and 1970s America and its temporary unconstitutionality, and then examines the gas chamber's "last gasp" in the execution of Walter LaGrand in Arizona on March 3, 1999.

Without a doubt this is an important contribution to the historiography of capital punishment, and the book fills a gap in existing death penalty research. Christianson does for the gas chamber what others have done for the guillotine in nineteenth-century France and other parts of Europe and for the electric chair and lethal injection in twentieth- and twenty-first-century America. Thus, in the history and sociology of capital punishment, the book follows a familiar train of thought that critiques the twisted logic of "humanizing" the death penalty by unmasking modern states' efforts to execute humanely and without pain and suffering as a distorted fallacy.

Yet Christianson's book aspires to do more. Most significantly and admirably, the author embeds the U.S. death penalty system in the larger historical configuration of "modernity" by seeking to explore wider and more general transatlantic efforts to make killing on behalf of the state more humane, rational, and also more efficient. No execution technique makes the ambivalence and implausibility of this effort more obvious than the gas chamber. Initially invented and developed as a noble instrument with the intent to execute painlessly and put the condemned to sleep peacefully, the gas chamber proved to be a gruesome means to a torturous death. Even more than that, the efficiency of gas in killing masses paved the way for its systematic and

industrialized employment in the annihilation of millions of Jews and others in the Nazi genocide of World War II.

Unfortunately, the great strength of the book's approach also exposes one of its weaknesses. Even though the author stresses that he in no way seeks to equate the Holocaust with the American execution system or "blame the Americans for the Nazi atrocities" (p. 8), the book's style and approach are investigative at times, as its author seems to be on the hunt for more clear-cut ties among the American chemical industry, the U.S. death penalty system, and Nazi genocide. However, he does not succeed in uncovering such connections. No proof exists that the Nazis studied American gas chambers, nor does the book present evidence that American death penalty states debated whether they should continue to use gas for executions after World War II and Auschwitz.

Although the introduction to the book lays out tools of social and cultural theory that Michel Foucault, David Garland, and others have used to analyze punishment and its larger sociocultural significance, the author hardly seems to employ them to explore the topic or navigate the material. Drawing more inspiration from the existing body of theories of punishment might have helped to unfold interdependencies in the transatlantic twentieth-century history of killing with gas that go beyond simple causal ties and show to what extent mechanized executions and industrialized mass killings constituted part of the same discursive formation. Thus the book too often remains anecdotal, even though the author has collected an impressive amount of material and done a great deal of original research. Nevertheless, Christianson's book makes a significant contribution to the historiography of capital punishment and should inspire more research on this important topic.

Erfurt University

CAROLYN DE LA PEÑA. *Empty Pleasures: The Story of Artificial Sweeteners from Saccharin to Splenda*. Chapel Hill: University of North Carolina Press. 2010. Pp. 279. \$32.50.

Artificial and non-nutritive sweeteners have been available since the 1880s when a German sugar chemist named Constantin Fahlberg began manufacturing saccharin. Scientists saw saccharin as a great achievement on a par with artificial dyes. Doctors hoped that diabetics could now enjoy sweets without increasing their blood sugar level, and dyspeptics—Theodore Roosevelt was a notable example—could enjoy sweets without increasing their weight. Food processors saw that saccharin was much cheaper than sugar, at least per unit of sweetening power, and equally good as a preservative. And during times when sugar was scarce, many consumers saw saccharin as better than nothing. In *We the Living* (1936), Ayn Rand provides powerful images of saccharin in revolutionary Petrograd. The sugar in-

dustry, by contrast, saw saccharin as a threat to its business and urged federal and state governments to limit its use, if not ban it altogether. Some clinical trials were held, but they convinced only the already committed.

Similar stories unfolded when cyclamates were introduced in the 1950s, and when aspartame and sucralose followed somewhat later. As Carolyn de la Peña explains, the postwar period was a time of plenty when some Americans worried about their weight and saw chemicals as a solution to their problems, and when some Americans worried about the amount of chemicals in their lives. In response to this latter concern, the U.S. Congress in 1958 passed an Additives Amendment to the 1938 Federal Food, Drug, and Cosmetic Act; this amendment banned additives that had "not been adequately tested to establish their safety," and its so-called Delaney Clause said that no additive would be deemed safe if it induced cancer in "man or animal."

Scientists, many of them supported by the sugar lobby, then pumped cyclamates into lab animals and, when the dosage was sufficiently high, found evidence of cancer. That meant that cyclamates could no longer be "generally recognized as safe" and foods containing cyclamates could no longer remain on the market. When scientists found similar results with saccharin, the public rebelled, arguing that they should be able to weigh the risks and benefits for themselves. Congress responded by putting the saccharin ban on hold from year to year, eventually deciding that chemical additives in processed foods, as well as residues on fruits and vegetables, would be permitted if they were present in such small quantities that there could be "reasonable certainty" that they would cause no harm.

De la Peña is keenly attentive to the social and cultural meanings of foods, and how these may differ depending on whether one is a producer or a consumer, a marketing professional or a mother. She reads the texts and subtexts of advertisements and examines the complex relationships between sweetener manufacturers and food manufacturers. Always aware of race and gender, she tells us, time and again, that this was largely a story of white men in lab coats, and white women as consumers.

The Special Collections of the University of California, Davis, houses the papers of the California Canners and Growers, a cooperative network of farmers who sent their fruit to be combined, processed, and sold under one label. Richmond Chase (the predecessor firm) had introduced a Diet Delight brand of unsweetened canned fruit in 1946, and was open to the possibility of using cyclamate for this purpose. And because its chief technologist preserved his papers and the relevant trade literature that came his way, de la Peña can explore the complex interactions between Abbott Laboratories, the major manufacturer of cyclamates, and one of the first important food processors to use cyclamates. She also makes good use of the papers of Tillie Lewis, a California businesswoman who successfully promoted artificially sweetened dietetic foods, and

the letters sent to the Food and Drug Administration protesting the planned saccharin ban of 1977.

One concern I have with this book pertains to the assumption that, since artificially sweetened food was not advertised in the African American press, African Americans did not eat it. Another pertains to Walter Landor, the marketing guru who in 1956, at the behest of the Spreckels Sugar Company, announced that "sugar is sugar." While de la Peña reads this as evidence that sugar had no distinctive image for average American consumers, I would argue that Spreckels, along with other beet sugar firms, was striving to overcome the widespread notion that cane sugar tasted better than that made from beets. Careful consumers today can distinguish packages of "pure sugar" from those of "pure cane sugar."

Such matters aside, this book does an excellent job of exploring the contested history of artificial sweeteners and their use in packaged food and drink. In de la Peña's hands these substances become windows onto important aspects of the American experience.

DEBORAH JEAN WARNER

National Museum of American History

DAVID E. NYE, *When the Lights Went Out: A History of Blackouts in America*. Cambridge: MIT Press. 2010. Pp. x, 292. \$27.95.

David E. Nye has written a deceptively simple book. It includes thematic chapters arranged in a rough chronological order including a variety of blackout experiences: military blackouts, the Great Northeastern Blackout of 1965, the New York Blackout in 1977, terrorism and blackouts, and voluntary "greenouts." Although focused on the United States, the themes in the book are much more universal. Nye's objective in this fine history is not simple, however. He links physical blackouts with numerous cultural concerns from economic growth to labor unrest, from consumerism to global warming. "Blackouts," he states, "are breaks in the flow of social time" (p. 3). Nye draws attention to the union between blackouts and modern life. As we have become increasingly dependent on electricity in an energy-intensive society, we are forced to confront that dependence when the lights go out. Yet Nye is not exclusively interested in this observation, or in assessing blame for blackouts. Instead, blackouts become a means to comment on cultural issues in a novel way.

The first chapter discusses increased dependence on electricity, the electrical grid as the primary delivery system, and causes of blackouts. Nye reminds us, "In a blackout, one suddenly must live in the here and now. With each passing decade, the disorientation caused by confronting an electrified world becomes more profound" (p. 35). Nye addresses this issue by exploring both causes and impacts of blackouts and carefully correlating the two. Blackouts result in people being swallowed up in the dark, but whether the event was intentional or unintentional imposes different outcomes, as does the timing of the blackout itself.

In subsequent chapters, Nye goes beyond caveats about the modern world's dependence on electricity to confront blackouts in a variety of settings and from varied perspectives. Chapter two on "War" deals with enforced blackouts imposed as a shield against enemy attack—"artificial darkness"—desirable and necessary in an aviation age. The blackout was a disguise, changing in time from "an element of military planning to a coordinated civilian exercise" (p. 41). The blackout, in this case, also was a form of technological control, not technical failure. In chapters three and four, Nye turns to blackouts as accidents, that is, unintended technical failures. The systems that produced and generated electrical power became more complex, more centralized, and in some cases more vulnerable, even as customers developed increased reliance on them. Thus, glitches or serious problems in the systems were magnified. The 1965 blackout struck without warning, which distinguished it from the military blackout in a major way. How did people respond? In the case of the 1965 blackout, most people experienced inconvenience, not panic: a little fear but also little reactionary behavior. Some people even stopped to reflect on the "strange beauty" of the city without lights. Twelve years later, the 1977 blackout produced a much different response, induced by high temperatures, shaky economic conditions, and memories of the energy crisis in the early 1970s. Arson, looting, and rioting replaced the more quiet resignation of 1965. Nye compares these different responses in detail to demonstrate the need to pay attention to change over time. Blackouts as a category of events are no more static or uniform than the conditions in which they occur.

In chapters five through seven, Nye moves to a different set of blackouts and blackout experiences. "Rolling blackouts" (chapter five) were planned and not accidental, and resulted from more fully integrated electrical systems not less developed ones. Such events thus fly in the face of common notions of technological progress. Rising concerns over terrorism in the 1990s (chapter six) made blackouts a new type of weapon. While military blackouts concealed society's human and infrastructural assets, terrorists could use the darkness to cripple services, conduct stealthy activities, and disconnect people from their communities. Greenouts (chapter seven) are more benign in impact, but politically charged. Dimming power to demonstrate problems of overconsumption (or to advocate reduced use of electricity in the name of sustainability) used the blackout in a unique way.

Thus what appears simple and straightforward in the title of this book encourages much deeper reflection on a range of societal issues, connected not only to energy use but to how we view our world, how we manipulate technology, how we came to depend on an environment with perpetual light, and more. Nye guides us through many of these themes, but what makes the book highly

valuable is that he encourages our own speculation and reflection. Not many books do that, or do it so well.

University of Houston

MARK V. BARROW, JR. *Nature's Ghosts: Confronting Extinction from the Age of Jefferson to the Age of Ecology*. Chicago: University of Chicago Press. 2009. Pp. xi, 497. \$35.00.

A specter has long haunted American naturalists—the specter of extinction. According to Mark V. Barrow, Jr.'s absorbing book, the ethereal presence of those animals no longer living “alerted [naturalists] to the growing problem of human-caused loss of plants and animals while fostering sympathy for their desperate plight” (p. 13). That thesis is, in the author's words, “straightforward” (p. 13). But the book's accumulation of detail, attention to overlooked naturalists, and critical rendering of the way systematics informed the development of conservation make it a must read for environmental historians and historians of science.

Concern over extinction did not begin with the age of ecology, but with the age of Thomas Jefferson. During the height of the American Revolution, Jefferson spent a good deal of intellectual energy attempting to refute European notions that the New World environment was incapable of producing robust life. A key piece of Jefferson's evidence was the “Mammoth or Big Buffalo” known at the time as the “*incognitum*” (p. 17). And yet Jefferson could not produce live mammoths, only fossils: what did that say about the New World? Jefferson offered scientific explanations—the mammoth was confined to areas not yet explored—and philosophical ones—the great chain of being demanded the mammoths' presence—for the lack of live Virginia specimens. Plainly, Jefferson could not accept the reality of extinction. But by the time of his passing in 1826, many scientists, prodded by the discovery of new fossils and French scientist Georges Cuvier's comparative anatomy, had begun to embrace the historical reality of life-forms no longer living.

By the mid-nineteenth century, naturalists understood that many forms of life had long historical records, and that contemporary flora and fauna were subject to extermination. Extinction became a pressing concern, and the American bison embodied the problem. Among those alarmed by the bison's fate was Joel Asaph Allen, a curator at Harvard's Museum of Comparative Zoology. Allen, one of Barrow's overlooked naturalists, began writing about the bison in 1876. He wrote for both scientific and popular audiences and advocated for wildlife reserves and strict hunting regulations. Nor was Allen alone in his concerns. Many scientists and concerned citizens, especially those, like Allen, associated with the Audubon movement, formed organizations devoted to protecting wildlife.

Concern about conservation was not confined to species indigenous to the United States. One of the great strengths of Barrow's book is its exploration of how the

alarm over extinction was exported abroad. Among the chief exporters was Harold J. Coolidge, another associate of the Museum of Comparative Zoology, who helped form the American Committee for International Wild Life Protection in 1930. Coolidge and his fellows—mostly scientific elites flush with imperial arrogance—focused on African wildlife. The continuing development of scientific information broadened conservationist anxieties, both ideologically and geographically.

Thanks to the centennial of Charles Darwin's visit to the Galapagos, a dramatic decline in migratory waterfowl, and increased political interest in Latin America, naturalists turned their attention to the Western Hemisphere. Prodded by the new political attitude toward Latin America embodied by Franklin Delano Roosevelt's Good Neighbor policy, conservationists produced in 1933 a landmark in international wildlife law: the Convention on Nature Protection and Wildlife Preservation in the Western Hemisphere. This law helped spur many conservation efforts and was a significant precedent to the Endangered Species Act of 1973.

The Endangered Species Act reflected the importance of the science of ecology in myriad ways that the earlier convention did not. By the 1950s ecologists learned to think of animals as members of interdependent communities, thus fostering a reconsideration of the value of animals beyond traditional use or aesthetic standards. This switch was particularly important in thinking about top predators, which Barrow demonstrates in an excellent chapter on efforts to preserve raptors during the interwar years. And yet ecologists of the 1940s and 1950s were deeply conflicted about the relationship between their scientific interests and their politics. The Ecological Society of America supported a preservation committee only to balk at its politics; eventually the committee separated from the scientific organization and over time grew into The Nature Conservancy, a leading contemporary environmental organization.

Barrow concludes with two chapters that explore more contemporary debates, delving into controversies and campaigns over whooping cranes, the American alligator (a crusade encouraged by University of Florida conservationist Archie Carr), big cats, and marine mammals. Like their predecessors, contemporary scientists struggle with the boundaries between their scientific and political commitments. But in some ways such lines do not matter: whether a species is preserved due to scientific interest or for moral or aesthetic reasons, it is still preserved.

Given that most ecologists argue that we currently reside in one of the great mass extinction episodes in history, with extinction between 1,000 to 10,000 times the background (natural) rates, this book could not be more timely. As humans continue to remake the earth, the fate of other life forms, and how their fate inevitably intertwines with humanity's, will undoubtedly remain a topic of vital public debate. That larger public dialogue

is mostly missing from this volume; Barrow limits his attention to professional naturalists, a necessary concession for a single volume. Readers should not assume, however, that conservation has only been a preoccupation of scientific elites. Rather, from its earliest days conservation secured broad public appeal. The larger story of how mass social movements addressed the extinction issue remains to be written. When such a volume appears, it will greatly benefit from Barrow's important work.

CARIBBEAN AND LATIN AMERICA

LOWELL GUDMUNDSON and JUSTIN WOLFE, editors. *Blacks and Blackness in Central America: Between Race and Place*. Durham, N.C.: Duke University Press. 2010. Pp. viii, 406. Cloth \$89.95, paper \$24.95.

This collection of essays aims to make space in the historiography of the African diaspora for those areas of the Central American isthmus colonized by Spain or later absorbed into the nations that emerged from Spanish rule. It successfully contributes to documenting the extensive presence of Africans and their descendants in these areas, to exploring these Afro-Central Americans' struggles for security, freedom, and power, and to tracing the erasure of blacks and blackness in elite constructions of national identity focused on "Spanish and Indian antecedents and contributions" (p. 2). A second aim is to overcome the marginalization of these histories from Spanish Central American historiography.

This volume, the product of a 2004 conference of Mexicanists, Colombianists, and Central Americanists, is divided into two sections: the first on the Spanish colonial period, comprising five chapters, and the second on the period since independence from Spain to about 1940, comprising six chapters. There is dialogue among the chapters both within and between sections. The volume does not cover all of Central America but rather focuses attention on non-coastal Guatemala and Nicaragua, and the Caribbean coasts of what became Nicaragua (Mosquitia), Panama, and Costa Rica. The one clear exception to this is Rina Cáceres Gómez's essay on the port of Omoa in modern-day Honduran territory.

The first section analyzes slave labor on sugar plantations in south-central Guatemala and in cacao production in eastern Costa Rica, the complex ethnic and political region of the Mosquitia, waged slavery at Omoa's fort, and urban slavery and processes of emancipation in Guatemala. Paul Lokken shows how slaves developed mechanisms for escaping sugar plantation slavery and how, as they blended into the free non-Indian population, bases for a strong collective black identity weakened. Russell Lohse demonstrates how a similar process in Costa Rica resulted from the extreme autonomy of male cacao slaves, which bred social con-

fidence and eroded slavery. Cáceres Gómez likewise shows how the economic and political strength of Omoa's slaves resulted in early mass manumission, although she does not comment on post-slavery issues of black identity. Catherine Komisaruk documents a range of strategies deployed by slaves in late colonial Guatemala to obtain freedom. Komisaruk confirms Lokken's findings and concludes that "crossing over into free Hispanic society helped occlude consciousness in the nineteenth century of African heritage in Guatemala" (p. 170). Karl H. Offen acknowledges "the intersection of British and Spanish empires" in the isthmus (p. 92) and provides a lucid explanation of the way Mosquitia's power relations nurtured racial pride among the Afro-Amerindian Sambo and Tawira Mosquito peoples, who "interacted with the British and the Spanish as equals" (p. 121). As in Matthew Restall's work on Afro-Yucatecans, indigenous people are not a backdrop in Offen's chapter.

Section two has a stronger emphasis on Nicaragua. Juliet Hooker extends Offen's analysis by showing how the post-independence Nicaraguan elite was obsessed with physically incorporating the Mosquitia into the republic while denying full citizenship to its supposedly uncivilized indigenous, black, and mixed peoples. She shows how coastal leaders, especially Creoles, eloquently contested such discursive and legal discrimination. Among the Nicaraguan elites disparaging the coast were Liberal politicians of black descent from western Nicaragua analyzed by Justin Wolfe, who links the erosion of their radicalism to their self-distancing from a specifically black identity. Lowell Gudmundson examines the 1883 Nicaraguan census, which was unusual in the non-British isthmus of the time for including categories that captured black appearance if not identity, to demonstrate the extent of black presence in the population of four western towns, including in their local elites. Mauricio Meléndez Obando uses genealogical records to succinctly trace the often unacknowledged African roots of many notable Nicaraguans and Costa Ricans.

Lara Putnam's and Ronald Harpelle's essays deal with the new infusion of people of African descent after 1870 into the isthmus to work on the Panama Canal, banana plantations, and railroads. Putnam provides rich evidence of their presence in coastal Panama and Costa Rica. She explains those nations' restrictions on black immigration and internal migration from the mid-1920s with reference to their elites' practical and ideological attractions to U.S.-fueled eugenic thinking. Indeed, the eugenic character of emerging projects of national *mestizaje* in formerly Spanish Central America merits further analysis. Harpelle's account of white United Fruit Company wives living in company compounds in eastern Honduras, Costa Rica, and western Guatemala relates best to the volume's core theme when he discusses these women's fraught relations with black English-speaking maids and cooks, who were clearly as much protagonists of their own lives as were

the enslaved women of colonial Omoa who “struck” effectively in 1800.

This book is a major contribution to the scholarly literature, but its conceptual framework leads to a lost opportunity that arguably impoverishes its goals of documenting the diversity of black histories in the isthmus and of impacting African diaspora and Spanish Central American historiographies. Second only to the Caribbean archipelago and perhaps northeastern South America, the Central American isthmus has been a zone of competing imperialisms, regionalisms, and nationalisms since the early 1500s. This reality is implicit in many of the book’s chapters, and explicit in Offen’s and Hooker’s, but it is absent from the editors’ introduction and thus does not frame the collection as a whole. Although both editors and other contributors rather frequently write as if their subject is the entire geographical isthmus (pp. vii, 5, 9, 147, 209–210, 335), the opening definition of “the Hispanic mainland Caribbean nations from Mexico through Central America and Panama, to Colombia and Venezuela” (p. 1) clearly serves to exclude Belize, the one British territory that was never absorbed into a ladino-dominated national territory or a project of *mestizaje*. El Salvador is also marginalized. Mentions of Belize and its colonial antecedents are far more frequent than indicated in the index, but the contributors’ disinterest in learning from the historiography of Belize, integrating Belize into comparative analyses, or using their own scholarship to inspire new work on Belize is disappointing, especially as the exclusion of Belize is never acknowledged or justified.

Five of the many ways in which the Belize case could be usefully integrated into this volume are as follows. Offen’s portrayal of the Mosquito kingdom’s strength and how it weakened British, Spanish, and Nicaraguan colonial projects bears comparison to how the Itza Maya kingdom documented by Grant D. Jones prevented effective Spanish colonization of the Belize area. Lohse’s analysis of male cacao slaves in Costa Rica would benefit from comparison with Nigel Bolland’s pathbreaking analysis of similar gender dynamics in forestry slave labor in Belizean territory from the mid-1600s to emancipation in the 1830s. Wolfe will find other politically ambitious Afro-Central Americans distancing themselves from their black ancestry in my work on middle-class Belizean Creoles and their late nineteenth- and early twentieth-century efforts to extract greater political rights from Britain. Putnam and Harpelle could attend more deliberately to the presence of Belizeans and Bay Islanders in the canal and banana zones; among them in the 1940s was Belizean labor leader Antonio Soberanis Gómez, who returned home to articulate a vision of a historically black and indigenous nation. Finally, Hooker’s concluding discussion on contemporary tensions among mestizos, Creoles, and indigenous people in eastern Nicaragua would be enriched via dialogue with Laurie Kroshus Medina’s and Mark Moberg’s work on dynamics among Belizean Creoles, Garifuna, Maya, and mestizos, and immigrant

Hondurans, Salvadorans, and Guatemalans in post-independence Belize’s citrus and banana industries. Indeed, a chapter on the Garifuna version of Central American blackness would have facilitated the inclusion of Belize in this collection, which in turn would have transformed the meaning of “Central America” from an imperially bounded space to a geographical place.

ANNE S. MACPHERSON
College at Brockport,
State University of New York

PAUL K. EISS. *In the Name of El Pueblo: Place, Community, and the Politics of History in Yucatán*. (Latin America Otherwise: Languages, Empires, Nations.) Durham, N.C.: Duke University Press. 2010. Pp. xv, 337. Cloth \$84.95, paper \$23.95.

The Spanish term *pueblo* cannot be translated into English by a single word as it may either mean “village” or “people,” referring to a place, a community that inhabits a place, or a political collectivity. The term became a standard reference in political discourse starting in the late eighteenth century, when a rhetoric of popular sovereignty emerged in opposition to the *ancien régime* and colonial rule. *El pueblo*, Paul K. Eiss argues, has become “a focus of contention . . . within which divergent conceptions of community and collectivity came into conflict” (p. 5). Eiss combines historical and anthropological data, methods, and approaches (micro-history, ethnography, and the history of the present) to explore the concept as realized in the Hunucmá region located in the northwest of Mexico’s Yucatán peninsula. His book is not a classic community study but “a study of communalism in a defined region” (p. 10). Eiss wants to show that practices of making or claiming *el pueblo* were elaborated “in dialogue with the wider political rhetorics and frameworks of governance” (p. 11). Following Michel Foucault, he does not consider communal identifications as stable but holds that present and previous modes of communal and collective identification may be radically different.

The book develops in chronological order. The first three chapters span the period from late colonial rule in the eighteenth century to the outbreak of the Mexican Revolution in the early twentieth century. They illustrate the—sometimes legal and at other times violent—struggle of Hunucmá’s indigenous villagers in defense of their communal lands against dispossession by mestizo landlords and the colonial and postcolonial state. Among other things, the rise of haciendas based on the production of henequen and the industry’s repercussions on the indigenous peasants and workers are discussed. Subsequent chapters scrutinize how *el pueblo* became “a subject of politics and an object of governance” in the revolutionary and postrevolutionary periods until the 1990s. Eiss’s analysis shows how the communalists’ struggle changed from a fight against the haciendas into a revolutionary war for land and freedom. Indeed, an agrarian reform was realized and the

ejido, a new form of collective land tenure, was established in Yucatán as in the rest of Mexico after the triumph of the revolution. However, many peasants remained dependent workers laboring for hacienda owners who were controlled by the state bureaucracy that now organized henequen production and agrarian credit. The book's third section focuses on the weakening of *el pueblo* as a framework for political mediation and control due to neoliberal policies, which led to a further decline of the peasant economy. Eiss describes regional attempts to organize a labor movement independent of state control in the 1980s and 1990s. Independent movements engendered massive popular protests but ultimately failed under state repression. The fiesta and guild system surrounding the cult of the Virgin of the *pueblo* of Tetiz are discussed in chapter eight. Eiss focuses on the cult's role in the elaboration of historical memory and communal identity. The cult, he notes, provides shared experiences and a common sense of identity for the villagers in spite of growing social and economic differentiation. Chapter nine explores the life of Anacleto Cetina Aguilar, a political activist, poet, teacher, and historian who tries to counteract the alienating tendencies of migration and modernization, especially among youth, through the recovery of local history and culture.

While topics such as the alienation of indigenous community lands, the rise and fall of the henequen industry, and the failure of agrarian reform in Yucatán have already been studied, this book adds a local perspective to these more general accounts. By bringing to light the mostly forgotten local resistance against the authoritarian Porfirian regime in the early twentieth century, Eiss modifies earlier interpretations that suggested the Mexican revolution had (almost) no local roots and came to Yucatán largely from without. The book's broad historical perspective aids understanding of the continuities and ruptures in Hunucmá's history. While resistance to the alienation of communal lands had determined the villagers' struggle for centuries, recent economic developments that have made wage work in local *maquiladoras* and migration labor abroad major sources of income mark a fundamental change in people's lives and self-conceptions.

Eiss's book is based on a wealth of archival documentation as well as on years of ethnographic fieldwork. It is written in a clear and accessible style. All chapters unfold around concrete cases such as a legal struggle or the biography of a specific individual such as "Hunucmá's Zapata," Feliciano Canul Reyes, a major figure in the revolutionary struggle. While Eiss presents a wide array of perspectives, the reviewer would have welcomed the author's development of his own arguments and interpretations somewhat more explicitly as a complement to the rich material presented.

WOLFGANG GABBERT
Leibniz Universität Hannover

PAUL GILLINGHAM. *Cuauhtémoc's Bones: Forging National Identity in Modern Mexico*. (Diálogos.) Albuquerque:

University of New Mexico Press. 2011. Pp. xi, 338. \$28.95.

Latin American history may be approaching the saturation point for studies on nationalism and its sketchy origins, but Paul Gillingham's book represents a welcome breath of fresh air. At the most basic level, he offers a doggedly researched, entertaining history of nationalist fabrication in an out-of-the-way corner of Mexico (rural Guerrero). But he also provides a thoughtful discussion of his case study's place in wider debates about national identity formation and popular politics. Gillingham's artful presentation of theory, historiography, and the exploitation of history make this book a valuable resource for undergraduates and graduate students interested in Latin American nationalism. Furthermore, the author's investment in exhaustive research and his clear, engaging prose make the text exemplary in terms of archival diligence and scholarly style.

At the center of the book we find a bungling small town charlatan's effort to convince the Mexican state and public that the last Aztec emperor's remains had incongruously come to rest beneath the altar of his pueblo's church. Not surprisingly the incorrigible forger fancied himself the sole guardian of the alleged relics as well. As Gillingham points out, however, this is not the usual story of a state-directed "invented tradition" fashioned to sanctify and consolidate an elite group's power and hold on the discourse of origins and destinies. Quite to the contrary, he unravels a sloppy but remarkably enduring case of "grassroots instrumentalism" (p. 203). Rural Mexicans far from the halls of power concocted a historical fable and planted evidence in hopes of securing concrete personal gains and bolstering local prestige. As Gillingham shows, from the very first news of the bones' excavation, most experts and observers were deeply suspicious. Those who actually investigated were even more dismissive. However, a range of factors and ambitious, bandwagon-jumping outsiders kept the scheme alive. Perhaps even more surprising, although their claims were never officially ratified, a number of the key players derived clear and lasting benefits from the sham and the nationalist puffery they deployed to make their case.

To set the stage for the "discovery" of Cuauhtémoc's bones in 1949, Gillingham leads the reader through the twists and turns of the ill-fated Aztec ruler's biography and emergence as the ultimate national hero. Much of what is discussed is history of the intellectuals and politicians who made use of the Cuauhtémoc story while crafting a Mexican nationalist saga (in brief, the primordial nation's valiant resistance to Spanish domination and gradual patriotic conquest of autonomy and genuine cultural freedom). Thus the book provides a useful synthesis of Mexican nation-building endeavors from more or less the eighteenth through the early twentieth century. More novel contributions emerge when the author weaves in a late nineteenth-century plot to plant evidence of the famed Tlatoani's inter-

ment. He shows how relatively humble rural actors kept up with elite efforts to conjure the nation and then took up the game of nation-making with their own interests in mind.

Gillingham also leads readers into the tempest of debate, ambition, and petty rivalries fueled by the messy archaeological dig that unearthed the fake relics. Thus we learn how the governor of Guerrero manipulated the story to bolster his political position. Here, we are treated to an entertaining close-up of contentious academic politics in mid-twentieth-century Mexico. Essentially a scholar who championed Cuauhtemoc's bones exploited prevailing *indigenismo* and the overheated climate of state-sponsored nationalism to carve out a lasting academic fiefdom, despite offering only a porous defense of her own methods and the bones' provenance. The hoax at least netted the townspeople a much-needed road linking their community to the nation's expanding highway infrastructure.

If there is a flaw in this book it is a case of too much of a good thing. Gillingham tracked every lead through a variety of archives and remote locations, and he demonstrates a thorough knowledge of secondary sources. However, at times it appears as if he was reluctant to let any evidentiary nugget go unmentioned or unexplained. This is a potential trap for all historians researching popular cultural phenomena. A tighter, more economical presentation would attract a wider audience. Nonetheless this work represents a fine example of new scholarship on modern Mexico.

EDWARD WRIGHT-RIOS
Vanderbilt University

RICK A. LÓPEZ. *Crafting Mexico: Intellectuals, Artisans, and the State after the Revolution*. Durham, N.C.: Duke University Press. 2010. Pp. x, 408. Cloth \$89.95, paper \$24.95.

From Hernán Cortés to the well-heeled tourists of today, foreigners have long marveled at the handicrafts produced by indigenous Mexican artisans. Rick A. López tells the fascinating story of how folk art produced by anonymous potters, weavers, and wood carvers became a "proud symbol of Mexico's authentic national identity" (p. 2). His excellent monograph advances our understanding of Mexico's cultural revolution—the state policies, artistic movements, and commercial developments that transformed a regionally fragmented postwar society into a unified nation-state with an ethnically inclusive national identity. Focusing mainly on the postrevolutionary decades (1920–1940), López offers a twofold perspective on the role of native craft industries in the historic construction of this ethnicized identity. Part one begins in Mexico City, where influential cultural nationalists debated the meaning of Indianness and forged paternalistic policies to uplift, secularize, and integrate indigenous peoples into the postrevolutionary nation. They also fashioned a newly inclusive nation-building discourse that "celebrated the living indigenous heritage as a vital compo-

nent" of national identity. While often denigrating native culture and religion, intellectuals simultaneously set out to (re)discover, investigate, and collect folk art, recasting handicrafts from "symbols of peasant backwardness" into iconic showpieces of Mexican art and identity (p. 68). They collaborated with American and European artists, ethnographers, diplomats, and collectors. Transnational support and patronage lent international legitimacy to the nationalist project and produced major exhibits of indigenous folk art and new markets for it at home and abroad. López emphasizes that nonstate actors initiated an *indigenista* project meant to valorize indigenous cultures. But the state institutionalized their movement in the 1930s, thereafter co-opting cultural nationalist intellectuals with employment and fickle but enduring budgetary support. This section concludes with institutional genealogies of what became two renowned public agencies, one dedicated to investigating national history and anthropology (now the Instituto Nacional de Antropología e Historia) and the other to showcasing folk arts and assisting the artisans who produce them (today's Fondo Nacional para el Fomento de las Artesanías).

By 1940, López argues, Mexico's crafting produced "the mass-based and inclusive identity that most Mexicans and foreigners today take for granted" (p. 14). What proves this "palpable reality?" One indication is that ethnicized cultural nationalism became official policy, enhancing the state's "claims to revolutionary legitimacy" (p. 147). Moreover, intellectuals no longer feared that racial fragmentation threatened political cohesion. But was "cultural hegemony" really achieved even as "the media continued to idealize whiteness" (p. 150)? López alludes to resistance from unspecified "artistic elites" and the middle class. He acknowledges that "success varied by locality" (p. 22), with notable resistance from the North. But he contends that the construction of regional identities in opposition to the dominant narrative actually "reinforced an ethnicized identity as the hegemonic cultural nationalist discourse" (p. 145). For this reviewer, contestation does not confirm hegemonic status, and López perhaps downplays the countervailing forces of regionalism, conservative Catholic Hispanism, and emigration that historians find operating against *indigenista* cultural nationalism. Such forces transformed the figure of the *charro* (cowboy) and mariachi music symbolic of rural, western, mestizo, and *criollo* cultures into secular nationalist icons. López's study calls for and makes possible a less bifurcated understanding of Mexico's postrevolutionary identity (re)formation. One hopes it inspires researchers to weigh how Mexicans of diverse class, ethnic, or provincial backgrounds made sense of these nationalist discourses as they evolved over the twentieth century into the unified cultural fabric of "authentic Mexicanness."

A notable history of ideas, policy making, and nation building becomes a pioneering work because López examines what the ethnicization of national identity meant for the Indian artisans who embodied the cul-

tural nation. Postrevolutionary nationalists not only exalted native handicrafts; they pledged to uplift down-trodden indigenous communities by marketing their arts and delivering them services. A briefer part two (pp. 195–298) presents a “bottom-up study” of Olinalá (Guerrero), a southeastern mountain community whose artisans have crafted lacquer boxes, chests, lecterns, and drinking gourds since Aztec times. The book’s twenty-three archival photos and sixteen colored plates nicely illustrate these artisans and their museum-quality art. The “transnational renaissance” of native handicrafts initially bypassed Olinalá’s workshops. Drawing on ethnographies and oral interviews, López recounts the artisans’ struggles against imitative Asian competition, exploitative commercial middlemen, and local oligarchs who resisted postrevolutionary reform. By the 1960s, craftsmanship declined, artisans quit, and Olinalá remained mired in stunning levels of poverty, illiteracy, and political violence. Studies of postrevolutionary Mexico often end with dashed dreams of working people and their socially conscious intellectual allies. Not here. López smartly bridges the 1930s with the populist-nationalist revival of the 1970s, when Olinalá’s artisans strategically deployed their indigenism to court meaningful state patronage. Thus arrived schools, highway and bus links, effective marketing and extension services, and a revitalized lacquerware industry. This book thereby demonstrates why, despite decades of policy failures, corruption, and repression, even belated clientelism kept the ruling PRI (Partido Revolucionario Institucional) in power for seven decades.

AARON W. NAVARRO. *Political Intelligence and the Creation of Modern Mexico, 1938–1954*. University Park: Pennsylvania State University Press. 2010. Pp. xiv, 301. \$64.95.

Much of the historiography of postrevolutionary Mexico has been concerned with the formation and consolidation of state structures and one-party rule before the late 1930s, or with the foundations of Mexico’s industrial economy in the 1950s and 1960s, or with the political explosions of 1968 and its aftermath. This book offers a corrective to these biases by placing the 1940s at the heart of its analysis. Aaron W. Navarro shows that political and institutional developments in this decade were central to the Institutional Revolutionary Party’s (PRI) capacity to consolidate its power, and key to twentieth-century Mexican state formation more generally. Navarro focuses on the political opposition confronting the PRI in the lead-up to and aftermath of the 1940 presidential election as well as on a resurgent military opposition during the Aleman administration (1946–1952). His book offers a new interpretive angle by examining these political conflicts through the lens of the military-civilian tensions that persisted even after formal demilitarization of the state. Navarro’s most original contribution, however, is his examination of

the origins and institutional evolution of state security services in Mexico. This book, therefore, breaks new ground in the study of Mexico’s intelligence apparatus, and will most likely be the starting point for further historiographical work on the topic.

Within a broad discussion of the “previously-loyal” opposition forces that the PRI confronted between 1939 and 1957, Navarro devotes an entire chapter to the secret service organizations used to document and undermine the activities of potential enemies of the state. Although he briefly discusses the origins of political intelligence services in the mid-1920s, he directs most of his attention to the founding of the Dirección General de Investigaciones Políticas y Sociales (DGIPS) and to the agency’s subsequent reorganization in the late 1940s as the Dirección Federal de Seguridad (DFS). In so doing, Navarro unveils the heretofore hidden dynamics of a critical and important set of institutions whose formation reflected the larger political tensions within the PRI-led state and whose emergence finally made it possible for the PRI to centralize its authority and successfully consolidate its power over opposition elements by the mid-1950s.

As one might expect given the elusive nature of the subject at hand, Navarro’s documentation of how the secret service institutions actually worked in terms of chains of authority, and on whose behalf, remains somewhat spotty. Some of this may owe to difficulties in finding “smoking gun” materials that give evidence of activities that are meant to be clandestine. The author relies heavily on a few primary resources, but also cites a range of memos, letters, and intelligence reports that reveal the attributes and characteristics of those under surveillance. Because of the nature of the documents available to him, it should not be entirely surprising that he is able to offer little about which actors or agencies solicited investigative reports, through which institutional chains of authority, and why. Because this field is in its infancy, and because such materials are inevitably quite difficult to locate, Navarro should still be applauded for the intensity of his efforts. This book produces some important findings, particularly in regards to FBI involvement in Mexican intelligence services and the overlap between different intelligence organizations (DGIPS and DFS). Yet it is somewhat disappointing that even these key findings seem under analyzed. How exactly did the FBI work with the DFS, and did all aspects of the PRI and/or Mexican state apparatus accept this relationship? Did the DGIPS and DFS compete in their activities, and what were the implications of the existence of two distinct security services for the larger political conflicts within and between the PRI and opposition movements?

Some basic facts about intelligence operations also seem cloudy, both with respect to chronology and to the relationship between intelligence services and other coercive forces of the state. For one, the narrative account in which Navarro identifies the main aims and ethos of the intelligence services shifts in temporal focus from

page to page, and sometimes from paragraph to paragraph, leaving the reader unclear as to whether its function was the same in all periods, and if not, whether intelligence orientations shifted as the PRI's power centralized over time. There also seems to be a lot of ambiguity as to whether the intelligence services worked with or for policing or military agencies, particularly in discussions of Mexico City's police, whose direct activities in intelligence gathering are noted by Navarro.

Even so, Navarro makes great headway in documenting the process of intelligence service centralization, and the ongoing efforts of Mexico's political leaders to coordinate security services. He skillfully documents the relatively amateurish tools and dubious interpretive techniques used by secret service personnel in their surveillance activities. He also helps us understand the extent to which the Mexican state security apparatus continually reinvented itself both through nomenclature and organizational leadership.

To account for much of this, Navarro frames his narrative of intelligence behavior through the lens of "professionalization." To a certain degree, this seems partly out of place because it requires him to evaluate Mexican intelligence services on the basis of some universal standard of conduct, a technique that serves to sideline the blatantly political objectives and context of intelligence gathering even at later stages when the intelligence service organizations were supposed to have reached professional "maturity." Despite this emphasis on professionalization, the intrastate conflicts and external opposition movements that riddled the Mexican state during the 1940s and 1950s come through loud and clear. This book makes a major contribution to our understanding of these conflicts and tensions. Navarro's focus on the role that Mexico's intelligence services played in monitoring and managing these conflicts is both novel and welcome.

MOLLY TODD. *Beyond Displacement: Campesinos, Refugees, and Collective Action in the Salvadoran Civil War*. (Critical Human Rights.) Madison: University of Wisconsin Press. 2010. Pp. xviii, 286. Paper \$19.95, e-book \$29.95.

The civil war in El Salvador (1980–1992) has received a fair amount of scholarly attention and will rightly continue to do so in the future. One challenge that historians of the conflict face is a lack of primary sources. In the absence of an extant documentary, interviews often provide valuable evidence.

Molly Todd's fine work on peasant refugees in Northern El Salvador resolves the challenge of sources partly through interviews and partly through documents housed in Honduras and at the United Nations. Certainly one of the noteworthy aspects of her book is the lacuna it fills in our knowledge; this is one of the first historical studies of refugees during El Salvador's civil

war, and it complements Joaquín M. Chávez's recent (2010) dissertation on insurgent organizing in El Salvador during the 1960s and 1970s as well as the anthropologist Irina Carlota Silber's recent book, *Everyday Revolutionaries: Gender, Violence, and Disillusionment in Postwar El Salvador* (2011).

Todd's work brings to mind Eric Wolf's classic, *Europe and the People without History* (1982), in the sense that she sets out to tell the story of people who have not been included in historical narratives to date. The author rightly points out that studies of the Salvadoran civil war tend to be "state-centric," and thus "more often than not . . . the rural population simply does not appear" in them (p. 5). Even those studies that do examine rural areas, Todd claims, tend to portray the peasantry with a "narrative of nonagency" (p. 5).

Generally, Todd's arguments are well supported, especially when she gets into the period best suited to her sources: the war itself. Some of the book's claims regarding the prewar era lack substantiation. One particularly interesting example is Todd's brief look at the paramilitary organization ORDEN (National Democratic Organization). Typically, scholars have portrayed ORDEN as a state-sponsored institution of right-wing terror that utilized tens of thousands of peasant foot soldiers to brutalize anyone suspected of opposing the status quo. That description is accurate in many respects. But as part of her effort to advance her claims about peasant agency, Todd argues that even progressive peasants might join on occasion if ORDEN provided them with opportunities unavailable elsewhere. I would have liked to see that topic more thoroughly developed and better substantiated, but in Todd's defense, it is not a major focus of her study.

Todd's evidence is strong when she examines the war and the strategies adopted by peasant refugees to survive its unpredictable and deadly conditions. Central topics of analysis include the tactics peasants used to hide from the military; the system of flight (*guinda*) they used to flee in advance of military assaults; the ways in which they conceived of and utilized the refugee camps across the border in Honduras; the ways in which they acted in defense of their interests while in those camps; the ways they explained to themselves the nature of the conflict in El Salvador; and the strategies they employed for returning home. Todd does a fine job of showing that the rural dwellers of El Salvador indeed possessed agency and worked diligently as individuals and in communities to manifest that agency in ways that they perceived to be in their best interests.

Todd's book does not overturn any existing argument about the war per se. Instead, her study stands as a benchmark reminder for any of us who might venture into the study of the civil war, or into the study of any era in Salvadoran history for that matter, that the peasants and "the displaced are people with histories" (p. 227).

CHAD THOMAS BLACK. *The Limits of Gender Domination: Women, the Law, and Political Crisis in Quito, 1765–1830*. Albuquerque: University of New Mexico Press. 2010. Pp. xii, 355. \$29.95.

Just as Douglas R. Cope asserted that race did not always play a dominant role in determining one's status in colonial Mexico City (1994), Chad Thomas Black argues that "customary legal practice performed a fundamental role limiting gender domination" in late colonial Ecuador (p. 1). Black persuasively shows that the Bourbon government failed to increase its social control through a stricter application of gender laws; it is only with independence and the advent of liberal ideologies that one finds consistently strict interpretations of gender laws. Black places this transition within a more general argument that patriarchy began with independence rather than in the late colonial period; this aspect of his argument falls short due to an inflexible definition of patriarchy and a failure to engage meaningfully with current scholarship. Even so, Black's book offers a rich analysis of the intersection of laws and customs in the shift from colony to republic in Ecuador.

Opening chapters discuss the Bourbon state's failed attempts to tighten control over colonial society via morality, especially around gender matters. Chapter two, for example, addresses a marked increase in the state's interest in moral crimes such as sex offenses, with women more likely to be taken into custody than men. Yet Bourbon attempts to tighten control fell short of their aims because many men and women were unwilling to denounce each other. Black's insights in this chapter are particularly innovative, and they suggest ways that we should be rethinking the Bourbon era more generally. In chapter three, Black shows that women rarely discussed whether or not they had their husbands' permission to act independently in court, and judges were likely to assume a husband's permission in many cases. Although these discussions are illuminating, some of Black's conclusions fail to capture the breadth of gender politics. For example, Black states that an attorney in a case "moved discussion of gender inequality to the much more familiar ground of the need for protection of interests of the supposedly weaker groups in society" (p. 127). However, virtually all of the so-called "weaker groups" in colonial society were defined as such based at least partly on gender ideologies.

Later chapters explore the changing application of gender laws following independence. Chapters five and six examine how the independence and early republican periods "accelerated the long and contested slide in legal rights to for the *corregimiento's* women" (p. 202). Black asserts that liberal commitment to the rule of law resulted in stricter interpretations of patriarchal precepts. Although women attempted to claim their rights as citizens, they often failed because citizenship was defined as the domain of literate men. Here, Black's discussion offers a close and much-needed examination of gender in Ecuadorian independence, and his findings

reinforce and complement studies of other areas of Latin America for this period.

Black closes the book by returning to his definition of patriarchy, in which he emphasizes men's complete authoritarian control of women and women's complete lack of legal and economic rights (pp. 261–262). He uses this definition to suggest that the Spanish colonial state was not patriarchal, and therefore that other historians are mistaken when they claim that nineteenth-century patriarchy was a colonial holdover. However, his definition of patriarchy is so rigid that it does not fit the republican period either, which he does see as patriarchal. Moreover, Black's discussion of the historiographical disagreement over patriarchy in the colonial period lacks depth: he often makes only general claims in his text, followed by lengthy footnotes that sometimes exaggerate other scholars' claims, since few of the works that Black cites actually assert that post-independence patriarchy was merely a colonial holdover. By oversimplifying both patriarchy and gender historiography, Black misses a chance to engage the reader in a substantive and meaningful discussion of patriarchy and history in Latin America. Black also loses some opportunities to bolster his arguments, as evident when he discusses events in Quito in 1809 at length, whereas consideration and analysis of liberal exclusionary and gender concepts would have done a better job of supporting his claims that gender inequalities increased due to liberal political practices and ideas.

Despite these limitations, Black's book makes a strong contribution to our understanding of the transition from colony to republic. It will be of interest to many scholars for its innovative discussion of how local legal customs often trumped state laws in late colonial Quito, and about the central role of gender laws and practices in the independence period. Black's findings open the door for further exploration of the relative strength of local versus centralized legal customs and agendas in other parts of Spanish America.

CAROLYN DEAN. *A Culture of Stone: Inka Perspectives on Rock*. Durham, N.C.: Duke University Press. 2010. Pp. xvi, 297. Cloth \$84.95, paper \$23.95.

Few of the world's great cultures managed to leave their stamp on history with images as simple as those of beautifully dressed and fitted, but otherwise unadorned, stones. Yet this is precisely the legacy of the great, if short-lived, Andean empire of the Inka. In her exquisitely researched, articulate, and annotated book, Carolyn Dean explores the Inka love affair with stone and demonstrates the near-universal role played by the material in Inka cultural and spiritual life. She approaches her task from a background in art history but makes it clear from the outset that, for the Inka, the incorporation and manipulation of stone into their world was not "art" in the Western sense but something far more "numinous." Stone was the living essence of *Pacha*

Mama, the Inka Earth Mother, and its power was nothing less than supernatural.

Dean shows how the Inka used stone in numerous ways to impose their quasi-messianic sense of order on what they saw as the chaotic wilderness all around them, and to celebrate the successful marriage of man and nature once order was established. Whether used architecturally, in terrain enhancement or as *waka* to commemorate important people, places or events, the message was clear: Inka stonework was synonymous with the Inkas themselves, and with whatever they wished to memorialize. To this day, Andean Indians regard Inka stones and *waka* with reverence. These are not “reminders” of glories long past; they are those glories, still alive and vibrant despite centuries of alien rule. There is, however, always risk in attributing thoughts, feelings, and ideas to a people or culture long gone. This is especially true when much of the evidence has been filtered through the minds and words of alien chroniclers who were generally hostile to the ideology they observed. Nevertheless, Dean does an excellent job of documenting her assertions, and I suspect few knowledgeable readers will find fault with her basic conclusions.

As an architect, I have passed much of my professional life in the company of builders, stonemasons, and, more recently, archaeologists. I thus come to Dean’s subject from nearly the opposite end of the spectrum than she does, with prejudices to match. In her book’s title, introduction, and text, Dean uses the words “stone” and “rock” interchangeably. I found this distracting. While the Quechua word *rumi* clearly refers to both, and as the material is found in nature they are surely the same, my stonemasonry friends make a rough distinction once the work begins. Rocks, they say, are unemployed stones. Call me a purist, but in a work so otherwise articulate, I would have preferred a similar distinction here.

In chapter one, the author discusses *wawqi*, including an especially important sugarloaf-shaped sun-stone once in the plaza at Cuzco but since lost. In fact a similarly carved stone still exists at Calancha’s Sun Temple of Chuquipalta, near Pachacuti’s Vilcabamba estate at Vitcos. I have worked there for years. It is a region rich with pristine examples of many of the concepts Dean discusses. In particular, there are numerous boulders almost certainly carved for shadow casting and other forms of astronomical observation, subjects altogether absent from her analysis. It is unfortunate that more Vilcabamba material was not included in the book.

Curiously, in chapter two, the author introduces the term “nibbling” to describe the pecking process used to work hard stone throughout the pre-ferrous world and long referred to by that name by virtually everyone. She correctly notes that the coursed ashlar pattern in some Inka walls is illusory, since like the polygonal stones found elsewhere, the squared blocks are not actually rectangular, thus not truly ashlar, but custom fitted to a single place in the wall. Since the work is often equally fine in both patterns, more discussion of the difference

would have been interesting. I agree with Dean’s skepticism in chapter four regarding the images some claim to see in the polygonal walls, although it was surprising to find no mention of the *llama* terraces recently discovered at Choquequirao, where such images are explicit and unambiguous.

The suggestion that Inka construction methods were somehow unique is also misleading. They are very similar to those of the Egyptians and others millennia earlier. Finally, the discussion of architecture in chapter three leaves the impression that the essence of Inka buildings was in their masonry alone, although it is clear in the chronicles that Inka thatchwork was equally impressive to Europeans and highly valued by Inka builders. Acknowledgement of this would have detracted little from the author’s thesis. Nevertheless, despite such omissions Dean has made a strong contribution to the field of Andean studies, one well presented and worth reading.

Institute of Andean Studies

KATHRYN BURNS. *Into the Archive: Writing and Power in Colonial Peru*. Durham, N.C.: Duke University Press. 2010. Pp. xv, 247. Cloth \$79.95, paper \$22.95.

Kathryn Burns’s book is about notaries and their often overlooked role in producing archives, particularly those of colonial Cuzco. Through this focus, Burns asks how writing related to power and agency. The study begins on a largely Foucauldian note, but it quickly dismisses the absolutist pretensions of colonial law and, by the end, challenges power/knowledge arguments as much as it supports them.

Notaries were licensed by the state but essentially independent of it. A fixed number of positions existed in every town, and they were bought and sold as investments to be amortized on a fee-for-service basis. Notaries shuttled back and forth between parties to legal disputes, took depositions and “improved” them for clarity and respectability, shepherded the cases through court, coaching and acting for both litigants and judges along the way, and kept the documentary results in their own archives of bound records (*protocolos*). Customary shortcuts and divisions of labor within the notarial workshop significantly departed from the letter of the law. Some were relatively innocent, such as when assistants took depositions for the notary to certify later. Others were less so, such as when, during the drafting of a document, notaries asked their clients to sign blank folios and later filled in the contents around the signature. Through such practices, notaries merged the voices of their clients into legal templates and procedures that confound any attempt to reconstruct litigants as discrete agents somehow unaffected by the documentary processes that made them historically visible.

What concerned clients at the time, however, was not questions of voice and agency but corruption. Notaries routinely engaged in off-the-record negotiations with all parties to a case, during which they thoroughly in-

termixed public and private interests. Not surprisingly, their mediating role, their intimate knowledge of clients' personal business, and the fact that they were privately paid combined to put their probity permanently into question despite thorough legal reforms in 1503 and subsequent "best practice" manuals. Yet in the context of a weakly institutionalized state, they could not do their job effectively without developing the same personal relations with elites that endlessly raised suspicions of corruption. Thus, the anxieties notaries aroused were those of a patrimonial rather than a panoptic bureaucracy.

Despite this Weberian point of arrival, Burns continues to press the question of how writing related to power, with a clear (but largely thwarted) constitutive expectation. To be sure, legal documents routinely established binding and authoritative truths irrespective of their actual accuracy. Yet the omnipresent anxious awareness of this reality and the demonstrable chicanery from which it derived jointly indexed off-stage power relations that drove the documentation process while mostly remaining hidden within it. In this fundamental way, writing and notarial practice did not constitute colonial power but instead adapted to it as a largely exogenous and superordinate phenomenon. Burns tellingly recounts the inspection (*residencia*) of an outgoing notary who fell prey to the illusion that his micro-practices could trump extradocumentary relations of complicity with local elites, and who paid a heavy price for so doing. Thus, the book's findings significantly undermine the power/writing premise on which it is based. One might fault the author for not settling accounts more thoroughly between expectations and findings in her argument, but such a move might well offend the book's theoretical constituency, and the implications are clear enough in any case.

The book's other major argument—that historians can benefit from paying closer attention to the construction of the archives from which they draw their data—meets a less conflicted but equally productive end. Burns develops this proposition in two different but largely complementary ways. Initially, she advocates making the archive and its underlying documentary processes into an object of study in its own right. This reflective impulse figures prominently in the recommendation that historians re-engage with legal scholarship, but is embodied above all in the basic decision to frame the study around notaries as mediating figures. By the end of the book, however, Burns acknowledges that such methodological progress requires continued attention to the broader social relations in which document production took place, which suggests that methodological and topical inquiry require an ongoing pragmatic reconciliation. She further notes that notarial practice varied at least somewhat by geographical and legal jurisdiction (*fuero*) and therefore cannot be fully abstracted from the different matters to which it pertained. Unfortunately, the author does not develop this insight systematically by analyzing the differences between the secular civil documents she primarily dis-

cusses and those produced in other jurisdictions, but the overall result is still instructive. It remains to be seen how many historians will choose to study notaries in the future, but this study convincingly shows that all will benefit from taking them more fully into account.

Carleton University

PAULO DRINOT. *The Allure of Labor: Workers, Race, and the Making of the Peruvian State*. Durham, N.C.: Duke University Press. 2011. Pp. xi, 310. Cloth \$89.95, paper \$24.95.

Peru's early twentieth-century elites, associating industrialization with progress and indigeneity with backwardness, were convinced that the creation of an industrialized labor force would lead to the disappearance of Indians. Government officials thus introduced a bevy of legislation to support urban laborers in what was still an overwhelmingly rural country. This conviction, and hope, that industrialization would effectively de-Indianize Peru, transforming rural, indigenous peasants into urban laborers with mestizo identities is what Paulo Drinot deems the "allure of labor." Paying particular attention to the 1920s and 1930s, Drinot shows that Peru's labor-centric nation-building efforts were inherently racialized.

Centering his study on four state agencies and initiatives—the Labor Section of the Ministry of Development, the creation of worker housing districts (*barrios obreros*), the establishment of state-funded eateries, and the 1936 worker social insurance law—Drinot shows how Peruvian government officials and bureaucrats prioritized laborers as the key to a remade Peruvian nation-state. The Labor Section served to recognize unions and mediate workplace conflicts, while the *barrios obreros* sought to provide affordable, respectable housing for laborers. The state-funded restaurants offered workers cheap, nutritious food served in clean and orderly environments, while the social insurance law promised them medical attention, free hospitalization, and even pensions. Drinot convincingly argues that these government efforts were more than attempts to co-opt laborers and thereby undercut left-wing challenges from the Peruvian Communist Party and the populist APRA (American Popular Revolutionary Alliance) Party. They were also integral components of a national project that regarded a healthy, moral, and robust urban working class as the solution to Peru's racial woes.

Because Drinot pays as much attention to the public reception of state efforts as he does to the government rhetoric surrounding them, the book ends up being much more than a study of institutions and policies. Instead, we see how a broad range of Peruvians engaged with the programs and thereby actively participated in the work of nation building. For example, Drinot shows how workers initially embraced the Labor Section despite the heated opposition of anarchists and communists but grew disillusioned once the agency proved un-

able to overcome steadfast resistance from employers. In the chapter on public eateries, Drinot demonstrates that these restaurants thrived in large part because of sharp anti-Asian racism: government officials and workers alike eagerly supported affordable alternatives to Chinese and Japanese restaurants. Worker housing, by contrast, was largely a failure. While laborers were eager to leave squalid tenements and single-room dwellings, the government-built homes were simply too costly for any but the wealthiest of workers to afford. Although Drinot's focus is on race and class, he also pays needed attention to gender, noting elites' desires to transform male laborers into "decent" family men, changing attitudes toward female domestic servants, and even a labor queen beauty contest.

Drinot's inclusion of a broad variety of perspectives is one of the real strengths of this book. We hear from bureaucrats, public intellectuals, lawyers, presidents, communists, APRA activists, anarchists, employers, and workers themselves. The range of workers considered is likewise diverse: bakers and printers, carpenters and sugar workers, telephone operators and oil workers all appear in the book. To present these diverse voices, Drinot utilizes prefectural reports, letters, contracts, memoirs, government reports, speeches, and a broad range of periodicals. Although most of Drinot's examples and sources come from Lima, the book is about all of Peru. Drinot argues persuasively that government officials concentrated their attention on the capital precisely because of their anxieties about the overwhelmingly indigenous and rural sierra. Peruvian elites, in effect, hoped to remake Peru from Lima outward.

There are, of course, areas where this excellent book could be stronger. The chapter on social insurance is less effective than others in showing workers' responses to the reform. The book also pays relatively little attention to the issue of education. Because members of the APRA made the "popular universities" (night schools for workers) central to their engagement with laborers, the state's action or inaction on worker education warrants further exploration. And while Drinot shows that workers saw themselves as active participants in the construction of a labor state, it is not clear whether workers shared the elite's view of industrialization as the key to de-Indianization. These minor weaknesses do not, however, detract from the work's overall importance. This is a valuable book for Latin Americanist historians of labor and race, and a crucial read for historians of Peru.

MARK HARRIS. *Rebellion on the Amazon: The Cabanagem, Race, and Popular Culture in the North of Brazil, 1798–1840*. (Cambridge Latin American Studies, number 95.) New York: Cambridge University Press. 2010. Pp. xv, 331. \$95.00.

Brazil's Cabanagem rebellion, because of its diverse racial composition and the dramatic aims of the insur-

gency, is often considered the most radical of the uprisings that occurred during the Regency period (1831–1840). Most studies of the Cabanagem rebellion focus on race and the tensions between poor mixed-blood *mestiços* and Indians and wealthier whites. Mark Harris's work presents a much more complex history of this event. He shows that the insurgency itself varied in size and composition over time and that insurgents included mixed-blood *mestiços*, Indians, blacks, and also a significant number of white people who were not from the lower class.

Harris extends the rebellion's chronology, going back to the Amazon river basin's development in the early eighteenth century. He posits the 1750s as a turning point in the history of the Grão-Pará captaincy. After the expulsion of the Jesuits from Portugal and overseas dominions in 1757, new legislation regarding the secular governance of indigenous communities, the *Diretório dos Índios* (Directorate), was imposed. Although Harris traces the roots of the rebellion to earlier events, he does not depict a linear and progressive succession of events. Far from that, the book describes a very complex, multifaceted, and frequently contradictory local history. The Directorate and subsequent laws aimed to foster the region's development and, at times, attempted to protect the Indian population from exploitation by slave hunters, patrons, and colonial administrators. The results of these laws were frequently the opposite of their intended aims, and they often aggravated the dissatisfaction of the lower classes they sought to protect.

Additionally, the region's unique development and reliance on the exploitation of forests and rivers, rather than the plantation, were key factors in the rebellion. Local populations and economies were vitally connected to the ecologic system of this fluvial space. A network of small agricultural units, rather than large estates, developed along the rivers, creating a peasant economy similar to that found in much of Spanish America. Harris notes these similarities and creatively uses a comparative method to argue for Cabanagem as a peasant insurgency rather than a race war.

By the end of this book it becomes clear that the Cabanagem rebellion had many different aims, periods, and geographical areas. In chapter five, Harris analyzes the resistance in the small city of Ecuipiranga in the lower Amazon basin, which allows the author to avoid a traditional Belém-centered analysis and to show that the rebel army was like a many-headed hydra, with several leaders. Harris also makes a great contribution to our understanding of the rebellion when he shows that the idea that Cabanagem was a race war came from outside the region and was strengthened and legitimated through the severe repression of rebels after 1837. Thus, Harris shows that propaganda during and after the war has continued to influence the historiography of Cabanagem, shaping the way we have understood the movement until now.

APARECIDA VILAÇA. *Strange Enemies: Indigenous Agency and Scenes of Encounters in Amazonia*. Translated by DAVID RODGERS. (The Cultures and Practice of Violence.) Durham, N.C.: Duke University Press. 2010. Pp. xv, 370. Cloth \$89.95, paper \$24.95.

History is often a mixed blessing for anthropology. A vital relation is universally accepted, but working the seam between the West and the rest raises deep concerns. The staggering scale of disruption and terror, only recently comprehended in places like the Amazon, is graphic testimony of how much was lost *and* how badly non-Western peoples are generally represented in written history. Images of "primitive" tropical societies are so deeply rooted in the Western imagination as to seem given, or even natural. Still, solid accounts of initial encounters are rare, particularly those that reflect indigenous perspectives and agency. In this book, Aparecida Vilaça presents a meticulous ethnography of indigenous practices and conceptions of social and cultural difference of the Wari' people and shows how these relate to broader historical forces in Brazil's western frontier. This work has profound and far-reaching implications for anthropologists and historians who examine the frontiers of colonialism and globalization.

The Wari' are fairly typical of recent indigenous societies in Amazonia: small, fairly mobile hunter-horticulturalists renowned for their exotic customs, such as aggressive warfare and cannibalism. They are a far cry, however, from the timeless or "traditional" societies that many believe are typical of tropical forests. Sustained contact with "whites" was initiated in the mid-1900s, during Brazil's "Little Rubber Boom," but the Wari' were no strangers to change. They had experienced earlier colonial encounters, including seventeenth-century expeditions, eighteenth-century missions and the Brazilian "gold rush," and the nineteenth-century (big) Rubber Boom in southern Amazonia. Like so many groups in the peripheral "tribal zone," they have a very deep history of resistance.

For many scholars, tradition is largely about identity expressed in sociality, politics, technology, or ideology. Vilaça, however, argues that "tradition is bodily substance," which is internalized "not as a belief, as an attribute of the spirit, but as food, as body fluids, and as clothing that, along with affects and memory, constitute the body" (p. 317). The focus shifts from sociological form, institutions as entities, to the actual practicing bodies that compose and decompose them. The Wari' incorporate the outside through co-habitation and substantiality, a process of familiarization that turns enemies, *wijam*, into friends and potential affines. The narrative structure of the book's first section mirrors indigenous conceptions of otherness and analyzes key indigenous categories of difference, notably, *wari'* (human/person), *tatirim* (foreigners), *wijam* (enemies), and *karawa* (prey). Thus, the author shows how one becomes, metaphorically and literally, the other. The second section analyzes four myths to show how they reveal critical social relations with foreigners, the dead,

and in-laws. Part three further probes the actual scenes of encounters during various stages in the "pacification" of the Wari' and outlines changes in their relations with larger Brazilian society.

The "shock effect" of colonial encounters and globalization did not overwhelm local difference nor diminish the agency and resiliency of "others," even in areas, such as western Brazil, where chronic violence characterized frontier relations. True to the series, the book adeptly explores how violence takes form and is apprehended differently according to cultural logics and values. What stands out in the Wari' case is the way warfare and cannibalism are constructive of personal identities, relations between genders and social groups, and indigenous agency in the extended social and political field of the southwestern frontier. This work underscores the remarkable resilience of core elements of indigenous cultures, not as impersonal or disembodied forces, but through the construction of subjectivity allowing for essential difference and the incorporation of others.

This is contemporary ethnography at its best, skillfully weaving together nuanced theoretical arguments, rich prose and storytelling, and insights that can only be gained by immersion in local settings. It reveals basic features of the Wari' culture and how they structured encounters with whites. Its true power, like most good ethnography, lies in its capacity, or agency, to promote dialogue with "others." The layered narrative is punctuated by conversations with Wari', other Brazilians on the frontier, and academics in Brazil, France, the United States, and the United Kingdom. Through its detailed descriptions of specific places, people, and interactions, multiple perspectives are voiced. Vilaça's remarkable depiction of the coherence and resilience of native Amazonian peoples even in the face of catastrophic change is a must read for anyone interested in colonialism, globalization, and the place of indigenous peoples in the modern world.

OLIVER J. DINIUS. *Brazil's Steel City: Developmentalism, Strategic Power, and Industrial Relations in Volta Redonda, 1941–1964*. Stanford, Calif.: Stanford University Press. 2011. Pp. xxi, 325. \$65.00.

Histories of the labor movement in Brazil tend to focus either on the role workers played in development policy and state capitalism in the post-World War II period (i.e., the *desenvolvimentista* view) or on the evolution of the government's social welfare programs and laws (i.e., *trabalhismo*). In this book, Oliver J. Dinius offers a synthesis of both views through a historical narrative of labor and business history in the largest steel mill of Brazil, the Companhia Siderúrgica Nacional (CSN), and the most important industrial city, Volta Redonda.

The author tries to shy away from the politically charged views of the labor movement as either anticapitalist or as a compliant follower of the interests of the

state and Brazilian elites. Thus, one of the most important insights of the book is that the role of the labor movement is more complex and more fundamental to economic policy than what these simple views would assume. In post-World War II Brazil, workers were central to government policy, both as beneficiaries and as agents of change.

Some of the author's findings, however, are specific to CSN and cannot be generalized to other factories. As the central axis of the Brazilian government's industrial policy, CSN was the largest integrated steel mill in Latin America, and its workers enjoyed a special status. In fact, the book shows how CSN was used as an experimental laboratory to test new managerial techniques and to expand labor rights (or to repress unions).

The book is divided into seven chapters, an introduction, and a conclusion. Chapter one is a good, succinct history of early industrialization in Brazil and of the creation of CSN. Chapter two is where Dinius displays the most interesting and original archival research, as he describes how the town of Volta Redonda developed as an industrial city. In this chapter the author provides a particularly interesting description of factory life and the problems CSN had with worker turnover and out-migration. Chapter three is a history of industrial relations in Volta Redonda and at the national level. It describes state paternalism (in discourse and action) and the engineering of a new society in which rural workers migrated to larger towns to work in factories and were then rewarded with a series of welfare benefits. Without acknowledging it, the book evokes the late John D. Wirth's characterization of the CSN's paternalism. Chapter four is a history of management approaches at CSN in its early years, including mechanisms to discipline workers. Chapter five contains a brief history of labor laws and labor repression in Brazil and describes in detail how police were used to control the communist threat in Volta Redonda. Chapter six focuses on the division of labor within CSN and explains why its union had such strong bargaining power. Chapter seven looks at the political history of labor relations in Brazil and analyzes different government attempts to tame unions. Here the author places the union of CSN workers in context, showing some of the progress it made to get concessions and higher wages for its workers.

Finally, chapter eight describes how the development model that CSN embodied, which seems to have been relatively successful from the developmentalist and *trabalhista* points of view, rapidly eroded toward the end of the 1950s and early 1960s. This decline in the development model, the author argues, led to labor conflict and to the breakdown of the system as a whole. In fact, after the military coup d'état in 1964, the Brazilian government repressed labor more aggressively and management ultimately got the upper hand over labor. Members of the military elite then became managers of state-owned companies such as CSN. This was, the book argues explicitly, the defeat of *trabalhismo* and, implicitly, the decline of developmentalism as well.

This book dives deep into a brief period of Brazilian history and leaves the reader with a feeling the story is incomplete. If 1964 was the end of *trabalhismo*, how does the labor movement before 1964 compare to that of Lula da Silva in the 1970s and 1980s? Was developmentalism dead after 1964? What about the relative success of state capitalism and industrial policy during the "Brazilian miracle" of the 1970s? Still, Dinius has written an original business and labor history of Brazil's largest factory and most emblematic state project of the twentieth century. Aside from the dense introduction, the narrative is elegant and easy to follow, making it a great reading for courses on labor history or modern Latin America.

EUROPE: ANCIENT AND MEDIEVAL

LESLIE KURKE. *Aesopic Conversations: Popular Tradition, Cultural Dialogue, and the Invention of Greek Prose*. (Martin Classical Lectures.) Princeton: Princeton University Press. 2011. Pp. xxi, 495. Cloth \$75.00, paper \$29.95.

For me as a boy it was Arthur Rackham's edition, with its beautiful colored plates, that first opened up the world of Aesop. And for many of us Aesop and his animal fables are associated with childhood and bedtime stories. This association is one reason, Leslie Kurke suggests, that classicists have traditionally not treated Aesopic fables as an object of "serious" scholarship: their wisdom is homespun, the moralizing commonplace, the language plain. Surely Aesop could not stand in the canon next to a Homer, Herodotus, or Plato?

This prejudice Kurke sets out to overturn in her impressive new book. For all its 431 pages and twenty-nine page bibliography, and its philological precision and theoretical sophistication, in the end the book tells a simple tale: Aesop's stories represent an occluded popular voice in Greek literature, and the Aesopic more generally lies at the root of some early Greek prose. Taking as her foci the *Vita G* (the fullest extant life of Aesop), select Platonic dialogues, and Herodotus's *Histories*, Kurke proposes to read these disparate texts together to uncover an important Aesopic presence behind them all.

The book is divided into two related parts. Part one on "Competitive Wisdom and Popular Culture" follows the trajectory of Aesop's life, interpreting its episodes as the crystallization of populist critiques of elites (e.g., Delphic priests, eastern potentates, Seven Sages) perhaps stretching back to the late archaic period. Aesop here becomes a pre-Platonic sage who over a lifetime manifests all varieties of wisdom, from political insight to prophecy and union with the divine. At the same time, the slave Aesop becomes a figure of resistance, whose cunningly enjoyable stories outwit seeming superiors like a Solon or his own master, Xanthus. Thus for Kurke the fable and Aesopic discourse generally be-

come tools “endlessly available and adaptable for all kinds of resistance, parody, and critique from below” (p. 13).

This was especially true from the mid-fifth century B.C. and so part two on “Aesop and the Invention of Greek Prose” seeks to find “a significant Aesopic strand twisting through the beginnings of narrative or mimetic prose” (p. 15). After arguing for fables’ importance in the educational programs of Prodicus, Antiphon, and Protagoras, Kurke moves on to excavate Aesopic elements in Xenophon’s *Memorabilia* and several Platonic dialogues. Her many interesting suggestions include the following. In the *Symposium*, Alcibiades tacitly depicts Socrates as an Athenian Aesop—ugly, poor, and rather indecorous in his use of rough analogies to tanners and asses. More generally, the Socratic *elenchos* parallels Aesop’s ability to “deftly manipulate the will and self-conception of a more powerful interlocutor to compel him to ‘bear witness against himself’ in a form of self-incrimination” (p. 341), while Socrates’s use of analogies to invite inductive generalization corresponds to Aesop’s skill in sketching a scenario, from which the hearers themselves draw the desired inference. So for Kurke, Plato tacitly uses “Aesop” to resist and contest the accepted wisdom of poets and Sophists alike: “Aesopic conversations” become crucial for the “invention” of philosophy itself.

Like Plato, Herodotus was an exceptionally plurivocal prose-writer. His *Histories* mingle Homeric grandeur, tragic pathos, and exact “science” (*historie*)—and, Kurke argues, the cheekier voice of an Aesopic advisor and *logopoios*: both hailed from Asia Minor, spent time in Samos, traveled widely “performing [their] *sophia*” (p. 430), and gave coded warnings against the excesses of power. For Kurke, the dialogue between Croesus and an unnamed advisor in Hdt 1.27 prefigures similar encounters later (e.g., Demaratus-Xerxes) and is programmatic for the entire work: “This small fable strategically placed early in Book I encourages us to understand Herodotus’ entire text as bouletic fable writ large . . . proffering tales of the past indirectly to advise audiences in his present” (p. 429). The “moral” that an Aesopic Herodotus “teaches his readers” (p. 426), in particular contemporary Athenians and Spartans, is that one should avoid the temptations of tyranny. On this note the book ends—like the *Histories*, rather abruptly.

Impressive in its collation of disparate material, imaginative in its juxtaposition of texts and genres, and ingenious in its philological argument, this is an original work on which scholars of many subdisciplines will need to ruminate, for it contains much food for thought. If anything, it contains too much. This may stem partly from its generous understanding of “fable” in the classical period as a “very loose category, which comprehended jokes, witty comebacks, and comic anecdotes as well as what are now considered ‘fables’ more narrowly defined” (p. 268). Under this broad outlook, Prodicus’s “Choice of Heracles” becomes “clearly an allegorical fable” (p. 272), as do the myths of Plato’s Protagoras,

Aristophanes, and Diotima, Herodotus’s story of the dancing Hippocleides, and much else besides—all assimilated for various reasons to “Aesop” whose name, one wonders at times, may become too convenient a placeholder.

Nevertheless, the book recognizes the dangers of overexaggeration and its readings are ever intelligent and informed. I recommend it wholeheartedly.

M. A. ROBB. *Beyond Populares and Optimates: Political Language in the Late Republic*. (Historia Einzelschriften, number 213.) Stuttgart: Franz Steiner Verlag. 2010. Pp. 225. €56.00.

What do we know about politics in the late Roman Republic? A wealth of contemporary evidence survives in the writings of key participants: Julius Caesar, Sallust, and above all Marcus Tullius Cicero. Senators all three, they reflect in their works senators’ concerns, as do the more synthetic accounts of later historians and biographers such as Plutarch. The result is that fundamental questions sometimes can only be answered vaguely. How often, for example, did citizens living outside Rome journey in for the popular assemblies that alone could pass laws? What did ordinary Romans think of the political process and of the senators, in whose control it lay? Even knowing what most senators themselves thought is difficult, so much does Ciceronian evidence predominate: of the thousands of speeches given to the Senate and the people, his alone survive.

It was reliance on some famous remarks of Cicero (from his speech *Pro Sestio*) that divided Roman politicians into two categories, *optimates* and *populares*, along with several passages of Sallust that describe the breakdown of consensus between Senate and people in the late Republic, that led historians, following the lead of Theodor Mommsen in his epic *History of Rome* (1854–1856), to explain the period’s politics as a struggle between two parties, a senatorial party (the *optimates*) and a popular party (the *populares*). While major aspects of Mommsen’s view were challenged, including even the very existence of anything like “parties,” it was influentially revived by Lily Ross Taylor in the 1940s, and again acutely criticized. Still, many scholars in the last two generations have fixated on an ideological clash between upholders of senatorial authority, on the one hand, and the rights of the people, on the other; exact definitions, along with ancient usage, continued to be debated, but *optimates* and *populares* remain today familiar terms in ancient history textbooks and classrooms to describe these two groups of politicians.

M. A. Robb’s new book will make the textbook writers and teachers think twice about totalizing explanations based on this paradigm. After a helpful survey of previous scholarship (chapter one), it proceeds through a close analysis of the use of the words *populares* (singular *popularis*) and *optimates* (singular *optimas*) in the

writings of Cicero, Sallust, and others. Chapter two argues that the deployment of the categories *populares* and *optimates* in the crucial passage of *Pro Sestio* is highly contingent, part of a strategy to alienate Cicero's great foe Publius Clodius by branding him a false demagogue, while suggesting that virtually everyone else in Rome is part of a redefined group of *optimates*, "all the best men." Robb suggests that Cicero's primary goal here is to "rally personal support" rather than present a "political manifesto" (p. 66), but one might question how easily the two can be separated: throughout his career, Cicero tried to forge consensus through similar strategies of redefinition and demonization.

Chapters three and four turn to *popularis* and *optimas* elsewhere in Cicero's writings, showing that the former has a range of meanings, sometimes quite positive by Roman aristocratic standards (e.g., "acting in the interests of the people"), while *optimas* refers to the Senate, the aristocracy within the Senate, and (more subjectively) those who share Cicero's views; the words do not typically refer to mutually opposed groups of politicians. The other authors examined in chapter five mostly use *popularis* similarly, and for them *optimates* usually means "aristocrats."

In chapter six, the book's most interesting, Robb concludes that there is no strong evidence for a widely recognized "*popularis*" ideology of attacking the senatorial establishment on behalf of the Roman people (though *popularis* can sometimes refer to one who breaks with the senatorial majority). The old aristocratic ideal was precisely to serve the people, and consensus and cooperation within the Senate were valued. Undeniably, though, certain senators in outright defiance of their peers went to the people's assemblies to pass laws; such men, Robb argues, were termed not *populares* but rather *seditioni*. Sallust, it is argued somewhat partially in the book's concluding chapter, in his sketches of political developments criticizes politicians individually (rather than groups) for exploiting widening divisions in society.

The underlying reasons for direct appeals to the people are not explored here, nor is there any guessing at perspectives on the *seditioni* other than those of senators: surely some of the urban *plebs*, not to mention Rome's old Italian allies, would not have called them that. Robb's focus is, in essence, on (some) senators' bitter recriminations against one another, and through this detailed study, one understands better their values and the language that encoded them. In the background remain the people themselves cheering at the games or massing in protest in Rome's streets, the bitter memories of Lucius Cornelius Sulla in the Italian countryside, commanders in conclave, and armies on the march.

JOSIAH OSGOOD
Georgetown University

DEBORAH MAUSKOPF DELIYANNIS. *Ravenna in Late Antiquity*. New York: Cambridge University Press. 2010. Pp. xix, 444. \$95.00.

Deborah Mauskopf Deliyannis has provided an up-to-date, comprehensive, synthetic study of Ravenna, one of the most important cities of late antique and early medieval Europe. Ravenna rose to prominence in the fifth century as the residence of western emperors, Gothic kings, and Byzantine governors in Italy. It is justly famous for its surviving monuments and intricately wrought mosaics in churches like Saint Apollinare Nuovo and S. Vitale. Part of the importance of this study is the light the author sheds on a city that has preserved the Gothic and Byzantine presence in Italy in ways no longer visible in Rome or in other late antique cities.

The history of late antique Ravenna has been strangely overlooked by scholarship in English. The status of this city in the fourth through the sixth centuries has contributed in part to the lacuna, for though Ravenna became the *sedes imperii*, the seat of the emperor and his administration, Rome remained the *caput orbis* or "head of the world." As Deliyannis observes: "Even the Romans who worked for the Ostrogothic king Theoderic praised Rome's monumental past far more than Ravenna's glittering present" (p. 4). Nor was Ravenna's rise smooth and fast, following directly on the decision to govern from Ravenna made by Stilicho, Honorius, and Galla Placidia. Rather, as Andrew Gillett has shown, emperors returned to Rome through the middle of the fifth century. Not until the late fifth century, and especially during the reign of King Theoderic (493–526), can we clearly see Ravenna as a capital city. This helps explain why we are missing contemporary textual histories of the city; for this we must wait until the early ninth century when the priest Agnellus wrote his *Book of Pontiffs of the Church of Ravenna* (*Liber pontificalis ecclesiae Ravennatis*). This work is fundamental to the historiography of Ravenna, ancient and modern, yet it provides us with a ninth-century view of the city, and one intended to rival the alternative history of Italy that centered on the pope of Rome, the *Book of Pontiffs* (*Liber pontificalis*).

Given these source problems, historians have understandably turned to archaeology. Indeed, one of the strengths of this book is Deliyannis's careful, deep command of a mass of archaeological evidence, which she uses to shed new light on the city, and not just its most famous monuments. So, for instance, Deliyannis's discussion of an area in the northeast part of the old *opidum* is both informative and historically grounded: "in the late fifth or early sixth century the street was blocked off by a room that served as a monumental entrance to a new, grander house built to the north of the street . . . The main rooms on both the north and south side were covered with elaborate mosaic and opus sectile floors. These buildings must have housed members of Theoderic's court of the Ravennate upper classes; and the modification for the imperial-era street network indicates new urban priorities at work" (p. 117).

The book is organized chronologically, with major divisions accorded to political changes from the Roman through the Byzantine and into the Carolingian period.

Deliyannis provides historical overviews of each period that are essential, though I did not always agree with her generalizations. For example, her claim that Rome was the “city of the pope, whose status as the head of the entire Church might be contested, but whose authority in Italy and the west was not doubted” (p. 3) is misleading. There were popes, like the early fifth-century Zosimus, whose authority was not only challenged but seriously questioned by strong North African bishops in the Pelagian controversy.

One major contribution of the book lies in Deliyannis’s intelligent and highly informed discussions of Ravenna’s built environment. So, for instance, she lays out the pros and cons for the elements of Theoderic’s mausoleum that have been seen as Roman or Gothic in detail before arguing sensibly that some of these elements were intended rather to be unique and mysterious (pp. 124–136). This reader wished for a stronger statement of her own views up front with less back and forth in the text. That, however, is not the approach adopted here or in the book as a whole. Nor is there really a single overarching argument that unifies the book. Rather, Deliyannis has chosen to offer a detailed and vivid panorama of Ravenna’s rise and decline. The book jacket is exactly right when it concludes that the volume “provides an English-language entry point for the study of this fascinating city.” But it should add that Deliyannis has also provided a book that is fascinating and essential reading for scholars and students eager to pursue any one of the many hotly contested issues she raises.

MICHELE RENEE SALZMAN

University of California,

Riverside [All reviewers of books by Indiana

University history department faculty are selected with the advice of the Board of Editors.]

D. L. d’AVRAY. *Medieval Religious Rationalities: A Weberian Analysis*. New York: Cambridge University Press. 2010. Pp. x, 198. Cloth \$85.00, paper \$29.99.

D. L. d’Avray excels at inquiring into networks of conviction. His first example in a book that is full of arresting illustrations from the Middle Ages of rationalities of different kinds makes the point compellingly. Rudolf von Schlettstadt’s collection of *Memorable Stories*, compiled around 1300, includes an account of a Jew stabbing a consecrated host to the point where blood poured out and it began to cry like a young boy—the boy Jesus. A mob gathered. They did not find either a host or a child, but it was neither irrational to believe that Jews murdered small boys and desecrated hosts nor irrational to condemn them for murder given the screaming people thought they had heard and given that it was thought to be common knowledge that Jews did such things.

This book is a companion volume to d’Avray’s more comparative and theoretical *Rationalities in History: A Weberian Essay in Comparison* (2010), but the two books may be read independently of each other. In the

book under review d’Avray seeks to “discover how values and instrumental calculation affect each other and to illustrate these relations in detail with medieval examples” (p. 164). Max Weber’s four types of rationality are used to guide an investigation of the history of medieval convictions. The four types form two pairs: value or conviction rationality (world views and systems) and instrumental rationality (calculation and adjustment of the consequences); formal rationality (rules made for a sector) and substantive rationality (suspension of these rules for particular reasons). D’Avray has special expertise in the study of preaching, scholastic thought, the papacy, and marriage in the late Middle Ages, and many of his very well-chosen illustrations reflect this. A chapter on “Structures” brings out the interconnectedness of medieval religious values with discussions, based on historical sources, of, for example, memory, miracles, and the canonization of saints. The following chapter on “Dynamics” illustrates how values were built up (gains) or declined (losses), the retreat from conciliarism back to papal monarchy during the fifteenth century being a particularly good illustration of this. The chapter embraces other types of change as well: the thirteenth-century “synthesis” of Aristotle and Christianity (dynamic equilibrium), Saint Francis of Assisi (charismatic leadership), Anglo-Saxon England (religious conversion), and Joachimism (crisis and recovery), among others. The interface of values and of instruments of control takes the reader more deeply in the next chapter into questions about the propagation and reception of values with discussion in particular of a “spiral process” whereby conviction rationality produces techniques that recreate the convictions, which in turn foster an instrumental technology that then protects them. Revivalist preaching in the fifteenth century illustrates this. The interplay between precept and dispensation is another theme and there is a particularly good focus on questions about property and poverty to illustrate how the calculation of what is appropriate for each was often in fierce conflict with adherence to absolute values.

A fourth chapter titled “Formal Rationality and Medieval Religious Law” illustrates decision making within sets of rules with reference to the delivery of papal judgments and papal grants in the absence of a bureaucracy. A final chapter takes a further look at the interface of formal and substantive rationality (rules and their suspension) with particular focus on the workings of the papal penitentiary and grants of dispensation from the rules attached to marriage. In all the chapters, the chosen illustrations are numerous, striking, and thought provoking, many being taken from unpublished manuscripts or early printed books, with the original Latin given in full following a careful English translation, and with ample references to a wide range of excellent secondary studies, many written in German and Italian, with which many anglophone scholars may not be as familiar as d’Avray is.

While the book is a rich mine of information about medieval mentalities and procedures, it is not a tradi-

tional history and certainly not a history of an upward curve of reason in the manner of (to take just one example) R. W. Southern's brilliant two-volume study, *Scholastic Humanism and the Unification of Europe* (1995, 2001). D'Avray offers historical sociology, and he does so at a time when historical studies and the social sciences seem to have grown apart. Some readers may find the Weberian terminology too rich, especially when "ordinary language" (e.g., rules, exceptions) is more familiar than the more technical formal rationality and substantive rationality. But without the discipline provided by concepts, and reduced to a work of empirical history, this book would run the risk of losing more or less completely its structure and its dynamic.

DAVID LUSCOMBE
University of Sheffield

MAX LIEBERMAN. *The Medieval March of Wales: The Creation and Perception of a Frontier, 1066–1283*. (Cambridge Studies in Medieval Life and Thought, number 4:78.) New York: Cambridge University Press. 2010. Pp. xv, 292. \$95.00.

This monograph comprises a detailed study of Shropshire in the period from the Norman conquest of England to the Edwardian conquest of Wales a little over two hundred years later. That the title does not, perhaps, reflect the content is the result of Max Lieberman's view, explained in the introduction, that "the first 'March of Wales' seems to have been the Welsh border of the county of Shropshire" (p. xi). Thus a book about Shropshire might become a book about the making of the March—at least if the author's claims hold water. Unfortunately, while this proposition is used intermittently to give the book direction, it is almost immediately thrown into doubt by the author's acknowledgment that the Domesday Book refers to the March of Wales in its account for Herefordshire (p. 5). It might also be added that in the 1130s the Anglo-Norman chronicler Orderic Vitalis was content to describe Robert of Rhuddlan—whose campaigns against the Welsh led him to "Snowdon's high mountain" and "Conwy's rapid river"—as a "marcher lord" (*bellicosus marchio*), although Lieberman does not do so.

Overall, the arguments advanced to demonstrate that Shropshire was the original March are unconvincing. One problem is identified by the author himself: "the usage of the phrase *Marchia Wallie* between the late eleventh and the early fourteenth centuries suggests that the medieval concept of the Welsh March was a malleable one" (p. 5). Lieberman's discussion of the terms *marcha* and *machia* is too superficial and clumsy to define the concept. Insufficient consideration is given to how those living in England and Normandy in the eleventh and twelfth centuries might have used the term before they brought it to the English border with Wales, and although there are some superficial references to Carolingian usage, no effort is made to demonstrate that this influenced terminology in England or Normandy. Nowhere is it noted that Normans might

acknowledge themselves ruled by a *marchio* (as well as a count, duke, or *princeps*). Nowhere is Orderic Vitalis's use of the words *marcha*/*marchio*/*marchisus* (on thirty-eight occasions according to Marjorie Chibnall's helpful glossary) digested.

If the unwise attempt to pin down the origin of the idea of a March of Wales is overlooked, however, then the book can be taken for what it is: a detailed analysis of Shropshire in the period under consideration. The book begins, in *Annales* style, with a discussion of the landscape of Shropshire, its communications and demographics, agricultural practices, and place names. Some of this is done to establish whether the area west of the Severn valley was likely to be open to English settlement in the twelfth and thirteenth centuries. This sets the scene, but the book is really concerned with the marcher lordships that were established by the first Norman earl of Shrewsbury, Roger of Montgomery, and their relationships with each other, the Welsh of Powys, their tenants, and the crown. Lieberman goes about this conventional business in more or less conventional ways, but it is here that the book is strongest. Generally speaking, where the discussion is about the internal workings of the lordships, their geography, or castles, the discussion is solid, useful, and original.

But the tunnel vision induced by the focus on Shropshire means that parts of the bigger picture are missed. The whole of the March of Wales is never encompassed. The world beyond Shropshire is noticed only in fits and starts. This is problematic when looking at the border aristocracy, who were lords elsewhere too, as Lieberman acknowledges, even if he does not then always consider how the wider interests of the Mortimers—here treated as honorary Salopians, despite the fact that their seat was at Wigmore in Herefordshire—and Fitz Alans affected their role and activities in Shropshire. Similarly, although some mention is made of Roger of Montgomery's estates in the Hiémois and Bellême, the experience he gained in pushing Norman authority forward on the duchy's southern frontier is not used to understand his actions in Shropshire, despite the fact that Gérard Louise's book on the *seigneurie* of Bellême has been consulted. Aside from these and other issues of interpretation, there are some surprising omissions from the bibliography. There is no sign of William of Malmesbury's *Gesta Regum Anglorum*, for example, and more recent articles by Huw Pryce and Sean Duffy, relating to Henry II's campaign of 1165 and his relations with the Welsh generally, are also absent.

Lieberman has written a useful and focused account of the border lordships of Shropshire in the two centuries and more after the Norman Conquest. The book will provide historians of the families studied, or of Shropshire, or the March as a whole with much detail and much material to use for comparisons with the situation pertaining in Glamorgan, Herefordshire, Cheshire, or elsewhere along the border. As such, although the book itself ultimately fails to provide an understanding of "the creation and perception of a frontier" in terms of the medieval March of Wales as a

whole, it is nonetheless a stepping stone toward the achievement of that goal.

MARK HAGGER
Bangor University

C. J. ZUIJDERDIJN. *Medieval Capital Markets: Markets for renten, State Formation and Private Investment in Holland (1300–1550)*. (Global Economic History Series, number 2.) Boston: Brill. 2009. Pp. xii, 316. \$147.00.

A generation ago James D. Tracy established the prevailing orthodoxy that the organization of funded debt by the Dutch state largely originated in or shortly before the sixteenth century. The States of Holland met the rulers' demands for money by selling what would now be called bonds, thereby creating a countywide system of public debt, for which their subjects were responsible collectively, secured on future tax revenues. C. J. Zijderdijn, however, argues persuasively that this system was "the final step in a slow evolutionary process that started in the 13th century" (p. 73). The basic device was the *rente*, which Zijderdijn leaves untranslated but is often rendered as "annuity." The market for *renten* originated in private debt then spread to the public sector. The borrower secured an annual payment, either for his or her own lifetime (*lijfrente*) or in perpetuity (*losrente*) in return for a lump sum of money. *Losrenten* were often transferable and payable until the initial purchase price was repaid by the seller. The *rente* originated in northern France then spread to the Low Countries. It was also used by city governments in the Holy Roman Empire but not in England. Zijderdijn is less persuasive, in my opinion, in arguing that the *rente* was unlike the *monti* shares sold by the Italian cities.

The *rente* resembled the modern mortgage when secured on real estate in the case of private capital, or on the entire assets of the state or specific incomes in the case of public borrowing. It involved risk for both lender and borrower and thus circumvented the church's prohibition of open interest. The development of a "secondary capital market" (p. 290) for *renten*, in which one person secured a *rente* on a piece of property, then sold the *rente* to a third party, existed by 1301. As early as 1318, *rente* contracts could be made out to "bearer." The growth of a market for *renten* was also fostered by the decline of interest rates from the late fourteenth century in Holland as elsewhere, which brought capital into Holland at precisely the time when its exports were expanding and made funded debt much more attractive than loans from financiers. Like their contemporaries, the thirteenth-century counts borrowed from Lombards, but William III (1304–1337) and his successors rarely did. City governments were slower than the counts to sell *renten* in a free market, although most were doing it by 1400 and thereby establishing what amounted to a public debt. Unfortunately, by the late fifteenth century regional and city governments became seriously overburdened by the de-

mands of the central government. By 1514 all cities "used a considerable part of their ordinary revenues for *rente* payments" (p. 169), ranging from 58.8 percent for Gouda to 118 percent for Delft. The central institutions of Holland used written forms of evidence and gave legal security of contract to creditors, thereby lowering transaction costs. By the fifteenth century some local authorities were requiring registration of mortgage and/or *rente* contracts for validity. The institutional mechanisms of the credit market and the protection of creditors' property rights by the state contributed significantly to the economic strength displayed by the Netherlands during the seventeenth century, the "golden age" of the Dutch Republic.

This is a clearly written and meticulously documented work that joins other recent studies in demolishing whatever is left of the idea that late medieval credit mechanisms and state finance were unsophisticated.

KIMBERLY A. RIVERS. *Preaching the Memory of Virtue and Vice: Memory, Images, and Preaching in the Late Middle Ages*. (Sermo: Studies on Patristic, Medieval, and Reformation Sermons and Preaching, number 4.) Turnhout, Belgium: Brepols. 2010. Pp. xvii, 377. €70.00.

In this book, Kimberly A. Rivers provides a thorough analysis of the place of memory in medieval preaching. The author begins with a detailed outline of the history of mnemonic theories, most notably those found in classical works such as the *Rhetorica ad Herennium*, Cicero's *De inventione*, and medieval works like Hugh of St Victor's *Didascalicon*. The study goes on to trace aspects of mnemonic theory employed by medieval preachers such as the Franciscan Guibert of Tournai. In his thirteenth-century treatise *De modo addiscendi*, Guibert considered the Augustinian power of memory's ability to transcend the corporeal and ascend to God through purification and illumination. He also appropriated aspects of Hugh of St Victor's teachings on memory. This, Rivers argues, is evident in how Guibert emphasized the use of rubrics and subheadings in his text to assist in ordering ideas so that the reader could remember them just as they appeared on parchment. Rivers then examines another Franciscan's view of memory, that of the master of novices at Regensburg, David of Augsburg (d. 1272). His pedagogical treatise *De exterioris et interioris hominis compositione* aimed to lead students to perfection through the reformation of memory—that is, the meditation on nothing but God, especially the Passion. It was believed that emotive meditation on Christ's suffering created a picture house of virtues, while erasing all memory of vices.

Rivers next examines the *Ars praedicandi populo* by the Franciscan Francesc Eiximenis (d. 1409) because it contains explicit discussion of how the memory should be used in the preaching of sermons. The mnemonic

learning presented in this work embraces the thirteenth-century scholastic desire for classification (mainly the four Aristotelian causes: final, efficient, formal, and material), a hierarchy of authorities (e.g. biblical, hagiographical, historical), and thematic order. Regarding this last point of order, Eiximenis encouraged the preacher to organize sermons around a diagram that contains concentric circles of the Ten Commandments, the articles of faith, the gifts of the Holy Spirit, the eight Beatitudes, the five corporeal senses, the seven works of mercy, and the seven virtues and vices. The significance of such organization was twofold: to allow the preacher to remember his sermon, and to enable the audience to take memorable soundbites of moral and theological learning home with them after the preaching had ended. The concern to imprint the moral importance of the sermon on the memories of audiences helps explain the rise of *exempla*, short and often entertaining tales of edification.

Rivers next considers how images served the preacher in remembering sermon themes. The pastoral works of two fourteenth-century mendicants who were contemporaries at Oxford are examined: the Franciscan John Ridevall and the Dominican Robert Holcot. These mendicants used *picturae*, which are “verbal pictures in rhyming jingles” (p. 212), to serve as mnemonic devices for preachers composing their own sermons. In addition to this function, *picturae* were aimed at the laity to enable them to develop meditative techniques that would train their minds to concentrate on major devotional concerns such as prayer, penitence, and death. *Picturae* were also found in the works of French and German preachers. French *picturae* in the works of the Benedictine Pierre Bersuire and the Hospitaller Jean de Hesin demonstrate how preachers used classical images, such as pagan gods, to assist in the memorization of religiously didactic themes for pastoral discussion. Germany holds an informative but overlooked (until now) fifteenth-century example of the use of images in preaching with John of Werden’s *Dormi Secure* sermon collection. These sermons are known mainly because of their popularity in the Middle Ages as prepared homilies that many preachers used as ready-made sermons. Rivers, however, brings to our attention their mnemonic worth in regard to how these sermons employ *picturae* and *exempla* to teach moral lessons. Rivers concludes her study with Italian examples of mnemonics used in preaching. In the fourteenth century, John of San Gimignano in his *Summa de exemplis et rerum* provided a way to memorize sermons by suggesting how various *exempla* could be arranged so they would stick in the memories of those constructing sermons as well as those hearing them. In the fifteenth century, Bernardino of Siena explicitly referred to memory techniques in his sermons to teach the laity to remember prayers and moral lessons.

There are some minor flaws with the book: Rivers is perhaps too gracious in her tendency to ensure that scholars with whom she is in dialogue have their say in the flow of her text, and her voice sometimes gets over-

shadowed while their opinions dominate. In those chapters in which text and image are the main focus of discussion, more illustrations would have been helpful (there are only four in the entire book) in understanding the relationship between mnemonics and iconography. But these points should not distract us from the worth of Rivers’s undertaking. This is a comprehensive and ambitious study. Rivers has broken new ground in both the fields of sermon studies and the history of memory.

STEPHEN A. MITCHELL. *Witchcraft and Magic in the Nordic Middle Ages*. (The Middle Ages Series.) Philadelphia: University of Pennsylvania Press. 2011. Pp. xiii, 368. \$49.95.

Stephen A. Mitchell’s book fills a major lacuna. Much scholarship has focused on early modern witchcraft and witch trials in Nordic lands, and valuable work has also been done on magic in the Viking era (Mitchell points to recent books by François-Xavier Dillmann, Neil S. Price, and Catherine Raudvere). Yet the intervening period, roughly 1100–1500, has remained understudied. In addressing this period, Mitchell’s central questions are: “What happened in Catholic Scandinavia as Christian ideology, with its own developing views of witchcraft and demonic magic, encountered and merged with native Nordic traditions of sorcery? How did these cultural categories meld and evolve in the four centuries before the Reformation?” (p. 201). Yet this is not a chronologically organized book. The sources are too scattered and their accounts often too ahistorical to allow that sort of structure. Instead, Mitchell proceeds topically, examining the relationship between magic and the past in Nordic culture, the role of magic in everyday life, common conceptions and “mythologies” linked to magic, and magic’s relation to law and to gender.

The most impressive aspect of Mitchell’s excellent study is his deft use of the full array of sources available for medieval Scandinavian magic—above all the spectacular examples of saga literature, but also law codes and trial records, sermons and ecclesiastical accounts, visual art and archeology. Each comes with its own problems, which he nimbly negotiates while weaving together an effective overall analysis. Particular methodological attention must be given to the sagas. Previous scholars have used this literature, written mainly in the thirteenth and fourteenth centuries, to plumb the distant Viking past that it describes, relying on various frameworks to do so. Mitchell, however, turns on its head the entire problem of trying to sift “authentic” traces of pagan culture from later Christian accounts by using the sagas instead to discern what they in fact directly illustrate: how later medieval Nordic culture addressed and employed the remembered magic of its pagan past. Eschewing any simple notion of Christian opposition to magic, he argues that magic provided an

arena of discourse that proved essential for the long, gradual process of conversion. Christian authorities opposed pagan sorcery, of course, but it also offered them avenues to accommodate and even incorporate the traditional heritage of their region into the structures of the new faith.

Mitchell sees magic as serving almost as a synecdoche for paganism and the pre-Christian era in later accounts. He argues specifically that authors typically depicted magic more expansively in tales set in the very distant past, whereas in accounts of more recent periods, they presented magic as still existent but more tempered, and generally no longer as the driving force of their story. His analysis here focuses on saga and other imaginative literature of a particularly Nordic variety, but the tendency he perceives was more widespread. A ready parallel exists in many Christian authors' historical accounts of their own religion, with early periods (the biblical or patristic eras, or the heroic early age of conversion) described as an "age of miracles" that has since given way to the more humdrum present. Since Mitchell largely effaces (usefully, for his purposes) the standard medieval distinction between magic and miracle, the comparison is stark.

Many of Mitchell's conclusions about magic and witchcraft in the Nordic context cohere with broader trends. He stresses, for example, that magic was widely used at all levels of society, from farmers in their fields to priests and monks, and the general usages he identifies—healing, divination, love magic—were typical across Europe, although of course specifically Scandinavian nuances are evident. Regarding the historical trajectory of magic, he sees a steady growth of concern and increased severity of prosecution and punishment, especially after the fourteenth century. Here connections to the rest of Europe are blatant, as the Scandinavian clergy partook of the developing demonology of this period. Regarding "mythologies" of witchcraft, Mitchell provides a convincing reading of how native beliefs in journeys to fairy lands and legends of Blåkulla merged with continental ideas of witches' night flight and heretical sabbaths. Always complex interaction rather than simply imposition of new ideas is the watchword. Likewise with matters of gender, he traces how deeply rooted Nordic conceptions of "evil women" merged with Christian concerns about female morality and especially sexuality to result finally in a gendered image of witchcraft akin to that found elsewhere in Europe.

Ultimately, this important book accomplishes several major goals. It illuminates a previously little-examined aspect of Scandinavian history, namely magic in the post-Viking but pre-Reformation centuries. It advances some valuable and broadly applicable methodologies for studying conversion and Christianization. And it successfully integrates Nordic developments into the overall history of magic and witchcraft in medieval Eu-

rope even as it highlights uniquely Scandinavian components of that history.

EUROPE: EARLY MODERN AND MODERN

LAURENT BOURQUIN and PHILIPPE HAMON, editors. *La politisation: Conflits et construction du politique depuis le Moyen âge*. (Histoire.) Rennes: Presses Universitaires de Rennes. 2010. Pp. 192. €15.00.

In the past quarter-century, political history has returned to prominence, exchanging a narrow view of politics centered on monarchs, ministers, and government institutions for a more expansive and multi-faceted understanding of politics as something that took place not only in the halls of power, but also in the actions of crowds, in rituals and ceremonies, and even within the worlds of work and family. Yet such an expansive view of politics raises further questions. How did Europeans become politicized? What determined the scope and forms of political debate and action? How did boundaries between the political and the apolitical evolve over time? How are we to move, in other words, from a broad social and cultural history of politics to a history of European politicization?

The nine essays in this volume edited by Laurent Bourquin and Philippe Hamon address these questions from a variety of methodological, chronological, and geographical perspectives. The product of two workshops at the University of Rennes in 2007 and 2008, the book explores how conflicts shaped the process of politicization from the late Middle Ages into the nineteenth century. To what extent, Bourquin and Hamon ask, do conflicts favor the gradual emergence of an "autonomous political sphere"? To what extent do various types of dispute—religious, economic, and social, among others—find political solutions?

The essays by historians included in this volume cover a wide range of topics, from Golden Age Spain, to late medieval Italy and Restoration France. These are complemented with essays by political scientists and sociologists, who offer theoretical models of conflict and politicization. Focusing on three principal forms of action—taking up arms, contests of words (oral and written), and ritual and ceremonial behavior—the volume's essays arrive at three provisional conclusions: politicization accelerates during moments of intense conflict, it takes a wide range of forms depending on the specific historical context, and, finally, politicization is not a linear process, but rather occurs in tandem with periods of depoliticization.

Bourquin and Hamon divide their volume into two main parts. In the first, "Global Approaches," five essays by historians, political scientists, and sociologists offer theoretical examinations of the relationship between conflict and politicization. Pierre Savy's analysis of the thirteenth through fifteenth centuries sets the tone. Focusing on northern Italian communes and the

Hundred Years War, Savy highlights themes common to several essays—the generalization of conflict, the transformation of private interests into public affairs and factional rivalries into political contests, and the ways wars and propaganda draw larger segments of the population into the political arena. The next two essays, by José Javier Ruiz Ibáñez and Michel Biard, are historiographical in nature. Ruiz Ibáñez traces the revival of political history among historians of sixteenth and seventeenth-century Spain. Biard, meanwhile, highlights the renewed interest among historians of the French Revolution in using social and economic conflicts to explain why large segments of the French populace took up arms and/or participated in elections.

The two remaining essays are conceptual, rather than historical. Political scientists Christine Guionnet and Christian Le Bart use recent French electoral campaigns to analyze how politicians and parties seek to delineate the political and apolitical to strengthen their positions while undercutting their opponents. This strategy of “depoliticization,” they argue, also provides new actors with a point of entry into the political realm. By criticizing partisanship and promising to “*faire la politique autrement*,” outsiders can turn their marginal status to their advantage—but only to a point and only at the cost of weakening the legitimacy of representative democracy. Sociologist Francis Chateaurayaud, meanwhile, looks at forms of political mobilization in recent disputes over genetically-modified organisms in France to better understand the relationship between force and principle in determining political outcomes.

The second section, “Studies,” consists of four historical essays on moments in French history from the Hundred Years War to the early nineteenth century. Nicolas Offenstadt shows how Armagnacs and Bourguignons used visual symbols, rumor, and texts to compete for the support of urban populations in the early fifteenth century. If there was no “public opinion,” Offenstadt writes, there were still publics who were becoming increasingly aware of their own concerns and interests, and whose backing needed to be won through negotiation, manipulation, and force. Jean-Marie Constant’s analysis of noble opposition to Cardinal Richelieu, by contrast, highlights the fact that politicization could contract as well as expand. While a circle opposed to Richelieu’s version of absolutism coalesced around Louis XIII’s younger brother, Gaston d’Orléans, it never became more than a collection of individuals engaged in a series of personal rivalries, despite a shared vision of a monarchy tempered by the parlements and other authorities.

Anne de Mathan’s study of politicization in Brittany during the uprisings of 1793 builds on Biard’s earlier essay and further illustrates Bourquin and Hamon’s insistence that the French Revolution was not the birth of politicization, but rather a moment in a larger history. Anti-Jacobin uprisings, she argues, were ultimately the product of a relatively small elite of fiscal and judicial notables. This group, which “claimed to defend the sovereignty of the people while remaining sus-

picious of the latter” (p. 162) ultimately proved unable to mobilize ordinary Bretons despite their mistrust of the Parisian sans-culottes. Emmanuel Fureix’s study of ritual protest during the first half of the nineteenth century further interrogates the complex interplay between elites and masses in political contestation. Excluded from political life under the Bourbon restoration, France’s popular classes saw their rituals and festivities urbanized, politicized, and nationalized by government opponents who co-opted *charivari*, masquerades, and the carnivalesque to circumvent limits on political opposition. In turn, however, the popular classes gave these “notabilized” rituals a more democratic spin, thereby reaffirming popular sovereignty despite their political disenfranchisement.

On the whole, this is an interesting and thought-provoking collection. Despite the diverse range of subjects and methodologies, the articles cohere relatively well. Savy’s opening essay is echoed nicely by Offenstadt’s study of the Armagnacs and Bourguignons. Biard’s and De Mathan’s studies of the French Revolution, meanwhile, provide a nice counterweight, giving the volume two chronological centers of gravity. Raul Ibáñez’s, Constant’s, and Fureix’s pieces all call our attention to the equally important phenomenon of depoliticization, whether under the Old Regime, during the nineteenth century, or in recent historiography, and illustrate the theoretical perspectives put forward by Guionnet, Le Bart, and Chateaurayaud.

Nevertheless, like many collections of this nature, *La politisation* sacrifices a certain amount of cohesion for the sake of breadth and diversity. Bourquin and Hamon’s introduction provides a useful framework for organizing the essays that follow, but a brief epilogue or afterward would have been welcome. Similarly, despite the editors’ best efforts, the two theoretical articles based on modern conflicts could have been better integrated, either by being placed earlier in the volume or more explicitly referenced by the other articles. Finally, it is surprising that the volume devotes almost no attention to an especially common form of conflict and conduit of politicization—litigation. These reservations aside, historians interested in the emergence of an autonomous political sphere in Europe will find this a thought-provoking and interesting book.

Reed College

JAN LUITEN VAN ZANDEN. *The Long Road to the Industrial Revolution: The European Economy in a Global Perspective, 1000–1800*. (Global Economic History Series, number 1.) Boston: Brill. 2009. Pp. xiii, 342. \$147.00.

General books about the origins of the industrial revolution, or the emergence of Western Europe as the world economic leader around 1800, have been appearing in a regular procession in recent years, but few are as wide-ranging, learned, and readable as this book.

Jan Luiten van Zanden seeks to understand the long-term background to the economic advances in Europe

in the eighteenth and nineteenth centuries. The story begins in the ninth century, and van Zanden dwells on formative stages in the later Middle Ages and the early modern period. He defines in a novel sequence of arguments the "modern" economy, which emerged well before 1600 and was capable of further growth. Its characteristics included relatively low interest rates (in the vicinity of five percent) and high levels of non-agricultural production. There was much investment in human capital, meaning widespread training and education, that led to the accumulation of knowledge. Van Zanden is especially influenced by the new institutional economics, which means that he sees the state as providing an important framework for economic activity by protecting property rights and creating the stable conditions that gave traders the confidence to expect that they would be paid. This environment encouraged buying and selling. Using this approach, it can be argued that the preconditions for industrial growth were present long before the steam engine, the coal-fuelled economy, and the factory system. The author highlights as the precursors of industrialization the great expansion in trade and agriculture in the period 900–1300 and the remarkable ability of England and the Netherlands to survive the crisis of the later Middle Ages and even sustain some growth. The "European Marriage Pattern" emerged in the fourteenth century and contributed much to productive capacity and the fostering of enterprise in the early modern period.

Van Zanden is a good teacher who gently presses home his argument by reiterating the main points, which some readers may find unnecessary, but the repetition has the good effect of leaving no one in doubt as to the central message. He makes the main themes enjoyable to read by using colorful phrases and taking the reader on excursions into social and cultural history. One chapter deals with "girl power," presenting the argument that late marriage of women made a beneficial addition to the labor force. Another chapter investigates book production in Europe, which began in the early Middle Ages, and argues that these volumes made a significant contribution to the "knowledge base." Van Zanden also deals deftly with some of the objections to his arguments. For example, if emphasis is placed on the creative role of the state, how can it be that economic growth was accommodated in the fragmentary petty states that were characteristic of Western Europe? The author's response is to shift emphasis to the building of institutions from the "bottom up" in guilds, cities, and rural communities, and he recognizes the economic contribution of the church, monasteries, and feudal institutions. He also has the problem of making broad brush comparisons between Europe and Asia in order to explain their divergence after the economies of the two continents had once attained similar levels of development. For van Zanden the key factor was the inability of the states in Asia to protect property rights, and therefore to foster the enterprises that delivered economic growth and industrialization in the West.

This book is about the "gloomy science" of econom-

ics, but van Zanden takes a positive view of manufacture and exchange. He is sometimes excessively optimistic in his judgments. For example, his idea that book production created wealth by spreading knowledge does not take sufficient account of the impractical contents of books, many of which before the sixteenth century were concerned with religion, chivalric fiction, high-minded philosophy, and the law. His benign view of labor makes little allowance for the drudgery in which many people were engaged, and one would not know from this book about the squalor of living conditions and the pollution associated with industrial processes. Following the style of the British Whig historians, he sees government in Britain as limited in its capacity for oppression. He notes correctly the failure of the English lords to assert their powers after the Black Death of 1349, but he does not make enough of the struggles and conflicts that produced these political conditions. There is much to admire in this book, but the author should not have swept under the carpet the dirt, misery, and violence that were associated with economic growth.

CHRISTOPHER DYER
University of Leicester

STEPHEN E. HANSON. *Post-Imperial Democracies: Ideology and Party Formation in Third Republic France, Weimar Germany, and Post-Soviet Russia*. (Cambridge Studies in Comparative Politics.) New York: Cambridge University Press. 2010. Pp. xxvi, 274. Cloth \$90.00, paper \$26.99.

Stephen E. Hanson seeks to explain divergent party and regime outcomes in contested political situations. His targets are his fellow political scientists, the advocates of Marxism, modernization, and rational choice theory in particular. Despite their methodological rigor, he argues, they have consistently failed to provide convincing explanations. Their omission lies especially in their denigration of ideology to a subordinate, functionalist role in political outcomes. The key to resolving longstanding insufficiencies in the literature, Hanson argues, is to give ideology an independent, causative role in party formation and hence in regime stabilization. In contrast, where parties fail to develop coherent and compelling ideologies in the wake of major transformative events, the regimes that follow will suffer from instability. To substantiate his approach, Hanson first develops a rigorous theoretical model based on Max Weber and then draws on the work of historians to develop three case studies.

In constructing his analysis, Hanson takes up the time-honored free-rider problem, or, more generally, the unit of analysis problem. Are collectives or individuals the basis of social action? Hanson comes down resolutely on the side of methodological individualism. For social science explanation, collectives are abstractions. Drawing on Weber, Hanson argues that what must be explained is subjective individual motivation, and the generation of that motivation into action. Why

should any individual join a political party? Party membership entails risks, and if there are benefits to be had, they may accrue to an individual regardless of whether one is a party member. Ideology holds the key, according to Hanson. When social uncertainty is high, political entrepreneurs, who might otherwise go unheard, find their clear visions of the future attractive to individuals who might otherwise stay home and ignore the political arena. Individuals' "time horizons" (p. xix) are elongated, such that sacrifices in the present become meaningful and worthwhile.

The chapters on Weber are idiosyncratic but also the most interesting and compelling sections of the book. Weber is Hanson's intellectual lodestar because he combined attentiveness to ideology with a rigorous methodological individualism. Weber, to be sure, parsed the bases of social action into instrumental rationality, value rationality, affect, and habit, but in his elaboration on each form he retained his commitment to individual decision making as the ultimate source of social action and hence the ultimate problem for social science. Hanson goes on to connect Weber's quartet of social action with his analysis of the forms of legitimation: namely, traditional, rational-legal, and charismatic.

Weber's intellectual achievement, Hanson claims, is far superior to the analyses of social action proffered by Marxism, modernization theory, or rational choice theory. Despite the mutual hostility among the partisans of each approach, Hanson uncovers a fundamental unity among them: their diminution of ideology and their ultimately functionalist understanding of social action (yes, that holds even for rational choice theorists). Into the rings steps Hanson with the claim that methodological individualism plus ideology resolves all the theoretical insufficiencies of the other approaches, at least in regard to party formation and regime stability.

As interesting and thought provoking as all this is, I am left somewhat baffled by Hanson's conception of ideology, which he defines as "proposals made by individuals to define clear and consistent criteria for membership in a proposed polity" (p. xix). The definition has the benefit of conciseness, but is it sufficient? Hanson glides much too easily over the complex symbolic and cultural meanings embedded in ideology. He works the vein of interpretive social science, but the interpretation of ideology seems not to figure in his analysis of social action.

The three case studies that Hanson examines are quite diverse. The only commonality is that Third Republic France, Weimar Germany, and post-Soviet Russia were founded in the wake of dramatic and unsettling events—the Franco-Prussian War, World War I, and the collapse of communism and the end of the Cold War. Political entrepreneurs entered into these situations of acute social and political uncertainty. Some were successful, some not. Léon Gambetta articulated a coherent political ideology that attracted followers; the party he forged became the focal point for the stability of the Third Republic. Only the parties on the

radical fringe of the Weimar political system ventured coherent ideologies. Those in the center failed to do so, leaving the field open for the ultimate system-destroying party, the Nazis. Post-Soviet Russia comes in for the most comprehensive analysis, with the tilts and turns of its political order resulting finally in the presidential regime of Vladimir Putin.

Historians of France may wonder at the depiction of Gambetta as such a clear-headed ideologist. German specialists might question whether Weimar failed because liberals proved unable to project a clear ideology, or because liberalism proved unable to master the manifold crises of the republic. In both cases, the social historical mechanisms by which parties mobilize their supporters is largely ignored. The Russian case sits uneasily with the other two because the most ideological parties failed and the result was a presidential, not a party, system (p. 229).

Hanson's book is definitely interesting. But it seems that we are left with the argument that sometimes ideology works, and sometimes it does not.

ERIC D. WEITZ

University of Minnesota

PATRICK WALSH. *The Making of the Irish Protestant Ascendancy: The Life of William Conolly, 1662–1729*. (Irish Historical Monographs, number 7.) Rochester, N.Y.: Boydell Press. 2010. Pp. ix, 229. \$125.00.

William Conolly was not only "the most remarkable case of social mobility in eighteenth century Ireland" (p. 61), but he also served as "*de facto* prime minister of Ireland" (p. 1) in the early eighteenth century. By the time of his death in 1729, he was speaker of the Irish House of Commons, a lord justice, a revenue commissioner, and, moreover, the first great "undertaker" in Irish politics. It is therefore surprising that Patrick Walsh's excellent study is the first major attempt to tell his story and place it in its various contexts. Walsh suggests that the imbalance in eighteenth-century Irish history writing toward the action-packed later period has resulted in the neglect of figures like Conolly. While there is clearly much truth in this, in Conolly's case the technical and sometimes scattered nature of the surviving archival evidence offered a further barrier. Indeed, one of the obvious strengths of Walsh's biography lies in his marshaling of an impressively wide range of manuscript and printed sources.

The book recognizes the historiographical influence of A. P. W. Malcomson's work on the lives of leading members of the ruling Protestant elite, but it is also clearly indebted to the scholarship of David Hayton (one of the editors of the series in which this book appears). Unlike those of Malcomson's major biographical subjects—John Foster, Charles Agar, and Nathaniel Clements—Conolly's life was directly shaped by the events of 1688–1691. As S. J. Connolly has noted, post-revolutionary Ireland saw the emergence of a large number of self-made men in both politics and society. Walsh goes further than any previous historian in ex-

plaining Conolly's remarkable social mobility. He shows that Conolly's rise did not begin from the lowly position sometimes ascribed to him. His family may not have been especially significant, but they were prominent locally in County Donegal. Conolly's legal career (he was an attorney by profession), his attainder by the Irish parliament of 1689, his role among Irish Protestant exiles in London at this time, and his advantageous marriage to Katherine Conyngham in 1694 all indicate a more elevated social rank than has sometimes been imagined. While Walsh argues that family connections, his successful legal practice, and his early political career (he was first elected an Irish MP in 1692) contributed to Conolly's success, his book also demonstrates that the accumulation of a huge landed interest was at the heart of the matter. Walsh shows that between 1691 and 1703, Conolly obtained 48,000 acres of forfeited Jacobite estates. From this substantial base, his estates expanded to cover 150,000 acres across Ireland by the time of his death in 1729.

Contemporaries and later commentators wondered about the nature of Conolly's land acquisition, particularly in relation to lands that formed part of the Williamite confiscation. Walsh brings readers closer than ever before to the truth by marshaling the available evidence with considerable skill. He shows that Conolly was accused not only of undervaluing land for personal gain but also of forging documents and even threatening other patrons at auctions. The temptation is to conclude that Conolly was corrupt (by contemporary as well as modern standards), but Walsh judiciously notes the inconclusive nature of the evidence, carefully placing it in context. The impression he leaves is not positive, but neither is it clear-cut.

In many respects, Walsh shows that Conolly made the most of the opportunities that came his way. Exile in London during 1689 ensured contacts with men who would become leading figures in Irish politics after 1691. While his role in the parliaments of the 1690s was moderate, after 1703 he emerged as a leading Irish Whig with a strong parliamentary interest (concentrated, as Walsh demonstrates, in Donegal). Conolly endured the party rivalry of the subsequent decade to earn his political reward from the Hanoverian Succession in 1714. Walsh illustrates that Conolly combined ideological steadfastness to the Whig cause with a pragmatic streak that made him an ideal "undertaker" of government business in the Irish parliament. This combination, as well as an appetite for hard work and clear ability (illustrated especially by his activities as a revenue commissioner), ensured that Conolly navigated successfully the challenges of the later 1710s and 1720s. Walsh highlights his positive relationships with successive viceroys and his handling of the major Irish political crisis of the period, the dispute over Wood's halfpence. The book ends with an interesting analysis of Conolly's great architectural monument, Castletown House, arguing that its construction was not only a reflection of his power but a deliberate model of economic patriotism.

This is the work of a skilled historian. The book draws together an impressive range of source materials, compensating as much as possible for deficiencies in the Conolly archive. While the sources lack a personal dimension, something of Conolly's character emerges: he was able, driven, pragmatic, and, one suspects, unscrupulous. Walsh crafts a "thematic biography" and succeeds not only in providing a detailed, even-handed account of Conolly's life but also in showing how it contributed to the emergence of a ruling Protestant elite in the generation after the Glorious Revolution. He draws together a multifarious career in the law, politics, and administration to illustrate, for example, how Conolly managed a complex system of patronage. Ultimately, Walsh demonstrates that Conolly was more than a "speaker" and an "undertaker." Indeed, this biography is a reminder that we still know relatively little about many of his contemporaries (Alan Brodrick, in particular), and it provides a scholarly model for those who would take up that challenge.

TILLMAN W. NECHTMAN. *Nabobs: Empire and Identity in Eighteenth-Century Britain*. New York: Cambridge University Press. 2010. Pp. xiii, 266. \$99.00.

Historians have long been fascinated by the whiff of scandal surrounding nabobs, the derogatory term applied in eighteenth-century Britain to wealthy servants of the English East India Company (EIC). The nabob as *nouveau riche* buffoon became a figure of fun in the British press, caricatured by well-known artists such as James Gillray. At the same time, as Tillman W. Nechtman emphasizes in his new study, nabobs were frequently portrayed as threats to the proper functioning of British society, polluting the pure streams of British virtue with eastern luxury and despotic habits. Returning nabobs were blamed for all manner of social ills, from corruption in parliament and the decline in ethical standards to inflation of prices for land and goods.

Nechtman's book is packed full with imputations against nabobs drawn from eighteenth-century newspapers, popular prints, and social commentary, notably the letters of that most vituperative hater of nabobs Horace Walpole. Nechtman covers some well-trodden ground, for example the public controversies surrounding the nabobs-in-chief Robert Clive and Warren Hastings; he also explores less well-known aspects of nabobery, including the sudden public prominence of Indian diamonds, the penchant among nabobs for erecting Indian-style buildings in the English countryside, and the importation of numerous Indian animals, including elephants, hyenas, and yaks. Perhaps the most original chapter of the book looks at the widespread criticisms of nabobinas, elite European women returned from India, as overdressed and sexually suspect.

Nechtman shows that returning EIC servants were painfully conscious of the public clamor against them,

particularly in the 1770s and 1780s. A friend of Paul Benfield, a notorious profiteer based in Madras, advised him simply not to come home because of the danger of attracting public opprobrium; if he did come, the friend counseled him “to disarm enmity and malevolence, by a quiet, unassuming entry” (p. 154). Domestic criticism of nabobs may have pushed the British in India to cultivate a more austere version of Britishness, more racially exclusive and often strongly flavored by evangelicalism. The fear of being labeled a nabob may therefore have been an important stimulus to the rebranding of British India in the era of Lord Cornwallis (governor-general from 1786 to 1793).

Situating his book within the new imperial history, Nechtman explains the public hysteria over nabobs as an insular reaction to the dawning realization that British society, and British national identity, were becoming thoroughly mixed up with imperialism. Nabobs with their huge diamonds and strange pets were troubling because they represented material evidence of the inseparable connections between home and overseas and between nation and empire. Nabobs appear here as forerunners of new imperial historians themselves, in that they “exposed the fluid dynamics that moved between empire and nation” and “suggested that British history and British imperial history could not be distinguished one from the other” (p. 238). The pillorying of nabobs was therefore part of a process whereby British public discourse established fictive boundaries between Britain and its overseas colonies, sustaining an image of British national difference and superiority on which empire itself depended.

Nechtman’s thorough study will be a valuable resource for historians, though his general argument is provocative rather than wholly persuasive. The book relies on an overdrawn contrast between imperial Britons (including nabobs) who embraced empire and the mass of domestic Britons who wanted to defend the nation from empire’s polluting effects. Nechtman tends to see the nabob controversy only in terms of a domestic repulsion from imperial otherness; but the domestic fascination with nabobs also reflected the attractions of the Indian empire, with its vast stocks of wealth and beautiful textiles, its exotic glamor, and its stories of military valor. Walpole’s invective needs to be set alongside the monuments to British Indian soldiers and statesmen rising up in St. Paul’s Cathedral or Westminster Abbey. Even Hastings, the arch-nabob, eventually became an object of sympathy as much as scandal and was lauded as a national hero by the end of his life. On the penultimate page of the book, Nechtman hints at the complexity of British attitudes, noting that not all domestic representations of nabobs were negative, but this point is left largely undeveloped.

A chapter on “enlightenment and empire” uses selections from contemporary journals and letters to argue that eighteenth-century Britons tended to see Indians as lacking “any sort of agency,” and India as a “degraded place” where life was “nasty, brutish and short” (pp. 58–59). This reading of British attitudes to-

ward India as monochrome and highly negative helps to explain domestic attacks on Indianized British nabobs but makes it hard to see why nabobs themselves were attracted to Indian styles of art, architecture, or culture, and it runs counter to recent scholarship suggesting the fluidity of “enlightened” attitudes to India. Nechtman’s book nonetheless highlights the deep material and cultural imprint of imperial expansion on eighteenth-century British society.

ROBERT SAUNDERS. *Democracy and the Vote in British Politics, 1848–1867: The Making of the Second Reform Act*. Burlington, Vt.: Ashgate Publishing Company. 2011. Pp. viii, 302. \$124.95.

This is an excellent book, thoroughly researched, elegantly written, and well organized. Beginning his analysis in the era of the 1848 revolutions and the fading of Chartism, Robert Saunders examines the impact of these phenomena upon constitutional reform. He details the manner in which reform came to be linked with other questions (especially free trade) and prompted both a repositioning of politicians and a clarification of ideas about representation, democracy, class, the national character, and other contemporary concerns. For many Liberals, notably Lord John Russell, reform was not about attracting radical support but protecting the constitution from radicals. Conservatives Edward Smith-Stanley, earl of Derby, and Benjamin Disraeli aimed to block a Liberal reform that might damage their party. When their political opponents in the Aberdeen coalition quarreled over the lowering of the borough qualification in 1854, the prospect of a party realignment seemed like a godsend (division on the Liberal side was a constant feature of this period). In the spring of 1857, Disraeli described the Conservative Party as a “corpse” and suggested that reform was the issue on which to rebuild it. Derby eventually agreed; reform offered a means to strengthen the Conservatives and hinder Liberal reunion, and 1859–1860 saw the most significant debates on reform since 1830–1832. William Ewart Gladstone’s populist turn helped to ensure that the debates would go on, but Gladstone’s principles were not shared by many in the Liberal Party, and he suffered a reversal in 1866. The “Adullamites” who resisted him wished to protect middle-class influence, while he “saw the enfranchisement of all who were duly qualified as part of the process by which class was dissolved” and parliament could represent the whole community (p. 266). Finally, the debates on reform in 1866–1867, the tactical maneuvering, the struggles to control the future of both the Liberal and Conservative parties, and the combined pressure for a settlement in parliament and out of doors produced the 1867 Reform Act. Ironically, a selective reform ushered in the age of mass politics, and all parties claimed credit for a measure of which none of them wholly approved.

Saunders argues that ideas really mattered in the re-

form debates of the 1850s and 1860s, and that most disagreements related to the specific details in reform proposals rather than to the principle of reform itself. He argues, further, that one of the key questions—about the character of the working man and his fitness for the vote—was really about incorporating new elements in the constitution without disturbing the old. That is, most commentators considered it essential to retain the variety of representation and to forestall democracy. Fitness to vote therefore could not be separated from a consideration of the number to be enfranchised. Democracy had negative connotations even for convinced reformers. In an interesting chapter on the international context, Saunders shows that the democracy seen in France and America was not wanted in Britain. Democracy's "operation upon a European society" gave birth to Napoleon III's dictatorship and the end of constitutional government in France; America, "of interest for its Anglo-Saxon culture and as an example of democracy in a large and opulent state," descended into sectional division and civil war (p. 131).

Saunders focuses on parliamentary politics, though with some appreciation of the most significant extraparliamentary developments. It was parliament that had to deliberate and decide on reform proposals. "Agitation might compel legislators to act, but it could not set the terms of legislation" (p. 23). Therefore, the violent demonstrations in the summer of 1866 should be regarded as important, but not as the primary cause behind the final act: "Rioting was hardly unknown in Victorian society, and the government only decided to legislate several months later" (p. 227).

Saunders demonstrates real command of his sources and the relevant historiography. In the years after 1867 a consensus held that popular pressure had forced the hand of party leaders at Westminster, but this was disputed by later historians and, Saunders thinks, for good reason. The most important works on the 1867 Reform Act date from the 1960s: articles by Royden Harrison and Gertrude Himmelfarb and books by F. B. Smith and Maurice Cowling. Saunders offers useful comments on these works throughout his own book (he is particularly complimentary about Cowling, but rejects the latter's claims that ideas were unimportant and that extraparliamentary agitation played no role at all in the passing of the 1867 act). Saunders has added a great deal to this body of scholarship. It is a pity that his book is not more reasonably priced.

FORREST CAPIE. *The Bank of England: 1950s to 1979*. (Studies in Macroeconomic History.) New York: Cambridge University Press. 2010. Pp. xxviii, 890. \$150.00.

Forrest Capie's history of the Bank of England joins the other official histories of the Bank—those of J. H. Clapham (for 1694–1914), R. S. Sayers (1891–1944), and John Fforde (1941–1958)—and brings the story up to the defeat of the Labour government and the elec-

tion of Margaret Thatcher in 1979. It is a story that covers two very distinct periods in British history: the so-called "Golden Age" of economic growth, with low rates of inflation, full employment, growing international trade, and capital flows, and the much more turbulent 1970s, with the collapse of the international monetary system, the oil shock, and stagflation. These two periods also included the establishment of sterling's convertibility, the crisis that preceded the devaluation of 1967, and the secondary banking crisis of 1973–1974.

Given Capie's expertise as a banking and monetary historian, it comes as no surprise that much of the book focuses on the Bank's attempts at making sense of what monetary policy was and how it should respond to change and crises. That said, overall the book offers a very lengthy and detailed "record of what the Bank did, how it did it, and . . . an explanation as to why it did it in the way it did" (p. xix). Context is also important, and the reader will learn much about the institutional history of the Bank, the growth of regulation, and about London as a financial center.

Capie was given complete access to the Bank's archives and to its current and former personnel. Nevertheless, some gaps remain, as many of the Bank's records have been destroyed (for example those pertaining to the secondary banking crisis) together with the "Books" recording the morning meetings of the governor.

The book starts with a very useful overview of the British economy and its monetary background. This chapter is followed by fourteen more in a loose chronological order, starting with the Bank in the 1950s, its structure, personnel, objectives, and functions. This is followed by analysis of the establishment of the Committee on the Working of the Monetary System (the Radcliffe Committee, from the name of its chairman), its findings and recommendations, and the responses it provoked. The chapters that follow cover considerable ground in much detail: the move to convertibility, the establishment of the euromarkets, the sterling crises and devaluation, and the introduction of credit controls, as well as the secondary banking crisis of the mid-1970s and the exchange rate policy that followed, including the end of sterling balances. Throughout, Capie does not forget the changes that took place in the Bank's personnel, most notably its governors, and the wider institutional environment, both in terms of international monetary reform and banking supervision. The rather relentless narrative is broken up by some very engaging and interesting vignettes, including the rescue of Burmah Oil in the mid-1970s.

Official histories can often be uncritical and overburdened by detail. Capie has achieved the remarkable feat of producing a long book that is neither of these things. His prose is lucid, and his grasp of the complexities of monetary policy is masterly; he does not shy away from showing his frustration at the Bank's shortcomings in grappling with policy. A brief review cannot do justice to a book of such gigantic scale and scope. Suffice to say

that in it banking and monetary historians will find much food for thought.

SID LOWE. *Catholicism, War and the Foundation of Francoism: The Juventud de Acción Popular in Spain, 1931–1939*. (Cañada Blanch/Sussex Academic Studies on Contemporary Spain.) Brighton, England: Sussex Academic Press. 2010. Pp. xviii, 332. \$74.95.

This is a fine and well-written political history of the Catholic youth movement during the Spanish Second Republic and Civil War. Sid Lowe provides a needed analysis of the ideological and social composition of the Juventud de Acción Popular (JAP), the youth movement associated with the clerical Confederación Española de Derechas Autónomas (CEDA), the largest party in Spanish political history. Lowe argues that JAP became increasingly influenced by a variety of European authoritarian models and underwent a “profound process of fascistisation” (p. 69). Many Spaniards, especially those on the Left, “understandably” (p. 7) considered it indistinguishable from fascism itself. Its leadership cult, nationalist populism, paligenetic faith, and youthfulness repeated or copied essential features of its European fascist counterparts. Lowe argues that the Falange, the recognized standard bearer of Spanish fascism, was weak because JAP was sufficiently fascist to absorb the Falange’s potential supporters. At the same time, the author admits that JAP’s devout Catholicism, lack of a dynamic imperial project, and relative reluctance to engage in violence distinguished it from the German National Socialists and Italian Fascists.

One of Lowe’s most significant contributions is to show why and when JAP members flocked to the more radical and violent Falange in 1936 and especially during the civil war. Many previous accounts have argued that the switch occurred following CEDA’s defeat in the February 1936 general elections. Although the flight from the JAP to the Falange was significant in the early spring of 1936, the author demonstrates that only in July with the eruption of civil war did the *japistas* massively join the fascist party. This shows, as Stathis N. Kalyvas has emphasized, that what causes civil wars is not necessarily what sustains them. Traumatic events encourage ideological flexibility and opportunism.

Despite these solid findings, the author may inflate the importance of his subject by arguing that the JAP provided the social basis of the Franco regime (p. 7). JAP was certainly part of the neo-traditionalist coalition of Francoism, but the social basis of the latter was broader than any particular political movement. Furthermore, JAP was largely urban; whereas early Francoism was more rooted in the countryside. Given Lowe’s political perspective, he may also overestimate the importance of anticlericalism as the Republic’s “greatest mistake” (p. 2). Likewise, his political determinism attributes the military coup of July to CEDA’s long-term reactionary influence and its electoral defeat

in 1936. The author is certainly correct that religious issues were extremely divisive, and that CEDA’s electoral failure gave ammunition to the authoritarian Right. However, the Republic’s inability or unwillingness to protect the lives and possessions of property owners and political opponents in the spring of 1936 was even more damaging to its survival than its previous political errors or CEDA’s anti-Republican propaganda. Like much of both old and new literature, Lowe’s volume favors political (or cultural) over social history. Thus, he argues that a “growing perception of disorder” (p. 121) was much more important than social unrest itself.

My own opinion is that Spanish historiography has inherited from a vulgar Marxism an overly narrow and often politicized conception of class struggle. Thus, it has ignored or downplayed hard-to-quantify petty thefts, attacks on property, and resistance to wage labor that individuals or small groups of workers initiated after the Left took power in the spring of 1936. No doubt the right-wing media attempted to manipulate property owners, but the latter were inclined to believe that “disorder” and “unrest” were significant because of their own experiences with an intense and multifaceted class struggle. In other words, “public order” was not merely the “pretext for the [military] rising” (p. 155) but rather its context.

The victory of the Francoists in the civil war cannot be explained by the Right’s greater “respect for authority” (p. 195). Once again, political and cultural explanations need to be harnessed to their social and economic context. A more global perspective demonstrates that in both the Russian and Chinese civil wars authoritarian military leadership did not guarantee the victory of the Right. Like the Russian and Chinese Communists, the fascistic Nationalists won not only because of a forced political and cultural unity but also because they mobilized their population and resources more effectively than their incompetent enemies.

Despite these criticisms, Lowe’s history of the JAP is a significant contribution to the study of politics and political culture of the Spanish Second Republic and Civil War.

MICHEL DE WAELE. *Réconcilier les français: Henri IV et la fin des troubles de religion 1589–1598*. (Les collections de la République des Lettres.) Montreal: Les Presses de l’Université Laval. 2010. Pp. x, 285. \$32.95.

Over the past decade, Michel De Waele has become a leading expert on the French Wars of Religion, so it is only fitting that he undertake to synthesize a past generation of scholarship and break new conceptual ground for the next in his new study of these complex conflicts and their aftermath. De Waele eschews the “long Wars of Religion” posited in Mack P. Holt’s 1995 seminal synthesis that extended them up to the 1629

siege of La Rochelle. Organized in three parts, De Waele's book traces these wars up to what he considers the decisive year 1589, the heated struggle thereafter over the conversion of Henri IV, and the new forms of comity that ensued between the king and his people after his conversion in 1593. In the process, the majesty of the king, the supreme authority of the royal state, and its preternatural Catholic character became reaffirmed as the touchstones of France's identity for the next two centuries. This vision of France as defined by one faith, one law, one king is essentially *parlementaire*, which should come as no surprise given all of De Waele's earlier splendid work on the judges.

In chapter one, De Waele disputes the unitary nature of the period 1561–1598 so long established in the historiography. A fundamental difference existed, he argues, between the wars fought in the 1560s and 1570s, which were principally noble revolts over influence at court, and the struggle over the Bourbon succession in the late 1580s and 1590s, which was a civil war because of the ideological stakes implicit in the possibility of a Protestant king ruling over a Catholic majority. While De Waele does not exactly “take religion out of the Wars of Religion,” he does construe matters of belief largely in terms of *la religion royale* of incipient French national identity. The greater lexical, if not legalistic precision that De Waele calls for when characterizing these conflicts, although certainly very useful, may hide the possibility that contemporary confusion about these conflicts actually vouchsafed their transformational character. Chapters two through four present the various factors—social, institutional, and religious—that conspired to plunge France into crisis after 1560. De Waele adds valuable nuance to the long familiar narrative of these years with insights gleaned from his reading of contemporary pamphlets and archives, principally in Beaune. Over time, what began as noble factions gradually morphed into political parties with the Monarchomachs of the 1570s and the rise of the Catholic Holy League in the 1580s. Part two builds on his own as well as others' work, including my own, on the struggle surrounding the succession and conversion of Henri IV. Unable to conquer his kingdom by force, Henri set about to subdue his rebellious Catholic subjects with kindness after his conversion at St. Denis, re-establishing bonds of *amitié* and consigning the contentious past to oblivion by royal fiat. Clemency rather than harshness marked the pacification process, as joyous entries, Te Deums, and paeans about peace and prosperity came to the war weary kingdom.

De Waele stresses the contractual nature of the renewed relationship between the Catholic king and his people, devoting particular attention to the peace agreements reached between Henri IV and Leaguer cities after 1594. Far from the *Politique* triumph touted since Voltaire, the resulting accord was a victory above all for moderate Leaguer Catholics, who had staunchly insisted they would only obey a Catholic king. With rare exception, Henri kept nearly all Leaguer officials in place and accepted the legitimacy of their past rulings,

including fiscal policy; he also restored properties and privileges to the Roman Catholic Church, as well as affirmed new proscriptions against the Huguenots. Accepting this continuity of Catholic governance was vital as Henri lobbied for his own acceptance. The eruption of popular revolts in the Croquant peasant uprisings further encouraged the realignment of Catholic elite support behind him, as did his astute decision in 1595 to declare war on the League's erstwhile sponsor, Habsburg Spain. Left on the margins of this return to the new normal were, of course, the Huguenots, many of whom after his conversion militated against him; but for the soothing admonitions of men like Philippe Duplessis-Mornay, confessional strife might have quickly resumed. The failure of Huguenots to rally to the king's side after the Spanish surprise of Amiens in 1597 signaled how low relations had sunk. Yet in spring 1598, Henri brought both these conflicts—one hot, one cold—to an end in the Treaty of Vervins with Spain and the Edict of Nantes for the Huguenots. Neither accord fully settled the points of difference between them and the French monarchy, as war with each eventually resumed after Henri's assassination in 1610. Yet this time around, cleavages among French Catholic elites remained muted and more manageable, even in the Fronde. The pacification achieved under Henri thus proved a resilient basis for the monarchy's servants to build its authority and their shared vision of France upon.

De Waele's important new book is essential reading for scholars and advanced students interested in early modern France as he presents a compelling picture of France's transformation under Henri IV. If he privileges the perspective of the lawyers, he does so for good reason, because the future of France, as we all know, essentially belonged to them.

MICHAEL WOLFE
St. John's University

BRIAN SANDBERG. *Warrior Pursuits: Noble Culture and Civil Conflict in Early Modern France*. (Studies in Historical and Political Science, number 3.) Baltimore: Johns Hopkins University Press. 2010. Pp. xxx, 393. \$60.00.

About twenty years ago Arlette Jouanna, one of the leading historians of the French nobility, published *Le Devoir de révolte* (1989), in which she examined the relationship between the French nobility (in particular the *noblesse d'épée*) and the French state between 1559 and 1661. In many ways Brian Sandberg's book takes a closer look at the same phenomenon for a more limited period of time, essentially the first third of the seventeenth century. He wants to explore the marked propensity of French nobles, both powerful princes and simple provincial gentlemen, to engage in armed revolts or sometimes just local feuds. The area he examines is southern France, in particular the province of Languedoc. For Sandberg violence and civil conflict were not just a legacy of the Wars of Religion; they were

also an expression of a particular noble culture whose virtues—such as a specific kind of heroic manliness—could only find expression on the field of battle, possibly in warfare abroad but just as well in civil war at home. As opposed to older accounts that have seen large sections of the nobility as undergoing a process of demilitarization in the early seventeenth century, Sandberg demonstrates that a culture of violence remained central to noble social identity.

In southern France the civil wars of the late sixteenth century never really came to an end and continued in an admittedly more muted form for decades, fueled not least by ties of patronage, kinship, and friendship that made it easy to raise private or semi-private armies. Religious division played an important part in these conflicts but so did family feuds and the resentment of powerful aristocrats who had been defeated in their quest for grants, status, and offices at court by their enemies. It was all too easy for nobles to raise armies in the king's name using their position as royal governors of fortified towns and castles or just relying on blank commissions that the king had issued earlier so that nobles could recruit soldiers for his army—which in practice, however, was dominated as much by local warlords and powerful nobles as by the king himself, as Sandberg shows. Even the Huguenots fought their wars in the 1620s in the name of the king and his edicts, relying in particular on the privileges granted to them in 1598 (p. 205).

All of this is well argued and illustrated by a wealth of fascinating details, but the reader nevertheless feels irritated at times by Sandberg's tendency to oversimplify problems. Not every historian will cherish the sentence that, armed with five subordinate clauses, carefully keeps the meaning in suspense, but for Sandberg almost everything seems to be clear cut and unambiguous. He prefers the dry short sentences that the military men whose actions he examines probably used in war, if they spoke at all. This creates a tendency either to simplify issues unduly or at least to use expressions that are conceptually and stylistically problematic. Thus Sandberg states "for warrior nobles, intense personal belief was dedicated to promoting religious causes" (p. 273). Would it not be more correct to say that intense faith motivated nobles to dedicate their lives to religious causes? Equally Sandberg speaks in a rather strange way of "sanctity" as an element of personal honor when he really means godliness, piety, and religious zeal. Did Louis XIII really raise the head of the Lauzières family in order "to confirm the family's enhanced sanctity" (members of the family had died in the fight against the Huguenots), or can crusades be described as "sanctity performances" (pp. 156–157)?

At a deeper level Sandberg's explanation for the decline of violent conflicts after 1635, although in itself plausible enough, fails to satisfy completely. Undoubtedly the end of religious war in 1629—the Huguenots no longer had the capacity to raise armed forces after this date—was in part responsible for the pacification of southern France, and the fact that nobles could now

serve in a "real" war against foreign powers (war had been declared against Spain in 1635) certainly also helped, as Sandberg argues. One misses, however, the subtle analysis that Stuart Carroll, for example, provides in his *Blood and Violence in Early Modern France* (2006) for the change in noble manners in the mid-seventeenth century and, in an even more pronounced way, during the later decades of the *âge classique*. Overall Sandberg presents a great deal of new and fascinating research on an important topic, but he has only partially succeeded in transforming a doctoral thesis into a polished and rounded monograph.

RONALD G. ASCH
Universität Freiburg

JEFFREY D. BURSON. *The Rise and Fall of Theological Enlightenment: Jean-Martin de Prades and Ideological Polarization in Eighteenth-Century France*. Foreword by DALE VAN KLEY. Notre Dame, Ind.: University of Notre Dame Press. 2010. Pp. xxiv, 494. \$55.00.

On November 18, 1751, the bachelor in license Jean-Martin de Prades appeared before a committee of the University of Paris Faculty of Theology (the Sorbonne) to defend his doctoral dissertation. Like many a doctoral thesis defense before and since, there was nothing in the event itself to suggest anything extraordinary. Doctoral degrees in theology also served for many in eighteenth-century France as the terminal degree that launched aspiring state officials upon administrative careers—the royal intendant and Controller General Jacques Turgot, for example, completed his formal education by taking a doctorate from the Sorbonne—and from this perspective there was nothing in Prades's profile going in that suggested that his examination would even generate much theological heat. The defense itself was also uneventful. Prades followed the dissertator's tried and true path of suggesting modest revisions to the consensus views of his professors, and after successfully answering a challenge raised by one of his examiners against his understanding of miracles, he was duly confirmed as a doctor of theology.

Yet within days of the event controversies about the thesis and its defense began to swirl. Over the next three months these questions exploded into a full-blown international scandal. By March 1752 Prades was at the court of Frederick the Great in Berlin, fleeing French arrest warrants, while a fierce public battle was unfolding in Paris and the wider Republic of Letters. The battle divided the Sorbonne faculty, which retracted its approval for Prades's thesis in January 1752, against itself and pitted each of its factions against a host of external critics that included clerics and officials of the Gallican Church, royal administrators engaged in ecclesiastical politics, Jansenist clerics and magistrates, the Society of Jesus, and the broader public of eighteenth-century readers who accessed the scandal through the vibrant print culture of the period. Especially important among the latter were the as yet still isolated *gens des lettres* who would soon come to be called the "Encyclope-

dists." The monumental *Encyclopédie* of Denis Diderot and Jean Le Rond d'Alembert began to appear, and to be vehemently criticized, in the same year as Prades's defense, and while Prades was not the only Sorbonne alumnus to agree to provide the *Encyclopédie* editors with articles (Turgot, for example, was an "Encyclopedist," as was the Sorbonne doctor Abbé Claude Yvon), only Prades became the center of a scandal that linked his thesis, and the Sorbonne's approval of it, with the wider reception of the *Encyclopédie* and Enlightenment *philosophie* more generally.

Many a historian, including this reviewer, thinks that the broader scandal activated by the "Prades Affair" was one of the central, if not the central, events in the opening of the French Enlightenment writ large, and what Jeffrey D. Burson asks in this meticulously researched and carefully argued book is why Prades, of all people, became the flashpoint for this monumental upheaval. What transpired, Burson inquires, to turn an ordinary doctoral candidate with a seemingly run of the mill doctoral dissertation into a singularly significant catalyst of the emerging French Enlightenment?

No one before Burson has asked these questions in quite this historically contingent and nuanced way, and the great virtue of this book, despite the sometimes problematic ways that it attempts to resolve its inquiries, is the way that it subjects the wider historical context surrounding the "Prades Affair" to a rigorous reevaluation. Especially constructive is Burson's urge to question the musty explanatory framework, recently dusted off by Jonathan Israel, that explains the affair as the overdetermined result of an imagined eighteenth-century war between secular scientific rationalism and materialism on the one hand and religious philosophy, scriptural authority, and traditional church teachings on the other. The book's title articulates Burson's different approach, for what he aspires to show is the presence of a mid-eighteenth-century French intellectual and institutional culture wherein Christian theology and Enlightenment critical philosophy could cohabitate without necessarily generating a war between them—what Burson calls the "Theological Enlightenment."

When Burson is documenting the porous walls that allowed Christian theology to intermingle with secular philosophies of all sorts, and clerics and ecclesiastical officials to critically debate and socialize with *gens de lettres* and aspiring *philosophes* in the wider public sphere, his book excels. Drawing on the work of R. R. Palmer and, more recently, Dale Van Kley (who contributes a foreword to the book) on the complex ties between Catholicism and Enlightenment in France, but also adding an astonishing quantity of his own original archival research, Burson contributes greatly to our understanding of the intellectual relationships and social networks that tied church with state, ecclesiastical politics with royal politics, and religion with secular philosophy in the making of French Enlightenment culture.

Unfortunately, Burson also tries to pin a story about the changing character of Enlightenment philosophy to

the contingent account of institutional and political change that is the book's core, and here the argument suffers. Burson follows Israel in these sections by viewing the eighteenth century as a battleground where Radical Enlightenment (basically philosophical materialism as Burson uses the term) fought to assert itself against various opponents, both moderate and conservative. But he also tries to complicate Israel's story by arguing for what he calls "the Jesuit Synthesis of Malebranche and Locke," a moment of rapprochement operative between roughly 1720–1750 that prepared the ground for the real moment of philosophical rupture, the "Prades Affair." This argument simply does not work. The evidence offered for the "Jesuit Synthesis" is a rather loose reading of only one or two Jesuit texts, and Burson's argument as a whole deploys names (Thomas Hobbes, John Locke, Nicolas de Malebranche, Claude-Adrian Helvétius) together with generalizing labels (Newtonianism, materialism, Jesuit, Jansenist) in a highly reductive way that produces an abstract narrative of alleged philosophical development detached from the complex texts and intellectual debates that these terms reference.

As an intellectual history of the French Enlightenment, therefore, *The Rise and Fall of Theological Enlightenment* cannot be recommended. But as a copiously researched institutional and political history of the contingent events that shaped the characteristic relationship between church and state, and religion and *philosophie*, in Enlightenment France, it is required reading for any serious student of the topic.

RALPH ASHBY. *Napoleon against Great Odds: The Emperor and the Defenders of France, 1814*. Santa Barbara, Calif.: Praeger. 2010. Pp. xiii, 230. \$44.95.

At the end of 1813 large Allied armies, commanded by the Prussian Marshal Gebhard Leberecht von Blücher and the Austrian Prince Karl Philipp zu Schwarzenberg, were on the verge of invading Napoleonic France. The 1814 *campagne de France* lasted for only three months until the fall of Paris on March 31. Napoleon abdicated on April 6 and was soon sent to Elba.

Ralph Ashby's goal is to "focus on Napoleon's army in 1814 as well as on partisans and other civilians who defended France" (p. 1). The book presents important topics, many of them well known, that explain the characteristics and conditions of the French recruits in 1814: conscription, desertion, and draft dodging; the structure and size of the Napoleonic army; the training or lack thereof; the soldiers' social origins and ages; and their weapons, uniforms, military actions, and casualties. Following a chapter about Napoleon Bonaparte's creation of the army, Ashby devotes five chapters to examining the organization and conditions of various branches in 1814: infantry, cavalry, artillery and engineers, Imperial Guard, and National Guard. He then explores the various battles (chapters nine and eleven),

civilian resistance (chapter ten), the fall of Paris (chapter twelve), and French casualties (chapter thirteen). The book provides useful statistical data and contains several helpful maps and many pictures of battles and prominent figures of the period.

Not surprisingly, most of the French infantry came from the lower classes. Many men were insufficiently trained and equipped. Some infantry had no muskets. Acute shortages of horses resulted in a much smaller cavalry than the enemy's. Scarcity of horses and insufficient training also hurt the artillery and the Imperial Guard. Overall, the Napoleonic army of 1814 was greatly outnumbered by the Allied armies (only 120,000 Frenchmen were conscripted), was inadequately equipped and clothed, and was often not well fed, with many of the troops virtually untrained or lacking experience (p. 175). Leadership quality varied and morale fluctuated. Yet, despite those limitations many French soldiers fought bravely to defend their homeland, and they were able to inflict several defeats on the invading armies in the battles of Champaubert, Montmirail, and Vauchamps, among others.

Aside from discussing the Napoleonic army, Ashby makes two main arguments: first, that Napoleon's main difficulty in preparing a bigger and better army was lack of time. The Allies invaded France in the early winter of 1814 instead of the spring, as the emperor had hoped, thereby denying him the necessary time to conscript more soldiers and train them sufficiently. This might have been the case, but would Napoleon have prevailed if he had had three more months to prepare? It is unlikely in light of numerous other problems the emperor faced. Second, Ashby challenges the interpretation that "war weariness" in 1814 France was the main reason for the French defeat. He insists that "war weariness" played a role in the loss, "just not the primary one" (p. 189). However, earlier he states that "war weariness" is a "vague expression" and "is impossible to qualify or quantify" (p. 31). If so, how does one decide with any certainty how important it was in causing French defeat in 1814? It seems to me that the author underestimates the importance of "war weariness." Factors that Ashby mentions elsewhere, such as difficulties of mobilization, widespread desertion and draft evasion, financial disarray, and a demoralized and ineffective bureaucracy were clear signs of an exhausted France that, after twenty years of fighting and great casualties, yearned for peace rather than continued struggle. The author is also unconvincing in stressing the important role civilian resistance played against the Allies. He provides scarce evidence in the form of specific examples of partisan opposition to adequately prove any strong French resistance, which never measured up to the widespread anti-Napoleonic revolts in Spain, southern Italy, and Tyrol.

Ashby places most of the responsibility of the collapse of France on Napoleon. Indeed, while the emperor showed much energy and succeeded in leading the army to several victories, he was unrealistic in thinking that, after the fiascos in Russia and Germany, he

could defeat the much larger and improved Allied armies. Ashby states correctly that in 1814 "France was ultimately overwhelmed by a superior combination of enemy forces" (p. 10). None of the Napoleonic 1814 victories was decisive or could halt the steady advance of the Allies toward Paris. The invasion of France in 1814 was different from that of 1792. Napoleon could have saved his throne but refused an Allied offer to stay in power within the 1792 borders of France. He did not believe that he would survive in power without beating the enemy decisively. Although not uniformly persuasive, Ashby's book contains useful information about the French troops and contributes to a better understanding of Napoleon's final campaign.

MARK TRAUGOTT. *The Insurgent Barricade*. Berkeley and Los Angeles: University of California Press. 2010. Pp. xviii, 436. \$39.95.

Mark Traugott has written an intriguing book that highlights both the possibilities and pitfalls of a social-science approach to historical phenomena. It takes as its subject the literal appearance of that which is so often a synecdoche for insurgent action—the barricade, and particularly its history as focused on the Parisian streets in the revolutionary years of 1830–1848. The author's contention is that the "barricade phenomenon" is a "routine of collective action" (p. xi) that as part of a "repertoire of collective action" (p. xiii) must be properly decoded to understand and appreciate popular culture and consciousness of the era. Following closely the methodological lead of Charles Tilly, this is a work that valorizes popular contention and resistance, and seeks to embed the particular forms that became famous in the mid-nineteenth century into a longer history of popular assertion and autonomy.

Beginning as it does by delving into "barricade" episodes from 1588 and 1648 and offering largely uncritical narratives of these events, the text foregrounds what seems to be a predetermined commitment to a positive view of barricading the streets. It is thus able to pass over the practical problems of the very shaky and uneven record of success that this strategy had. Glorious popular triumph in the July Days of 1830 was counterpointed, as every reader or viewer of *Les Misérables* knows, with futile and fatal revolt in 1832, 1834, and 1839. Success in February 1848 was followed by even more bloody repression in June. Truly monumental barricade-building in 1871 could not stave off the repression of *La semaine sanglante*. Meanwhile, as the barricade example spread, early successes in Belgium in 1830 led to widespread European adoption in 1848—but as in Paris, those revolutions all failed.

One has the sense that Traugott knows all this—there can be no disputing his scholarship, or the energy he has put into gathering a database of "barricade events"—but prefers to see things differently. His conclusions are noteworthy for their frank admission that

the “essential purpose” of early modern barricading practices was the defense of established neighborhoods against external threats that were not necessarily political in nature, and that this “pragmatic” function was displaced by more “sociological and symbolic” ones even as the “revolutionary tradition” reappropriated the practice in the early nineteenth century. The barricade had “versatility, longevity and vitality” because it was “a symbol that could serve as proxy for the desire to effect radical political change” (pp. 240–241)—which is all very well, but when it gets people killed without actually achieving any such change, does it deserve quite the retrospective admiration it receives here?

In addition, given the emphasis that Traugott wishes to place on the culture of those who built the barricades and presumably passed on the sense of these practices down the generations, it is striking how infrequently he is able to approach direct testimony on this subject. Commentators of both left and right tell us what they think workers were doing making barricades, but page after page passes before we hear from captured insurgents or memoirists. The section on the way barricades functioned to “foster an appropriate level of insurgent organisation,” for example, opens with the proclamations of educated revolutionists and goes on to witnesses who saw either conspiracy or complete spontaneity. Only one out of four of those quoted was a “worker,” and he was writing retrospectively. Going on to consider the development of a “division of labor” in barricade-building, Traugott plunges into artistic representations, insisting that despite their “distortions” they might “be useful in suggesting the diversity” of insurgents (pp. 196–200, citation p. 199). Several pages later we get to direct, individual examples of barricade-builders, to learn that they were masons who brought their practical skills to bear, but not to discover why they did so (p. 204).

What Traugott is able to show us, quite dramatically, is that barricading practices emerged as a striking escalation of something previously far from unknown but infrequent, at a time when the notion of urban neighborhood autonomy was being definitively challenged by the intrusion of ideological politics and deracinating economic development. Barricades as actually used in the mid-nineteenth century, reading through the hype both contemporary and retrospective, were a response fatally bounded by their reactive qualities. Their disruption of the emergent space of urban modernity could be profound but was always short-lived, and too frequently the backdrop to massacre by increasingly well-organized and ruthless military repression. Traugott clearly believes that we should give three hearty cheers to “barricade consciousness,” but it remains unclear from this study what that spirit actually was, or why it was not, in the end, a mistake.

University of Portsmouth

RACHEL CHRASTIL. *Organizing for War: France 1870–1914*. Baton Rouge: Louisiana State University Press. 2010. Pp. xii, 226. \$45.00.

Rachel Chrastil studies civil society’s response to the Franco-Prussian war in three French departments: Meurthe-et-Moselle, Sarthe, and Hérault. She examines associations that sprang up after the war, beginning with efforts to organize burial and monuments for the fallen, to pay off the indemnity, and to aid widows, orphans, and Alsatians moving to France. These beginnings gave way in the 1880s, Chrastil argues, to commemorative events. A particularly interesting case study concerns the frontier village of Mars-le-Tour (Meurthe-et-Moselle), where “a brief prayer service” commemorating battles there became in the 1880s a “day long ritualized event” (p. 81), a national “patriotic festivity” (p. 110) that the state apparently supported. Abbé Faller, who was responsible for this development, cooperated with the state even during the separation (pp. 84–85), and was granted the Legion of Honor (p. 107).

Commemoration led in turn, Chrastil suggests, to active preparation for the next war. She presents a case study of the *Souvenir français*, founded in 1887 “to preserve the tombs of French soldiers, transmit their memory . . . and promote a glorious France” (p. 100). By the twentieth century, this Catholic if not reactionary organization (Chrastil wavers on this) played a significant role, at least in the Meurthe-et-Moselle (pp. 100–105), again with the apparent tolerance of the state. From here Chrastil shifts to associations less directly related to the Franco-Prussian War: the various gymnastic and shooting societies, the *Fête Fédérale Française*, and the Red Cross (whose growth, if not origins, resulted from the war).

Chrastil offers many suggestions for our understanding of this period. Her close analysis of war-related organizations is often valuable and insightful. She makes a significant contribution to the study of early Third Republic associative life pioneered by Carol Harrison, Philip Nord, and others, confirming that Third Republic civil society was richer than often thought (pp. 69, 100–101), certainly more than Alexis de Tocqueville’s dire predictions would suggest (pp. 7–11). Chrastil notes suggestively that “civil society was more concerned with shaping the state’s action . . . than with securing freedom from the state” (p. 154), opening at least the possibility that the Third Republic’s anticlericalism was less ferocious (or perhaps more focused on the admittedly numerous reactionary elements of the Roman Catholic Church) than often portrayed. Abbé Faller is only the most striking example of cooperation between church and state.

Some of these ideas could be developed further. Others require more evidence. “The link between the Franco-Prussian War and the Great War is not *revanche*. It is that the first war fostered the belief that the citizens of a nation could and should prepare for a future conflict” (p. 156). Chrastil rightly deplores mind-

less deployment of *revanche* to explain the lead-up to the Great War (p. 162, n. 24), but she throws the baby out with the bathwater. She overemphasizes the monarchist argument that “the GDN continued a fruitless, destructive war” and thus concludes that republican patriotism was unpopular (p. 39; cf. pp. 26, 43). Rural voters in the 1870s, to be sure, feared the resumption of war, but they still shared the widespread desire to regain the “lost provinces”; *revanche* was only the tip of the patriotic iceberg. Chrastil does mention that General Chanzy was popular because he had “saved the honor of France” (p. 95) but overlooks the significance of his popularity as she overlooks that of Gambetta, which derived from the same cause.

Chrastil navigates skilfully between politics and associative life at the regional level, but less effectively at the national level. Paul Déroulède, she notes, refused to attend the inauguration of the Chanzy monument at Le Mans because “he had not been invited to speak” (p. 97), but she fails to explain further. The monument was inaugurated in 1885, just as the split between republican and authoritarian nationalists in the Ligue des Patriotes was becoming public. We need to know how events like the inauguration played out in relation to national struggles.

Chrastil concludes that “these organizations fostered the ‘self-persuasion’ that played a key role in the cultural mobilization of France” during World War I, that “civil society’s claim to shape the nation’s preparation for war sustained France’s ability to hold on” (p. 157) and “helped the French consent to and prolong” the war. France would have been better off to “renounce war” (pp. 157–158). Her study is, understandably, limited to three departments and to organizations that originated in response to the Franco-Prussian War; it excludes political groups and organizations that existed before that war. Her broad conclusions, however, require a study of civil society as a whole. She herself suggests that civil society includes “charitable, political, and religious organizations” (p. 7). Would it not therefore include the Ligue des Patriotes, the Roman Catholic Church, the Masonic Lodges, and even the many republican local committees?

That said, Chrastil has given us a rich and insightful work, particularly in its emphasis on the extent of Third Republic associative life before the 1901 Law on Associations. Let us hope that she will turn to a broader canvas with the same flair for research and the same lucid insight she brought to this valuable study.

NICOLAS MARIOT and CLAIRE ZALC. *Face à la persécution: 991 Juifs dans la guerre*. Paris: Odile Jacob. 2010. Pp. 302. €23.90.

We learn that the “991 Jews in the war” of the book’s subtitle formed an immigrant community in Lens, a small mining town in the Pas de Calais that, during

World War II, was in the “Forbidden Zone” of northern France, an area administered by the Germans from headquarters in Belgium. The fact that almost half of the Jews from Lens perished in the Holocaust (versus twenty-five percent for France as a whole) reflects in part this unique occupation status with persecution coming from three different power centers: Paris, Vichy, and Brussels.

Nicolas Mariot and Claire Zalc trace the experiences of the 991, many of whom had been driven to seek refuge from a rising tide of antisemitism in Poland and elsewhere in central Europe, and had arrived in France in the late 1920s or the 1930s. Different itineraries brought them to Lens, but the fact that more than two-thirds of the immigrants came from Poland and most spoke Polish in addition to Yiddish meant that an earlier massive immigration of Catholic Poles to the mining fields of northern France provided a natural environment for these immigrant Jews. Already familiar with the Polish miners’ favorite clothing and other products, the newcomers used their language facility in selling textiles and other consumer goods in the mining communities that surrounded Lens. When World War II began, a significant number of the Jewish immigrants volunteered for service in the French army, and, joining the general exodus from northern France at the time of the German invasion of May 1940, between twenty-one and forty-four percent of the Jews of Lens left the area forever, many of them establishing residence in southern France. This did not lead to permanent safety for all of them, as some would be trapped in later roundups and deportations, but the chances of survival were much greater for those who made it to the original Vichy zone.

The Jews who stayed in or returned to Lens were soon confronted with an ever-growing list of discriminatory measures. Mariot and Zalc do an excellent job of describing the process the authorities used to identify, isolate, reduce to misery, and ultimately arrest and send to their deaths at Auschwitz-Birkenau half of the Jews who were living in Lens before the German invasion. Their general conclusions are compatible with most of the best writing on these issues, but their presentation is original in several respects that help the reader to understand in precise detail the impact of the Holocaust. For example, detailed lists of all of the carrots, beets, potatoes, and leeks taken from the gardens of Jews who had been arrested and deported, and lists of all of the goods taken from their apartments, starkly demonstrate the extent to which persecution had reduced most of Lens’s Jews to destitution. The authors’ intent is to explain how the social circumstances of the 991 Jews of Lens weighed on the individual choices they made in response to persecution. They demonstrate that those with larger families were less likely to leave Lens to seek safety in the south of France or in Switzerland. The wealthy and those with family connections elsewhere were more likely to survive than those with fewer resources.

The authors demonstrate clearly that all of the an-

tisemitic measures were enforced vigorously by the authorities at Lens. Leading police officials were aggressive and thorough in carrying out censuses of the Jewish population, enforcing economic and financial discrimination, imposing the yellow star, and rounding up and arresting Jews for deportation. Moreover, there was virtually no evidence of Jews finding sympathy or support from the non-Jewish population of Lens, possibly because they were seen as foreigners and economic rivals. The book's final two sections are particularly noteworthy in describing what happened to Lens Jews from their arrival at Auschwitz until their deaths there, and the experiences of those of the 991 who were lucky enough to survive and attempt to resume their lives in Lens after the war. As we were reminded some years ago by Michel Deville's poignant film, *Almost Peaceful* (2002), the Jews of Lens found that the French Provisional Government's pronouncing all Vichy antisemitic legislation null and void did not mean that everything would return to normal. Some found it difficult to have their property returned, or, in applying for naturalization, found their path delayed by the same French police officials who had arrested and deported them. Mariot and Zalc have written a fine book that makes an important contribution to the growing literature on the Holocaust in France.

JOHN F. SWEETS
University of Kansas

CRAIG D. ATWOOD. *The Theology of the Czech Brethren from Hus to Comenius*. University Park: Pennsylvania State University Press. 2009. Pp. xix, 457. \$80.00.

Craig D. Atwood's substantial study defines itself as both a work of historical theology and a cultural history. It is also in part the social history of a community that sought peace as well as justice in times of passionate partisan religious feeling, warfare, and persecution. Part one begins by describing the "Czech Reformation," with an emphasis on its late medieval roots and the respects in which it was distinctive rather than simply an early manifestation of the Reformation of the sixteenth century. Part two is concerned with the early history of the Brethren themselves, while part three focuses on "the Brethren among the Protestants": the history of the Brethren during the wider European Reformation and their later development.

Who were the Brethren or Moravians? They were believers who settled at the Anabaptist end of the reforming spectrum. They had a complicated heritage. They emphasized community in their Latin name: *unitas fratrum*. They had common cause and shared ideals with some of the lay brotherhoods and sisterhoods that emerged around the year 1200, such as the Beghards and Beguines. But because they were heirs of Hussite controversies about the ministry and communion in both kinds, they had their own focus. Some of them warmed to the idea of the *perfecti* that had come down from Manichaeism to the Cathars and Bogomils. They were also heirs of the popular preachers of the later

Middle Ages and the older Waldensian tradition. They were focused on Scripture, but did not go so far as Martin Luther's cry of *sola scriptura*. They tended to hold strong views on such matters as avoiding oaths. They sympathized with millennial ideas. Their prophetic preachers warned that the age of the Antichrist was coming to an end, the end of the world was at hand, and it was urgent to reform in preparation to meet the returning Christ. Mount Tabor, where some said the Transfiguration of Christ took place, became both a holy place and a fortress for the Brethren. They were characterized by a strong strand of asceticism and a conception of the apostolic life that called believers to live as Jesus taught his apostles to do, simply and without possessions, trusting in the hospitality of the people they encountered on their travels.

What held this hotchpotch together as a movement? Atwood suggests that it was partly the experience of communal living that held the Brethren together. They might have said that "love," in the communal sense that they used the term, bound them together. But it was also in part the consequence of the influence of notable individuals such as Petr Chelčický and Luke of Prague. Although they stressed unity, the Brethren proved as fissiparous as reforming and dissident movements commonly did.

With the coming of the Reformation the Brethren ceased to be quite so definitively Czech and encountered Lutherans, Calvinists, and a new intellectual humanist style. The movement maintained a good deal of its vigor into the seventeenth century, but in places it ended with the Thirty Years' War. The last bishop of the Moravians, and perhaps the outstanding figure of the movement, was John Amos Comenius. His pansophy and his work as an educator and theologian were influential far beyond his Brethren community, as many of his ideas were disseminated throughout Europe.

Atwood's important study contributes a great deal to our understanding of the complex Brethren community. It helps to disentangle the important elements of transmission across the line that notionally divides the medieval from the Reformation era. It characterizes the thought of what was in many respects a non-intellectual movement, giving the influence of Marsilius of Padua its proper place. The Brethren were in the vanguard of the discussion of the difference between essentials and adiaphora. Though they had a Taborite confession, the Brethren were in a sense non-confessional, even arguably ecumenical in their approach to the Christian life. And it was the Christian life that mattered to them, with orthopraxis as well as orthodox faith important. All this is set out in Atwood's balanced, readable, and scholarly treatment.

University of Cambridge

HOWARD LOUTHAN. *Converting Bohemia: Force and Persuasion in the Catholic Reformation*. (New Studies in European History.) New York: Cambridge University Press. 2009. Pp. xiii, 351. \$120.00.

Bohemia is a fascinating region for historians of early modern Europe. It was the scene of great historical drama: the Hussite Revolution in the fifteenth century, the Protestant Reformation in the sixteenth century, and the Habsburg suppression of Bohemian liberties in the seventeenth century. Most of us, however, have to rely on scholarship written in Western European languages, given the lamentable fact that Czech is not one of the working languages in most scholars' toolkit. The publication of Howard Louthan's book, therefore, will be greeted with enthusiasm by scholars in the field, as it represents a cogently argued and well-documented synthesis of the Catholic Reformation in Bohemia after the Battle of White Mountain, a work that is based on a good command of archival and published sources in Czech, and the scholarship of the Counter-Reformation in the relevant languages. This is a revisionist work. Louthan argues against the grain of Czech nationalist scholarship, formulated in the nineteenth century and still influential today, and its thesis of Habsburg-German suppression of Czech liberties after the triumph of Emperor Ferdinand II. In this nationalist interpretation, Jan Hus, the Utraquists, and the Protestant Reformation represented the spirit of the Czech nation, while the Habsburg dynasty, Catholic arms, and the Jesuits embodied the alien repressive forces that turned back the progress of history. While admitting the importance of coercion in the seventeenth-century restoration of Catholicism—the alienation of Protestant noblemen's property, threat of quartering troops, and dismissal of Protestant councilors—Louthan reminds the reader that persuasion played an equally if not more important role in the long run. Whereas some ninety percent of the Bohemian population professed one of the Protestant creeds on the eve of the Thirty Years' War, Bohemia became solidly Catholic by the mid-eighteenth century, unlike other regions in Central Europe, such as Salzburg, where sizeable pockets of clandestine Protestants continued to exist. If scholars ignore the splendors of Catholic culture in the Baroque, Louthan argues, they will miss a vital element in the history of Bohemia between White Mountain and the Patent of Toleration promulgated by Emperor Joseph II.

Framed by an introduction and a conclusion, this book is divided into nine chapters. Louthan is less interested in telling a political narrative of Habsburg rule than in describing, with rich illustrative material, the cultural richness of the Catholic revival. After analyzing the Catholic identity of the ruling Habsburg dynasty and the conversion of the Bohemian nobility to Catholicism, a process accelerated by a highly effective carrot-and-stick policy, Louthan turns his attention to agents of the Counter-Reformation, the Catholic clergy, and in particular the Society of Jesus. He devotes considerable attention to Baroque historical scholarship, which constructed a bridge from the Baroque back to an antique, Catholic past, thus offering an alternative Bohemian identity to the displaced Protestant one. He is skillful in choosing and analyzing visual and architectural examples to demonstrate the cultural persua-

sion provided by a resurgent Catholicism. He examines at length, in chapters six through eight, the manifestations of Catholicism: confraternities, rural religion, sermons, songs, Catholic tracts, pilgrimage, and popular piety. Much of the popular literature, Louthan points out, was written in Czech, thus challenging older scholarship that held that the Habsburgs almost completely suppressed the Czech language. The last chapter offers interesting insights in its comparison of the making of Christian saints and Jewish martyrs.

Louthan's book refocuses the scholarly debate on early modern Czech history in the direction of the larger Catholic world of the seventeenth and eighteenth centuries, while paying close attention to Czech sources and local circumstances. It is this combination of the particular and the general, the attention to details alongside a wider perspective, that makes the work an important read for all historians of early modern Europe.

R. PO-CHIA HSIA
Pennsylvania State University

JESSE SPOHNHOLZ. *The Tactics of Toleration: A Refugee Community in the Age of Religious Wars*. Newark: University of Delaware Press, with Rowman and Littlefield Publishing Group, Lanham, Md. 2011. Pp. 334. \$80.00.

This book is a very welcome addition to the growing literature on the existence of religious pluralism or of practical toleration in an age generally noted for violence and religious extremism. By focusing on the largely Dutch Calvinist refugee community in the northwestern German town of Wesel in the Duchy of Cleves, Jesse Spohnholz outlines significant qualifications not only to our understanding of religious pluralism in the post-Reformation era, but also of the nature of confessionalism itself. The author has purposely chosen a difficult case to make his argument: if a foreign Calvinist refugee community could live more or less peacefully in a Lutheran town subject to a Roman Catholic duke, clearly our standard view of religious intolerance in the age of religious wars requires some serious rethinking.

Indeed, it was not only the large Calvinist contingent (at one point they made up half of the town's population) that found toleration, but also smaller communities of Mennonites and Roman Catholics. The toleration that emerged in Wesel was the lesser of evils and was made up not of grand pronouncements of high ideals, but rather of the cumulative impact of thousands of individual decisions on an everyday basis over a period of years. In all of this the attitude and policies of the civic government were crucial. After an earlier attempt to enforce Lutheran confessional unity on the refugees had produced substantial tension, the city council adopted a more flexible stance. Indeed, this may be the most unusual feature of Wesel's experience: in most places, once religious tension and conflict had set in, it tended to intensify rather than abate. The city fathers were no doubt nudged toward this flexibility by the ir-

regular nature of their own reformation. As a territorial city subject to the Roman Catholic Duke of Cleves, they were explicitly denied the religious freedom granted to imperial cities in the Peace of Augsburg. Nevertheless, this was in reality a Lutheran town, and preserving their reformation made them extraordinarily sensitive to any commotion that might attract outside attention.

Weselers, magistrates and residents alike, engaged in a series of very delicate balancing acts: how to maintain "peace and good order" (the phrase recurs again and again) in a community where large numbers of people disagreed on some of the most fundamental questions of the day? How to maintain the ideal of the sacral community, on which "peace and good order" rested, through worship and the Eucharist when Calvinist refugees in theory took great exception to Lutheran liturgical practices and the real presence of Christ in the bread and the wine? On a more practical level, how to accommodate a substantial body of foreigners without causing undue resentment among natives?

These difficulties were handled in a variety of ways, some deliberate, others serendipitous. A technically illegal yet openly tolerated consistory supervised the morals of the refugees. In addition, the Calvinist community established its own parallel institutions for education and charity thereby mitigating any potential resentment that they were a drain on the city's resources. The city's two churches frequently offered a variety of liturgical and sacramental practices. Most of all, the majority of residents seemed content to live with half a loaf, given the difficulties of attaining purity of doctrine and practice. In short, there was just enough flexibility to allow people to display a confessional allegiance, and just enough uniformity to maintain the desired ideal of the sacral community. Indeed, this flexibility and uniformity existed in a precarious yet essential symbiosis: "individuals resolved the tension between their town community and their conscience, between religious unity and confessional identity, by maintaining confessionally-oriented practices in certain areas, while abandoning them in others" (p. 218).

This finely textured book reminds us once again that in the sixteenth century, confessional categories were largely the devices of clergymen and governments, who have bequeathed them to historians. In reality, their boundaries were much more permeable than often supposed, and people were freer than we sometimes think to pick and choose and to assemble their own version of Christianity. Beneath confessional strictures, Spohnholz discerns a common Christian piety that allowed people who thought differently about some very important things not only to live and work side by side, but to worship together as well. Given the complexity of the research and the nature of the sources, it would perhaps be unfair to expect this book to address more explicitly the nature of this supraconfessional Christianity, but that is indeed the next frontier in understanding the

religious lives of laypeople in post-Reformation Europe.

MICHAEL LAURENCE MILLER. *Rabbis and Revolution: The Jews of Moravia in the Age of Emancipation*. (Stanford Studies in Jewish History and Culture.) Stanford, Calif.: Stanford University Press. 2011. Pp. xv, 464. \$60.00.

Unlike neighboring Bohemia, Moravia remains a minimally researched Habsburg crownland whose Jewish population has been almost completely ignored until recently. Michael Laurence Miller helps to rescue Moravian Jewry from virtual oblivion with this outstanding analytical study of Moravian Jewish communities in the nineteenth century, thereby situating the region within the historical context of other Central European Jewish communities of that era.

Miller's carefully researched, well-organized, and lucidly written monograph traces the religious, socioeconomic, and political history of the fifty-two small-town Jewish communities in Moravia from the Familiants Laws of 1726–1727, which limited Jewish marriage in the region, through the revolutionary era of 1848 and the emancipation of Habsburg Jewry in 1867, to the early years of the twentieth century. The author painstakingly explains the negative impact of marriage restrictions, residential segregation, and economic barriers on the growth of the Jewish population within this territory. As a result, Moravia, which had no large urban center comparable to Prague, Vienna, or Budapest, exported many of its native sons and daughters first to Hungary and later to Vienna. After emancipation, many of the small-town communities went into decline and could no longer support their own synagogues, schools, ritual baths, or religious functionaries, while new communities without a religious infrastructure began to develop in royal cities that had previously been off limits to Jews. Moravia thus became a region better known for those Jews who left, like Sigmund Freud, Stefan Zweig, and Robert Stricker, than for those who remained behind.

By detailing the lives and careers of leading Moravian rabbis, including the chief rabbis who resided in Nikolsburg (Mikulov), Miller brings to life both the internal and the external struggles facing the province's religious leadership. Conflicts among the rabbis of Nikolsburg and Prossnitz (Prostějov), the two largest communities, and the religious leaders of smaller communities reflect the tensions between traditional (or more Orthodox) scholars and their more modern Reform-oriented counterparts. Competition for appointment to the position of chief rabbi was fierce, and disputes raged over defining his sphere of authority. The author focuses on three major nineteenth-century religious figures: Mordecai Benet, who was strongly influenced by the German Haskalah (or Jewish Enlightenment); Nehemias Trebitsch, a traditionalist who opposed secular education and the use of German; and Samson Raphael

Hirsch, who was later to become the founder of Neo-Orthodoxy in Germany. Hirsch, who served as chief rabbi during the fateful 1848 Revolution, strove unsuccessfully to unify Moravian Jewry and achieve emancipation for Jews as individuals without sacrificing traditional Jewish practices within strong autonomous communities.

Miller admirably achieves the ambitious goals that he sets out in his introduction. Instead of writing a local Jewish communal history, he takes “a comparative approach to Moravian Jewry, examining its distinctiveness in an effort to shed light on a range of religious, ideological, and socioeconomic challenges that transformed Central European Jewry” (p. 8). Adopting the felicitous rubric of “geographical Judaism,” he explains why Moravian Jews tended to follow a middle-of-the-road path, more traditional than Bohemian or German Jewry but more liberal than most Galician or Hungarian Jews. Located between East and West, Slovakia and Bohemia, Moravian Jewry proved that throughout the nineteenth century there could still be communities where traditional *yeshivot* and modern German-Jewish schools could coexist. While their Bohemian counterparts chose to identify as either Czechs or Germans, both politically and linguistically, Moravian Jews, although they continued to speak German and retained local German-Jewish schools, often asserted a Jewish nationalist (or Zionist) identity.

This book greatly enhances our understanding of how Jewish communities, especially those in smaller towns or cities, operated not only in Central Europe but elsewhere in Europe and the Western world both before and after emancipation. By combining a regional and comparative approach, Miller demonstrates how Jews and their communities are shaped by their environments, their neighbors, and the legal systems within which they function. Each local community is distinctive in certain respects, but all confront common issues, including maintaining communal institutions, hiring rabbis, dealing with residential mobility and migration, and raising funds to cover communal needs, as well as responding to antisemitism and representing members and their grievances before governing bodies. By analyzing the evolution of Moravian Jewry and its nineteenth-century rabbinical leadership so persuasively, Miller helps us comprehend the stresses and strains that Jews in small-town communities have experienced as they responded to modernity.

CORDULA GREWE. *Painting the Sacred in the Age of Romanticism*. (Histories of Vision.) Burlington, Vt.: Ashgate Publishing Company. 2009. Pp. xvii, 418. \$99.95.

In 1809 six young German painters, led by Johann Friedrich Overbeck and Franz Pferr, banded together in Vienna to swear their allegiance to each other and to their belief in art's divine mission. The *Lukasbrüder*

(Brotherhood of St. Luke) soon attracted, among others, Peter von Cornelius, Friedrich Wilhelm Schadow, and Philipp Veit. Moving to Rome, they lived and worked collectively in a monastery. The locals dubbed these long-haired, earnest, and mystical Germans *I Nazareni* (The Nazarenes). By 1820 most had returned to Germany to assume academic positions, though Overbeck remained in Rome until 1869, where his studio became a popular pilgrimage site.

The Nazarenes' proselytizing Christian work swam against the stream of nineteenth-century painting's progression toward secularism, aestheticism, and art-for-art's sake that formed the basis of twentieth-century modernist abstraction. Or did it? This is a central question posed by Cordula Grewe's deeply researched, richly nuanced, and readable re-evaluation of the course and the content of Nazarene art and its relation to its context and to what was to come. She argues that Nazarene art developed innovative aesthetic strategies and represents an important and too little recognized strand within the faith-based roots of nineteenth and twentieth-century modernism. Like the Pre-Raphaelite Brotherhood, the *Lukasbrüder* set a precedent for the French *Nabis* (Prophets) and other Symbolists. While the Nazarenes eschewed abstraction, Grewe argues convincingly that they shared the modern commitment to art itself as a sacred calling, often casting themselves in the role of observer in the sacred scenes they portrayed. Grewe argues against the modernism-equals-secularization thesis, as do David Morgan (*The Sacred Gaze: Religious Visual Culture in Theory and Practice* [2005]) and Sally M. Promey (*Painting Religion in Public: John Singer Sargent's "Triumph of Religion" at the Boston Public Library* [1999]), as well as scholars such as Ziva Amishai-Maisels, Matthew Baigell, and Samantha Baskind, who explore the persistent presence of Jewish belief and culture in twentieth-century art.

Grewe claims that the Nazarenes developed a theory and practice of the image as legible, sacred script—a semiotic approach—that was modern and forward-looking even as it looked back to the Bible for subject matter, and to the Renaissance for pictorial and iconographic inspiration. According to Grewe, the Nazarenes rejected the humanist theory of *ut pictura poesis* in favor of *ut hieroglyphica pictura*, understanding the hieroglyph as a form of sacred image-writing that provided an alternative to neo-classical expressive gestures and narrative clarity. In their early years they constructed complex “indirect narratives,” word and image rebuses that Grewe brilliantly decodes in a chronologically ordered series of extended, complex, and lynx-eyed readings of key works such as Pferr's programmatic *Sulamith and Maria* (chapter two), in which multiple identifications—the typological (Old to New Testament), personal (Pferr and Overbeck), national (Italy and Germany), and semiological (word and image)—are layered into a complex web of intersecting and inherently multiple meanings. In response to growing social and political factors, such as the revolts of 1848 and the long and reactionary papacy of Pius IX,

Nazarene images became more clearly legible and polemical. For Grewe, this later, less “polysemic,” Nazarenism has clouded perceptions of the group’s contribution to a “modern” way of constructing and viewing symbolic images.

The Nazarenes’ “vexed place in the history of nineteenth-century art” (p. 320) encompasses derogatory depictions of Jews in several of their works. Veit’s lithographic *Caricature against the Emancipation of the Jews* of 1848 (figure 6.15) features hook and snout-nosed “Jews” sniffing a roast pig—implying that the primary motivation behind *haskalah* was relaxation of kosher proscriptions. Vexed indeed: Veit was the son of Brendel (Dorothea) Mendelssohn, daughter of Moses Mendelssohn. After divorcing Simon Veit and marrying writer Karl Wilhelm Friedrich von Schlegel, Dorothea converted first to Lutheranism and then to Catholicism, which Philipp, born Feibisch, fervently embraced. For Grewe, the acceptance of Veit into the Brotherhood is evidence that it was not antisemitic in the modern, racist sense but anti-Judaic, considering Jewishness a condition, like Lutheranism, that could be “cured” through the conversion to which their art was dedicated.

The author focuses in each of six chapters on one or two paradigmatic works related to a common theme. Some consist of multiple images in a variety of media, such as Overbeck’s *The Seven Sacraments* (chapter four) and Julius Schnorr von Carolsfeld’s wildly successful *The Bible in Pictures* (chapter five), a series of prints that achieved mass circulation in Germany and internationally through up-to-date means of promotion and promulgation. The great achievement of Grewe’s groundbreaking study is to reread Nazarene art in relationship to rather than distinction from modernization and modernism, revealing with verve its complex individual images and overall narrative arc, replete with modernity’s vexing tensions and confounding contradictions.

PETER CHAMETZKY
Southern Illinois University,
Carbondale

JOE PERRY. *Christmas in Germany: A Cultural History*. Chapel Hill: University of North Carolina Press. 2010. Pp. xiii, 399. \$49.95.

“In 1815,” Joe Perry reports in his splendid account of Christmas’s German career, “Caroline von Humboldt, wife of Wilhelm von Humboldt, the enlightened educator, philosopher, and Prussian diplomat, set up Christmas trees in her parlor on Unter den Linden” (p. 13). Caroline wrote a delightful account of the family’s joyful Christmas celebration to the absent Wilhelm. One might assume that Caroline was recounting a timeless, or at least ancient, enormously popular, and emotionally charged family festival. In fact, she was recording a profound moment of dramatic cultural change. Christmas in Germany is actually a very new arrival, and it is thick with multiple and contradictory messages. Perry’s book is not an accumulation of folkloric curi-

osities. It is, instead, a careful investigation from below of nineteenth and twentieth-century cultural history, using Christmas as a portal to an array of densely entangled and often bitterly contested cultural issues. As Perry remarks, “German Christmas remains overdetermined, laden just below the surface with the violent ruptures and radical political experimentations of Germany’s ‘shattered’ twentieth century” (p. 287).

Between an introduction and conclusion, Perry structures his investigation into six chapters. The first, “Scripting a National Holiday,” describes the invention of Christmas in Germany in the early nineteenth century; the second, “Contradictions in the Christmas Mood,” recounts some of the arguments that swirled around this new holiday. Perry reports that “between 1910 and 1950, Germans celebrated one out of every five Christmases while the nation was a war” (p. 95), and his third chapter outlines the peculiar experience of “Christmas in Enemy Territory,” especially during World War I. Christmas hedonism is no recent phenomenon; Perry’s fourth chapter, “Under the Sign of ‘Kauf lust,’” considers the “lust-to-buy” that quickly marked the Christmas holidays and expanded rapidly during the Weimar Republic. In chapter five, “Christmas in the Third Reich,” Perry examines the Nazis’ effort to capture Christmas. Finally, in chapter six, “Ghosts of Christmas Past,” Perry discusses the efforts of West and East German cold warriors to shape ideologically correct Christmas celebrations.

This study grows from and contributes to a rich historical literature. Perry’s focus on Christmas permits him to explore the invention of tradition, the evolution of the bourgeois family, the sentimentalization of bourgeois sensibility, the feminization of family life and religion, the displacement of the sacred by the secular, the commercialization of desire, the rapid expansion of consumer culture, the militarization of daily life, and the colonization of popular culture by competing ideologies. He skillfully deploys a diverse set of sources, ranging from Friedrich Schleiermacher’s theology to E. T. A. Hoffmann’s fables to popular magazines, private letters, and diaries.

Especially striking is the “performative” turn Perry gives to cultural history. What matters to Perry is what people actually *do* in the process of cultural construction and expression. He notes that “Christmas is a surprisingly open construct, used by Germans to support competing articulations of Volk and fatherland” (p. 284). *Christmas in Germany* demonstrates that this hugely popular holiday is actually quite young, and carefully traces its often contested genealogy. Seemingly trivial controversies—should people celebrate with a Christmas tree or a Christmas crèche?—reveal deeply rooted antagonisms between Protestant Prussians (who favored the tree) and Catholic southern Germans (who favored the crèche). Perry’s skillful use of Chaplain Jakob Ebner’s World War I diary shows how the celebration of the birth of the Prince of Peace was used to buttress a “war theology.” Nazis, communists, and cold warriors all struggled to shape the emo-

tion-laden holiday. Nazis tried to turn Christmas into a "Germanic" folk festival; East German communists would later turn it into an atheist "*Jolkafest*," modeled after a similar festival celebrated in the Soviet Union; West Germans carefully tied the holiday to West Germany's economic and political rehabilitation. Even those Germans uninterested in Christmas, Jews and Social Democrats for example, were nevertheless shaped by Christmas's customs and controversies. Social Democrats tried to create a "proletarian Christmas," partly by rewriting Christmas carols. While Orthodox Jews eschewed the holiday entirely, Reform Jews either celebrated Christmas as a national, not Christian, holiday, or expanded Hanukkah as a substitute (and during World War I, Jewish Germans developed their own Hanukkah-related "war theology" that paralleled the Christmas-related "war theology").

This book will be of immediate interest to German scholars. As an example of an unusually insightful, inventive, and rigorous cultural history, it deserves a wider audience. Compellingly written, jargon-free, and thoroughly researched—Perry notes that in 1996 he was one of 500 Father Christmases organized by Berlin's Technical University—*Christmas in Germany* is a fascinating contribution to modern German and contemporary cultural history.

SEBASTIAN CONRAD. *Globalisation and the Nation in Imperial Germany*. Translated by SORCHA O'HAGAN. (New Studies in European History.) New York: Cambridge University Press. 2010. Pp. vii, 497. Cloth \$90.00, paper \$36.99.

First published in German in 2006, this study was well received by German scholars interested in the burgeoning field of transnational history. It did, however, meet with some measured skepticism from historians who were not sure that the new transnational approach to history adequately replaced the prevailing national paradigm. Such criticisms are misguided, given that this is not what Sebastian Conrad has set out to do, as the book's title clearly suggests. Transnational history does not seek to dissolve the history of the nation but rather to contextualize it more broadly so as to pose and answer a new set of research questions that are quite often still related to the histories of nationalist projects and the nations they engender. As Conrad reminds us, "using the perspective of global history . . . does not imply abandoning the category of the nation completely for analysing modern history" (p. 402).

Conrad's monograph is an excellent example of how transnational history might be written. Without sacrificing any of the requisite understanding of the finer grain of German history, he illustrates precisely how Wilhelmine Germany was enmeshed in the series of international exchanges of commodities, ideas, and populations that characterized globalization prior to World War I. This global engagement, both in concert and in

competition with other large powers, affected not only German foreign policy but also crucial domestic decisions regarding protectionism, population mobility, and the definition of the citizen. Conrad argues that German traders, politicians, and commentators constructed a German nationalism from materials largely drawn from their interactions with the extra-European world, from attempts to transplant German work discipline to East Africa, Brazil, and Poland to anxieties (shared with North America and Australia) about the ostensible "yellow peril" posed by the mobility and wage-competitiveness of Chinese workers.

Conrad focuses on work and on the nationalist assertion that there were particularly German forms of labor that needed to be both supported at home and exported around the globe, and this leads him to some key insights. Although German nationalists were not the only nationalists to proclaim that their people had a distinctive and superior mode of work, the assertion enabled social engineers within Germany to posit concrete links between their attempts to discipline the German lower orders and their attempts to reshape the conditions of existence of the populations inhabiting colonial spaces. Whether the recalibration of labor relations within Germany was actually the same as the epistemic and physical violence practiced in the colonies is not Conrad's research question. Rather, he argues, the fact that the two were perceived as twin parts of a broader process by those undertaking domestic and colonial reforms suggests something important regarding the translocation of European social and economic struggles to colonial spaces.

His understanding of how broader global trends shaped and formed German colonial ambitions and projects is similarly important. Indeed, the book illustrates exactly how much the history of globalization and new imperial histories have in common, both in terms of approach and research preoccupations. Yet globalization and imperialism are not precise synonyms, and the book often reads better as a contribution to the history of imperialism than the history of globalization. For example, while the Germanization of Prussia's Polish territories might be read profitably as having occurred within a colonial space (as Kristin Kopp has argued), the struggle along this inner frontier might not be integral to the history of globalization, except in the weak sense that it took place "in a world deeply structured—albeit unevenly—by imperialism" (p. 184).

One other question worth entertaining is whether the process of delineating the nation through external trade and imperial agitation and action in the 1890s (and thereafter) might not be antedated. Recently, for example, Bradley Naranch has posited that German nationalism was at least partially "made in China" prior to 1871, while Hans Fenske wrote twenty years ago of Germans beginning to engage in globalizing imperial endeavors as early as 1814. Certainly the efforts at colonizing Brazil that Conrad discusses were well underway by 1850. It seems uncontroversial to say that the emergence of a "global consciousness," which Conrad

dates to around 1900, actually emerged far earlier (p. 2). Some have even argued (although this reviewer is not among their number) that the turn to protectionism prior to 1900 demonstrated that the zenith of prewar globalization had been reached far earlier and that by the turn of the century there was a gradual retreat from globalization.

Yet, in offering a detailed picture of Germany's globalizing and imperial endeavors during the Wilhelmine era, as well as of the domestic stresses and possibilities they produced, Conrad's work is invaluable. It brings together numerous strands of both national and transnational historiography to offer a cogent and compelling narrative of Germans' attempts to consolidate the position and identity of their nation-state in an era of globalization.

TROY R. E. PADDOCK. *Creating the Russian Peril: Education, the Public Sphere, and National Identity in Imperial Germany, 1890–1914*. Rochester, N.Y.: Camden House. 2010. Pp. x, 263. \$75.00.

Given the violent clashes with Russia that rocked twentieth-century Germany, one might expect that Germans were obsessed with the eastern behemoth before World War I. In fact, as Troy R. E. Paddock argues, Germans knew and cared little about their Russian neighbor until 1905. They took a little more interest following the revolution in that year and grew somewhat concerned with the rise of pan-Slavism and the outbreak of the Balkan Wars after 1911. But very few Germans saw Russia as a real threat until March 1914. Furthermore, the little knowledge in Germany about Russia stemmed from a handful of self-professed "experts." Few of these historians and journalists had ever visited Russia, and their knowledge of Russian politics and society was superficial at best. They accordingly spread a fuzzy set of negative stereotypes that reflected their own right-wing views about German superiority. Paddock demonstrates that newspapers and school textbooks relied almost exclusively on such accounts and were remarkably consistent across time and political leanings. Thus, with some exceptions, from 1890 to 1918 almost all Germans read in monographs, magazines, newspapers, and school textbooks that Russians were primitive, corrupt, inflexible, uncultivated, hungry, illiterate, impolite, non-Western, nationally disunited, economically backward, and regularly drunk.

Until the Balkan Wars, such an incapable people was hardly seen as a danger. According to so-called liberal imperialists like Hans Delbrück, Friedrich Meinecke, and Max Lenz, the Russian nation was weakened by its corrupt bureaucracy, undisciplined military, and multiple dissenting ethnic groups—traits that contrasted with Germany's supposed ethnic unity and alleged competence in civil and military matters. Combined with the weak character of its people, these traits meant that only a repressive tsar and autocratic Orthodox Church

could hold the state together. The liberal imperialists thought that Russia could not withstand a major war, a judgment confirmed by its loss to Japan in 1905 and the subsequent implosion of its government during the revolution. The far-right Baltic German émigrés Theodor Schiemann and Paul Rohrbach wrote of a future spiritual and metaphysical conflict between Germandom and Slavdom. But even they believed that, given Germany's moral and cultural superiority, Germandom would prevail. Until 1905 the press emphasized that Russia was a natural ally, not an enemy.

The German press took more interest in Russia after the 1905 Russian revolution. German Social Democrats cheered the temporary end to autocratic rule, but Prussian aristocrats, the kaiser, and their domestic allies feared that the revolution might inspire socialists to topple the monarchy at home as well. Furthermore, the editors of the right-wing *Kreuzzeitung* were distressed by ethnic Russian revolutionaries' attack on the special privileges of the Baltic Germans. Subsequently, the *Kreuzzeitung* regularly wrote that while pan-Slavism posed a threat to Germany, the Russian state, which supported the Baltic Germans and aristocratic privilege, did not. By 1911, all non-socialist newspapers in Germany were following this interpretation.

The book's most important contribution is the ten-page section on the alarm and controversy unleashed by an article in the well-respected *Kölnische Zeitung* in March 1914. The article arguably crystallized "the Russian peril" through its shocking claims: by 1917 Russia would fully recover financially and militarily from its loss to Japan. Furthermore, it had since improved the morale, organization, and equipment of its army enormously. Above all, anti-German sentiments were proliferating in Russia, and Russia was in fact arming itself for war against Germany. Left-liberal and socialist newspapers challenged this incendiary account, and facing anger from Russian diplomats, the German government severed its ties with the *Kölnische Zeitung*. But the article nonetheless convulsed Germany and was to a large extent responsible for stirring up widespread Russophobia. Incredibly, in the historiography on the origins of World War I this story has been all but ignored.

The book's main argument—that the image of Russia created by German historians and journalists was largely a foil for their own concerns about Germany, their reflection in a panoptic mirror—is sharp and illuminating. It is commendable that, rather than writing a purely intellectual history, Paddock traces the transmission of this image from experts to school textbooks and the press. But given that most Germans did not sense any real Russian peril until six months before the outbreak of World War I, let alone care or even know something about Russia at all, reading a full-length monograph on the German image of Russia from 1890 to 1914 will be a task mostly for specialists in diplomatic and intellectual history.

ANDREW DONSON

Amherst

ANNEMARIE H. SAMMARTINO. *The Impossible Border: Germany and the East, 1914–1922*. Ithaca: Cornell University Press. 2010. Pp. xiv, 232. \$39.95.

This book makes an impressive contribution to the often tangled fields of German and Eastern European history, borderland history, and the history of migration and citizenship. Additionally, it contributes some of the most original and creative work on Weimar Germany to have appeared in a long time. Annemarie H. Sammartino draws mainly on government sources—from the local, state, and national level—as well as on writings from across the political spectrum, to analyze how Germans and the German state treated border issues from 1914 through the mid-1920s. On one level the book offers a cultural analysis of the many changing anxieties and utopian visions that Germans projected onto the idea of Germany's borders. At another level it analyzes the constraints that German governments faced in regulating borders and refugee populations. On a third level, the book examines changing public attitudes toward different groups of migrants, demonstrating effectively that situational factors influenced popular opinion far more than did essentialist beliefs about specific groups.

Germany's wartime advance deep into Russian territory made it possible to imagine a vast new German state that could accommodate ethnic Germans from all over Russia, even if that meant expelling locals to make room for them. When the Treaty of Brest-Litovsk (to which Sammartino laudably devotes considerable attention) was undone by Germany's defeat in the West, border questions produced new sets of anxieties along with radical new utopian dreams. The logic of popular national self-determination that legitimated both the victors' new map of Europe and the revisionist protests of the defeated encouraged many Germans to see their borders as fetters that would eventually have to be breached in order to house ethnic Germans who had been unfairly excluded from Germany. At the same time, revolutionary instability, inflation, and poverty provoked fears that Germany's borders could not keep out starving, diseased refugees or subversive carriers of Bolshevism.

The book is most effective in its radical deployment of the very concept of "border" to several unexpected sites in the immediate postwar period. For example, one chapter offers a brilliant analysis of Freikorps conceptions of a moving national frontier in the Baltic. Here, radical nationalists abandoned what they perceived to be a decadent German state in order to establish a purer German national community in Latvia. Another fascinating chapter recounts how in 1920 German communist activists reconceived the border by establishing German workers' settlements in the Soviet Union, east of Moscow. In her examination of former German citizens caught in Poland and ethnic Germans who sought to migrate to Germany after the war, Sammartino expertly analyzes the synergy that developed between a politically moderate government beset

by financial constraint, and radical nationalist demands for aggressive territorial expansion in the near future. Who should be admitted into Germany and on what basis? Should Polish-speaking former German citizens have the same rights as German-speaking former citizens to public assistance if they settled in Germany? Unable to support the potential financial claims that thousands of former citizens might make on the state, successive governments eventually encouraged them to stay in Poland, justifying this policy in nationalist terms as a way to maintain Germany's territorial claims there.

In a chapter on popular attitudes toward different groups that sought asylum in Germany, the author argues that postwar migration politics did not simply produce a hardening of essentialist fears about Russians, Poles, or Jews. Instead, public anxieties about specific groups of migrants developed situationally, often changing as rapidly as did the political situation. Moreover, it was often specific local concerns that determined how controversial citizenship cases were decided, and not the overriding popularity of an ethnic concept of citizenship. Sammartino argues convincingly that the border policing regimes developed by Germany during the early years of the Weimar Republic did not constitute a first step down a slippery slope toward fascism, as Hannah Arendt had argued in *The Origins of Totalitarianism* (1951). While ultimately agreeing with Arendt about how their "rightless" condition shaped the fates of many stateless people, Sammartino nevertheless lays to rest the argument that a concept of ethnic nationhood somehow trumped legality or due process in the 1920s. She also disputes Arendt's claim that because an incapacitated Weimar state turned the problem of stateless refugees over to the police to handle, it moved Germany away from legality and toward totalitarian measures. The Weimar regime typically dealt with refugees, naturalization practices, and border policing by referring to the practices of the Wilhelmine era. Moreover, in those cases where the state did leave the refugee problem to local police to solve, it in no way produced a move toward totalitarianism. To the contrary, local police dealt with refugees based on considerations that differed from place to place. Those who faced deportation in one community often removed themselves to another locality where police were more lenient. Here, as elsewhere in her book, Sammartino emphasizes not simply the central state's lack of resources but also Germany's federal structure, a point too few historians recognize in discussions of Weimar nationalism and border policy. Ultimately she argues that Nazi thinking about citizenship and migration weakened Germany's borders by privileging racial community over state sovereignty. In this sense, her work confirms that Germany's development in the 1920s was hardly exceptional by European standards.

PIETER M. JUDSON
Swarthmore College

S. JONATHAN WIESEN. *Creating the Nazi Marketplace: Commerce and Consumption in the Third Reich*. New

York: Cambridge University Press. 2011. Pp. xiv, 277. Cloth \$85.00, paper \$26.99.

At its core, S. Jonathan Wiesen's impressively researched and thoughtful book is about the evolution of modern marketing in Germany, a development that overlapped during the bulk of its formative years with the catastrophic rule of Nazism. The central components of modern, "scientific" marketing were systematic advertising and market research. The book's key chapters thus deal with developments in these areas, and particularly with the rise of experts and projects in market research. This is where the book will be an indispensable resource for scholars of advertising and consumerism.

This focus means that Wiesen is not primarily interested in Nazi economic policy, business collaboration, or even consumption in the Third Reich, but looks at business leaders' thoughts and discussions about modern consumer society, its needs and opportunities, and the most effective and ultimately profitable ways to meet them. This explains the at first sight curious combination of the first three (of four) main chapters, which deal with advertising, the German Rotary Clubs (which endured only until 1937), and consumer research.

It is not surprising that all three groups sought to adapt their views and their language increasingly to Nazi ideas. This was most obvious in their adoption of nationalist, racist, and *völkisch* verbiage. Other fashionable demands at the depth of the Depression, like the call for *Bedarfwirtschaft*, an economic order based on actual human needs rather than profit, had been current since World War I and would once again dominate the post-World War II years. Oddly, it was the Rotarians, animated by the highest respect among businessmen for the ideals of the German *Bildungsbürgertum*, who identified most closely with the Nazi calls for an economy not based on profit but on service. The arguments that were put forth by the club's speakers were logical enough and in all probability noble. Rotarians are traditionally committed to social engagement as expressed in their slogan "service above self," and the club's meetings are to enrich the members intellectually and culturally through lectures and discussion. Yet, given the reality of the brutal setting of Nazi Germany, of which readers are reminded regularly, this brings to mind the disturbing sense of morality in the Third Reich that Claudia Koonz details in *The Nazi Conscience* (2003).

Despite the Nazi condemnation of commercial advertising as wasteful and un-German, the industry flourished and foreign influence increased in the promotion of consumer goods. Typically, the Nazis chose limited control through a central organization, primarily in order to guard the party's monopoly over political propaganda. Wiesen writes that "any attempt to exploit Nazi ideology for marketing purposes would be confronted head-on" (p. 99). Still the giant Henkel and Bayer companies, on whose archives chapter two is primarily based, adapted skillfully to the political environ-

ment, even with their considerable international marketing. Corporate support for public events and causes only had to be translated and funneled into the Strength Through Joy coffers.

The chapters on the Society for Consumer Research (Gesellschaft für Konsumforschung, or GfK) are the most powerful and intriguing. The intellectual origins, debates, and preparations for such an institution go back well before the creation of a "Nazi marketplace" and were influenced by similar initiatives in America. The concept may well go back to French positivists working for Napoleon III. The GfK's founding was quite unrelated to Nazi economic policy. It was established to "serve private economic interests," although it obviously had implications for the "Nazi marketplace" because, in Wiesen's words, "it was also a part of a larger national project to understand the mass public" (p. 163). From its inception, however, the GfK did not share the *völkisch* views of the Nazis, but held to a modern pluralist conception of a mass society of consumers. Not surprisingly, the Nazi secret police mistrusted the GfK interviewers who talked with consumers in shops and markets.

The book's primary focus is not on the second half of the Nazi dictatorship—the years of the war and Holocaust. The last chapter, however, deals with those years, and here Wiesen shows that even the GfK was pressed into conducting surveys for the government and undertaking investigative missions in occupied areas, primarily in the Balkans. He ends with the famous story of Ludwig Erhard—the former GfK director who would later become minister of economics and chancellor in West Germany—who resigned his official position in the GfK because he refused to join the Nazi Party, sharing around his analysis and recommendations for post-war German reconstruction.

STEPHEN D. BOWD. *Venice's Most Loyal City: Civic Identity in Renaissance Brescia*. (I Tatti Studies in Italian Renaissance History.) Cambridge: Harvard University Press. 2010. Pp. xii, 359. \$39.95.

During the course of the fifteenth century, the city of Venice established a vast territorial empire that stretched from its lagoon across much of northern Italy. Venice occupied Brescia, among many other cities, in 1426. Though Brescia was two hundred miles and several days' travel away from Venice itself, it was among the richest, most populous, and most strategically important of Venice's subject cities. Through a variety of lenses and historical episodes, Stephen D. Bowd's study examines how Brescians negotiated issues of authority and identity during the first hundred years of Venetian rule.

In the period when Venice governed Brescia, the Venetian state sent a *podestà*, a *capitano*, and their respective staffs to oversee political life, justice, finance, diplomacy, and defense in the city. These authorities

presided over Brescian council meetings and generally mediated between Venice and Brescia, but Venetian officials were always limited in terms of how much they could interfere in Brescian deliberations. Brescians could easily have clandestine political meetings, and it was important for Venetian rectors to remain above the local fray and local factionalism in order to be politically effective. In this way, Bowd demonstrates how Brescian politics were always marked by a plurality of voices that expressed and negotiated local, territorial, and Venetian concerns. Considering chronicles and panegyrics, Bowd illuminates how Brescians presented themselves as the loyal sons and daughters of Venice while simultaneously maintaining a sense of local pride and independence, as seen for example in humanistic discussions of the ancient origins of the city that predated Venetian rule.

Especially after the mid-fifteenth century, one of the principal ways that the Brescian patriciate asserted its autonomy was by slowly concentrating political power in the hands of the oldest and wealthiest Brescian clans. For instance, the Brescian elite slowly changed the criteria for eligibility for admission to its main legislative body—the Brescian communal council—by restricting admission to those who had served the city during wartime, for instance, and by preventing shopkeepers, merchants, and manual workers from political participation. Beyond the criteria that made one eligible for political participation, including a demonstration of Brescian lineage, residence, and citizenship, membership in the Brescian council was progressively reserved for those who demonstrated a “noble” lifestyle in their public self-presentation: namely, in their increasingly opulent clothing, homes, and artistic commissions. This aristocratization of Brescian politics aroused no opposition from Venetian authorities, and Bowd reads this political contraction as an expression of Brescian autonomy.

Other persistent assertions of Brescian identity existed in rituals, civic space, and religious culture. In a variety of topical chapters on such subjects, Bowd demonstrates how Brescians consistently mediated Venetian demands with their own local needs and desires. The Brescian oligarchy employed images of local saints and martyrs to promote and consolidate their rule. Brescian rulings about sumptuary law and funerary practice served a similar function, employed to mark clearly the privileges of the Brescian elite. Brescians used pomp and excess to defend their aristocratic ideology and identity and maintain a degree of regional autonomy in the shadow of Venice. In addition, an examination of the “other” in early modern Brescia, namely Jews and witches, illuminates both conflict and cooperation between the two cities. For instance, Venetian authorities called into question Brescian trials of witches, objecting to the confiscation of laypeople’s property by Brescian ecclesiastics. Brescians asserted their independence and authority, in short, through the persecution of local witches, and arriving at an acceptable level of toleration in Brescia often involved a com-

plex mix of submitting to Venetian jurisdiction while attempting to assert Brescian priorities.

Bowd sums up by noting that “the strength and continuity of Brescian identity during this first century of Venetian rule is striking” (p. 232). Bowd’s erudite work is faultlessly documented. Any question about his study lays rather in the significance of his findings. It seems in some ways to be expected that regional states forced to submit to foreign rule would naturally seek to balance the directives of the metropole with local initiatives. It is in no way surprising that while Venice ruled Brescia, Brescians clung to a native and local identity and culture to shore up their sense of power and agency. Though Bowd’s sources and lenses of investigation do differ from those of previous studies, his conclusions often echo those of other scholars. Joanne M. Ferraro’s *Family and Public Life in Brescia, 1580–1650: The Foundations of Power in the Venetian State* (1993) similarly describes the aristocratization of Brescian leadership and the ways that leading Brescian families sought to preserve their political autonomy and local culture in relation to the larger, dominant Venetian state. It is as if, in reading Bowd’s book, we learn primarily what we might expect to be true. In the end, this is a text that proves a somewhat modest argument, nevertheless through learned and impeccable scholarship.

ELENA FASANO GUARINI. *Repubbliche e principi: Istituzioni e pratiche di potere nella Toscana granducale del '500–'600*. (Ricerca.) Bologna: Il Mulino. 2010. Pp. 291. €26.00.

In this valuable collection of six major essays, some published in out-of-the-way volumes and one not previously seen, Elena Fasano Guarini brings together some of her finest writing to date about the transition from republic to principate that occurred in Florentine Tuscany in the fifteenth and sixteenth centuries. Throughout her career as a historian Fasano Guarini has worked hard to find anticipations in earlier decades of developments once believed to be watersheds and to describe continuities where others claimed to have found striking changes. The essays in this volume are no exception. The most important of them, on “Machiavelli and the Crisis of the Italian Republics,” was originally published in English, in a 1990 volume on Niccolò Machiavelli edited by Gisela Bok, Quentin Skinner, and Maurizio Viroli. Here it appears in the original Italian. Previous historians had tended to study Machiavelli’s republicanism either with a view to its place in great power diplomacy or by comparing it with the ideals of the classical *polis* and *res publica*. In this essay Fasano Guarini argues for investigating Machiavelli’s political thought in the context of the crisis of the Italian republics of his own day, each of which was placed under enormous stress by the Italian Wars. Critical to her analysis is the relationship between the capital city and its subject territory. Better than most contemporaries

Machiavelli understood the weakness that resulted when a republic refused to allow the inhabitants of its subject cities and towns a role in the larger state that administered them. Even in a republican work like the *Discourses on Livy*, Machiavelli stands out among contemporary republican writers and historians for his perception of the advantages accruing to a large monarchy whose territory comprised many cities governed on comparatively equal footing. As Fasano Guarini restates the argument elsewhere in this volume, it was the development of a positive conception of the extensive state that constituted Machiavelli's "most important breach" (p. 45) with traditional republican ideology.

Whether a sixteenth-century writer understood the territorial state as a coherent entity, existing under a single administration, consisting of inhabitants accustomed to a single set of normative structures, becomes, in the volume's other chapters, the litmus test that Fasano Guarini applies to a series of well-known republican theorists and historians of Florence. There are thus useful, up-to-date pages on the idea of the state as present (or not) in the works of Francesco Guicciardini, Francesco Vettori, Donato Giannotti, Jacopo Nardi, Filippo de' Nerli, Benedetto Varchi, Giovan Battista Adriani, and Scipione Ammirato, in addition to Machiavelli. This is well-trodden ground, but Fasano Guarini correctly notes that her predecessors, notably Rudolf von Albertini and Felix Gilbert, were more concerned with regime change at Florence than with state administration in Tuscany. She also draws often and usefully on Eric Cochrane's work on Renaissance historiography, which, in her view, Italian scholars have too often ignored.

Sometimes the subtitle of a book reveals more of its contents than the title, but in this case the reverse is true. "Institutions and Practices of Power in Grand Ducal Tuscany in the Sixteenth and Seventeenth Centuries" (my translation) misses the mark so widely (with respect to both the material and time period) that one suspects a publisher's error. In this book about ideology and historiography, "institutions and practices" creep in only rarely: for instance, in a description of Machiavelli's chancery experience and in a fine revisionist essay on Guicciardini's relations with Cosimo I de' Medici. And while the seventeenth century barely exists here, there happens to be much good material on the 1400s—especially in a chapter on conspiracies.

The dramatic, violent scenes of this period of Tuscan history exist only as background in these pages. Fasano Guarini offers nothing that helps explain Girolamo Savonarola's execution, the sack of Prato, the siege of Florence, the assassination of Duke Alessandro de' Medici, the beheading of the Florentine republican exiles after their capture at Montemurlo, or the death of Filippo Strozzi. Yet that, in a way, is the point. With great insight the author treats instead the writers who happen to have described those memorable events, showing their reservations, hesitations, and changes in direction. The aim is to measure the extent to which these writers perceived (too often dimly if at all) the

other developments that today draw the attention of historians of early modern Europe.

REBECCA MESSBARGER. *The Lady Anatomist: The Life and Work of Anna Morandi Manzolini*. Chicago: University of Chicago Press, with the Getty Foundation, Los Angeles. 2010. Pp. xiii, 234. \$35.00.

Anatomical models made of wax are intriguing artifacts and arguably form an important subject for historians of medicine. The many uses of wax are also of considerable interest to historians of art, religion, and material culture. The subject of Rebecca Messbarger's book, Anna Morandi (1714–1774), was an exceptional exponent of the art of making anatomical models in wax. Messbarger is keen to expound Morandi's virtues, skills, and talents by documenting "her expert knowledge and pivotal research in the field of anatomical science" (p. 3) and showing her works, which are indeed stunning. She explores the implications of Morandi's sex for her reputation and status. The city of Bologna, where Morandi spent most of her life, its institutions, and its leading lights play significant roles in the story. The conflicts, jealousies, and rivalries in which Morandi was caught up run through the book. Messbarger discusses the anatomical models and the ways in which they were made and received and examines Morandi's surviving writings. The "lady anatomist" was a part of public culture. Messbarger's book documents the complex interplay between public and private, the elaborate intertwining of "science," art, and medicine in eighteenth-century Bologna, as well as patronage networks that included the papacy.

Chicago University Press is widely respected for the magnificent books it produces in the history of science: some, like this one, are published with the support of the Getty Foundation. The volume is full of high-quality illustrations that make a great difference to readers' ability to appreciate exactly what makes wax models so fascinating, both in the eighteenth century and now. More close analysis of their features would certainly be worthwhile. One way of doing this is through extensive comparisons with other two- and three-dimensional artifacts. Messbarger sometimes does this, for example, when she compares a wax forearm by Morandi with the painted arm of Adam in the Sistine Chapel (p. 63). The hands are in distinct poses, however, and it would be helpful to learn a little more about how the comparison works in such a case, especially given, as she points out, the profound significance of hands. The striking arrangements, colors, and uses of drapery in Morandi's waxes invite just such close attention.

Messbarger's enthusiasm for Morandi and her achievements is evident, and her prose is exuberant, although some of the vocabulary is distinctly unusual. Examples include using "sect" as a verb (p. 22); the phrase "Morandi's story is puzzled together" (p. 12); "clambered" (p. 37) instead, I assume, of "clamored"; and

references to a “project proposal” in the eighteenth century. More robust editing might have been helpful. At a more abstract level, I would have liked more discussion of the concept of “design,” given its powerful and complex resonances in Morandi’s time for both art practice and natural theology, as well as some explanation of Messbarger’s use of concepts such as “science,” “ideal,” “neoclassical,” and “archetype.”

The Lady Anatomist will certainly bring the life and work of Morandi to new audiences. By piecing together visual, verbal, and material sources, Messbarger has made a useful contribution to the field. The book needs to be read critically, however. I am not sure, for example, how much analytical bite Messbarger’s treatment of misogyny has. Nor am I convinced that invoking the idea of pseudoscience is helpful (e.g., p. 119). It is unfortunate that the language sometimes appears to have escaped authorial control. A good example is this description of Morandi’s remarkable self-portrait: “her hands prepare to penetrate the human brain mushrooming from the hair-covered skull before her” (p. 99). In fact, the brain stays neatly contained within the skull as we see in the color plates on pages 100 and 102. There is no doubt of Morandi’s historical interest, or of Messbarger’s passionate commitment to telling her story as fully as the sources permit. There is much fascinating material here: for example, Morandi’s work on the senses and on the reproductive systems of both men and women is discussed in detail. However, I am sure I am not alone in being surprised to find the comment “this is a paraphrase” in a footnote to a direct quotation (p. 188, n. 77). I checked the original text and both this note and the previous one are inaccurate. We all make slips, and reviewers should be forgiving. But the significant number of problems suggests that the publisher would have served its author better had it provided her with more editorial feedback. Nonetheless, Morandi is a figure who deserves scholarly attention and Messbarger makes a forceful case for her.

LUDMILLA JORDANOVA
King’s College London

BRIAN HOROWITZ. *Jewish Philanthropy and Enlightenment in Late-Tsarist Russia*. (A Samuel and Althea Stroum Book.) Seattle: University of Washington Press. 2009. Pp. ix, 342. Cloth \$75.00, paper \$35.00.

Readers unfamiliar with the emergence of a russified, politically astute, elite coterie of engaged journalists, novelists, poets, lawyers, educators, physicians, and merchant princes in Jewish public life in the last half-century of tsarist rule will find Brian Horowitz’s book an excellent guide to the subject.

Early in the period of reforms initiated by Alexander II, a group of Jewish notables, living in Saint Petersburg, sought to formalize their program of progressive reform for their brethren by organizing an educational association that they called the Society for the Promotion of Enlightenment among the Jews of Russia (known by its Russian acronym OPE). The initiative

and funding for the OPE came from the family of Evzel Gintsburg and his son Horace, as well as other wealthy Jewish sponsors (among them A. M. Brodsky and S. Poliakov). The organization promoted a philanthropic program of civic betterment for the Jews of Russia through elementary and secondary educational reform and the dissemination of Jewish high culture in the Russian language. They continued to do this—despite disappointments and setbacks amid the repressive, often violent atmosphere that plagued Russian Jewish existence from the 1870s on—right to the end of the tsarist regime.

Far from pursuing a pipe dream of a tolerant civil society in the face of stark realities, Horowitz argues that the leaders and cultural workers who took part in the project of wholesale cultural uplift were complex individuals who stood athwart the ideological quandaries of their time. Arguing among themselves—for and against russification, Jewish nationalism, evolutionary change, legal emancipation, and political activism—few could be fairly characterized as the complacent, socially conservative, timid, and “assimilationist” apologists for the regime that, to the mind of many of their more radical adversaries, their organization seemed to embody. Horowitz surveys the fortunes of the OPE as it encountered a sullen bureaucracy, state policies aimed at keeping minorities quiescent, antisemitic high officials and intellectual opinion, the growing enthusiasm for self-expression and national consciousness in the Jewish intelligentsia, and the revolutionary fervor of 1905.

As the first full-length history of the OPE to be written in any language, this work provides for a broader understanding of Jewish social and cultural ferment in late nineteenth-century Russia. It makes clear that Jewish public life was not exhausted or exclusively dominated by pogroms, mass emigration to America, socialist agitation against the autocracy, or Zionism. These issues, indeed, were central, but they overlapped and intertwined with less celebrated currents of opinion and programs of action. Educational philanthropy was, arguably, less coherent in ideological terms than some of the alternatives, but it remained a mainstay of pre-1917 Jewish activity.

Horowitz’s book joins other recent scholarly publications on Jews in the civil order of late tsarist Russia, such as the political and civic analysis of Russian Jewish liberalism written by Benjamin Nathans (*Beyond the Pale: The Jewish Encounter with Late Imperial Russia* [2002]) and the cultural innovation in Jewish arts and letters inspired by the drive toward a new Russia, described by Kenneth B. Moss (*Jewish Renaissance in the Russian Revolution* [2009]). Like his interlocutors in the field, Horowitz is interested in challenging some of the fustier myths shrouding the “Fiddler on the Roof” version of Russian Jewish life. He does so with authority, having mined a voluminous amount of source material in Russian and Hebrew.

I have a few caveats. The chapter dealing with the school wars, detailing the policy debates in the Jewish intelligentsia over the merits and demerits of the tra-

ditional folk school (*kheyder*), might have benefited from accessing contemporary writing in Yiddish from that period. Likewise, the overall impact of the OPE, given a Jewish population of five million, the majority of whom remained both culturally and religiously traditional and impoverished, is not entirely clear. Horowitz pulls his punches somewhat, stating that school reform “spread far beyond the main cities into the far-flung recesses of the Pale of Settlement,” but admitting that “the number of students in OPE-sponsored schools never reached that of students in state Jewish schools [themselves only a minority of school-age Jewish youngsters]” and that “the number of people directly involved in OPE activities was never extremely high” (p. 227).

Nevertheless, this study fills a lacuna in the field of Russian and modern Jewish history and will no doubt furnish readers and students with a new understanding of Jewish progressivism under duress.

Hebrew University of Jerusalem

PAUL DU QUENOY. *Stage Fright: Politics and the Performing Arts in Late Imperial Russia*. University Park: Pennsylvania State University Press. 2009. Pp. xiii, 290. \$65.00.

During the Soviet era, the standard Marxist interpretation of Russia's Silver Age culture held that it was characterized by escapism: effete intellectual and artistic elites, unable to face massive and growing social inequality and injustice, had devoted themselves to the pursuit of recondite subjects perfectly irrelevant to the public good. At the point in the Cold War when the West engaged on a cultural front with arts-subsidizing Soviets dedicated to general improvement through public consumption of edifying art, American academics took very seriously the originality of late imperial Russian culture. According to these scholars, European aesthetic preoccupations such as symbolism, decadence, and naturalism found ingenious employment in, for example, enduring works produced by Anton Chekhov, Fyodor Sologub, and Maxim Gorky.

More recently Western scholarship, influenced by Jürgen Habermas, has regarded late imperial Russia as a modernizing polity with a transformed public sphere. Paul du Quenoy sets himself the task of analyzing the performing arts in this light to determine whether they raised political consciousness. Could the burgeoning “theater industry” in Russia, estimated to have employed 10,000 people by 1900, somehow have functioned as a sounding board of reason?

The subsidized imperial theaters are shown here to have adapted to attract non-elite customers and performed new works with little if any regard to political correctness. Du Quenoy demolishes Soviet arguments about the pervasive influence of censors, concluding that “Russian theatrical censorship outdid its western counterparts in permissiveness” (p. 245). Administrators showed more concern with lapses in taste than pre-

sumably dangerous political implications in texts, as Vaslav Nijinskii's 1911 dismissal for appearing in a revealing pair of tights suggests. (The Dowager Empress denied having been offended and asked a mutual friend to convey her regrets about the matter to the dancer.)

The author corrects Soviet contentions that certain “conscious” progressive prerevolutionary artists had secretly worked to advance the revolution's cause *avant la lettre*. Vera Komissarzhevskaja is a case in point. The actress, who had formed her own company, donated concert proceeds that helped the Bolsheviks purchase a clandestine printing press and receipts from a performance to help St. Petersburg Social Democrats organize a “cultural enlightenment center” to front for underground political activities. But her philanthropic generosity had no political focus or agenda. She told Gorky that she never could have imagined that Leonid Krasin, the polished electrical engineer who solicited funds for the press on behalf of the Bolshevik Central Committee, was a revolutionary.

In chapters examining the actors of the imperial and private theater companies, du Quenoy confirms the vast majority's indifference to politics. Their extra-artistic energies went into improving their working conditions and economic status through professionalization. Though the 1905 revolution presented an opportunity to point audiences toward political engagement, very few actors evinced the slightest desire to do so. Frightened theatergoers stayed away, or, mistaking the mob scene in Gorky's “Children of the Sun” for an invasion from the street, fled the theater. Audiences did not go to the theater to have their nerves shattered.

By 1906, with urban order reestablished and civil rights significantly expanded, the Russian theater industry functioned effectively as a market, with consumers pursuing entertainment and eschewing uplift. Classical Greek drama, so beloved by pioneering directors like Savva Mamontov, simply could not attract an audience. Plays by Sophocles and Euripides were mounted, but inevitably flopped. Modern symbolist dramas, like those of Maurice Maeterlinck, fared little better. Nikolai Evreinov's “Ancient Theater,” aspiring to create a new polis, a genuine community, lasted but one season.

Expanding audiences evinced not just indifference, but contempt for the prestigious art intelligentsia types had hoped would prove transformative. Beginning in January 1909, the Crooked Mirror cabaret performed “Vampuka, African Bride,” which parodied grand operas of Giuseppe Verdi and Giacomo Meyerbeer, over three hundred times. At the Suvorin Theater, as plays by Friedrich Schiller failed, a second cast had to be trained to meet the demand for an adaptation of Sherlock Holmes mysteries. But the avant-garde remained free to reimagine dramatic expression and stagecraft. “Nothing in my research,” notes du Quenoy, “has led me to doubt the sincerity of Alexandr Benua's description of it as ‘a time of all sorts of enterprises and every kind of bliss’” (p. 253).

If the salient feature of late imperial theater was its

audiences' resistance to radical messages presented from the stage, then it might have been instructive to ask why these audiences were so doggedly apolitical, especially in view of the fact that after the Soviet interlude Russians apparently remain doggedly apolitical. Other civilizations that have embraced theatrical entertainments have relished critiques of existing political and social arrangements.

The author may have suggested an answer when he explained that modern audiences "craved staged depictions of moral challenges, open sexuality and other sources of shock" (p. 208). Everyman, connected by cell phone, may simply have no use for the kind of bliss afforded by contraptions like "Uncle Vanya," "The Inspector General," and "The Misfortune of Being Clever."

GARY THURSTON
University of Rhode Island

JOHN W. STEINBERG. *All the Tsar's Men: Russia's General Staff and the Fate of the Empire, 1898–1914*. Baltimore: Johns Hopkins University Press. Washington, D.C.: Woodrow Wilson Center. 2010. Pp. xvii, 383. \$60.00.

This study of the education, training, and performance of late imperial Russia's most elite coterie of officers begins with an endorsement of Alexander Solzhenitsyn's claim that "only one group, the officers of the Imperial Army's General Staff, had the intellect and experience to understand the problems and challenges that Imperial Russia faced in the early twentieth century" (p. 1). Yet, as the book repeatedly notes, these enlightened modernizers were unable to cure the ills that they diagnosed so well.

John W. Steinberg's heroes are war minister Aleksei Nikolaevich Kuropatkin at the turn of the century and what he calls the "Young Turks" in the general staff between 1906 and 1914. He provides evidence that they understood some of the key problems in Russian officer education and training and sought reforms to address them. Steinberg nicely personifies the struggle between reformers and their opponents with the examples of the reformist Kuropatkin and the recalcitrant traditionalist Mikhail Ivanovich Dragomirov, who stubbornly believed in the old mantra of "bayonets over bullets"—that even in modern warfare, the most important task was to create patriotic, well-drilled soldiers who would win the day through inspired acts of courage. As head of the Nicholas Academy, Kuropatkin tried to modernize the curriculum, and as war minister, he tried to introduce more realistic war game exercises and pushed for other reforms. Kuropatkin fell out of favor due to the army's disastrous performance under his command in the war against Japan in 1904–1905. But that debacle convinced many that reform was all the more necessary, and Steinberg argues that a group of "Young Turks" within the general staff proposed and developed new educational and training ideas under the protection of war minister A. F. Rediger and Grand Duke Nikolai Nikolaevich.

Steinberg, however, sees all this as amounting to very

little. Why did the military reformers fail so miserably? For Steinberg, the blame goes almost entirely to the vacillating last tsar, the grand dukes, and nobles who jealously fought petty battles to preserve their positions and their outmoded ideas about warfare. For example, he argues that the mere presence of the tsar at war training exercises completely undermined their value because the participants twisted the exercises to make sure the tsar's side won and catered to the every whim of "meddling grand dukes" when they unexpectedly appeared on the scene (p. 85).

The good guys and bad guys are well marked in this story. What is less clear is whether this is really a story of the reformist general staff against an incompetent tsar and court. The general staff included plenty of opponents of reform, and some of the leading reformists were not from the general staff. Noble and royal meddling in military affairs certainly was not limited to the Russian Empire; an attempt to place the Russian case in comparative context would have been helpful and would have probably made for a more qualified argument.

Steinberg presents the tenure of war minister Vladimir Aleksandrovich Sukhomlinov from 1908–1914 as the triumph of the conservatives in a more unambiguous way than several other accounts, and I think he underplays the extent of change during the massive military buildup and rapid modernizing drive of that period. On the spectrum of views from pessimists who see revolution as likely even if World War I had not occurred to optimists who see a society undergoing rapid change and full of possibilities for future peaceful evolution, Steinberg falls on the extreme pessimist side. The words "failure" and "dysfunctional" are among the most common in the book. I would have liked to read more about the tactical, strategic, and educational theories and ideas in contention at the Nicholas Academy and on the battlefield. If the reality was as simple as Steinberg portrays it—a handful of well-educated reformers promoting the most basic ideas of modern warfare centered on better command and control, communications, and field training continually thwarted by an incompetent tsar, anachronistic grand dukes, and nobles more interested in parade ground pageantry and their own careers than in the effectiveness of their army—then it is hard to imagine a more damning portrayal of the late imperial army and system. The book ends in 1914, but it provides a good background explanation for the decision of several of the Young Turks in the officer corps to so readily support the February 1917 overthrow of the tsar. However, it does not help us understand how that dysfunctional army and system managed to fight a total war on three fronts while under blockade for a full two and a half years before collapsing.

ERIC LOHR
American University

ROCHELLE GOLDBERG RUTHCHILD. *Equality and Revolution: Women's Rights in the Russian Empire, 1905–1917*.

(Pitt Series in Russian and East European Studies.) Pittsburgh, Pa.: University of Pittsburgh Press. 2010. Pp. xviii, 356. Cloth \$65.00, paper \$27.95.

Rochelle Goldberg Ruthchild's account of Russian feminist movements in the period from 1905 to 1917 is well written and impressively researched. Ruthchild moves beyond conventional understandings—or misunderstandings—of feminism in late imperial Russia. She demonstrates that the boundaries between socialists and feminists were quite permeable, and many leaders as well as rank-and-file people moved between the two groups. Ruthchild also convincingly argues that historians of world feminist movements have concentrated too much on Anglo-American events and have failed to appreciate the accomplishments of feminists in the Russian Empire. Finnish women were, after all, the first women in the world to achieve full suffrage (in 1906). And the Provisional Government bowed to pressure from feminist and socialist women's groups in the summer of 1917; the victory meant that women of the Russo/Soviet state attained full suffrage five years before U.S. women and over ten years before British women. Ruthchild also notes that one of the first (perhaps the very first) women's political parties was in the Russian Empire. The pioneering physician and feminist Maria Pokrovskaja founded the short-lived Women's Progressive Party in 1905.

Ruthchild gives many examples of efforts at cross-class solidarity by feminist organizers in late imperial Russia, and she convincingly demonstrates their influence not only on bourgeois women and members of the female intelligentsia but also on women (and some men) of less privileged classes. Ruthchild notes that the *Trudoviki* (the largest peasant party) were the first to bring the issue of female suffrage to the first Duma—thereby casting doubt on Kadet Party claims that male peasants were implacably opposed to women's rights. And she stresses that it was a massive demonstration called by feminist organizations and dominated by women workers and intellectuals that finally brought down the tsarist government in 1917.

Ruthchild's monograph contains absorbing biographies of individual feminist leaders and lively chronicles of the various women's congresses, journals, and organizations that sprang up after 1905. She also details the frequent Duma debates on women's suffrage, admission to universities, issuing of independent passports, and so on. Much of this is fascinating and well explained, and it goes a long way toward dispelling the myth of feminism's isolation from other reformist and revolutionary movements in late imperial Russia.

On two points, however, I find Ruthchild less convincing. The first concerns her repetitive attempts to refute the accusations leveled against feminists by Aleksandra Kollontai, Nadezhda Krupskaja, and other socialists to the effect that the former were bourgeois in class background and goals. Ruthchild appears to consider probative her oft-repeated observation that, like most of the feminists, Kollontai and some other

socialist women came from the social elite. This fact, however, is beside the point. Ruthchild's own account contains example after example of class-based arrogance on the part of several of the most prominent feminist leaders. Overall, it seems clear that while women of all classes were attracted to women's rights agendas and could be mobilized by feminist calls to organize along gender lines, women of the working classes were often as frustrated by feminists' condescension toward them as they were by unequal relations with their male worker or peasant comrades.

My second reservation concerns Ruthchild's treatment of the final stages of the suffrage debates leading up to the attainment of full female suffrage on July 20, 1917—a treatment that raises as many questions as it answers. Why did some leading feminists suddenly scale back their demands for universal female suffrage to a more limited, property-based franchise? Why, if Kollontai's accusations were incorrect, did virtually all of the women's rights measures that feminists successfully agitated for concern privileged women? As Ruthchild admits, “[p]roposals on inheritance, on women's access to the universities, or the right to practice law were foreign to the lives of the masses of women in the factories, in domestic service, or in the fields” (pp.180–181). (The demand that did affect working women—the call for women factory inspectors that the Women's League endorsed—was one that socialists and other workers' groups had been voicing for years.) More broadly—if feminism was so integral to the movements that culminated in the October Revolution, why was it largely invisible in the turbulent, exciting, experimental 1920s?

These questions aside, Ruthchild's book is a valuable contribution to the history of world feminism and social protest movements in late imperial Russia.

ANN HIBNER KOBLITZ
Arizona State University

DONALD FILTZER. *The Hazards of Urban Life in Late Stalinist Russia: Health, Hygiene, and Living Standards, 1943–1953*. New York: Cambridge University Press. 2010. Pp. xxx, 379. \$110.00.

In this first-of-its-kind book, Donald Filtzer marshals a staggering array of statistics to show that Russians' urban living standards suffered a time lag of about fifty years compared to those of Western Europe. Whereas some of Filtzer's conclusions seem logical—such as the role of rapid industrialization in destroying urban living standards—others, like abrupt decline in infant mortality without any significant improvement in sanitation and access to clean water (two of the key factors for increasing living standards in Western Europe) seem counter-intuitive. In both cases, however, Filtzer brings to bear ample evidence, clear logic, and a grasp of science and global comparisons that make this a rare and convincing book.

In five chapters, Filtzer discusses urban waste, water, hygiene, diet, and infant mortality in five key industrial regions in the Russian Federation of the Soviet Union

during the first decade after World War II. Whereas the author could have studied the cities flattened during the war, he instead chose cities away from the front lines of battle to illustrate the systemic, not war-induced, problems of daily life. In order to provide context, Filtzer shows the relationship between city and countryside, and between Russia and Western Europe. He even cites global rates for infant mortality. His study is informed by key works on urban life and health by scholars such as Anthony S. Wohl, David Barnes, Richard Evans, Jörg Vögele, and Ann-Louise Shapiro, as well as comparative data from international agencies. This book therefore will be relevant to many scholars who are not Russian specialists. The vast data sets allow for both longitudinal and comparative evidence, which is displayed in numerous tables and graphs.

Whereas some historians have used wage data to show relative progress during industrialization in various countries, Filtzer takes the position that increasing wages may not have been able to offset the gross overcrowding and pollution that came with industrialization. Moreover, wages in the Soviet Union tell us almost nothing. Increasing wages did not guarantee access to clean water, individual housing, or sufficient food. These key indicators of the standard of living were always in short supply, and one's access to them had more to do with geography and one's position within the hierarchy than wages alone.

Chapter one details the massive amounts of human waste that littered urban areas, from illegal dump sites on the fringes of cities to overflowing cesspools and out-houses just outside apartment blocks and workers' barracks. Massive urban growth in the 1930s and the eastward wartime evacuation joined an already severe underinvestment in sewer lines, bathhouses, indoor plumbing, and waste removal. Twice yearly cleanup campaigns were designed to remove much of this waste, but even when that was accomplished, the excrement quickly built up again. The lack of water and industrial pollution in waterways, detailed in chapter two, made matters even worse. Chapter three reveals that a chronic lack of sanitation prevented effective control of contagions. With almost no indoor plumbing, bathhouses often lacking fuel to heat water, and near constant shortages of soap, the diseases of poverty and overcrowding such as typhus and dysentery could hardly be controlled. With nutrition dire even outside of the famine year of 1947, the quality and quantity of food (when accessible) fell far short of what was necessary to maintain health. Of course the effects of all these conditions affected certain segments of the population differently. In the last chapter before his conclusion, Filtzer analyzes infant mortality, normally a key measure of standards of living. All the above conditions were improving to some degree, but the pace of improvement could not keep up with the rapid growth of Russia's cities. Cities in Western Europe fifty years earlier were only able to improve living standards through better housing, plumbing, food, and sewerage, but Russia did little to improve expensive infrastruc-

ture. Instead, decreased infant mortality depended on an extensive public health campaign to encourage better hygiene, the training of more doctors and health inspectors, and antibiotics (some of which were engineered from Western examples).

This very brief review cannot do justice to the positive contribution that this book makes not only to Russian studies, but also to research on public health and the effects of urbanization and industrial development in capitalist or centralized economies. Filtzer's more global conclusion about self-negating growth, "the consumption of the means of production and labor power [that] failed to translate itself into the production of a commensurate quantity of use values" (p. 347), should provoke thought about past, present, and future industrial expansion.

PAUL STRONSKI. *Tashkent: Forging a Soviet City, 1930–1966*. (Pitt Series in Russian and East European Studies; Central Eurasia in Context.) Pittsburgh, Pa.: University of Pittsburgh Press. 2010. Pp. xv, 350. Cloth \$65.00, paper \$27.95.

Paul Stronski situates his study of Soviet Tashkent within studies of urbanism, and his analysis shows the mark of James C. Scott's critique of state visions that attempt to create modern societies and change citizens. This chronologically organized volume is rich in archive-based description of planners' attempts to transform Tashkent over three decades, but it is somewhat frustrating in both its eclecticism and lack of a defined method for weighing evidence.

The book begins with Russian colonial perceptions of Tashkent from the late nineteenth century and wends its way through Stalinist urban planning, the city during World War II, postwar Stalinism, Tashkent's role as a showplace for the Third World, and the 1966 earthquake. Throughout, Stronski examines planners' and architects' visions for a new Tashkent, their equation of modernity with Europe and backwardness with Uzbekistan, their desire to create a city of apartment buildings to replace Tashkent's mud-brick courtyard homes, and their goal of using new streets, government and cultural buildings, and housing to refashion Tashkenters as Soviet subjects.

Soviet architects, often specialists from Russia, contrasted "native" Tashkent with their own hope for the modern future, expressed in wide boulevards, large parks, "capital" buildings—meaning public buildings worthy of a capital city—and an aesthetic that did not easily apply to an arid climate. Stronski discusses the *Mosoblproekt* (Moscow oblast project) proposal of 1938 that imagined a Tashkent where old neighborhoods of mud-brick homes would be replaced with "monumental architecture and industrialized construction" based on a Moscow model (p. 56). Many obstacles emerged to the building of such a grand project: reliance on materials from Russia, lack of interest or coordination

from other Tashkent city departments, and World War II all helped derail much of it, although Navoi Street did become a new, wide boulevard with some monumental buildings.

The mass evacuation of Soviet citizens to Uzbekistan during World War II overwhelmed the city's limited infrastructure, and relocated factories led to high levels of pollution in Tashkent's water supply canals. Stronski notes that the "prewar urban plan for rational growth quickly went by the wayside" (p. 73). While most of the book focuses on city planning and urban planners' ideas about how Uzbeks ought to live in a new "cultured" Soviet space, chapter five focuses on "Central Asian" lives in Tashkent during the war. Far from the discussion of buildings and planning, this section illustrates the hardships that evacuees faced in their city of refuge. Many had imagined Tashkent as "the city of bread," and yet they faced dire conditions of hunger, starvation, and hostility from the city's residents. A much richer account of this period and the interaction between Uzbeks and evacuees can be found in Rebecca Manley's *To the Tashkent Station: Evacuation and Survival in the Soviet Union at War* (2009).

Stronski demonstrates that there were significant shifts in architectural visions after World War II: should Tashkent's new Soviet buildings look like Stalinist buildings elsewhere, or incorporate local and "Eastern" motifs? Planners dealt with Tashkent's expanding population by building large "microrayons," districts of apartment complexes on the edges of the city. Until the 1960s, lack of coordination meant that such complexes might start to be built before sewers or power lines were put in, resulting in buildings that looked modern but lacked amenities. Urban administrators complained that the city's Uzbek residents were not conforming to the state's vision by moving into urban flats; instead, the city expanded primarily through the building of privately owned family houses. Stronski does not explain how the majority of Tashkent families acquired land to build individual homes. Discussions often focused on the inappropriate design of the new apartment complexes, which used Russian urban norms and lacked adequate space for typically larger Uzbek families. In contrast with the slow pace of construction into the 1960s, reconstruction after the 1966 earthquake flattened Tashkent's center was rapid and appropriate to the arid climate.

Stronski's claim that a colonial relationship existed between non-Uzbek architects who were immigrants from European parts of the USSR and Uzbeks who rejected Soviet plans in a "foot-dragging" style seems inconsistent with his conclusion that differences between Soviet visions and the gritty realities of poor planning and a lack of concern for sewage disposal were common experiences for all Soviet citizens rather than the particular fate of mistreated colonial subjects. On this topic, Donald Filtzer's *The Hazards of Urban Life in Late Stalinist Russia: Health, Hygiene, and Living Standards, 1943–1953* (2010) provides a useful comparison.

A book about the growth of a city would be enhanced

by inclusion of maps and a chart of population growth figures. The volume includes photos of the city appropriate to the time period, but the whimsical captions frequently fail to identify the distinctive buildings that they depict. Mistakes will be noticed by experts: Shaikhantaur, not Shaikhtanur was the most prestigious mahalla of prerevolutionary Tashkent (p. 37); the famous dancer Tamara Khanum was Armenian by ethnicity, not Uzbek (p. 244); Yadgar Nasriddinova (female, not Nasriddinov) was vice-president, not president of the Uzbekistan Supreme Soviet in 1956 (p. 251).

Stronski's book won the 2011 Central Eurasian Studies Society annual book award for history, and scholars of Central Asia will find it a valuable addition to studies of Central Asia in the Soviet period.

JULIANE FÜRST. *Stalin's Last Generation: Soviet Post-War Youth and the Emergence of Mature Socialism*. New York: Oxford University Press. 2010. Pp. xiv, 391. \$99.00.

Juliane Fürst's book is an important and original contribution to a growing body of historical scholarship on Soviet society during Joseph Stalin's last years and the Khrushchev Thaw. The author situates her monograph among recent works by Julie Hessler, Stephen Bittner, and Ethan Pollock that stress continuities between the two periods. Nonconformist behaviors by youth, such as imitating Western styles in clothing or criticizing local youth leaders at meetings of the Communist Youth League (Komsomol), did not begin after Stalin's death—they had precedents in the postwar Stalin years. Fürst's continuity argument is not entirely original, but her argument for a radical discontinuity between the late 1930s and the postwar years is. She contends that World War II weakened the Soviet state, and in particular the Komsomol, so much that the authorities lost much of their control over youth.

Stalin's Last Generation centers on the claim that youth coming of age in the postwar years (too young to have served during the war) were the first generation of Soviet citizens that party apparatchiks failed to incorporate into the project of building socialism. To use Ken Jowitt's terminology, the Soviet leaders were unable to find a "social combat task" that would engage postwar youth. They had been able to mobilize earlier youth cohorts for the revolution, the First Five-Year Plan, and the Great Fatherland War. Following the war, however, the relative weakness of the party/state apparatus made mobilization more difficult, while returning war veterans, whose moral and political authority could not be questioned, dominated official youth culture. The result, according to Fürst, was a postwar generation less engaged with official rituals and ideology.

These youth engaged in what Nicholas Glossop has called "the struggle for fun," organizing impromptu dance parties, pulling practical jokes, and showing off their "Western" styles along Leningrad's Nevsky Pros-

pect. Some, but not all, of this activity occurred outside the boundaries of the Komsomol. Local Komsomol organizations put on parties with “improper” dances and music; some Komsomol leaders themselves were *stiliagi*, combining Western and Soviet dress styles into new fashions that authorities stigmatized.

Like modern youth in many societies, postwar Soviet youth sought identities counter to those that adults wanted for them. This search, along with the weakness of the state, the power of veterans, and the struggle for fun, led to a progressive “hollowing out” of official Komsomol practices and language. When the Soviet Union collapsed in 1991, the Komsomol, like so many other institutions, proved an empty shell.

In the end, Fürst concludes, millions of individual decisions to “opt out”—to avoid Komsomol activities or skip the class on Marxism-Leninism—proved a greater threat to the regime than the small groups of overt dissidents. Her finding is highly persuasive. It parallels Thomas Cox Wolfe’s argument that Khrushchev-era shifts in official journalism (away from politics and toward human interest) were more important than *samizdat* in the cultural shifts that contributed to the collapse of the USSR.

Fürst does a fine job of avoiding the two poles of the recent “resistance or totalitarian mind control” debate among Soviet cultural and social historians. Over the last two decades some historians have argued that there was widespread resistance to the Soviet state, from previously unknown strikes to misbehavior at parades. Others have claimed that the party/state ideology so penetrated people’s minds that they could not think outside them—a Foucauldian version of 1950s tales of communist brainwashing. Fürst describes how independent-minded youth used official practices and culture (modeling themselves, for example, on the partisan heroes of the movie *Young Guard*), but she sees them as appropriating these for themselves rather than succumbing to totalitarian mind-control. She also refuses to read “opting out” as resistance to the party/state. It was, rather, a natural search for space outside stultifying ideas and boring meetings, not a direct challenge to the authorities.

There are a few weaknesses in the monograph. Some of the phenomena Fürst claims were new in the immediate postwar years, for example youth indifference to Komsomol activities and the “struggle for fun,” were certainly present in the 1930s as well. Her contention that the Soviet state was weaker at the local level after the war than before is thought-provoking but not entirely convincing. Another shortcoming is the focus on intelligentsia/elite youth, which may be due in part to the relative paucity of sources on other sectors of society. Finally, the book needed a thorough copyeditor. Words are frequently misused, “hawking back to,” for example, when “harking back to” is meant.

But fundamentally this is an excellent work, deploying original, plausible arguments about the social and cultural history of an era that historians are only be-

ginning to explore. It will be a rewarding read for historians in general, not just Soviet specialists.

MATTHEW E. LENOE

SERGEI I. ZHUK. *Rock and Roll in the Rocket City: The West, Identity, and Ideology in Soviet Dnepropetrovsk, 1960–1985*. Baltimore: Johns Hopkins University Press. Washington, D.C.: Woodrow Wilson Center. 2010. Pp. xvii, 440. \$65.00.

Sergei I. Zhuk’s nuanced study offers a welcome addition to the growing literature on what used to be regarded as an unvariegated era of Soviet history bracketed by the liberalizing reforms of Nikita Khrushchev and the turbulence of perestroika. Zhuk’s main purpose is to explore the connections between identity formation, ideology, and cultural consumption. His analysis offers valuable insight on the cultural and political milieu in which the post-Soviet Ukrainian leadership came of age, and on the complex and contradictory ways that Soviet ideologists lost the cultural Cold War with the youth of a strategically vital Ukrainian city.

As an important center of the Soviet military-industrial complex and the space program, Dnepropetrovsk (formerly Ekaterinoslav) was closed to foreigners in 1959 and became a magnet for a highly skilled and well-paid workforce. Although these engineers and scientists could not travel abroad, they had access to Western scientific literature and the popular press. They also travelled within the Soviet Union to Moscow and other regional centers with fewer ideological restrictions. This privileged status made them important conduits of ideologically suspect music, books, and ideas back to what Soviet people called “the closed rocket city” (p. 22).

Following analytical frameworks that highlight the transformative and creative implications of cultural consumption, Zhuk examines the complex ways that the consumption of music, books, and films, as well as ideas about religion, nationalism, and human rights from the West, helped shape the identity of Dnepropetrovsk’s youth. Limited access to Western cultural products intensified local interest in them, leading to an obsession that exaggerated their broader cultural significance. This “cultural fixation” on particular kinds of music, film, and literature fueled the Westernization of popular culture in a society with strong ideological regulation.

The book begins by charting the fallout from Beatlemania and the authorities’ struggle against the nationalist overtones of the Ukrainian literary revival in the 1960s. While this initial wave primarily involved local elites, by the end of the decade the obsession with beat music and Western (cowboy) films had spread to working-class youth as well. The massive popularity of the British band Deep Purple and the rock opera *Jesus Christ Superstar* (1971) in the 1970s intensified youths’ interest in hard rock and religion. At the same time the demand for Western adventure books (by writers such

as Thomas Mayne Reid, Arthur Conan Doyle, and Jack London) and films (such as *The Magnificent Seven* [1960] and *Mackenna's Gold* [1969]) facilitated both the Westernization of local youth and their Russification (via language, as Russian was used both for the translation of foreign literature and to dub foreign films). Détente and increased tourism opportunities for Soviet citizens supported the "disco madness" of the later 1970s. Juggling conflicting pressures from ideologists in Moscow against the demand for entertainment, the possibility for fiscal gain, and the local struggle for hearts and minds, the Communist Party and youth organizations assumed an important position in both the production and regulation of dance music. Commercializing disco and attempting to co-opt some Western cultural products in an effort to stave off others prompted the last major crackdown—this time against heavy metal and "fascist" punk rock—by the authorities in the early 1980s. In the end, restrictions on cultural consumption emanating from Moscow alienated local elites and ordinary consumers in Dnepropetrovsk. Although the democratizing influence of Western culture spread in tandem with Russification, the foundations of a post-Soviet Ukrainian identity had been laid in the closed rocket city long before the collapse of Soviet communism.

This is not a narrative of simple dichotomies. The lines between local, legal, illegal, Soviet, Western, Ukrainian, and Russian shifted and evolved throughout the period. While the appeal of Western music, film, and literature might be taken as a given, the complex routes by which this quasi-"forbidden fruit" reached the youth of Dnepropetrovsk were serpentine and often opaque. Books and music circulated on the black market, but the extensive dissemination of foreign films and literature required significant support from the state and its agencies (to translate and print Western books, and to dub and distribute films). The authorities might have wrung their hands over the excesses of Beatlemania, but fans could buy "greeting cards" featuring songs by the Beatles or the Rolling Stones at a large audio recording store on Karl Marx Avenue. And sometimes appropriating Western cultural products into the local milieu produced baffling responses, such as the campaign against the band KISS out of misplaced fear that the double "S" in its name referenced Adolf Hitler's SS.

Zhuk's narrative draws on an impressive source base that includes materials from KGB and Communist Party archives as well as diaries and more than one hundred oral histories. Students of youth culture, cultural consumption, identity, and nationalism will find much of value in this detailed and original book.

AMY NELSON
Virginia Tech

JONATHAN HASLAM. *Russia's Cold War: From the October Revolution to the Fall of the Wall*. New Haven: Yale University Press. 2011. Pp. xvii, 523. \$38.00.

Before the collapse of communism and the opening of East European and Soviet archives, Western historians of the Cold War were hamstrung by a lack of evidence from the other side. Too few had the linguistic skills to make use of foreign language sources anyway. Jonathan Haslam has rectified these shortcomings in his groundbreaking new book on Russia's Cold War. Few scholars could have written this book. Haslam has sorted through a dizzying array of German, Italian, French, and Russian sources to produce a fascinating new account of one of the most controversial periods in modern international history. The book is not for the novice; Haslam assumes knowledge of the basic outlines of Cold War history and a familiarity with the scholarly debates.

Haslam is right to begin his story of Russia's Cold War with the Bolshevik Revolution in 1917, although he spends less than a fifth of the book on Soviet policy before World War II. Like tsarist Russia, the new Soviet state sought to expand its territory and project its power abroad. Unlike imperial Russia, however, the Bolsheviks wanted to destroy the political and economic structure of the other European states through surrogate communist parties. The Cold War only abated when the Soviet Union and the West joined to fight a common enemy in World War II. The United States and the Soviet Union never signed an alliance during the war, and as Haslam expertly shows, relations were strained throughout. Haslam's thorough research also uncovers the extent to which Soviet intelligence knew about postwar U.S. foreign policy deliberations, nuclear capabilities, and economic objectives.

Haslam focuses squarely on the deliberations and decisions of Soviet leaders. He accounts for the infighting among Soviet bureaucracies, arguing that those in the foreign ministry and security agencies who, like the Soviet military and military industries were preoccupied with the United States, kept tensions high and the arms race going. But in the end this is an account of the Cold War as it played out in the higher echelons of power. Whether Soviet leaders injected more ideology or *realpolitik* into foreign policy, Haslam argues, depended on the leadership: "the revolutionary drive had since 1917 exerted its influence only through accepting minds" at the top (p. 365). The radical departure in Russia's Cold War came when Mikhail Gorbachev gave up on global "proletarian internationalism."

The book covers Soviet Russia's relations with the West and the Kremlin's struggle to gain allies in Africa, the Middle East, Asia, and Latin America. For example, Haslam brings to bear new evidence on the Berlin crises, the Israeli-Arab conflict, the Vietnam War, the Cuban missile crisis, and the Sino-Soviet split. He shows that Soviet leader Nikita Khrushchev was personally behind the Berlin and Cuban missile crises, dangerous gambits that prompted his ouster in 1964. Haslam cites Soviet leaders who rued the signing of the human rights provisions of the 1975 Helsinki Accords—the so-called Basket Three—because they turned out to be important tools for dissidents to delegitimize the

communist dictatorships. The fall of South Vietnam in 1975 emboldened the Soviets and their Cuban client to support leftist insurgencies in Nicaragua, Ethiopia, and Angola. It is doubtful, however, that Nicaragua presented Carter with "a major security problem . . . in his own backyard" (p. 318).

Haslam reveals that it was President Jimmy Carter, not Ronald Reagan, who initiated U.S. support of Afghan rebels against the Soviet-backed regime in Kabul. But did Carter's national security advisor Zbigniew Brzezinski really "trick Moscow into invading Afghanistan at the end of 1979" (p. 319)? Carter's startled reaction to the invasion and the perception that he had hitherto appeased the Soviet Union helped seal his defeat in the 1980 election. Haslam's claim that Gorbachev signed the Intermediate-Range Nuclear Forces Treaty in 1987 because of his fear of Reagan's Strategic Defense Initiative also does not hold up; by that time Gorbachev knew that a fail-safe missile defense system was impossible. He wanted the Pershing II and cruise missiles out of Europe. That sword of Damocles—missiles that could hit the Soviet Union within minutes—he did fear.

This book is a valuable addition to what we now know about the Cold War. Haslam's version is not the last word, however, and will provoke new historical controversies. Haslam calls *détente* a failure, but Reagan exaggerated the Soviet Union's strategic and military gains in the 1970s. The United States maintained economic and technological superiority and a strong conventional and nuclear deterrent. The Soviet Union's allies in Eastern Europe and the Third World were economic basket cases and unreliable strategic partners. Furthermore, the Kremlin's relations with Red China were at a nadir. Despite occasional friction within its alliance system, in the end the United States could count on such economic powers as West Germany, Great Britain, France, Italy, Japan and South Korea.

SHELDON ANDERSON
Miami University

MIDDLE EAST AND NORTHERN AFRICA

HIBBA ABUGIDEIRI. *Gender and the Making of Modern Medicine in Colonial Egypt*. (Empires and the Making of the Modern World, 1650–2000.) Burlington, Vt.: Ashgate Publishing Company. 2010. Pp. xii, 268. \$114.95.

This book is a fascinating study of gender and medicine in colonial Egypt. Hibba Abugideiri begins with a quote from a popular Egyptian medical journal that in 1902 called on urban women to exercise and take in fresh air in order to have strong bodies and therefore healthy children. The modern woman was to use her body to build the modern nation. Egypt was then under British colonial rule, and British medical reformers had combined the existing all-male Egyptian Qasr al-Aini medical school and all-female School of Midwifery. The new medical institution thus created was hierarchical, with

the all-male medical school offering advanced medical training and the all-female medical school teaching only midwifery and nursing. Female medical practitioners became caretakers and assistants to male doctors, who under the new system had supreme medical authority that carried over into all aspects of public life. More than a few Egyptian doctors, like other Western-educated professional elites, became leaders of the secular nationalist movement. The new elite's views on proper gender roles resembled those of the premodern period, but now those views were cast in modern scientific and medical terms.

The book begins by discussing medical reforms undertaken by Muhammad Ali (r. 1805–1848), a controversial ruler who established a professional medical school, military hospitals, a school for women medical practitioners, free clinics, and sanitation and vaccination programs. The overall goal was to create a healthy army and workforce that would serve the interests of the centralized state. Abugideiri then turns to the British colonial era, during which many of Muhammad Ali's medical policies were reversed. Most importantly, the colonial authorities privatized education by instituting tuition fees at all levels. The result, as intended, was the widening of class divisions and the creation of a small Egyptian professional elite trained to serve the British administration. The British authorities reserved high-level positions for British physicians and administrators and employed Egyptian physicians, all English-speaking males, in the lower ranks of the medical hierarchy. The authorities transformed the school that had trained women medical practitioners into a school for midwives. Men's work, including modern medicine, was highly valued while women's work, midwifery, was relegated to the lowest level of prestige or even criminalized. In the wake of the Egyptian nationalist movement and nominal independence in 1922, Egyptian physicians formed the Egyptian Medical Association. They officially reserved for themselves the fields of obstetrics, gynecology, pediatrics, and reproductive health in general. Henceforth Egyptian women were to be unpaid domestic medical caretakers who ran their homes scientifically. Women had long been unpaid domestic workers, but now that role was rationalized, justified, and even glorified as part of the modern republican way of life.

Doctors extolled motherhood, the family, and domestic life and called on women to embrace their duty to the nation by becoming modern mothers. The new modern woman should be a mother, homemaker, and beauty queen. Using their medical training, male physicians argued that these roles were scientific, natural, and biologically determined. Egyptian doctors were influenced by the Victorian scientific ideas that they had acquired from teachers and texts at Qasr al-Aini medical school and during trips to London. Notions of sexual difference already familiar to them resonated with this new scientific framework. Doctors called on women, especially pregnant and nursing women, to eat healthy food—meat, eggs, fish, lentils, green and fava

beans, and other vegetables—and spend an hour a day exercising in fresh air. It is not clear where women were to find the fresh air, the money for food, or the time to enjoy either.

The Egyptian press was full of medical rhetoric that celebrated republican motherhood and called for national independence from Britain. A parallel Islamic discourse of domesticity also extolled motherhood and proclaimed that divine rule called for and governed hierarchical gender roles. The modern medical establishment, however, made these divisions part of modern scientific medicine. This largely elite discourse glorified modern upper-class homes but was equally aimed at lower-class women. The assumption was that most medical problems originated in the lower classes. Therefore, the medical and public health establishment should design affordable methods of hygiene and medical care and train lower-class women to use them. Doctors wrote popular instructional manuals and established health laws to reduce Egypt's high infant mortality rate and to prevent the spread of contagious diseases.

Women benefited in some ways from the medicalization of domesticity, but in the long run, it was a trap because it reinforced and in some ways deepened existing hierarchical gender and class relations.

STEPHANIE STIDHAM ROGERS. *Inventing the Holy Land: American Protestant Pilgrimage to Palestine, 1865–1941*. Lanham, Md.: Lexington Books. 2011. Pp. x, 163. \$60.00.

Anyone who knows American evangelicalism from the inside is familiar with the Holy Land pilgrimage. Often organized by a local pastor, the tour involves visiting holy sites in Israel—“walking where Jesus walked,” as it were. During their trip the pastor and/or other tour guides connect the sites they are visiting with the appropriate Scripture passages, the focus of the trip being the biblical past and the prophetic future (and not the contemporary political and religious situation). On their return, the happy pilgrims report on their Holy Land experiences to those who were left behind, often in a Sunday evening slide show replete with testimonials.

Of course, these pilgrimages have a history. Stephanie Stidham Rogers examines American Protestant tourism in Palestine from 1865, when travel to the Middle East from the United States began to take off, until the onset of World War II. Using thirty-five pilgrimage narratives as the basis of her study—and it would have been helpful to have a separate and annotated bibliographical section for these narratives—Rogers discusses how American Protestant visitors were troubled by the poverty and filth, dismayed by the ubiquity of Catholic and Orthodox shrines, and outraged by the role of Muslims in administering Christian holy sites. In

response these pilgrims worked “to create a Holy Land that was more biblical, or more Protestant” (p. 4). By the end of the nineteenth century this vision of biblical Palestine occupied an important place in American Protestantism, with the frequent inclusion of Holy Land maps and photographs of Palestine in Bibles (in contrast with Rogers's book, which contains neither maps nor photographs), and with the emergence of biblical archaeology as a field of study. Most remarkably, American Protestants came to understand this “invented” Holy Land as a “fifth gospel” that gave Protestants “a way to skip centuries of ecclesiastical corruption and excess . . . to return to the basic, original, and undeniable truths of the Gospel” (p. 32).

In her strongest chapter, “The Out-of-Doors Gospel in Palestine,” Rogers emphasizes how American Protestants established outdoor pilgrimage sites. These included the Jordan River, where pilgrims stood on the banks and sang hymns, and the Mount of Beatitudes, where American Protestants sat on the slopes and read the Sermon on the Mount, generally eschewing the opportunity to enter the Catholic shrine. Then there was the Garden Tomb, a rock outcropping which the British General Charles George Gordon proposed (with little in the way of evidence) as the site of Jesus's crucifixion. A very popular alternative to the Church of the Holy Sepulcher, a “site rejected [by American Protestants] for its superstitious idolatry and excessive tradition,” the Garden Tomb offered visitors the opportunity to sit on benches “under the canopy of trees and sky” and contemplate Golgotha (p. 124).

Oddly enough, while “the out-of-doors became the new altar or Protestant shrine” (p. 138), it did not seem to concern pilgrims that Gordon's outcropping may not have been the site of Golgotha, that the designated Mount of Beatitudes may not have been where Jesus preached the Sermon on the Mount, or whether they as pilgrims really were walking where Jesus walked. What mattered to these late nineteenth- and early twentieth-century American Protestant pilgrims, and is probably still the case with their contemporary counterparts, was that they have a subjective spiritual experience; to quote Rogers, the real Holy Land “lay in the hearts and minds of believers rather than in a particular landscape” (p. 120).

Given the spiritualized Holy Land, it makes sense that the actual living, breathing individuals residing in Palestine were not of interest in and of themselves. Local Arabs were seen simply as “figures frozen in a miniature diorama,” providing a “vision of the ancient world” (p. 15) for the benefit of the Protestant pilgrims, who, the author notes, generally ignored the presence of Arab Christian communities. In contrast, the two-dimensional role of Jews in Palestine had to do with the future. As dispensational premillennialism—the biblical prophecy schema developed by John Nelson Darby—swept through much of American Protestantism, pilgrims came to see them as the advance guard of Jewish settlement in the Holy Land that “would has-

ten the millennium and act as a harbinger of the end times and the return of Christ" (p. 93).

Rogers's book is insightful and interesting. It is unfortunate that it is marred by writing problems. Particularly confusing is the author's practice of providing direct quotes without mentioning in the text whom she is quoting. This is problematic in a paragraph (e.g., second paragraph of p. 104) in which there are quotes from multiple sources, but no indication as to which are from primary sources and which are from scholars commenting on those sources.

WILLIAM VANCE TROLLINGER, JR.
University of Dayton

MICHELLE U. CAMPOS. *Ottoman Brothers: Muslims, Christians, and Jews in Early Twentieth-Century Palestine*. Stanford, Calif.: Stanford University Press. 2011. Pp. xii, 343. Cloth \$70.00, paper \$24.95.

In the wake of the liberal Ottoman revolution of 1908, which reinstated the constitution and parliament, Muslim, Christian, and Jewish men gathered in public squares throughout the empire to proclaim "Long live the homeland! Liberty, equality, brotherhood!" Men of different religions publicly embraced each other, proclaiming that all were united as brothers of the Ottoman family. In 1912, one of the two main Armenian political organizations promoted the shared interest of all Ottoman citizens. In 1913, an Arab congress upheld the integrity of the empire. On the eve of World War I, most Ottoman Jews viewed the Zionist program to create an exclusive Jewish state in Palestine with indifference or hostility.

Yet by 1914, few of these men promoted a reinvigorated empire, Ottoman patriotism, or interconfessional imperial union. The majority supported ethno-nationalist claims. During World War I the rulers of the empire abandoned interconfessional solidarity in favor of religious and racial unity. One result, not mentioned by the author of this book, was that in 1915 the Armenians were deported to their deaths. The Greek Orthodox were expelled from Anatolia. Arabs and Turks, once vital partners in the imperial project, viewed the other as oppressor or traitor. And in Palestine, Christians and Muslims united against Zionists, who began establishing a Jewish national home that would segregate indigenous Jews from their neighbors and their empire. Why did the discourse and practices known as Ottomanism fail to keep the empire and its citizens together?

Based on an exhaustive reading of Arabic, Hebrew, Judeo-Spanish, and Ottoman Turkish accounts, Michelle U. Campos's book is the first to focus primarily on Ottomanism from a multiconfessional perspective. Ottomanism has been depicted as mere discourse, as an official state project that had no impact on its citizens, as political opportunism by Muslim Turkish rulers driven by reason of state, or as the origin of Turkish nationalism. Campos demonstrates instead how, rather than being passive recipients of state propaganda, the

newly emergent Muslim, Christian, and Jewish urban middle and upper classes actively engaged in the task of strengthening and solidifying imperial citizenship. Placing Palestine in its Ottoman imperial context, rare for the historiography of Palestinian and Israeli history, Campos argues that the irreconcilable differences between individual and ethno-religious interests and the gap between the promises and shortcomings of "civic Ottomanism" ultimately led to conflict.

Despite sincere intentions to save the homeland by linking its citizens together regardless of religion, ethnicity, or mother tongue, severe structural constraints ensured that the project failed. The Ottoman state remained an Islamic state, which was wary of enfranchising and arming non-Muslims, and promoted Muslims and ethnic Turks above all others. Vocal Muslims declared that equality between Muslims and non-Muslims contravened Islamic law. Non-Muslim religious leaders abhorred giving up their power and privilege, and demanded proportional representation of their communities in parliament. Christian and Jewish youth found ways to avoid conscription.

The changed demographic realities ensuing from the Balkan Wars of 1912–1913 made a union of Christians and Muslims a dead letter. Islamic discourse was used openly in politics thereafter, as the empire was reconceived as a union of Muslim peoples. Yet Arabs complained that they were treated as colonized peoples, not on an equal footing with their Turkish masters. An increasing number of Ottoman Jews sided with the Zionists. The Balfour Declaration of 1917 guaranteed that Britain, which began its occupation of Palestine in 1918, supported the Zionist effort to establish a state for the Jewish minority and not a shared homeland for all of its citizens.

Rather than depicting the peoples of the empire as proto-nations eager to establish separate nation-states, as is usually the case in the historiography of the late Ottoman Empire, Campos succeeds in convincing the reader that, if only between 1908 and 1913, Muslims, Christians, and Jews actively sought a common future within a reformed empire. Thus concerned mainly with giving voice to diverse Ottoman citizens from Cairo to Istanbul, the study sometimes loses its focus on events in Palestine, pays too little attention to the machinations of European imperial powers and the brutal policies of the Ottoman rulers after 1913, and does not take seriously enough the explicit aims of the Zionists. Nevertheless, Campos's book is crucial reading for all interested in imperial citizenship, Ottoman, Middle Eastern, Israeli, and Palestinian history.

LESLIE DOSSEY. *Peasants and Empire in Christian North Africa*. (The Transformation of the Classical Heritage, number 47.) Berkeley and Los Angeles: University of California Press. 2010. Pp. xvii, 352. \$60.00.

The spread of ideas and of goods has remarkable potential to transform structures of social power. Leslie Dossey's important new study is a compelling exploration of that process in late Roman Africa (roughly the territory of modern Tunisia, Algeria, and western Libya). Her book specifically seeks to understand why the African provincial elite suddenly become anxious about peasant rebellion in the fourth century A.D., at a time when actual rural violence was both rare and easily suppressed. Dossey proposes that, in comparison to the classical period, late antiquity witnessed "a greater resemblance between rural and urban populations, both in terms of material culture and religious ideology" (p. 7), and that this "resemblance could heighten, not mollify, social tensions" (p. 8). Dossey draws both on archaeological field surveys and on a wide array of written sources. Indeed, to specialists one of the most exciting aspects of her work is sure to be her examination of over four hundred anonymous Christian sermons and other texts that have never been extensively exploited by historians but whose scriptural tradition or transmission history strongly suggests that they were composed in Africa between the fourth and sixth centuries.

A concise introduction orients readers to the parameters of the study, and the first chapter provides a short historical overview of North African history from prehistory to the Islamic conquest. The second and third chapters focus on material culture, demonstrating how, both in their production and in their consumption, a range of goods that had previously been scarce in the African countryside (fine ceramics, metal and glass objects, dyed and tailored clothing, and coins) came increasingly to suffuse the rural landscape in late antiquity. Rural populations also aspired to the benefits of civic life, including self-government and the ability to select their own leaders. The fourth and fifth chapters explore these civic desires and how they were frustrated in the political sphere, which in turn led rural communities to demand the creation of Christian bishoprics in villages and on the estates of the African countryside, where peasants could play a role in the election of their own bishops. Of course, bishops and clergy were also expected to preach, and through their sermons rustic congregations were exposed to universalizing Christian and imperial ideals, sometimes with explosive consequences. Chapters six and seven examine these processes, arguing that what rural violence we do see in fourth- and fifth-century North Africa—most notoriously that of the so-called Donatist *circumcelliones*—can be understood not as a rejection of the Roman Empire but rather as an attempt on the part of peasants to make the professed values of that empire a reality by putting an end to their own illegal exploitation at the hands of unscrupulous elites. A brief conclusion presents an excellent synthesis of the study's central findings and considers how representative Africa was of the Mediterranean world at large.

Dossey's analysis is thoughtful, sophisticated, and intelligent throughout. She has read widely and well, and she deploys both her deep, long-term understanding of

ancient North African rural society and her perceptive grasp of comparative postcolonialism to good effect. The book is magnificently written, and its conclusions are both stimulating and challenging.

It is a haunting irony of this study that one of the most important mechanisms shaping the new horizons of peasant possibilities in late antiquity was competition between Roman elites: between, on the one hand, well-heeled absentee landlords for whom a prosperous peasantry was a source both of wealth and of status and, on the other hand, local urban-based landowners desperate to signify their superiority over rustics through differential patterns of consumption; between both of these groups and a new Christian ecclesiastical hierarchy determined somehow to win social influence; between Catholic and Donatist bishops locked in a struggle for popular loyalties. Such struggles could be decisive in terms of defining legitimate parameters to rural aspiration. Thus, for example, Dossey demonstrates convincingly that, as long as the rustics found themselves on the right side of the Catholic-Donatist divide, Augustine himself could actively defend their militancy against rape, illegal enslavement, or forced conversion—despite the fact that in so doing the bishop landed himself in legal and political controversies.

Given the importance of this point, it perhaps deserves somewhat stronger emphasis than it receives here. At the end of antiquity, peasant aspirations did not just evoke anxieties among the elite; they may also have redefined for the new ruling class what it meant to be a freeborn Roman, forcing no less a figure than Augustine to rethink the profound implications of the universalism that he propounded. This book is an exceptional piece of scholarship that gives us all of that, plus over four hundred new sources to ponder.

SAHAR BAZZAZ. *Forgotten Saints: History, Power, and Politics in the Making of Modern Morocco*. (Harvard Middle Eastern Monographs, number 41.) Cambridge: Harvard Center For Middle Eastern Studies. 2010. Pp. xvi, 180. \$19.95.

In 1909, Muhammad al-Kattānī, a leading Moroccan religious figure with popular appeal, was put to death in a most humiliating way by Sultan 'Abd al-Hafiz, who had earlier overthrown his brother with the support of al-Kattānī. Sahar Bazzaz situates this dramatic tale within the reformist policies of the pre-Protectorate period (1860–1912), arguing that it was not a simple case of two figures with socioreligious prestige vying for power. Rather, al-Kattānī's death marked the end of an era of symbiotic balance between sultan and saint, an arrangement known as *sharifism*. With the rise of a new merchant class that gave the court access to global markets, the sultan could dispense with the spiritual brotherhoods and their saintly leaders. Knowledge of Europe, not spiritual expertise, now mattered.

This is a welcome study of a significant religious fig-

ure in Moroccan history and can take its place alongside works by Dale F. Eickelman, Vincent J. Cornell, and Malika Zeghal, among others. Bazzaz combines careful historical analysis with attention to the specific concerns of the main protagonist, who saw himself in special relation to the Prophet Muhammad and thus destined to renew the moral fiber of a nation in crisis. The author does not ignore the tensions between sultan and religious elite or the encroachment of European power into Morocco but shows that the affair is not reducible to a simple logic of power. Bazzaz, rather, attempts to explain why al-Kattānī sought a new formula for Morocco's religious politics. Other saintly figures had led revivals without challenging the system. The overthrow of one sultan for another was meant to correct the imbalance that had resulted from the sultan's increased entanglement with European interests, and al-Kattānī had taken the lead in binding the sultan more closely to the supervision of the religious elite in what is known as the 1908 conditional pledge of allegiance. But the pledge did not hold. The sultan had important allies among the tribal powers of southern Morocco. The populace might have been disgruntled, but 'Abd al-Hafiz was not about to bow to the religious elite.

The author also takes up the nature of al-Kattānī's reformist efforts. Did they express early nationalist sentiment? Sudan at this time offers a parallel case of a quasi-messianic figure contributing to the framing of a national project. For this reason, Bazzaz notes, al-Kattānī's revivalism has been suppressed from the memory of a state-centered nationalist historiography in Morocco that exalts the role of the king in the drive for national independence. Postcolonial myths still reign in Morocco, calling for silence on competing narratives. Still, saintly revivalism extends the length of Morocco's history. How much nationalist coloring should be given to this case? With the sultan colluding with the infidels, al-Kattānī may have felt compelled to overstep his place, and a new era was dawning with the court increasingly beholden to its own bureaucratic centralization as much as its colonial handlers.

How novel is this story? Ibn Khaldun speaks of holy persons who revolt against unjust emirs for the sake of moral renewal, yet notes that if they do not combine their call for reform with powerful alliances, they will have only the populace to rely on and thus risk their destruction. Bazzaz argues that by seeking popular support al-Kattānī actually undermined the hierarchy of holiness on which his own authority was based. Ibn Khaldun sees this as a recurring pattern: a holy person who in his zeal for reform oversteps his traditional place to challenge the ruler fails because he relies too exclusively on the masses apart from the actual powers in society. The pattern fits not only al-Kattānī but also the well-known contemporary opposition figure in Morocco, 'Abd al-Salām Yāsīn.

Saints do not overthrow monarchs unless they have sufficiently powerful allies, notably in the military ranks but also among the religious elite, who today have turned against Yāsīn as their forebears did against al-

Kattānī. It is true that saintly figures today, including members of al-Kattānī's family, do not have the socio-political agency they once did, but we should not be too surprised when patterns of the past intrude into the present. This book will serve scholars for years to come, helping them to think more precisely about the historical significance of the mystical heritage in the politics of national coherency.

SUB-SAHARAN AFRICA

PETER MARK and JOSÉ DA SILVA HORTA. *The Forgotten Diaspora: Jewish Communities in West Africa and the Making of the Atlantic World*. New York: Cambridge University Press. 2011. Pp. xv, 262. \$80.00.

Peter Mark and José da Silva Horta have written an engaging history of the emergence and fading away of Jewish communities in the Petite Côte region of Senegal. Jewish communities differentiated themselves from a larger Portuguese trading diaspora, formed by merchants who established themselves on the mainland away from major centers of Portuguese power. This diaspora contained a substantial number of New Christians (forced converts), some of whom took advantage of new conditions in the early seventeenth century to publicly embrace and reaffirm their identities as Jews. These conditions were the protection offered by African rulers to all merchants from Europe, regardless of nation or religion, and the breach of the Portuguese trading monopoly with the arrival of Dutch, English, and French merchants. While the presence of Jewish merchants has been noted by previous studies, this is the first full examination of their history and their connections with the Atlantic world. Their story appears in documents of the Portuguese Inquisition, which denounced both their religious activities and their "illegal" trade. They also figure in documents dealing with trade and in notarial records in Amsterdam, where a Sephardic Jewish community with ties to both Portugal and the Petite Côte emerged during this period of time.

Jewish communities in Senegal had strong ties with Portugal and New Christians in the Portuguese empire, but their links to the United Provinces, and particularly Amsterdam, were central to their commerce and Jewish identity. The book's first three chapters focus on questions of identity and document the relationships that stretched back and forth between West Africa and Amsterdam. The next two chapters take an excursion into wider horizons, with chapter four focusing on the blade weapons trade in seventeenth-century West Africa and chapter five on Luso-African ivories as historical sources for the weapons trade and the Jewish presence in West Africa. The trade in blade weapons was important, but instead of focusing on Senegambia, the authors argue for direct links between Jewish arms producers in Portugal and Morocco, the Moroccan

invasion of the Niger bend region in 1591, and the growth in the blade weapons trade across northern West Africa, which is described as “explosive” (p. 131). Regional arms production is downplayed, and the book’s analysis totally ignores Atlantic trade in the Gold Coast region, which had far stronger commercial ties to the Niger bend than Senegambia. The chapter on Luso-African ivories offers only a tenuous direct link with the Jewish communities of West Africa but does make connections with other themes such as blade weapons trade. The final chapter returns to questions of identity, which is the book’s main focus.

Portuguese New Christians seized the opportunity presented by Dutch trade to become middlemen for Dutch ships purchasing hides, ivory, beeswax, and other commodities, and then used their ties with the Dutch and Amsterdam to reaffirm their Jewish identity. Most dramatically, this was shown in 1612 when Jacob Peregrino journeyed from Amsterdam bringing sacred texts, his knowledge of Torah, and ritual instruments to perform circumcisions to serve the Jews of Porto D’Ale and Joal as rabbi. Before Peregrino’s arrival, New Christians had been obliged to make a journey to Amsterdam to reestablish their Jewish identities. While the communities were small, by the second decade of the seventeenth century there were at least ten adult males in Porto D’Ale and Joal, where synagogues were established, and the entire Jewish community, including African wives and servants who had converted, may have comprised more than a hundred individuals at this time.

Portuguese Jews first took advantage of a flexible “Senegambian identity model for traveling merchants” (p. 31). This allowed them to claim protection from African rulers, who refused to expel Jewish merchants when they were pressured to do so by Portuguese representatives of the Inquisition. The authors argue that the decision to embrace a public identity as Jews was evidence of “a transition of identity” (p. 59) to a fixed or more exclusive identity as Jews. The final chapter examines the growing significance of the slave trade, its place in the commerce of Jewish communities (indirect linkages primarily), and the return or migration of many prominent Jewish merchants to Amsterdam. These developments were linked to two key shifts in identity: the fading away of Jewish identity among descendants and converts who remained in West Africa, now described as “black Portuguese” who resembled their African neighbors more than they differed from them, and the growing importance of skin color and descent as determinants for inclusion in the Sephardic community in Amsterdam. While not yet fully racialized, these shifts were signs of the racial order emerging in parts of the Atlantic world. Unfortunately, the book’s discussion of identity is more nuanced for Jews than for Africans, who appear in modern terms as Wolof or Serer, Muslim or non-Muslim.

NWANDO ACHEBE. *The Female King of Colonial Nigeria: Ahebi Ugbabe*. Bloomington: Indiana University Press. 2011. Pp. xiii, 305. Cloth \$80.00, paper \$29.00, e-book \$23.95.

Like Ahebi Ugbabe, the subject of this rich biography, Nwando Achebe crosses many boundaries to challenge historiographies of gender, sexuality, and colonialism in southeastern Nigeria. More than a woman who “became king,” Ugbabe linked Igbo and Igala regions as a trader, colonial intermediary, translator, and “free woman.” For her part, Achebe incorporates a range of oral, archival, and artistic sources in her attempt to bridge theories of gender and sexuality while sharing a “forgotten” piece of Igbo women’s history.

The book tells the life history of Ahebi Ugbabe against the backdrop of local politics, religious change, and British colonialism in Nigeria, while providing an alternative timeline that reframes the historical narrative. For example, for the period before colonial rule that Achebe renames *oge nwatakili*, or “during the time of (Ugbabe’s) childhood,” Achebe surmises that Ugbabe’s parents tried to marry (enslave) her to a deity (*igo mma ogo*). Achebe notes that such practices had emerged during war and slave-raiding during the nineteenth century (pp. 22, 60). Achebe eschews, perhaps to the detriment of a fuller discussion of colonial encounter, the more common British colonial chronology that emphasizes the flu epidemic of 1919 and other events removed from Ugbabe’s place of birth in Enugu-Ezike. Instead, she argues that a series of gendered performances by Ugbabe, between 1916 and 1948, as returned exile, as headman, as warrant chief, and as ruler marked the history and collective memory of the town where Ugbabe reigned.

One of the most striking and commendable features of Achebe’s book is her use of local terms and concepts to immerse the reader in the specific time, place, and worldview of the Igbo community into which Ugbabe was born and the diverse Igala community to the north where she spent her formative years in exile. Local ideologies shape titles of chapters, provide periodization, and define concepts such as “woman-to-woman marriage.” For example, in these ritualized arrangements whereby wealthy women obtained wives to bear children in their own name or for dependent men in their households, Achebe captures local notions of kinship and sexuality (pp. 145, 148–149). Achebe also explains the deep paradoxes in Ugbabe’s unexpected rise and fall largely through an examination of religious practices, beginning with her parents’ fateful attempt to marry Ugbabe to a deity. After reaching the height of her power, Ugbabe’s own doomed staging of a masquerade led to her ultimate decline. Given the origins of her ordeal, Ugbabe endures in the present day—perhaps ironically, perhaps fittingly—memorialized as a deity.

Despite the book’s focus on local knowledge, however, Achebe sometimes undercuts her own insightful analysis by insisting on terms or connections that seem

out of place. Achebe refers to Ugbabe as a “sex worker” for several pages before discussing different expressions that described women who engaged in a range of sexual liaisons in rural and urban areas during Ugbabe’s early years (pp. 78–81). In fact, Achebe reveals that the people she interviewed called Ugbabe a “free woman” during this time in her life, potentially ascribing other local meanings to Ugbabe’s actions. In an understandable effort to piece together very scattered evidence, Achebe also deploys problematic, but tempting, comparisons to explain or imagine Ugbabe’s behavior, including references to an Igala woman king and princesses from several centuries ago as well as to a modern-day prostitute. Still, Achebe’s exploration of female masculinities and gendered performance make very important contributions, even though biology lurks behind her reliance on terms coded as masculine like “king” and “husband” and qualified by the adjective “female.” Perhaps more interrogation of the interplay between femininities and masculinities would better demonstrate the idea of “female” king and other phrases such as “masculine woman,” drawn from a song performed at Ugbabe’s symbolic burial as a man (p. 192).

Having spent so many years piecing together Ugbabe’s remarkable life, Achebe herself becomes an important character in this narrative, hence the opening comparison in this review of both women’s crossing of boundaries. Achebe discusses her own changing position as researcher and “daughter” in the Enugu-Ezike community and provides glimpses into the struggle involved in collecting oral data, especially in her discussion of interviews with Ugbabe’s oldest surviving relative Barnabas Obeta (p. 161). Achebe seeks to “marr[y] the best that autobiography and personal narrative offer, revealing a text that does not have an obvious personal agenda” (p. 8). Yet, to construct this elaborate story from shards of evidence suggests deep personal and political commitment to a biography that, by its nature, seeks to rewrite history.

Achebe presents a compelling history that embodies yet transcends the local. This thorough and detailed biography will be of great use to specialists in Igbo history and to scholars of women’s and gender history more broadly. Indeed, Ahebi Ugbabe should enter the historiography not only as a singular African woman but also as a masterful leader who manipulated politics, gender relationships, and religion during a turbulent time in southeastern Nigeria and the wider world.

College of the Holy Cross

ALISON LIEBHAFSKY DES FORGES. *Defeat Is the Only Bad News: Rwanda under Musinga, 1896–1931*. Foreword By ROGER V. DES FORGES. (Africa and the Diaspora: History, Politics, Culture.) Madison: University of Wisconsin Press. 2011. Pp. xxxviii, 306. Paper \$26.95, e-book \$19.95.

This book represents the posthumous publication of Alison Des Forges’s 1972 Ph.D. dissertation, a political history of the reign of Yuhi Musinga, the Rwandan king who came to power at the advent of colonial rule. It is first and foremost a book about power, a topic that Des Forges knew well. At the time of her death—in a plane crash in Buffalo in February 2009—she was arguably the most well-known and well-versed authority on Rwandan politics. Her deep knowledge of Rwandan culture and language made Des Forges not only a formidable scholar but also an indefatigable champion of human rights. Her unswerving commitment to justice for all earned her a MacArthur Fellowship, but also the enmity of the Rwandan regime that had come to power in 1994, which objected to her insistence that *all* perpetrators be held accountable for their crimes.

Long before Des Forges focused the world’s attention on the genocide in Rwanda, however, she challenged two prevailing and equally specious views of African and Rwandan history. The first was that Africans had no history, and the second was that Rwanda had long been a unified kingdom under a central authority. Des Forges’s work belied both views. In her retelling, Rwandans are highly ambitious, strategic, and factionalized actors who know that “Europeans [are] not the only adversaries, and armed confrontation [is] not the only way to fight” (pp. xvii–xviii).

Des Forges focuses on an extremely crucial period in Rwandan history: the moment when Europeans first arrived in the country. Their arrival coincided with the ascension of a new *mwami* (king) named Musinga. Musinga’s father, Rwabugiri, had designated a different son as his successor but named a favorite wife, Kanjogera, as queen mother because he had killed the mother of his designated heir two years earlier. Kanjogera had a son of her own, however, and with the help of two powerful brothers, she orchestrated a palace coup and placed Musinga on the throne.

Only a few weeks after Musinga’s installation as the new *mwami*, the first German troops arrived on Rwandan soil, followed closely by the first White Father priests. Musinga learned quickly how to use German firepower to expand the court’s reach. Both the Germans and the Belgians helped Musinga to pacify regions that had long resisted court rule. But they also exacted concessions from Musinga, such as the granting of land for Catholic missions and the reorganization of local authority structures. These changes upset the delicate power dynamics and removed the flexibility that had enabled Rwabugiri, and Musinga after him, to keep rivals in check.

Throughout his reign, Musinga fought to maintain his authority. He used a variety of tactics in different situations to deal with colonial administrators and the White Fathers, often playing one set of actors against the other. He worked equally hard to extricate himself from the influence of Kanjogera and her brothers. In the end, however, it was the Belgians who threatened not only Musinga’s rule but the institution of the monarchy itself.

As his power waned, he made greater and greater concession, but refused to capitulate fully. The Belgians finally lost patience and deposed Musinga in 1931. They installed one of his sons as the new *mwami* and sent Musinga into exile, first inside Rwanda, then outside the country, where he died in 1944.

Des Forges organizes the narrative chronologically but covers multiple intrigues in detail, paying close attention to shifts in power and highlighting the dynamic alliances that characterize each episode. This makes the prose dense, but the writing is always sharp and clear.

For her sources, Des Forges uses oral histories to full advantage. She draws on interviews with over one hundred informants to examine closely the inner workings of the Rwandan court, which was riven by violent intrigue long before the first Europeans arrived in the country. She also draws on an array of documents, including diaries the White Fathers maintained at their missions. This diversity of sources provides her with multiple perspectives on court machinations and regional politics.

The book benefits greatly from David Newbury's spare and judicious editing. Newbury brings the citations up to date and resituates Des Forges's work within the current state of knowledge. He adds descriptive chapter and section headings to guide readers and maps and photos to create a visual sense of people and place.

The posthumous publication of her dissertation is fitting testimony to Des Forges's life's work. It not only stands as an important contribution to the historiography of the region, but also serves as a model for understanding the complexities of present-day politics in Rwanda, which, as before, do not lend themselves to static or simplistic analysis. Readers, in sum, will find much to learn and admire in these pages.

LEE ANN FUJII
University of Toronto

ANDREW IVASKA. *Cultured States: Youth, Gender, and Modern Style in 1960s Dar es Salaam*. Durham, N.C.: Duke University Press. 2011. Pp. xi, 276. Cloth \$84.95, paper \$23.95.

For a host of reasons, Andrew Ivaska's book may stand as a pioneering work in the historiography of postcolonial Africa. In its finely textured depictions of the distinctive cultural imaginaries fueling official and unofficial visions of nation building and citizenship in post-independence Tanzania, the book offers compelling material for broader studies in comparative nationalisms worldwide. The same can be said of its potential contributions to comparative studies of the cosmopolitan sensibilities and social movements of the global 1960s.

Reading this work is an intensely literary experience, in precise and positive senses. In a memorable section of his introduction, Ivaska distances himself from methodologies that privilege interviews and the authenticity of personal voice and memory as bases for social histories of modern Africa. Instead, he argues for sharper

recognition of the vital roles played by local print media in both documenting and shaping social experience and cultural change across the continent, particularly in its cities. Any reader's misgivings regarding Ivaska's methodological and epistemological claims will likely dissolve over the course of the four core chapters, in which extended citations from dozens of individual letters to local newspapers vividly illuminate the complex social and political heteroglossia of Dar es Salaam during the 1960s and early 1970s. Ivaska examines a range of subjectivities and social visions articulated in the letters themselves, as well as the way their viewpoints combined and clashed with one another to form dialogical fields that represented, more richly than any other communicative genre, contemporary tensions and rifts in Tanzania as an "imagined community"—or rather, a community in the midst of constant, conflicting reimaginings.

The first core chapters of the book—one concerning "National Culture and Its Others," and the other "The Age of the Minis"—combine to forge crucial interventions in understandings of the sources and trajectories of anticolonial and post-independence nationalisms in Tanzania, with potentially vital ramifications for comparative inquiry. While Ivaska's emphasis on correspondences between colonialist and elite African nationalist orientations toward the characteristics of traditional cultures and subjectivities is far from original, his documentation and explanations of such affinities are compelling and illuminating. Ivaska describes in striking detail the vehemence with which the Nyerere regime attacked urban youths who transgressed the traditional social values, as promoted through official discourse, of authentic, predominately rural national culture. The first two chapters examine official criticisms of youth culture and banning campaigns that targeted the widespread passion for African American soul music, young women's taste for miniskirts, and popular yearnings for other cosmopolitan forms deemed incongruous with socialist models of citizenship. Beyond chronicling and analyzing the efflorescence of proscriptive cultural stances and strategies in state ideology and policy across the 1960s, Ivaska illuminates the fascinating, unforeseen ramifications of such efforts to police and differentiate between desirable and undesirable manifestations of Tanzania's modernization. In the end, the pressures exerted by state cultural politics tended to sharpen, rather than dispel, young people's desires to experience and participate in global cultural currents whose modernist meanings, ideals, and pleasures altogether defied the defensive, territorializing orientations and tactics of the nationalist regime.

Depending on the reader's interests, the other two core chapters—one exploring student and faculty politics at the elite University College, Dar es Salaam, and the other public responses to new national marriage laws—may prove equally intriguing. Ivaska documents the dramatic confrontations between late colonial elites (headed by Julius Nyerere and other officials in the post-independence government) and university stu-

dents who strove to cultivate their influence and wealth within the new nation. This memorable chapter describes the university's extraordinarily vigorous socialist-internationalist intellectual and political environment during the late 1960s. Intellectual stars ranging from faculty members Walter Rodney and Giovanni Arrighi to visiting luminaries such as C. L. R. James, Stokely Carmichael, Angela Davis, and Samir Amin, alongside foreign students including future Ugandan President Yoweri Museveni, contributed to the university's radical environment. The university community, which was often intensely critical of the capitalist biases of Tanzanian socioeconomic policies, met with harsh retaliation from the Nyerere regime. The last chapter,

on public responses to marriage reforms, features a productive critical engagement with the work of Achille Mbembe and examines the Cameroonian historian's emphases on postcolonial conviviality and "zombification." Although Ivaska is sympathetic to Mbembe's observations and insights, he insists that radical dynamisms and openness characterized the public culture of postcolonial Dar es Salaam. Thus, Dar es Salaam emerges not as a mere "postcolony" but as an ever-changing, cosmopolitan city unfolding and expanding across other horizons.

REVIEWS

TO THE EDITORS:

Although I was pleased that Eric Ehrenreich, someone familiar with Nazi racial practices, has reviewed my book, *The Nazi Symbiosis: Human Genetics and Politics in the Third Reich* (AHR, December 2011, 1587–1588), I am disappointed by several of the questions he raised, which seem less pertinent to my study than to issues he has articulated in his own publications.

Ehrenreich suggests that I have “not thoroughly address[ed] the role geneticists played in supporting Nazi racism.” He also contends that I did not include a discussion of the “unscientific” nature of Fischer’s and especially von Verschuer’s pronouncements on the “Jewish question” in my book. Moreover, he faults me for not analyzing their racial certificates to demonstrate how nefarious their ostensible pseudo-scientific pronouncements were for subjects forced to offer proof (or lack thereof) of their Aryan ancestry—something which, at least after 1941, could spell death for the individual in question.

There is a simple answer to his last concern: While I was writing my book, I had access to only two racial certificates from von Verschuer, including the one in Ehrenreich’s study, *The Nazi Ancestral Proof: Genealogy, Racial Science, and the Final Solution* (2007). I did not believe then, and I do not think now, that two *Rassegutachten* tell us anything significant. Fortunately, I have subsequently located and analyzed over 120 such racial certificates from von Verschuer’s Frankfurt Institute, one-third written by his doctoral student Josef

Mengele. The conclusions, forthcoming in *Central European History* next year, demonstrate, among other things, that von Verschuer and his assistants more often than not used the very ambiguity regarding “Jewish character traits” to the benefit of the subject in question—a fact as surprising to me as it will be to others.

The reviewer’s other criticisms are relevant to his last. Ehrenreich appears to be one of the few scholars who still insist on using the term “pseudo-science” in describing von Verschuer and other biomedical professionals’ pronouncements on “race” during the Third Reich. The idea of “pseudo-science” might make rhetorical sense in jurisprudence, but neither I nor most mainstream historians or sociologists of science share Ehrenreich’s supposition that the human sciences are value-free. According to Ehrenreich’s definition of science, much of early-twentieth-century anthropology, and not just German anthropology, would be unscientific. I submit that it is far more illuminating to recognize that there is a symbiosis between science and politics under all forms of government and that my book’s story emerges as a devastating illustration of this phenomenon under admittedly unique historical circumstances. Science, I can only rejoin, is what is accepted as science by its practitioners, appears in peer-reviewed journals, and is funded by scientific agencies and governments.

Yet these differences of opinion between me and Ehrenreich did not result in my failure to point out that the geneticists in question used their prestige in the cause of Nazi antisemitism. For example, I analyzed Fischer’s virulent antisemitic speech in occupied Paris (pp. 215–216). Moreover, I established not only that both Fischer and von Verschuer gave talks supporting antisemitism at the infamous Reich Institute for the New Germany (p. 103), but showed how they supported the racism of the regime in their national and international professional talks (chap. 4). These are but a few examples.

But the real reason that I did not take up the issues for which Ehrenreich indicts me is that they are not germane to the purpose of my work. The volume is not exclusively focused on Nazi racial antisemitism. Since Ehrenreich neither addressed what is meant by the title of my book nor stated or discussed its thesis—something one might expect of a reviewer—let me do so briefly. Based on four case studies of the interface of

human genetics and politics under the swastika, two dealing with the production of human genetic knowledge and two dealing with its dissemination, I sought to demonstrate *how* and *why* human heredity and Nazi racial policy became “mutually beneficial resources for each other” (Mitchell Ash)—in other words, how they became symbiotic. And there is a reason for this inquiry. I wanted to provide an answer to the following question: What, if anything, was uniquely “Nazi” about human genetics during the Third Reich? There were, after all, eugenics movements and racial science in other countries. My thesis: “the symbiosis that ensued between human heredity and the broad political context of Nazism served to radicalize them both.” This was particularly evident during Germany’s “racial war” in the East “when the symbiosis turned deadly.” Finally, I sought to clarify that this symbiosis was the product of historical contingency—“the coming together of a dictatorial regime for which race and heredity serves as an ideological cornerstone and a mature eugenics movement for which race and heredity functioned as its epistemological categories” (p. 306). It is my hope that my thesis will become the subject of future historical debates surrounding the human and moral tragedy of this “Nazi symbiosis.” In any case, the last thing I wish my audience to take away from my book is that the road that led some German biomedical professionals to the gates of Auschwitz was their intentional decision to pursue a “pseudo-scientific” agenda for political purposes.

SHEILA FAITH WEISS
Clarkson University

ERIC EHRENREICH RESPONDS:

In her response, Sheila Weiss avers that my review ignores the central thesis of her book: “the symbiosis that ensued between human heredity and the broad political context of Nazism served to radicalize them both.” I disagree. The first paragraph of my review directly quotes Weiss to this effect. Indeed, my own work on Nazi racism supports this conclusion.

However, the last sentence of Weiss’s response actually undergirds my central critique of her book. There, she states: “the last thing I wish my audience to take away from my book is that the road that led some German biomedical professionals to the gates of Auschwitz was their intentional decision to pursue a ‘pseudo-scientific’ agenda for political purposes.” A major problem with Weiss’s book is that it ignores evidence, and avoids analytical perspectives, that might support just such a view.

The first chapter of my book *The Nazi Ancestral Proof* demonstrates that during the Third Reich, as before, virtually all prominent hereditary scientists in Germany were in accord as to what constituted valid scientific methodology: carefully gathered data, logically interpreted, and subject to experimental verification. My book also demonstrates that these scientists did not use this methodology in their “racial scientific” work. Ver-

schuer was a primary example. His work on the heritability of tuberculosis clearly complied with the foregoing methodology. His work on Jewish racial characteristics, essentially a series of unproven assertions swathed in scientific verbiage, clearly did not. In other words, his latter work was “pseudo-scientific.”

That Weiss had access to only two racial investigations by Verschuer during her research in no way undermines my critique. Verschuer’s 1938 article “Racial Biology of the Jews,” which Weiss mentions nowhere in her work, provides a particularly blatant example of pseudo-scientific reasoning. And *The Nazi Ancestral Proof* also demonstrates that Verschuer was only one of many German biomedical scientists who engaged in this double standard in service of Nazi racial policy. That Weiss’s subsequent research indicates that Verschuer used this incoherent methodology to benefit certain individuals is also irrelevant to the question of whether this “racial scientific” work was in fact pseudo-scientific.

Taking issue with my use of the term “pseudo-scientific,” Weiss writes: “neither I nor most mainstream historians or sociologists of science share Ehrenreich’s supposition that the human sciences are value-free.” Here, Weiss imputes an argument to me that I do not make. Nowhere do I claim that “scientific” equals “value-free.” Rather, I argue that allegedly scientific conclusions that were not derived through use of a widely agreed-upon scientific method in the 1930s and 1940s constituted “pseudo-science,” even in the context of that time. That Weiss’s book fails to make this distinction, or even to acknowledge that such a distinction might be made, is, in my opinion, a serious flaw in a work that seeks to analyze the *how* and *why* of the symbiotic relationship between the Nazi regime and German biomedical scientists. It in fact goes to the heart of the question of whether German biomedical professionals were willing to pursue a “pseudo-scientific” agenda for political purposes.

Essentially, Weiss’s book leaves the impression that, although the results of the German hereditary scientists’ racial scientific work were often regrettable, they were nevertheless the result of a good-faith application of their scientific training. Any resulting horror was due to their use of the scientific method unfettered by moral constraints. My work shows something quite different. In the field of “racial science,” these scientists demonstrably abandoned the widely accepted scientific method of their time in order to reach predetermined conclusions about “racial characteristics,” while all the while insisting on their strict adherence to the most rigorous scientific standards. And this, I argue, constituted the Nazi regime’s most important source of ideological support. This was also the key to the symbiotic relationship between the scientists and the regime. Weiss may disagree. But simply ignoring alternative explanations and evidence does not make for compelling scholarship.

ERIC EHRENREICH

American Historical Association

Founded in 1884. Chartered by Congress in 1889.
Office: 400 A St. SE, Washington, DC 20003

President: William Cronon, *University of Wisconsin-Madison*
President-Elect: Kenneth Pomeranz, *University of California, Irvine*
Executive Director: James R. Grossman
Controller: Randy Norell

MEMBERSHIP: Persons interested in historical studies, whether professionally or otherwise, are invited to membership. The present membership and subscription total is approximately 18,000. Members elect the officers by ballot.

MEETINGS: The Association's next annual meeting will take place January 3–6, 2013, in New Orleans. Many professional historical groups meet within or jointly with the Association at this time. The Pacific Coast Branch holds separate meetings on the Pacific Coast and publishes the *Pacific Historical Review*.

PUBLICATIONS AND SERVICES: The *American Historical Review* is published five times a year and is sent to all members. It is available by subscription to institutions. The Association also publishes *Perspectives* (a newsmagazine with classified listings) and a variety of pamphlets on historical subjects. To promote history and assist historians, the Association offers other services, including a Department and Organization Services Program. It also maintains close relations with international, specialized, state, and local historical societies through conferences and correspondence.

BOOK PRIZES: The *Herbert Baxter Adams Prize*, awarded annually for a first book in the field of European history. The *George Louis Beer Prize*, awarded annually for a book on any phase of European international history since 1895. The *Albert J. Beveridge Award*, given annually for the best book on the history of the United States, Latin America, or Canada since 1492. The *Paul Birdsall Prize*, awarded biennially for a major work by a U.S. or Canadian historian in European military and strategic history since 1870. The *James Henry Breasted Prize*, awarded annually for the best book in English in any field of history prior to 1000 A.D. The *Albert B. Corey Prize*, awarded biennially for the best book on the history of Canadian-American relations, administered jointly with the Canadian Historical Association. The *John H. Dunning Prize*, awarded biennially for a book on any subject in U.S. history. The *John K. Fairbank Prize*, awarded annually for East Asian history substantially after the year 1800. The *Morris D. Forkosch Prize*, awarded annually to the best book in British, British imperial, or British Commonwealth history. The *Leo Gershoy Award*, given annually for outstanding work in seventeenth- or eighteenth-century western European history. The *Clarence H. Haring Prize*, awarded every five years for Latin American history by a Latin American. The *J. Franklin Jameson Prize*, awarded every two years for outstanding editorial

achievement. The *Joan Kelly Memorial Prize*, awarded annually for the best book in women's history. The *Martin A. Klein Prize in African History*, awarded annually for the most distinguished work of scholarship on continental Africa, including those islands usually treated as countries of Africa. The *Waldo G. Leland Prize*, awarded every five years for the most outstanding reference tool. The *Littleton-Griswold Prize*, awarded annually for the best work on the history of American law and society. The *J. Russell Major Prize*, awarded annually for the best work in English on any aspect of French history. The *Helen and Howard R. Marraro Prize*, awarded annually for Italian or Italian-U.S. history. The *George L. Mosse Prize*, awarded annually for European intellectual and cultural history since the Renaissance. The *Premio del Rey Prize*, awarded biennially for early Spanish history and culture (500–1516 A.D.). The *James A. Rawley Prize in Atlantic History*, awarded annually for an outstanding book in the history of the Atlantic worlds before the twentieth century. The *John F. Richards Prize*, awarded annually for the best book in South Asian history. The *James Harvey Robinson Prize*, awarded biennially for the teaching aid that has made the most outstanding contribution to the teaching of history. The *Wesley-Logan Prize*, awarded annually in African Diaspora history by the AHA and the Association for the Study of African American Life and History. Book prizes are awarded at each AHA annual meeting.

CORRESPONDENCE: Inquiries for the AHA should be addressed to Executive Director, 400 A St. SE, Washington, DC 20003. Our e-mail address is aha@historians.org. Our web address is <http://www.historians.org>.

Inquiries for the *AHR* Editorial Office, including correspondence regarding manuscript submissions and books for review, should be addressed to Editor, American Historical Review, 914 E. Atwater Ave., Bloomington, IN 47401. Our e-mail address is ahr@indiana.edu. No manuscript will be considered for publication if it is concurrently under consideration by another journal or press or if it has been published or is soon to be published elsewhere. Both restrictions apply to the substance as well as to the exact wording of the manuscript. If the manuscript is accepted, the editors expect that its appearance in the *AHR* will precede republication of the essay, or any significant part thereof, in another work. Specific guidelines and policies for the preparation of manuscripts for submission to and publication in the *AHR* can be found at www.americanhistoricalreview.org or will be sent upon request. **Unsolicited book reviews are not accepted.**

All the Missing Souls

A Personal History
of the War Crimes
Tribunals

David Scheffer

"Few persons have been so intimately involved as David Scheffer in the contemporary emergence of international criminal justice. His insightful book shows not only his important role in bringing about the tribunals and the International Criminal Court, but also reveals the inner workings of the international legislative processes."

—M. Cherif Bassiouni, DePaul University

Human Rights and Crimes against Humanity

Eric D. Weitz, Series Editor

Cloth \$35.00 978-0-691-14015-5

Stalin's Genocides

*Norman M.
Naimark*

"[A] small book that places a large exclamation point on the most incriminatingly tragic dimension of Soviet history."

—Robert Levgold, *Foreign Affairs*

Against Massacre

Humanitarian
Interventions in the
Ottoman Empire,
1815–1914

Davide Rodogno

"In this outstanding, elegant, and informative book, Rodogno makes a powerful case for reexamining humanitarian intervention from a historical perspective by exploring cases of European involvement in the Ottoman Empire during the nineteenth century."

—J. P. Daughton, Stanford University

Human Rights and Crimes against Humanity

Eric D. Weitz, Series Editor

Cloth \$39.50 978-0-691-15133-5

Guilty of Indigence

The Urban Poor in
China, 1900–1953

Janet Y. Chen

"This is an important and novel book about a widespread Chinese problem: poverty. No other book profiles a social class of people, and the ideas and culture that surround them, so well and so decisively. With first-rate research and previously underutilized archival material, *Guilty of Indigence* completes our picture of urban China in a vital and dynamic fashion."

—David Strand, Dickinson College

Cloth \$45.00 978-0-691-15210-3

Distant Tyranny

Markets, Power,
and Backwardness
in Spain,
1650-1800

Regina Grafe

"Regina Grafe has written a challenging, courageous, and provocative book, one that reflects an extraordinary capacity to deal with an extremely wide literature not only on Spain but also the history of Europe. The dialogue between historical facts and economic theory is just outstanding."

NEW FROM KNOPF DOUBLEDAY

AUTUMN IN THE HEAVENLY KINGDOM

China, the West, and the Epic Story of the Taiping Civil War

by Stephen R. Platt

"A splendid example of finely calibrated historical narrative. The civil war that erupted in China between the early 1850s and 1864 was perhaps the bloodiest in human history; with a wealth of vivid detail, Platt shows how the fates of China's rulers and many millions of their subjects were manipulated by British diplomatic and commercial interests, as well as colored by the rebels' own unorthodox religious and political beliefs. It is a tragic and powerful story."

—Jonathan Spence, author of *The Search for Modern China*

KNOPF | CLOTH | 512 PAGES | \$30.00

THE LADY IN GOLD

The Extraordinary Tale of Gustav Klimt's Masterpiece, Portrait of Adele Bloch-Bauer

by Anne-Marie O'Connor

The spellbinding story of Gustav Klimt's *Portrait of Adele Bloch-Bauer*, one of the most emblematic portraits of its time; of the beautiful, seductive Viennese Jewish salon hostess who sat for it; the notorious artist who painted it; the now vanished turn-of-the-century Vienna that shaped it; and the strange twisted fate that befell it. A riveting social history and an illuminating and haunting look at fin de siècle Vienna, *The Lady in Gold* is a brilliant portrait of the evolution of a painter and a masterfully told tale of suspense.

KNOPF | CLOTH | 368 PAGES | \$30.00

THE ICE BALLOON

S. A. Andrée and the Heroic Age of Arctic Exploration

by Alec Wilkinson

Alec Wilkinson brings us the story of S. A. Andrée, the visionary Swedish aeronaut who, in 1897, during the great age of

Arctic endeavor, left to discover the North Pole by flying to it in a hydrogen balloon. Based on the expedition's diaries and photographs, dramatically recovered thirty-three years after the balloon came down, and Wilkinson's research, *The Ice Balloon* is a haunting story of high ambition and courage, made tangible with the detail, beauty, and devastating conditions of Andrée's flight and the journey.

KNOPF | CLOTH | 256 PAGES | \$25.95

ON AN IRISH ISLAND

by Robert Kanigel

Robert Kanigel tells the story of the Great Blasket, a wildly beautiful island off the west coast of Ireland, renowned during the early twentieth century for the rich communal life of its residents and the unadulterated Irish they spoke. With the Irish language vanishing all through the rest of Ireland, the Great Blasket became a magnet for scholars and writers drawn there during the Gaelic renaissance—and the scene for a memorable clash of cultures between modern life and an older, sometimes sweeter world slipping away.

Dartmoor's Alluring Uplands

Transhumance and Pastoral Management in the Middle Ages

Harold Fox

Edited by Matthew Tompkins and Christopher Dyer

This book describes, for the first time, the social organization and farming practices associated with that annual transfer of livestock.

PAPER \$55.00

Citation, Intertextuality and Memory in the Middle Ages and Renaissance

Volume 1: Text, Music and Image from Machaut to Ariosto

Edited by Yolanda Plumley, Giuliano di Bacco, and Stefano Jossa

These essays offer a wide array of scholarship on the role of memory and citation in the cultural production of the late Middle Ages and early Renaissance.

CLOTH \$110.00

Edited by
Yolanda Plumley, Giuliano di Bacco, Stefano Jossa

Ramparts of Empire

The Fortifications of Sir William Jervois, Royal Engineer 1821-1897

Timothy Crick

This volume provides a detailed study of the life and works of William Jervois, the "design leader" for the largest system of fortifications in the British Isles.

CLOTH \$95.00

Practical Advice for New Teachers

Paper \$14.00

The Chicago Handbook for Teachers is an extraordinarily helpful guide for anyone facing the daunting challenge of putting together a course and delivering it successfully. Beginning with a nuts and bolts plan for designing a course, the handbook also explains how to lead a discussion, evaluate your own teaching, give an effective lecture, supervise students' writing and research, create and grade exams, and more.

"Packed with useful information."

—*Library Journal*, on the first edition

What's new in the second edition:

- Updated coverage on the use of electronic resources
 - New information on how to create and sustain an inclusive classroom
 - New chapter on science education
 - Additional coverage of the special issues facing adjunct faculty
 - Samples of practical, hands-on teaching materials
-

"In the Chicago tradition of exemplary reference manuals, this is a clear and succinct guidebook."

—*Teaching Theology and Religion*, on the first edition

New from Stanford University Press

Making the Chinese Mexican

Global Migration, Localism, and Exclusion in the U.S.-Mexico Borderlands
GRACE PEÑA DELGADO
"A stunning example of borderlands history."

—Erika Lee,
University of Minnesota

Occupying Power

Sex Workers and Servicemen in Postwar Japan

SARAH KOVNER
"A path-breaking work of Japanese history using a broad range of sources from Japanese, American, and British Commonwealth archives. This book will serve as the base line for studies in the history of sex work in postwar Japan for many years to come."

—William Johnston,
Wesleyan University

Studies of the Weatherhead East Asian Institute, Columbia University

The Hierarchies of Slavery in Santos, Brazil, 1822–1888

IAN READ

"A pioneering work, standing out for its analysis of urban slavery from multiple angles and for its use of such a wide variety of sources."

—B.J. Barickman,
University of Arizona

Theater of State

Parliament and Political Culture in Early Stuart England

CHRIS R. KYLE

"Kyle frames the demotics, theatrics, and staging of parliamentary speech in terms of the history of communication. No account of early modern politics will be complete without reference to the murmuring, hissing, shouting, and silences that this book reveals."

—David Cressy,
The Ohio State University

Networks in Tropical Medicine

Internationalism, Colonialism, and the Rise of a Medical Specialty, 1890–1930

DEBORAH J. NEILL

"An important and original argument about the interplay of nationalism and internationalism in the European colonial project. [This book] shows how the rise of international organizations continued significant aspects of the formal colonial rule that they also displaced."

—Andrew Zimmerman,
George Washington University

A Jewish Voice from Ottoman Salonica

The Ladino Memoir of Sa'adi Besalel a-Levi

Edited by

ARON RODRIGUE and

SARAH ABREVAYA STEIN

Translation, Transliteration, and Glossary by ISAAC JERUSALMI

"A book to read for the sheer pleasure of it and an accessible way to engage students new to the history of Ottoman Jews."

—Barbara Kirshenblatt-Gimblett,
New York University

Stanford Studies in Jewish History and Culture

Transformative Beauty *Art Museums in Industrial Britain*

AMY WOODSON-BOULTON

"This book provides an important new view of the development of art galleries in three industrial cities: Birmingham, Manchester, and Liverpool. [It] will add significantly to the literature on museums, art, culture, and urban development."

—Anne Rodrick,
Wofford College

Writing Mexican History

ERIC VAN YOUNG

"I read Eric Van Young's book with great pleasure. His voice is the most distinctive of any of our top colonialists, and his authority in the field is indisputable."

—Margaret Chowning,
University of California
at Berkeley

New from ILLINOIS

The War of 1812

A Forgotten Conflict

DONALD R. HICKEY

Bicentennial Edition

This comprehensive history of the War of 1812, called "the definitive study," by the *Journal of American History*, has been thoroughly revised for the 200th anniversary of the conflict.

Illus. Paperback \$24.95

Illinois in the War of 1812

GILLUM FERGUSON

"Often referred to as the 'forgotten' war, the War of 1812 was in fact the final chapter of our country's war for independence. This indispensable history commemorating our nation's early history will engage scholars as well as lay readers."—James A. DeGroff Jr., President-elect, Illinois Society of the War of 1812

Illus. Hardcover \$34.95

The 1933 Chicago World's Fair

A Century of Progress

CHERYL R. GANZ

"Well researched and beautifully illustrated."—*Journal of Illinois History*

Illus. New in Paperback \$21.95

Equal Time

Television and the Civil Rights Movement

ANIKO BODROGHKOZY

Brings to the foreground network news treatment of now-famous civil rights events to reveal how entertainment programmers sought to represent a rapidly shifting consensus on what "blackness" and "whiteness" meant and how they now fit together.

Illus. Hardcover \$50.00

Ghost of the Ozarks

Murder and Memory in the Upland South

BROOKS BLEVINS

"Does an outstanding job of retelling the ins and outs of this fantastic and entertaining story—the sensationalism of the press, the charges of rape, peonage, and privilege, the dramatic trial, and even the reappearance of the murder victim."

—Michael Pierce, associate editor, *Arkansas Historical Quarterly*

Illus. Hardcover \$29.95

African or American?

Black Identity and Political Activism in New York City, 1784–1861

LESLIE M. ALEXANDER

"[Alexander's] survey of black leadership is excellent, her sensitivity to local black politics is admirable, and her tracing of the varied black investment in emigrations is . . . correct and adds to our understanding of antebellum reform and nationalism."

—*American Historical Review*

Illus. New in Paperback \$28.00

Lincoln's Political Generals

DAVID WORK

"Enjoyable and useful."

—*Journal of American History*

Illus. New in Paperback \$19.95

The History of Communication

The Rise and Fall of Early American Magazine Culture

JARED GARDNER

"An ambitious reimagining of magazine culture. . . . Under Gardner's careful attention, however, the early national period emerges as a time of extraordinary periodical experimentation."—Patricia Okker, author of *Social Stories: The Magazine Novel in Nineteenth-Century America*

Illus. Hardcover \$50.00

SHAPING HISTORY

Inventing George Washington

America's Founder, in Myth and Memory

Edward G. Lengel

"Lengel uses meticulous research—and lively wit—to separate the myths from the reality. Along the way, he reveals our competing desires to glorify and humanize one of the most important and complex figures in our nation's history. Highly recommended."

—*Library Journal*

Harper: 978-0-06-166258-4 (hc)
\$25.99 (\$28.99 Can.) • 272 pages

The Partnership

Five Cold Warriors and Their Quest to Ban the Bomb

Philip Taubman

"Taubman has . . . unlocked the history of the war we never had—a full or even limited nuclear exchange. This book examines the greatest threat of our time and the extraordinary effort of five key cold warriors to overcome it."

—*Bob Woodward*

Harper: 978-0-06-174400-6 (hc)
\$29.99 (\$33.99 Can.) • 496 pages

The Clockwork Universe

Isaac Newton, The Royal Society, and the Birth of the Modern World

Edward Dolnick

"A character-rich historical narrative."

—*Wall Street Journal*

Harper Perennial: 978-0-06-171952-3 (pb)
\$16.99 (21.99 Can.) • 416 pages

The Quiet World

Saving Alaska's Wilderness Kingdom, 1879 - 1960

Douglas Brinkley

"Brinkley carves well-known figures with the tools of a skilled biographer. . . . This volume is required reading for anyone even mildly interested in the antecedents to U.S. environmental policy in the 21st century."

—**Los Angeles Times**

Harper Perennial: 978-0-06-200597-7 (pb)

\$18.99 (\$21.99 Can.) ■ 592 pages

American Uprising

The Untold Story of America's Largest Slave Revolt

Daniel Rasmussen

"A deeply researched, vividly written, and highly original account of the largest slave revolt in the nineteenth century U.S."

—**Eric Foner**

Harper Perennial: 978-0-06-199522-4 (pb)

\$15.99 (\$19.99 Can.) ■ 288 pages

She-Wolves

The Women Who Ruled England Before Elizabeth

Helen Castor

"Makes one gasp at the brutality of medieval power struggles—and at the strength and vitality of the women who sought to wield royal power."

—**Financial Times**

Harper Perennial: 978-0-06-143077-0 (pb)

\$16.99 (\$21.99 Can.) ■ 496 pages

Rich and vivid social history, designed for understanding

Understanding Western Society: A Brief History combines compelling stories of everyday life with innovative pedagogy that helps students to focus as they read, to think like historians, and to study effectively for exams. Over 30% shorter than its parent text, *A History of Western Society*, this affordable book's cutting-edge scholarship ties social history to the broad sweep of politics and culture.

Beyond Our Means

Why America Spends While the World Saves

Sheldon Garon

"*Beyond Our Means* shows that we need more than economics and psychology to determine how societies save and spend. Garon reveals the history of farsighted reformers, politicians, and bankers who actively shaped the norms, incentives, and institutions that turned rising earners into savers. He delivers strong lessons for those who worry about today's overspent America."

—Jonathan Morduch, New York University

Cloth \$29.95 978-0-691-13599-1

Roosevelt's Lost Alliances

How Personal Politics Helped Start the Cold War

Frank Costigliola

"This is a terrific book. Fluidly written, cogently argued, and supported by superb research, it addresses a fundamental yet underexamined dimension of both the World War II Grand Alliance and the origins of the Cold War: the personalities as well as the personal relations of Churchill, Stalin, and Roosevelt."

—Richard H. Immerman, Temple University

Cloth \$35.00 978-0-691-12129-1

The 1970s

A New Global History from Civil Rights to Economic Inequality

Thomas Borstelmann

"Keeping contemporary history timely and accessible, Borstelmann shows the impact of 1970s politics, culture, and religion on the following decades. . . . The author's sterling commentary on the rise of the feminist movement, the decline of the Soviet empire, and the New Christian right's courtship of Capitol Hill sets this book apart from other surveys of the 'Me Decade.'"

The French Way

How France Embraced and Rejected American Values and Power

Richard F. Kuisel

"With elegant and sleek prose, Kuisel tells the forgotten history of France's perceptions of the United States in the 1980s and 1990s. He vividly paints the portrait of a France actively seeking to adopt American culture and techniques, while at the same time trying to adapt, resist, and compete with the overpowering ally. A pleasure to read."

Crossroads and Cultures A History of the World's Peoples

Bonnie G. Smith, *Rutgers University*

Marc Van De Mieroop, *Columbia University*

Richard von Glahn, *University of California, Los Angeles*

Kris Lane, *Tulane University*

 We know you have a budget: consider this text in a loose-leaf or e-book version.

Crossroads and Cultures incorporates the best current cultural history into a fresh and original narrative that connects global patterns of development with life on the ground. Students benefit from a strong pedagogical design, abundant maps and images, and special features that emphasize the narrative's attention to the lives and voices of the world's peoples.

Cover Illustration: This imposing head, known as the "Great Biyeri," is the work of an unidentified sculptor from the Fang people of present-day Gabon, and has become an icon of what once would have been called primitive art. The thick accumulation of palm-oil libations on its surface indicates how important it was to its original owners, who placed it atop a cylindrical bark box containing the bones of distinguished ancestors. The circumstances under which the head was taken from the former colony of French Equatorial Africa are unknown. Its first documented owner outside of Africa was the Chilean poet Vicente Huidobro, who purchased it in 1916, when he was living in Paris; by the mid-1920s, it had become the centerpiece of the art dealer Paul Guillaume's famous collection of so-called *art nègre*. In "Surface Tensions: Empire, Parisian Modernism, and 'Authenticity' in African Sculpture," John Warne Monroe describes the context in which African objects made journeys like this one. The idea of primitive art, he argues, was a revealing and paradoxical consequence of a distinctively Parisian interaction between aesthetic modernism and colonial power. Image reproduced by permission of the Metropolitan Museum of Art, the Michael C. Rockefeller Memorial Collection, Bequest of Nelson A. Rockefeller, 1979.

The American Historical Review is the official publication of the American Historical Association and appears in February, April, June, October, and December of each year. The journal is published by The University of Chicago Press, 1427 E. 60th Street, Chicago, IL 60637 on behalf of the American Historical Association, 400 A St. SE, Washington, DC 20003 (phone 202-544-2422). Our editorial offices are located at Indiana University, where our mailing address is 914 E. Atwater Ave., Bloomington, IN 47401. Phone: 812-855-7609; fax: 812-855-5827; e-mail: ahr@indiana.edu. Our web address is www.americanhistoricalreview.org. The *AHR* is sent to members of the American Historical Association and to institutions holding subscriptions.

Membership dues: Contributing Member, \$300 annually; for incomes over \$150,000, \$215; over \$100,000, \$185; over \$70,000, \$158; over \$45,000, \$117; over \$25,000, \$86; under \$25,000, \$47; for students, \$40; for Early Career Members (available only after three years of student membership), \$50; for teachers of K-12 (AHA/SHE) without the *AHR*, \$72; for K-12 with the *AHR*, \$103; for joint members or spouse/partners, \$50; for associate members (nonhistorians), \$89. A life membership is \$3,500. Non-U.S. members add \$20 for postage. The proportion of dues allocated to the *AHR* is \$17. Members also receive *Perspectives on History* and the program of the annual meeting.

Further information on membership is available at <http://www.historians.org/>, or at the back of the journal on page 1(a), immediately preceding the advertisements.

Institutional subscription rates: Institutional print + electronic and electronic-only subscriptions to the *AHR* are available in 2012 through JSTOR's Current Scholarship Program and include unlimited online access to current issues as well as the *AHR*'s full back run. Rates are tiered according to an institution's type and research output: \$347 to \$694 (print + electronic), \$287 to \$577 (electronic-only). Institutional print-only is \$347. Additional taxes and/or postage for non-U.S. subscriptions may apply. Single copies of individual issues published within the past three years are available from the University of Chicago Press for \$83 per copy; copies of issues older than three years may be purchased from Periodicals Services Company, 11 Main St., Germantown, NY 12526. For more information, please visit <http://www.journals.uchicago.edu/AHR/order.html>.

Manuscript submissions: For basic information on the submission and publication of manuscripts, see p. 1(a) at the back of the journal, immediately preceding the advertisements. Full guidelines and policies can be found at <http://www.americanhistoricalreview.org> or will be sent upon request. **Unsolicited book reviews are not accepted.**

In This Issue

The April issue contains five articles on subjects that range chronologically from the Middle Ages to the twentieth century and topically from medieval scholasticism and disputes over property in eighteenth-century North America to U.S. politics after the Civil War, the slave trade in the nineteenth-century Mediterranean, and African art in interwar Paris. There are also three featured reviews, followed by our usual extensive book review section. "In Back Issues" draws attention to articles and features in the *AHR* from one hundred, seventy-five, and fifty years ago.

Articles

In "Toward a Cultural History of Scholastic Disputation," **Alex J. Novikoff** tackles one of the most fundamental and characteristic features of medieval learning, arguing that it had large implications for the cultural history of the period. He begins by examining how scholastic disputation has traditionally been examined, its relation to the form of the dialogue, and how the two might be examined together in light of disputation's far-reaching effect on medieval society. Deploying an array of source material from the eleventh to the thirteenth century, the article distinguishes five elements of a medieval culture of disputation, ranging from the monastic environment of Anselm and his followers to polyphonic music, debate poetry, and Jewish-Christian disputations. In examining how dialogue escaped its literary origin and passed from an idea among few to a cultural practice among many, Novikoff offers a mode of cultural history based on the passage of ideas into practices.

In "Commons and Enclosure in the Colonization of North America," **Allan Greer** highlights the importance of common property for Spanish, English, and French settlers of colonial North America, as well as for the indigenous peoples they displaced. Whereas many historians, following the lead of John Locke, tend to equate colonization with the privatization of an open commons, evoking something resembling an overseas extension of the enclosure movement, Greer argues that a colonial commons in various guises played a central role in wresting control of land from the possession of natives. In New Spain, New England, the Chesapeake, and to a much lesser degree New France, livestock ranged freely, much to the detriment of Indian property and Indian subsistence. The confrontation of the indigenous commons and the colonial commons typically resulted in the triumph of the latter, thus clearing

the way for a later stage of enclosure and settler private property in land. While Greer focuses on the early modern period, he also suggests that a similar pattern of clashing commons can be discerned in the nineteenth-century histories of South Africa, Australia, and the western plains of North America.

In "The Mexicanization of American Politics: The United States' Transnational Path from Civil War to Stabilization," **Gregory P. Downs** treats post-bellum history not as a time of reconciliation and stability but rather as a period haunted by fears that the end of the Civil War might lead only to more civil conflict. This concern was expressed in a now-forgotten but then-common discourse evoking the historical example of Mexico as a harbinger of permanent instability as the result of civil war. Recasting the contested 1876 U.S. presidential election as a process of stabilization, Downs recovers the prevalence of the Mexican example, which served both to give voice to popular anxiety and to coax politicians toward a peaceful resolution of the crisis. By evoking contemporary fears of the possibility of state collapse, he provides an image of a strangely vulnerable nineteenth-century United States. He also critiques conventional nationalistic accounts that paradoxically have made the Civil War proof of the impossibility of future U.S. civil wars. Finally, the article suggests the relevance of transnational history to the study of domestic politics.

In "The Children of the Desert and the Laws of the Sea: Austria, Great Britain, the Ottoman Empire, and the Mediterranean Slave Trade in the Nineteenth Century," **Alison Frank** shows that Austrian ships were used by slave traders to transport enslaved Africans from Alexandria and other African ports to Constantinople and other Ottoman cities on the Mediterranean from the 1840s through the 1870s. Although Ottomanists and Africanists have long known that the Mediterranean was rife with slaving throughout the nineteenth century, its history has been largely overshadowed by the story of the Atlantic slave trade, on the one hand, and nineteenth-century abolitionism, on the other. Frank thus suggests a shift in the timeline of slavery and antislavery to the very long period of ongoing slaving after the so-called abolition of the Atlantic slave trade in the first decade of the nineteenth century. Her article shows how the politics of abolition and the logic of free trade forced Austria to confront the limitations of its legal theories of freedom and liberal understandings of self-interest. Austria's conviction that it was not implicated in the slave trade left it ill-equipped to handle the complexities of slavery once its involvement was exposed.

In "Surface Tensions: Empire, Parisian Modernism, and 'Authenticity' in African Sculpture, 1917–1939," **John Warne Monroe** looks closely at the reception of African sculpture in the interwar period in order to reassess what has been a thorny theoretical problem among cultural anthropologists and art historians: the complex and vexed capacity to appreciate so-called "traditional" objects from Africa, Oceania, and the Americas as art in the Western sense. He notes that what can seem from one angle to be a condescending emphasis on the Western connoisseur's "eye" in judging the value of exotic objects can seem from another to be a powerful means of celebrating the creative achievements of peoples and cultures previously written

off in racist terms. Rather than taking sides on this question, his article builds on the insights of the new colonial history to show how the coexistence of these two points of view can be seen as a legacy of the historical situation in which the idea of primitive art first emerged. This ambivalent aesthetic category, he argues, was shaped by the unique conditions of interwar France, a society distinguished both by its paradoxical attempt to function as an imperial republic and by the global influence its avant-garde exerted in cultural matters. Considered from this perspective, the emergence of the idea of primitive art suggests a new way of thinking about aesthetic modernism, its spread across geographic and cultural borders, and its relation to empire.

The June issue will contain an article on vaccine testing in interwar Algiers and an *AHR* Forum on "Historiographical 'Turns' in Critical Perspective."

In Back Issues

In the hope of encouraging readers to dip into the long history of scholarship contained in the pages of the *American Historical Review* (now in the 117th year of its publishing history), and to take advantage of the digital availability of this archive to most readers, the *AHR* editors offer a look back at issues from one hundred, seventy-five, and fifty years ago. What follows is not a comprehensive survey of the contents of those issues, but rather a glance at some of the articles and other features that might be of interest, or even of use, today.

Volume 17, Number 3 (April 1912)

The five articles in the April 1912 issue remain within the orbit of North American-British history, and are largely confined to the chronological limits of the seventeenth, eighteenth, and nineteenth centuries. Certainly the most lively, though also the most narrow in scope, is "The Trent Affair," by Charles Francis Adams, president of the American Historical Association in 1901 and the direct descendant of two U.S. presidents. His brother was the well-known historian and author Henry Adams. From 1884 to 1890, Charles Francis Adams led the Union Pacific Company and thereby, as Richard White documents in his 2011 book *Railroaded: The Transcontinentals and the Making of Modern America*, played a central role in the creation of a transcontinental railroad system. "The Trent Affair" recounts an episode from the first year of the Civil War, which saw a Union warship intercept a British vessel, the *Trent*, carrying two Southern envoys in transit to London to lobby for the interests of the Confederacy. Adams's article is a rather pedestrian, blow-by-blow narrative of the story, focusing mostly on the communications and commentary, both public and private, voiced by American and British officials and observers over the legitimacy, legality, and wisdom of the U.S. captain's actions. If his account is less than insightful or novel, it is personal and judgmental, given to broad characterizations and critical pronouncements. One passage immediately leaps off the page, at least for a twenty-first-century reader: Adams recalls his first exposure to the affair as news of the *Trent*'s capture reached Boston several weeks after it happened. (He was a twenty-six-year-old lawyer working for Richard Henry Dana, Jr., the expert in maritime law best known as the author of *Two Years before the Mast*.) Throughout the account, he indulges in the sort of psychological commentaries that most present-day historians find suspect, if not downright inappropriate. Interestingly, most redound

to the discredit of the Unionists. Noting the public pronouncements in the press, he writes, "they are more suggestive of the incoherences [*sic*] of the inmates of an insane asylum than of any well-considered expression of the organs of a sober and policed community." When news of the ship's capture became known, "the United States went crazy," he writes. To be sure, he expresses relief that "popular effervescence" has finally waned, noting with axiomatic (self)-assurance, "An Anglo-Saxon community rarely goes daft permanently." But if his article is marked by a superiority and condescension with regard to the collective passions provoked by this affair—which it certainly is—he also implicates himself, at least retrospectively. Adams's father was ambassador to the Court of St. James during the Civil War. With a laconic lack of precision that only sharpens the irony, he writes, "two of the sons of Mr. Adams[,] in private correspondence, foamed at the mouth, swearing inextinguishable hatred of Great Britain and asseverating an unalterable determination to bide their time for revenge on that arrogant and overbearing nationality." Adams's article is thus a brief for politics guided by reason and interests, not passion or enthusiasm—statecraft "worthy of a Cavour or a Bismarck," he notes tellingly. But it also reflects his generation's own reassessment of the passionate commitments and certitudes that guided their youth.

Volume 42, Number 3 (April 1937)

Probably the most interesting article in the April 1937 issue is an essay on historical thinking co-authored by the renowned historian (and president of the AHA in 1933) Charles A. Beard and the German exile scholar Alfred Vagts (who was also Beard's son-in-law). "Currents of Thought in Historiography" begins with a long retrospective look at the demise of Rankean historicism, continues with an even longer consideration of the new "historism" of Friedrich Meinecke based on his just-published book *Die Entstehung des Historismus* (1936), and then concludes with a challenge to American historians to embrace a more sophisticated and reflective understanding of the theory and practice of history. Their analysis of Meinecke's work is erudite and informed, providing readers of the journal with an appreciative interpretation of the German scholar's approach to historiography, which, in this book, at least, emphasizes its deep historical roots. Their patient exposition, which acknowledges the contribution of other historians, especially Benedetto Croce, seems to be guided by the implicit assumption that U.S. historians remain largely ignorant of European developments in historiography, because of either their limited linguistic capabilities or a willful ignorance based on intellectual provincialism. Indeed, their condescension is ill-disguised. While acknowledging "that widening circles of European historical criticism and constructive efforts will reach these shores," they also posit a significant time lag, suggesting with some exasperation that "the problems that disturbed Croce about 1912 may become insistent in the United States about 1950." But they are far from advising a slavish adoption of European thinking, however much they lament the desire among U.S. scholars "to escape . . . the imputation that they themselves have some philosophy or scheme of controlling values when they cry out that they have none." They insistently reject biological or other scientific vocabulary

and concepts in historical thinking, declaring, "if historiography is to get at the realities of its subject matter, it must firmly discard such words and employ a terminology appropriate to, corresponding to, its own subject matter." The overriding theme of the essay, however, seems to be a sophisticated defense of the relativistic nature of historical inquiry, here understood as simply rooted in the individuality of every historian. "Each historian does have his 'scheme of reference,' or his operating conception of values, truth, and importance . . . no matter how vehemently he denies its existence." But they firmly discount the dispiriting assumption that relativism leads to skepticism, intellectual chaos, or worse, offering the interesting argument that "there are not available as many distinct schemes of reference as there are historians . . . both the number and character of the frames of reference are knowable." Moreover, these schemes, they insist, possess "common features" and are "open to practical testing in the movement of history as time unfolds." And, lest one suspect that relativism somehow implies a weakening of professional practice, they declare, "Knowledge is still to be obtained by the methods of bibliography, scrutiny, authentication, and verification." Finally, Beard and Vagts project an optimistic vision of historical practice, which they say "has been widened until it reaches toward the very borders of culture in all its manifestations." The result, they conclude, bodes well for the contemporary relevance of history; for these Progressive historians, this is indeed axiomatic. If the histories produced "are full, accurate, comprehensive, systematic—the fruits of tireless industry and a bold conception of historical obligations—so much the better for grand public policy."

Volume 67, Number 3 (April 1962)

There are two articles in the April 1962 issue that are notable in broaching large topics of general concern. In "Distinctive Traits of Western Civilization: Through the Eyes of Western Historians," Gerhard Masur, a German-educated historian of Europe and Latin America, offers a learned though also somewhat brisk survey of works of universal history from Bossuet and Voltaire to Weber and Toynbee, with stops along the way to acknowledge those thinkers—Hegel, Marx, Tocqueville, Burckhardt, Croce, Spengler, and others—who, while they did not all write history in this mode, nevertheless contributed to the conception of the history of the West as synonymous with history *tout court*. This indeed seems to be his point: that, owing in part to the legacy of Christianity, the history of the Christian West has been understood as describing the history of all of humanity. His conclusion, however, suggests the possibility of a departure from this restrictive understanding, a possibility that could be realized only "by a generation of historians for whom the unity of the historical world had become an experienced and acknowledged destiny." That possibility was now: "There can be little doubt that such an experience is, if not yet an established fact, at least in the making." Masur, then, is a prophet of world history—a global account of the past, moreover, that would discard "the Christian pattern of the oneness of history which it has consciously or unconsciously applied for so long." And his prognosis comes with a warning against ethnocentrism: "We would fail utterly in our efforts at comprehension were we to project once again our own stan-

dards on cultural entities that have followed a different rhythm and different ethical and human standards.”

Like Masur's article, John Higham's essay, "Beyond Consensus: The Historian as Moral Critic," is an argument for a new understanding of historical practice, in this case a reasoned plea for historians to recover the politically engaged and morally relevant stance that characterized the Progressive historians of the earlier part of the twentieth century. A well-regarded U.S. historian who focused mostly on immigration, Higham clearly has little respect for the school of consensus history, which he sees as currently dominant in the profession; for him, not only is it characterized by an innate conservatism, but it has failed to produce "any master works of great strength and enduring significance." "Now that the progressive impulse is subsiding," he laments, "scholarship is threatened with a moral vacuum." But Higham harbors few illusions as to either the desirability or the practicality of recovering the spirit of progressivism among historians of his day. Rather, he urges a turn toward "moral history," as distinguished from "causal history." Moral history does not judge, but neither does it coolly and dispassionately analyze. Instead, it strives to capture the subjective reality of historical actors, the "moral tone" of an era, the conflicting values in play, and the ethical dimensions of choice at crucial moments. If his prescription strikes one as imprecise, this impression is only compounded by his suggestion that historians look for inspiration not primarily to scholars of history, but to contemporary literary critics such as F. O. Matthiessen, Lionel Trilling, and Henry Levin. His models are indeed exalted: "the moral critic must learn from the great dramatists, like Shakespeare, from novelists, like Tolstoy, and from the matchless example of Thucydides." Higham's vision for a new kind of history was certainly ambitious—an attempt to recover not merely the politically and socially engaged history of his admired forebears, the Progressives, but history as all-encompassing and engaging as art: "an intensive, concrete reflection upon life, freed from academic primness, and offering itself as one of the noblest, if also one of the most difficult and imperfect, of the arts."

Toward a Cultural History of Scholastic Disputation

ALEX J. NOVIKOFF

THE SCHOLASTIC DEBATES OF MEDIEVAL AUTHORS have not fared well among historians. As a subject, they are treated seriously by philosophers and theologians interested in particular points of logic or doctrine, selectively by specialists of medieval learning who focus on particular authors or key ideas, and hardly at all by historians concerned with the wider cultural fabric of medieval society. Popular images of scholastic argumentation have only isolated the field further. From Renaissance humanists and luminaries in the age of reason to general assumptions today, these debates have routinely been condemned as medieval vestiges of an anti-intellectual world: pedantic at best, pointless at worst.¹ Faced on the one hand with the pejorative connotations of “scholastic” and “quodlibet,” we are on the other hand endlessly entreated these days to enter into “dialogue” with others, a discourse that both reflects and presupposes a post-Enlightenment (perhaps even postmodern) engagement with the world.² Marginalized and misunderstood, the history of medieval dialogue and debate is in need of a fresh assessment.

A preliminary version of this article was delivered as a paper in February 2008 at the Mellon-Sawyer Seminar on Disputation at UCLA’s Center for Medieval and Renaissance Studies. I am grateful to the organizers, Brian Copenhaver and Calvin Normore, for the invitation to speak and to the participants for their feedback. I especially thank Daniel Hobbins, James J. Murphy, Benjamin Nathans, Albert B. Novikoff, Thomas B. Payne, Edward Roesner, Jennifer Saltzstein, and my wonderful colleagues in the Rhodes History Department’s “Historians at Work” seminar. For advice and encouragement in my earliest research on this topic, I thank Edward Peters, Rita Copeland, E. Ann Matter, Anna Sapir Abulafia, Roger Chartier, and Anthony Grafton. My deepest gratitude is offered to the six anonymous reviewers for the *AHR* for their critical and constructive insights, and to the editors of the journal, who handled this article with such care and judiciousness: Konstantin Dierks, Sarah Knott, Jane Lyle, and especially Robert Schneider. I wish to recognize the generous support of the Rhodes College History Department in helping to cover the cost of the images.

¹ Many authors of the Middle Ages criticized or satirized the logic of the schools and universities, but it was the humanists of the Italian Renaissance who were among the first to associate scholasticism with a distinctly medieval and backward-looking outlook, a view that has persisted ever since. The image passed down in the English-speaking world is well summed up by John Locke, *Essay Concerning Human Understanding* (1690), bk. III, chap. 10, para. 9: “For, notwithstanding these learned disputants, these all-knowing doctors, it was to the unscholastic statesman that the governments of the world owed their peace, defence, and liberties . . . Nevertheless, this artificial ignorance, and learned gibberish, prevailed mightily in these last ages, by the interest and artifice of those who found no easier way to that pitch of authority and dominion they have attained, than by amusing the men of business, and ignorant, with hard words, or employing the ingenious and idle in intricate disputes about unintelligible terms, and holding them perpetually entangled in that endless labyrinth.” The parody of scholastic debate finds its most familiar caricature in the proverbial question of how many angels can dance on the head of a pin, a satire on medieval angelology (and scholasticism in general) that likewise seems to be early modern in origin.

² “Dialogue” and “dialogic” are buzzwords in many corners of modern political and intellectual discourse. In his influential, and difficult to characterize, collection of essays *The Dialogic Imagination*,

Serious challenges remain to understanding the place of scholasticism in the broader culture of the High Middle Ages. A particular challenge is posed by the origins and development of disputation, the formalized debate techniques of the medieval university, whose existence is always assumed but whose impact beyond the academic environment has not been adequately explored. As a leading scholar of medieval rhetoric has put it, “the scholastic emphasis upon thesis, counterthesis, and listing of arguments must have had its effects on all kinds of discourse. It would be difficult to name a more pervasive influence with so little study given to its effect.”³ An especially vexed question is the relationship between the dialogue genre, a popular literary form in the twelfth century, and the dialectical methods of scholastic disputation. Giles Constable has stated the problem thus: “Dialogue and dialectic—the science of doubt as it has been called—played a fundamental part in the thought processes of the eleventh and twelfth centuries. It underlay the discipline of disputation that developed in the schools and was applied to almost every branch of intellectual inquiry.”⁴ Curiously, no scholar has yet pursued the history of dialogue and disputation along these other branches—what we might call their cultural history. The centrality of scholastic disputation to medieval learning has never been doubted; the problem in charting its history is where to begin and in what direction to proceed. To date, the topic has more commonly been treated as a subsidiary and finite category of medieval logic in connection with individual authors or schools.

Identifying disputation as a historical problem raises a fundamental question: Can the scholastic argumentation embodied in these dialogues and disputations (real or literary) shed light on deeper cultural mutations within medieval civilization? The answer, it seems, is yes. Scholastic disputation arose in the late eleventh century in connection with new developments in monastic learning, and over the course of the next two centuries, it developed systematically and centrifugally from France and Italy to become a formative practice in the scholastic culture of medieval Europe, eventually transcending the frontier between private and public spheres and extending to multiple levels of society. Not only was the triumph of disputation one of the signal achievements of the medieval university curriculum, but its evolution and application beyond the confines of strictly academic circles (in debate poems and polyphonic music, and more particularly in the Christian confrontation with Jews and Judaism) suggests that the rise of medieval disputation can offer historians an instructive model of cultural history: specifically, it illustrates how dialogue escaped its literary origin and passed from an idea among few to a cultural practice among many.

The term “cultural history” is as elusive as it is seductive. Frequently invoked but rarely defined, cultural history in the early modern period is often identified with a combination of anthropological and historical approaches to understanding popular

trans. Caryl Emerson and Michael Holquist (Austin, Tex., 1981), literary theorist Mikhail Bakhtin saw an important linguistic and semiotic shift in the rise of the “dialogical” novel of the eighteenth and nineteenth centuries, which he contrasted with the ancient epic. For recent reflections on the opposition between medieval and modern, see Carol Symes, “When We Talk about Modernity,” *American Historical Review* 116, no. 3 (June 2011): 715–726.

³ James J. Murphy, *Rhetoric in the Middle Ages: A History of Rhetorical Theory from St. Augustine to the Renaissance* (Berkeley, Calif., 1974), 102 n. 47. I am grateful to the author for bringing this passage to my attention.

⁴ Giles Constable, *The Reformation of the Twelfth Century* (Cambridge, 1996), 130.

cultural traditions using a variety of narrative texts or nonverbal forms of communication (public rituals, material texts, the body, and the like).⁵ Among French historians, the study of medieval “mentalities” that flourished in the last third of the twentieth century was an attempt to access the shared ideas and worldviews of the medieval mind by investigating its cultural matrix, described by one cultural historian as a “historical anthropology of ideas.”⁶ Previous attempts at medieval cultural history have therefore often consisted of dissecting a single author or concept in order to get at the larger surrounding culture. What has not been pursued in any great detail is the evolution and diffusion of that most scholastic method itself—disputation—especially its extension into other, related spheres of cultural activity that did not immediately depend on the schools in which it first developed. An important exception is Erwin Panofsky’s short but provocative *Gothic Architecture and Scholasticism* (1951), which attempted to correlate the ordered and harmonious spaces of thirteenth-century cathedrals to the organizational structure of scholastic thought.⁷ A comparative model of a different sort led another scholar to suggest that elements of the scholastic method of the twelfth century were influenced by earlier Islamic colleges, which also gave prominence to a *pro* and *contra* form of argumentation.⁸ Evoking loose parallels between thought and architecture or between two different cultural traditions is one thing; tracing the organic evolution of an essential mode of analysis in a single culture is quite another. A new approach to scholastic learning is needed.

Studies of the medieval mind or the medieval “imagination” have been undertaken before, and in their most successful forms they have greatly enriched our understanding of medieval society by expanding intellectual and theological concepts into more culturally relevant categories.⁹ In the case of disputation, however, one

⁵ As just one example of the plurality of definitions offered, see Peter Burke, *Varieties of Cultural History* (Ithaca, N.Y., 1997). For an attempt at a cultural history of medieval France, see Michel Sot, Jean-Patrice Boudet, and Anita Guerreau-Jalabert, *Le Moyen âge* (Paris, 1997), where disputation is mentioned in passing (e.g., 127, 145, 176) but not discussed at any length.

⁶ See Peter Burke, “Strengths and Weaknesses of the History of Mentalities,” in Burke, *Varieties of Cultural History*, 162–182, here 163. The textbook of sorts for the history-of-mentalities approach is Hervé Martin, *Mentalités médiévales, XI^e–XV^e siècle* (Paris, 1996). For critique and analysis of the French approach, see Roger Chartier, “Intellectual History or Sociocultural History? The French Trajectories,” trans. Jane P. Kaplan, in Dominick LaCapra and Steven L. Kaplan, eds., *Modern European Intellectual History: Reappraisals and New Perspectives* (Ithaca, N.Y., 1982), 13–46. More recently, see Philippe Poirier, *Les enjeux de l’histoire culturelle* (Paris, 2004).

⁷ Erwin Panofsky, *Gothic Architecture and Scholasticism* (Latrobe, Pa., 1951). Panofsky’s now-famous insight was slightly anticipated in a review article by Lucien Febvre, “Histoire des idées, histoire des sociétés: Une question de climat,” *Annales ESC*, no. 2 (1946): 158–161, here 161: “We must not underestimate the role of ideas in history . . . We must show that a Gothic cathedral, the marketplace of Ypres and one of those great cathedrals of ideas such as those Etienne Gilson describes to us in his book are daughters of a single epoch, sisters reared in the same household.”

⁸ George Makdisi, “The Scholastic Method in Medieval Education: An Inquiry into Its Origins in Law and Theology,” *Speculum* 49, no. 4 (1974): 640–661. Most scholars have not been convinced by the argument for an Islamic root to the Western legal tradition, but see more recently John A. Makdisi, “The Islamic Origins of the Common Law,” *North Carolina Law Review* 77, no. i5 (June 1999): 1635–1739.

⁹ Above all, one thinks of the influential studies by Jacques Le Goff, *The Birth of Purgatory*, trans. Arthur Goldhammer (Chicago, 1986); *The Medieval Imagination*, trans. Arthur Goldhammer (Chicago, 1992); and *Intellectuals in the Middle Ages*, trans. Teresa Lavender Fagan (London, 1993). For a discussion of Le Goff’s methodology, see Aaron Gurevich, “Popular and Scholarly Medieval Cultural Traditions: Notes in the Margins of Jacques Le Goff’s Book,” *Journal of Medieval History* 9 (1983): 71–90. The extraordinary scholarship of Caroline Walker Bynum might also be said to move in the cultural-historical direction, and she has on several occasions emphasized the need to go beyond what she calls

of the stumbling blocks to appreciating its cultural dimension is the tendency to freeze it in a moment in time rather than observe its evolution. Individual practitioners and instances of disputation have been studied, but rarely has there been a sustained consideration of the practice itself.¹⁰ In order to uncover the formation of this essential habit of medieval culture, a more profitable approach will be to trace the development of disputation on the frontiers between private and public spheres and between learned and popular audiences. The crossing of these frontiers can best be observed when disciplinary boundaries are blurred and disputation is examined longitudinally across both time and place—the *longue durée*, to borrow a term from the economic historians of the Annales school. Our goal, therefore, is to illustrate how an idea and a literary form originally limited to small intellectual circles in the late eleventh century evolved through multiple stages to become a cultural practice within the larger public sphere in the thirteenth.¹¹ It is in this sense that the study of scholastic disputation, long confined to technical discussions among specialists, offers historians a useful paradigm of cultural history.

“old-style intellectual history.” See Bynum, *The Resurrection of the Body in Western Christianity, 200–1336* (New York, 1995), xvi, and *Wonderful Blood: Theology and Practice in Late Medieval Northern Germany and Beyond* (Philadelphia, 2007), xv–xviii. More recently, see the exemplary study by Daniel Hobbins, *Authorship and Publicity before Print: Jean Gerson and the Transformation of Late Medieval Learning* (Philadelphia, 2009). A sociological approach to medieval thought is D. L. D’Avray, *Medieval Religious Rationalities: A Weberian Analysis* (Cambridge, 2010).

¹⁰ When disputation is singled out for study, it is almost always in the context of the university curriculum, and with scant regard for pre-university or extra-university manifestations. Cf. Olga Weijers, *La “Disputatio” à la Faculté des arts de Paris (1200–1350 environ): Esquisse d’une typologie* (Turnhout, 1995); and Bernardo C. Bazán, John W. Wippel, Gérard Fransen, and Danielle Jacquart, eds., *Les questions disputées et les questions quodlibétiques dans les facultés de théologie, de droit, et de médecine* (Turnhout, 1985). For the use of disputation among individual scholastic authors, see the learned studies by Marcia L. Colish, *Peter Lombard*, 2 vols. (Leiden, 1994); and John W. Baldwin, *Masters, Princes, and Merchants: The Social Views of Peter the Chanter and His Circle*, 2 vols. (Princeton, N.J., 1970). For case studies of individual poets and philosophers of the later Middle Ages, see Georgiana Donavin, Carol Poster, and Richard Utz, eds., *Medieval Forms of Argument: Disputation and Debate* (Eugene, Ore., 2002). A detailed analysis of a famous thirteenth-century Jewish-Christian disputation is Robert Chazan, *Barcelona and Beyond: The Disputation of 1263 and Its Aftermath* (Berkeley, Calif., 1992).

¹¹ The term “public sphere” is admittedly something of a hornet’s nest in modern historiography. Jürgen Habermas noted that his concept of a “bourgeois public sphere” in the eighteenth century did not apply to medieval Europe; Habermas, *The Structural Transformation of the Public Sphere: An Inquiry into a Category of Bourgeois Society*, trans. Thomas Burger (Cambridge, Mass., 1989; original German ed. 1962), 5–12. Medievalists, however, have rightly challenged the presumption that no public sphere at all existed in the Middle Ages. In fact, Habermas’s public sphere was largely based on a caricature of the Middle Ages, not unlike the caricatures of scholastic debates cited above. Recent discussions of premodern publicity range widely, from the symbolic rituals of early medieval assembly politics to late medieval marketplaces, public intellectuals, and legal culture. I employ the term “public sphere” to point to a division between the more cloistered and literary world of monastic learning in the eleventh century and the more public, and indeed performative, sphere of university and extra-university debates in the thirteenth century, as will become clear below. On the semantic difficulties involved in discussing the concepts of “private” and “public” in the Middle Ages, see Peter von Moos, *“Öffentlich” und “privat” im Mittelalter: Zu einem Problem historischer Begriffsbildung* (Heidelberg, 2004); and Shannon McSheffrey, “Place, Space, and Situation: Public and Private in the Making of Marriage in Late-Medieval London,” *Speculum* 79, no. 4 (2004): 960–990. For another attempt at locating a public sphere in the thirteenth century, see the remarkable study by Carol Symes, *A Common Stage: Theater and Public Life in Medieval Arras* (Ithaca, N.Y., 2007). A more radical application of Habermas’s concept is Leidulf Melve, *Inventing the Public Sphere: The Public Debate during the Investiture Conflict (c. 1030–1122)*, 2 vols. (Leiden, 2007), who advances the curious argument that a public sphere existed in the predominantly textual context of the eleventh-century controversy over Investiture but that it then did not reappear until after the Middle Ages.

DEBATE AND ARGUMENTATION ARE as ancient as civilization itself, and perhaps innate to the human mind.¹² Plato knew well that a skillfully crafted dialogue could express what mere lecture notes could not.¹³ Aristotle devoted his *Topics* and *Sophistical Refutations* to the art of forming questions and responses, pioneered the discipline of logic, and was himself the author of several dialogues that are no longer extant. In the legal courts of late Republican Rome, Cicero perfected an art of discourse *in utramque partem* (on both sides of the issue) that became a basic element in classical rhetoric. In his dialogues, Cicero introduced Romans to the chief schools of Greek philosophy and created a Latin philosophical vocabulary that allowed him to follow the Socratic method by raising doubts about the plausibility of some of the most important ideas of the day.¹⁴ Both before and immediately after the rise of Christianity as a state religion, the social competition of public disputation formed an integral part of Roman culture.¹⁵ Early Christians adopted the rhetoric of debate for their own purposes. The New Testament describes Jesus disputing with the elders (Luke 2: 46–47) and Paul disputing with the Jews (Acts 17–18), motifs that would become especially popular in later medieval and Renaissance iconography. In late antiquity, the merging of classical learning and Christianity produced another cultural turn in dialogue and disputation: Augustine introduced in his *Soliloquia* and other writings a meditative inner dialogue with himself, while continuing to dispute publicly with heretics, and Boethius provided in his celebrated dialogue *Consolation of Philosophy* and other theological works a point of departure for the medieval harmony between faith and philosophy.¹⁶ In the centuries after the fall of Rome,

¹² The roles of reason and debate are currently being rethought from the perspective of the cognitive sciences. A recent, and controversial, theory holds that human reason evolved for the purpose of winning arguments in the debating arena. See the positions for and against this theory in *Behavioral and Brain Sciences* 34, no. 2 (April 2011): 57–111. For a précis of this theory, see Patricia Cohen, “Reason Seen More as Weapon Than Path to Truth,” *New York Times*, June 14, 2011. For ancient models of literary debate, see G. J. Reinink and H. L. J. Vanstiphout, eds., *Dispute Poems and Dialogue in the Ancient and Mediaeval Near East: Forms and Types of Literary Debates in Semitic and Related Literatures* (Leuven, 1991).

¹³ On Plato’s use of dialogue, see Charles H. Kahn, *Plato and the Socratic Dialogue: The Philosophical Use of a Literary Form* (Cambridge, 1996); and Kenneth M. Sayre, *Plato’s Literary Garden: How to Read a Platonic Dialogue* (Notre Dame, Ind., 1995). For a convergence of philosophical ideas and music similar to what is attempted in this article, see J. B. Kennedy, *The Musical Structure of Plato’s Dialogues* (Durham, N.C., 2011).

¹⁴ See Robert Gorman, *The Socratic Method in the Dialogues of Cicero* (Wiesbaden, 2005). Cicero’s dialogues, in particular, circulated widely because the early Church declared him a “virtuous pagan,” and consequently many of his works were deemed worthy of preservation. Indeed, more works survived in the Middle Ages by Cicero than by any other Latin author. See John C. Rolfe, *Cicero and His Influence* (London, 1923); and Ettore Paratore, “Cicerone attraverso i secoli,” in Luigi Alfonsi et al., *Marco Tullio Cicerone* (Florence, 1961), 237–244, for indications of their medieval manuscript tradition. Cicero’s moral philosophy proved especially influential in the twelfth century. See, for instance, the following studies by Philippe Delhaye: “La place de l’éthique parmi les disciplines scientifiques au XII^e siècle,” in *Miscellanea moralia in honorem eximii domini Arthur Janssen, universitatis catholicae in oppido lovaniensi professoris*, 2 vols. (Louvain, 1948), 1: 29–44; “L’enseignement de la philosophie morale au XII^e siècle,” *Medieval Studies* 11 (1949): 77–99; and “Une adaptation du ‘De officiis’ au XII^e siècle: Le ‘Moralium dogma philosophorum,’” *Recherches de théologie ancienne et médiévale* 16 (1949): 227–258, 17 (1950): 5–28.

¹⁵ Richard Lim, *Public Disputation, Power, and Social Order in Late Antiquity* (Berkeley, Calif., 1995).

¹⁶ See the learned remarks about Augustine’s dialogues in Brian Stock, *Augustine the Reader: Meditation, Self-Knowledge, and the Ethics of Interpretation* (Cambridge, Mass., 1996), 130–137. Dialectic was of paramount importance to Augustine throughout his works, and in *De doctrina Christiana* 2.31.48–

where scholars have begun to highlight the role of Christianity in this so-called “end of dialogue,” Augustine and Boethius served as models for the medieval continuity of dialogue in a monastic and contemplative setting.¹⁷ This master narrative of the decline of literary dialogue and public disputation has been especially attractive to scholars of the Renaissance, who have repeatedly minimized the role of both during the Middle Ages, all while accentuating the “culture of dialogue” or “culture of debate” that humanism allegedly rediscovered.¹⁸ Like the abusive stereotypes of scholastic thought, this assumption correspondingly calls for revision.

2.35.48 he explicitly acknowledges the usefulness of dialectic (*disputandi disciplina*) for all the kinds of problems that must be investigated and resolved in sacred scripture. In *Soliloquia* 2.7.14 he never uses the word “dialectic,” but he does refer to the discipline in one of its meanings when he writes that there is no better way of searching for truth than by questioning and answering. He then raises the question whether the art of disputation (*ars disputandi*) is true or false, and he answers that it is true. On Boethius, see especially Seth Lerer, *Boethius and Dialogue: Literary Method in the “Consolation of Philosophy”* (Princeton, N.J., 1985). For the medieval reception of this classic work, see Maarten J. F. M. Hoenen and Lodi Nauta, eds., *Boethius in the Middle Ages: Latin and Vernacular Traditions of the “Consolatio Philosophiae”* (Leiden, 1997); and, most recently, Noel Harold Kaylor, Jr., and Philip Edward Phillips, eds., *A Companion to Boethius in the Middle Ages* (Leiden, 2010). The importance of Boethius’s logic and the complexity of the *Consolation of Philosophy* are expertly treated in John Marenbon, *Boethius* (Oxford, 2003).

¹⁷ Simon Goldhill, ed., *The End of Dialogue in Antiquity* (Cambridge, 2008). On the medieval continuity of ancient models, see K. J. Wilson, “The Continuity of the Post-Classical Dialogue,” *Cithara* 21, no. 1 (1981): 23–44; Jacques Fontaine, “Le genre littéraire du dialogue monastique dans l’Occident latin des V^e et VI^e siècles,” in Marek Starowieyski, ed., *The Spirituality of Ancient Monasticism: Acts of the International Colloquium Held in Cracow-Tyniec, 16–19th November 1994* (Cracow, 1994), 228–250; and M. L. W. Laistner, *Thought and Letters in Western Europe, A.D. 500 to 900* (Ithaca, N.Y., 1957), chap. 8, for the use of dialogue among the Carolingians. Important insights into the dialogue form during the twelfth century and after, and on which I seek to build the connection to scholastic disputation, are provided by Peter von Moos, “Le dialogue latin au Moyen âge: L’exemple d’Evrard d’Ypres,” *Annales ESC*, no. 4 (1989): 993–1028; von Moos, “Literatur- und bildungsgeschichtliche Aspekte der Dialogform im lateinischen Mittelalter: Der *Dialogus Ratii* des Eberhard von Ypern zwischen theologischer *disputatio* und Scholaren-Komödie,” in Günter Bernt, Fidel Rädle, and Gabriel Silagi, eds., *Tradition und Wertung: Festschrift für Franz Brunhölzl zum 65. Geburtstag* (Sigmaringen, 1989), 165–209; von Moos, “Gespräch, Dialogform und Dialog nach älterer Theorie,” in Barbara Frank, Thomas Haye, and Doris Tophinke, eds., *Gattungen mittelalterlicher Schriftlichkeit* (Tübingen, 1997), 235–260; E. C. Ronquist, “Learning and Teaching in Twelfth-Century Dialogues,” *Res publica litterarum* 13 (1990): 239–256; and Roger Friedlein, *Der Dialog bei Ramon Llull: Literarische Gestaltung als apologetische Strategie* (Tübingen, 2004).

¹⁸ For a modest sampling of English-language works on this topic, see David Marsh, *The Quattrocento Dialogue: Classical Tradition and Humanist Innovation* (Cambridge, Mass., 1980); Jon R. Snyder, *Writing the Scene of Speaking: Theories of Dialogue in the Late Italian Renaissance* (Stanford, Calif., 1989); Virginia Cox, *The Renaissance Dialogue: Literary Dialogue in Its Social and Political Contexts, Castiglione to Galileo* (Cambridge, 1992); Colette H. Winn, ed., *The Dialogue in Early Modern France, 1547–1630: Art and Argument* (Washington, D.C., 1993); and Dorothea Heitsch and Jean-François Vallée, eds., *Printed Voices: The Renaissance Culture of Dialogue* (Toronto, 2004). More pointedly, see David Marsh, “Dialogue and Discussion in the Renaissance,” in Glyn P. Norton, ed., *The Cambridge History of Literary Criticism*, vol. 3: *The Renaissance* (Cambridge, 1999), 265–270, here 265, who says that “the Humanist dialogue arose in Italy around 1400 . . . [and] reflects the new philosophical freedom and eclecticism which were fostered by the rise of mercantile communes and by the weakening of papal authority through schism”; Stephen A. Tyler, “Ode to Dialog on the Occasion of the Un-for-seen,” in Tullio Maranhão, ed., *The Interpretation of Dialogue* (Chicago, 1990), 292–300, here 293, who describes the dialogue as “a literary genre emerging out of the Renaissance reinvention of the mood of the classical discourses of Plato”; and Christopher S. Celenza, *The Lost Italian Renaissance: Humanists, Historians, and Latin’s Legacy* (Baltimore, 2004), 87, 100, who says that “many humanists participated in this culture of the *disputatio*” and that “the verbally centered culture of the disputation was intimately allied to the progress of Humanism.” No mention is made in any of these works of the medieval tradition of dialogue or of scholastic disputation.

THE TURN OF THE TWELFTH CENTURY has long been identified with new beginnings in the intellectual and cultural landscape of Europe.¹⁹ The growth of cities and centers of learning, the migration of students into France, a renewed interest in dialectic, and the recovery of ancient law texts are all familiar components of what is commonly referred to as the “twelfth-century renaissance.”²⁰ The Italian-born monk Anselm of Bec (1033–1109) occupies a central place on this new horizon of learning. Best known for his ontological proof of the existence of God, Anselm experimented early in his career with a more pedagogically engaging method of instruction at his monastery in Normandy (Bec). It was his pioneering use of dialogue and disputation in the company of his students that initiated the emergence of a culture of disputation.²¹

Anselm’s first substantial work, the *Monologion* (ca. 1077), reflects a close reading of Augustine’s *De trinitate*.²² Anselm described his work as a *meditatio* on the divine being, but by “meditation” he specifically meant the inner dialogue and deliberation that was characteristic of Augustine’s spirituality. Some of Anselm’s brothers persisted in asking him to give them an example of meditation, “by writing down some thoughts on the divine essence and other related matters, which I have communicated to them in my regular discussions [*colloquia*].” The discussions must have been fairly open engagements, for it was the leading questions that drew out of Anselm a new approach to teaching and learning. “They asked that whatever conclusion was reached in the course of each investigation should be expressed in plain language with intelligible arguments and simple disputation [*simplicique disputatione*], so that the necessary conclusions and clear truth of the matter would be clearly expressed.”²³ These opening words in the prologue to the *Monologion* point to what would quickly become a recurring feature of Anselm’s method of inquiry: dialogue and disputation.

¹⁹ For recent assessments, see Thomas F. X. Noble and John Van Engen, eds., *European Transformations: The Long Twelfth Century* (Notre Dame, Ind., 2012).

²⁰ The phrase “renaissance of the twelfth century” owes its popular success, but not its initial conception, to Charles Homer Haskins’s 1927 book of the same title. For the pre-Haskins origins of the term and the development of the concept, see Alex J. Novikoff, “The Renaissance of the Twelfth Century before Haskins,” *Haskins Society Journal* 16 (2005): 104–116. On developments since Haskins’s influential book, see Marcia L. Colish, “Haskins’ Renaissance Seventy Years Later: Beyond Anti-Burckhardtianism,” *Haskins Society Journal* 11 (2003): 1–15. The applicability of the term has long been questioned. For a recent critique, see C. Stephen Jaeger, “Pessimism in the Twelfth-Century ‘Renaissance,’” *Speculum* 78, no. 4 (October 2003): 1151–1183.

²¹ I explore this element of the culture of disputation in detail in Alex J. Novikoff, “Anselm, Dialogue, and the Rise of Scholastic Disputation,” *Speculum* 86, no. 2 (2011): 387–418. The paragraphs that follow recapitulate those arguments in order to set up the later cultural history of disputation that constitutes the focus of this article. For insights into other elements of monastic learning in the age of Anselm, see Sally N. Vaughn and Jay Rubenstein, eds., *Teaching and Learning in Northern Europe, 1000–1200* (Turnhout, 2006); and most recently, Steven Vanderputten, ed., *Understanding Monastic Practices of Oral Communication: Western Europe, Tenth–Thirteenth Centuries* (Turnhout, 2011). The *locus classicus* for a sweeping historical assessment of Anselm remains R. W. Southern, *Saint Anselm: A Portrait in a Landscape* (Cambridge, 1990). A diverse appraisal of Anselm’s significance for the modern world is offered in Coloman Viola and Frederick Van Fleteren, eds., *Saint Anselm, a Thinker for Yesterday and Today: Anselm’s Thought Viewed by Our Contemporaries* (Lewiston, N.Y., 2002). Still very useful because of the range of historical themes touched upon are the proceedings from the 1982 Anselm conference held at Bec: Raymonde Foreville, ed., *Les mutations socio-culturelles au tournant des XI^e–XII^e siècles* (Paris, 1984).

²² The various stages that Anselm went through to “publish” his works have been addressed in a meticulous study by Richard Sharpe, “Anselm as Author: Publishing in the Late Eleventh Century,” *Journal of Medieval Latin* 19 (2009): 1–87.

²³ Anselm of Canterbury, *Monologion*, in *S. Anselmi opera omnia*, ed. Franciscus Salesius Schmitt, 6 vols. (Rome, 1938–1961), 1: 7. All translations are my own unless otherwise stated.

This path to knowledge, along with an unprecedented commitment to demonstrating Christian truth by reason alone (*sola ratione*), was the critical element in his pedagogical innovations at his school at Bec.²⁴ He later explained his simultaneous reliance upon, and departure from, Augustine along similar lines in a letter to his mentor Lanfranc: "it was my intention throughout the whole of this disputation [*disputationem*] to assert nothing that could not be immediately defended either from canonical writers or from the words of St. Augustine."²⁵ Even a work cast in the form of a meditation was, for Anselm as it was for Augustine, a dialogue with oneself. All reflections on the matter of the divine being, even if originally stimulated by a reading of Augustine, were the result of an inner dialogue. In much the same way that he was committed to proving Christian doctrine *sola ratione*, without recourse to scripture, Anselm was venturing to demonstrate most of his propositions by means of inner disputation alone.

Anselm's method of teaching, as far as it can be reconstructed from his writings and those who knew him, was to hold a Socratic form of debate with the monks, in which the participants argued out the issues. Clues to his pedagogy come from his theological and philosophical works that are cast in the form of a dialogue between master and pupil.²⁶ To be sure, the dialogue genre extends back to antiquity, and it was effectively used by Lanfranc and others, but over his career, Anselm went on to write more dialogues than any other Latin Christian author since Augustine.²⁷ No fewer than seven of his works take the literary form of a dialogue, and there are several others that are attributed to him but are of dubious authenticity. *De grammatico* is likely the earliest of these dialogues and concerns not grammar in the sense that the title implies, but paronymy (the semantics involved when the same noun signifies more than one thing) and the section in Aristotle's *Categories* that deals with substance.²⁸ Like his later works, *De grammatico* is not overtly confrontational. The discussion about Aristotle's syllogisms comes to a close when the teacher in the dialogue applauds the student's progress but warns him against the power wielded

²⁴ The novelty of Anselm's reliance on reason as an aid to faith has been much commented upon by historians, theologians, and philosophers alike. For a fresh assessment, see Marilyn McCord Adams, "Anselm on Faith and Reason," in Brian Davies and Brian Leftow, eds., *The Cambridge Companion to Anselm* (Cambridge, 2004), 32–60. See also Eileen C. Sweeney, "Rewriting the Narrative of Scripture: 12th-Century Debates over Reason and Theological Form," *Medieval Philosophy and Theology* 3 (1993): 1–34.

²⁵ Anselm, *Epistola* 77, in *Opera omnia*, 3: 199–200.

²⁶ This point has been observed before, but never truly explored. See the remarks by Richard Campbell, "The Systematic Character of Anselm's Thought," in Foreville, *Les mutations socio-culturelles au tournant des XI^e–XII^e siècles*, 549–560, here 553–554: "What I find striking about Anselm's arguments, whether in the more philosophical works or in the more theological, is the way they always proceed within the context of *what someone says* . . . In the dialogue form adopted in many of the later works all of the statements are, of course, owned by one or [an]other of the participants . . . Anselm is not indulging in idle speculation or intellectual games; he will only consider propositions which are 'owned' by one speaker."

²⁷ The foundational study of the dialogue genre is Rudolf Hirzel, *Der Dialog: Ein literarhistorischer Versuch*, 2 vols. (Leipzig, 1895). A recent compendium of medieval Latin dialogues has highlighted the genre's popularity for later centuries, but curiously ignores its resurgence in the twelfth century: Carmen Cardelle de Hartmann, *Lateinische Dialoge, 1200–1400: Literaturhistorische Studie und Repertorium* (Leiden, 2007). See also the studies of individual authors in Klaus Jacobi, ed., *Gespräche lesen: Philosophische Dialoge im Mittelalter* (Tübingen, 1999), with an essay devoted to Anselm by Eileen Sweeney, 101–124.

²⁸ The authoritative commentary on this early work is Desmond Paul Henry, *Commentary on "De grammatico": The Historical-Logical Dimensions of a Dialogue of St. Anselm's* (Dordrecht, 1974). The dating of this dialogue is a matter of some conjecture. The dates proposed are as early as 1060–1063 (after R. W. Southern, which I prefer) and as late as 1080–1085. See the discussion by Sharpe, "Anselm as Author," 22, who favors a dating of around 1080 "or a little later."

FIGURE 2: Anselm in conversation with fellow monks, giving them books. Upper half: Anselm, as archbishop of Canterbury 1093–1109, presenting books to Countess Matilda of Tuscany. Twelfth century. Oxford, Bodleian Library, MS Auct. D.2.6, fol. 185v. Used by permission.

by other dialecticians. Even if the aspiring student should be outdone by weightier arguments, “you would not deny that at least our disputing [*disputandi nobis*] has benefited us in the practice of argumentation.”²⁹ The very framing of the work indicates that Anselm’s dialogues, in their form as well as their content, served as a window onto the current issues that engaged him in discussions with his students. The effects of this learning on the intellectual atmosphere at Bec so impressed the ecclesiastical historian Orderic Vitalis that he described with amazement Anselm’s ability to produce a climate of learning in which the monks were “so eager to solve theological problems and compose edifying treatises, that almost all of them seem to be philosophers.”³⁰ Both Orderic and Anselm’s biographer Eadmer stressed the diversity of the students, clerics, and laymen who came to sit at the feet of the renowned teacher.³¹ Thus the dialogical procedure that characterizes Anselm’s school not only reflects the pedagogical activities that took shape at Bec, it is what attracted them there in the first place.

In the corpus of his writings, Anselm uses the verb *disputare* and its accompanying noun forms on more than forty separate occasions.³² While the meaning of this term

²⁹ Anselm, *De grammatico*, in *Opera omnia*, 1: 168.

³⁰ Orderic Vitalis, *The Ecclesiastical History of Orderic Vitalis*, 6 vols., ed. and trans. Marjorie Chibnall (Oxford, 1969–1980), 2: 297.

³¹ *Ibid.*, 2: 294–295; Eadmer, *The Life of St. Anselm, Archbishop of Canterbury (Vita Anselmi)*, ed. R. W. Southern (Oxford, 1962), xxii, 39–40.

³² For these figures I rely on *A Concordance to the Works of Anselm*, 4 vols., ed. G. R. Evans (Millwood, N.Y., 1984), s.v. “disputabo” to “disputet.”

might vary from a simple “discussion” or “conversation” to a more intense “dispute” or “debate,” there is a clear parallel between the form of his writings and the vocabulary he employs. From his earliest meditation to his last letters, with several real debates in between, he consistently refers to his rational investigations and dialectical argumentation in terms of a *disputatio*, and his dialogues bear the imprint of this approach.

From the circle of Anselm and his students, the dialogue rapidly emerged as a literary, pedagogical, and indeed polemical genre of choice for authors of the twelfth century. Fewer than ten dialogues can be counted in the century prior to Anselm’s writings at Bec (the 1060s), but more than eighty exist from his time to the close of the twelfth century. The authors of these dialogues and disputations are among the most important writers and thinkers of the twelfth century: Odo of Tournai, Rupert of Deutz, Hugh of St. Victor, Anselm of Havelberg, Aelred of Rievaulx, Adelard of Bath, Peter Alfonsi, Peter Abelard, Walter of Châtillon, Andreas Capellanus, and many others, including several anonymous authors and known students of Anselm. The sheer quantity of dialogues written in the generations following Anselm and his circle reflects the success of new methods of writing and argumentation—the scholastic method, so called because of its association with the schools of the late eleventh and the twelfth century.³³ In one sense these figures are hardly surprising, since alongside the resurgence in dialogues there can, and should, be placed a concomitant growth in a number of other literary enterprises, such as the writing of letters, poetry, commentaries and glosses, sentences, and even history.³⁴ Yet in contrast to these other genres, whose purposes and audience are often more explicit or apparent, there is no immediate explanation for the sudden popularity of the dialogue form in the last quarter of the eleventh century and throughout the twelfth.³⁵ No *ars dialogi* as such existed in the Middle Ages comparable to the *ars dictaminis* or the *ars poetica*.³⁶ Most of Plato’s dialogues remained untranslated until the fifteenth century.

³³ The foundational study of the scholastic method is Martin Grabmann, *Die Geschichte der Scholastischen Methode: Nach den gedruckten und ungedruckten Quellen dargestellt*, 2 vols. (Freiburg im Breisgau, 1909–1911), who adopts the broadest possible scope and examines authors from late antiquity until the beginning of the thirteenth century. Important themes related to scholastic thought are discussed in the various essays in Norman Kretzmann, Anthony Kenny, and Jan Pinborg, eds., *The Cambridge History of Later Medieval Philosophy: From the Rediscovery of Aristotle to the Disintegration of Scholasticism, 1100–1600* (Cambridge, 1982). Many philosophical and theological elements of early scholasticism are explored in an excellent recent collection of essays by leading scholars in the field: Irène Rosier-Catach, ed., *Arts du langage et théologie aux confins des XI^e–XII^e siècles: Textes, maîtres, débats* (Turnhout, 2011).

³⁴ Brian Stock, in discussing the cosmological interests of twelfth-century authors, writes that “a great many literary forms from the classical and, in particular, the late Latin world were revived for the purpose: the dialogue, the *satura* (or *prosimetrum*), the encyclopedia, the commentary, and, more rarely, the epic and the myth itself. The forms were utilized in ways that often emphasized their distance from antiquity and their relation to literary fashions in their own day.” Stock, *Myth and Science in the Twelfth Century: A Study of Bernard Silvester* (Princeton, N.J., 1972), 30.

³⁵ Cf. Constable, *The Reformation of the Twelfth Century*, 128: “one of the most striking examples of the influence of rhetoric on the forms of religious literature in the eleventh and twelfth centuries was the popularity of debates, dialogues, and disputes, or, as they were sometimes called, the *altercatio* or *conflictus*.”

³⁶ But see von Moos, “Literatur- und bildungsgeschichtliche Aspekte der Dialogform im lateinischen Mittelalter,” who says that “a new culture of problematizing dialogue” tended to replace the commentary in the late twelfth century (199). In his investigation of Everard of Ypres (“Le dialogue latin au Moyen âge”), von Moos takes up the question of the *ars dialogica*, but it still stands that there was no formalized manner for writing dialogues. Ronquist, “Learning and Teaching in Twelfth-Century

What did develop and was eventually formalized in the schools of the twelfth century was the practice, and later theory, of disputation.³⁷ In the generation following Anselm, the medieval *disputatio* would be taken up in Italy and northern France and become central to the new scholastic milieu.

IN THE FIRST HALF OF THE twelfth century, theologians, scientists, and lawyers all turned to the dialogue for effective instruction. While certain patterns in the form and function of the dialogue genre remained, new developments in the practice of debate also emerged.

The theological nature of the dialogues of Anselm and his followers can readily be seen in the spiritual dialogues of Aelred of Rievaulx or the instructional dialogue of Conrad of Hirsau (ca. 1070–ca. 1150). In Conrad's *Dialogus super auctores*, a teacher instructs an inquisitive pupil on how to approach and understand the works of twenty-one classical authors, among them Prudentius, Horace, Ovid, Homer, and Virgil.³⁸ This student-teacher dialogue (an early contribution to the scholastic *accessus ad auctores* genre) echoes in its opening paragraph the didactic program encountered in Anselm's dialogues, only here it is the student who opens the conversation, saying that the discourse must be carefully controlled; in this way, "the teacher is better able to exercise his goodwill, while . . . the slower partner, that is the learner, who is in dire need, is helped."³⁹

The inquisitive student in search of answers can also be found in the dialogues of Adelard of Bath, whose *De eodem et diverso* and *Questiones naturales* offer detailed descriptions of the science and philosophy that he acquired on his travels to eastern lands.⁴⁰ In both of these works, Adelard presents himself in conversation with his nephew-pupil, whose criticism of and curiosity about his uncle's travels form the

Dialogues," 242, 245, stresses the equality of interlocutors and their "spirit of tolerance and open inquiry." The medieval dialogue is the subject of increasing attention, notably by scholars in France and Germany. A conference in Paris in June 2010, inspired by the work of Peter von Moos, was devoted to the topic of the dialogue form in the *exempla* literature of the Middle Ages. I am grateful to Jean-Claude Schmitt for sharing with me his contribution to the conference proceedings ahead of publication.

³⁷ For general remarks about the history of disputation, see Brian Lawn, *The Rise and Decline of the Scholastic "Quaestio Disputata": With Special Emphasis on Its Use in the Teaching of Medicine and Science* (Leiden, 1993), chaps. 1–3. See also P. Delhaye, "L'organisation scolaire au XII^e siècle," *Traditio* 5 (1947): 211–268; and the concise overview of the origins of disputation by Anthony Kenny in Kretzmann, Kenny, and Pinborg, *The Cambridge History of Later Medieval Philosophy*, 24–29. See also R. N. Swanson, *The Twelfth-Century Renaissance* (Manchester, 1999), 35: "The quaestio was a format mainly for the masters; students had their own oral academic exercises. In the twelfth century (but perhaps emerging from older roots) the disputation became their characteristic academic exercise."

³⁸ For an extended discussion of this work, see Leslie G. Whitbread, "Conrad of Hirsau as Literary Critic," *Speculum* 47, no. 2 (1972): 234–245.

³⁹ The Latin text is published in R. B. C. Huygens, ed., *Accessus ad auctores: Bernard d'Utrecht; Conrad d'Hirsau—Dialogus super auctores* (Leiden, 1970). Extracts are translated in "Dialogue on the Authors," in A. J. Minnis and A. B. Scott, eds., *Medieval Literary Theory and Criticism, c. 1100–c. 1375: The Commentary-Tradition*, rev. ed. (Oxford, 1988), 39–64, here 39.

⁴⁰ An edition and translation of both these works and a third, *De avibus tractatus* (also in dialogue form), has been made available in Charles Burnett, ed., *Adelard of Bath, Conversations with His Nephew: "On the Same and the Different," "Questions on Natural Science," and "On Birds"* (Cambridge, 1998). Winthrop Wetherbee describes Adelard as anticipating in important ways the Platonism of the school of Chartres; Wetherbee, *Platonism and Poetry in the Twelfth Century: The Literary Influence of the School of Chartres* (Princeton, N.J., 1972), 20–22.

pretext for the discussions. Adelard refers to the discussion in *Questiones naturales* as a “disputatio” and ends *De eodem et diverso* by asking his nephew to “judge for yourself whether I have disputed rightly (*utrum recte disputaverim*).”⁴¹ The tone of these works does not rise beyond that of a friendly and affectionate conversation, but Adelard’s dialogical approach is consistent with a new generation of dialecticians. He begins *Questiones naturales* by reminding his nephew that seven years earlier, he sent him and other students to study in French schools (*in Gallicis studiis*) at Laon, a major center of learning in the early twelfth century.⁴² The dialogue form that Adelard cultivated very likely reflected the dialectical procedures of such “French schools,” just as his emphasis on reason (*ratio*) surely reflected the new currents in early-twelfth-century thought.⁴³

A transitional figure in the emergence of disputation out of dialogue is the Benedictine abbot Rupert of Deutz (ca. 1075–1129), the twelfth century’s most prolific author and a staunch defender of traditional monasticism.⁴⁴ In his effort to controvert what he saw as the intrusion of dialectic into the sphere of theological study, Rupert engaged in public disputes at Liège, Laon, and Châlons-sur-Marnes.⁴⁵ The topics of debate differed from one disputation to the next, but Rupert did not shrink from opportunities to face off with his adversaries, who dismissed him on account of his ignorance of dialectics. He proudly recounted his combative position several years later in his apologetically written commentary on the Benedictine rule (ca. 1125). He went to France, he says, in order to engage in a mighty battle of disputation (*praelium disputationis*) with those famous masters whose authority was always held over and against him.⁴⁶ Portraying himself as seated on a paltry ass, with only a servant boy to accompany him, Rupert combines the imagery of a lone protector of the faith with the vocabulary of feudal combat as he describes his expedition to join battle (*ad conflictum*) in distant cities in France, where a large band of masters and students met him in order to hear his arguments and defeat them. Rupert’s use of such colorful imagery is more than just rhetorical flourish. Peter Abelard employed much the same language in his own autobiographical apology: “I preferred the weapons of dialectic to all the other teachings of philosophy, and armed with these I chose the conflicts of disputation [*conflictus pretuli disputationem*] instead of the trophies

⁴¹ Burnett, *Adelard of Bath*, 91, 73.

⁴² The existence and importance of the school of Laon has been a topic of considerable debate among scholars. Most recently, see the study by Cédric Giraud, *Per verba magistri: Anselme de Laon et son école au XII^e siècle* (Turnhout, 2010); and supplemented by Giraud, “L’école de Laon entre arts du langage et théologie,” in Rosier-Catach, *Arts du langage et théologie aux confins des XI^e–XII^e siècles*, 351–371. On the study of dialectic and its connection to twelfth-century theology, see Joseph de Ghellinck, *Le mouvement théologique du XII^e siècle* (Brussels, 1948); Marie-Dominique Chenu, *La théologie au douzième siècle* (Paris, 1957); and more recently Toivo J. Holopainen, *Dialectic and Theology in the Eleventh Century* (Leiden, 1996).

⁴³ Cf. Andreas Speer, “Ratione duce: Die naturphilosophischen Dialoge des Adelard von Bath und des Wilhelm von Conches,” in Jacobi, *Gespräche Lesen*, 199–230.

⁴⁴ See Maria Lodovica Arduini, *Rupert von Deutz (1076–1129) und der “status Christianitatis” seiner Zeit: Symbolisch-prophetische Deutung der Geschichte* (Stuttgart, 1985).

⁴⁵ Cf. John Van Engen, *Rupert of Deutz* (Berkeley, Calif., 1983), 200–215.

⁴⁶ Rupert of Deutz, *Super quaedam capitula regulae divi benedicti abbatis*, in J.-P. Migne, ed., *Patrologiae cursus completus: Series latina*, 221 vols. (Paris, 1844–1864) [hereafter *PL*], 170: cols. 482–483. See the eloquent reconstruction of this episode in Van Engen, *Rupert of Deutz*, 211–212. This passage has recently been examined in a slightly different twelfth-century context: Ian P. Wei, “From Twelfth-Century Schools to Thirteenth-Century Universities: The Disappearance of Biographical and Autobiographical Representations of Scholars,” *Speculum* 86, no. 1 (2011): 42–78, here 51–53.

of war.”⁴⁷ Abelard, of course, actually did come from a knightly background, and in Paris he strove to use the tools of logic and the methods of dialectic in precisely the manner to which Rupert objected, throughout his works defending the virtues of questioning and the value of disputation.⁴⁸ A comparable description of disputation is given, but with a different purpose, by Herman of Cologne (d. 1181), the Rhineland Jew turned Premonstratensian canon whose *Opusculum de conversione sua* is a rare (and still controversial) specimen of a medieval autobiographical conversion narrative.⁴⁹ In the second chapter of the *Opusculum*, Herman states that it was the intense conversations that he heard among clerics that compelled him to inquire into the sacraments of the Church. Listening in on these conversations led him to challenge the leading cleric of the day, Rupert of Deutz, to a public disputation (*ad disputationis invito conflictum*).⁵⁰ It would ultimately take the prayers of two pious women to bring about Herman’s conversion, but disputation remained a theme of his progression toward Christianity until finally he took on the role of disputing his former coreligionists, but as a representative of Christianity. Thus, within a fifteen-year period (1120–1135), three separate accounts describe the conflicts of disputation (two of them involving Rupert) and the centrality that public dispute had come to assume in intellectual life. It is not that these texts are necessarily interrelated or that one author was echoing another; rather, these years represent a transitional moment in the rise of disputation as a cultural practice. From an art historical perspective, increasingly frequent images of debate, and especially of Paul disputing with Jews, are notable features in the development of twelfth-century iconography.⁵¹

A crucial parallel to the use of debate in theological circles is the renewed study of Roman law, first in northern Italy and eventually in France as well. The systematic study of canon law often centered upon the use of a question-and-answer format for

⁴⁷ Peter Abelard, *Historia calamitatum: Texte critique, avec une introduction*, ed. J. Monfrin (Paris, 1959), 63–64. For a discussion of this passage, see Jacques Le Goff, “Quelle conscience l’université médiévale a-t-elle eu d’elle-même?” in Paul Wilpert, ed., *Beiträge zum Berufsbewusstsein des mittelalterlichen Menschen* (Berlin, 1964), 16–19.

⁴⁸ Abelard’s disputationary career is the stuff of legend, although this has somewhat clouded what his contribution to the scholastic method actually was. I have here deliberately focused on other, equally instructive examples from his generation, as my point about the rise of disputation is more about the culture as a whole than about any single individual. For analysis of Abelard’s own anti-Jewish dialogue in the context of the Jewish-Christian debate, see Alex J. Novikoff, “Reason and Natural Law in the Disputational Writings of Peter Alfonsi, Peter Abelard, and Yehuda Halevi,” in Michael Frassetto, ed., *Christian Attitudes toward the Jews in the Middle Ages: A Casebook* (London, 2007), 109–136.

⁴⁹ The historiographical debate over the “authenticity” of this account is fully reviewed in Jean-Claude Schmitt, *The Conversion of Herman the Jew: Autobiography, History, and Fiction in the Twelfth Century*, trans. Alex J. Novikoff (Philadelphia, 2010), esp. chap. 1, “Fiction and Truth.” Schmitt himself adopts a somewhat nuanced position, suggesting that a real Jew named Herman may indeed lie behind the account, but that the *Opusculum* as the text exists is the product of a community of Premonstratensian canons whose main ambition was to augment the new order’s prestige by embellishing a foundation legend.

⁵⁰ *Hermannus quondam Judaeus: Opusculum de conversione sua*, ed. Gerlinde Niemeyer (Weimar, 1963), 76. A slightly different translation from mine is given in Karl F. Morrison, *Conversion and Text: The Cases of Augustine of Hippo, Herman-Judah, and Constantine Tsatsos* (Charlottesville, Va., 1992), 81.

⁵¹ The iconography of debate in the twelfth and thirteenth centuries merits greater attention, particularly within the larger culture of disputation that this article seeks to describe. I am grateful to Colum Hourihane, director of the Index of Christian Art at Princeton University, for sharing his expertise with me on images of Paul disputing with Jews. See also my discussion of Jewish-Christian disputations below.

FIGURE 3: Paul disputing with Jews (bearded in the foreground) and Gentiles. One of the figures in front holds an inscription, *revincebat Iudaeos*, in reference to the passage from the Latin Vulgate (Acts 18:28): “For he vigorously refuted the Jews in public debate.” An inscription with the words *disputabat cum Graecis* is issuing from Paul’s left hand. Enamel plate, ca. 1170. Victoria and Albert Museum, London. Erich Lessing / Art Resource, N.Y.

legal disputes and the harmonizing of conflicting interpretations.⁵² In time, the *quaestiones disputatae* of the glossators (or commentators) of the law would become an established genre within the legal literature.⁵³ There is much that remains hazy in this early history of medieval law, but it is also clear that the recovery of the juristic learning embodied in Justinian’s Digest came as an especially powerful, “almost intoxicating” revelation to Western scholars in the late eleventh century.⁵⁴ Much as the recovery of Aristotle’s New Logic would ultimately transform medieval logic, the intricacy and ingenuity of the legal reasoning in Justinian’s Digest attracted and transformed the minds of those familiar with legal problems. From the significant portions of the Digest that were made available, medieval jurists learned how to frame sophisticated legal arguments, how to manipulate legal categories, how to analyze problems, and how to find solutions to apparently contradictory opinions.⁵⁵

⁵² Stephan Kuttner employed the very phraseology of the twelfth-century theologians, with a nod to the development of Parisian polyphony as well, in the title of his now-famous essay on the topic, *Harmony from Dissonance: An Interpretation of Medieval Canon Law* (Latrobe, Pa., 1960). Twenty-six years later, Charles Donahue, Jr., lamented the meager advances that had been made in interpreting the legal texts that survive: *Why the History of Canon Law Is Not Written* (London, 1986).

⁵³ Like scholastic university disputations, scholarship on the legal uses of disputation has focused heavily on the later periods. See, for example, Manlio Bellomo, ed., *Die Kunst der Disputation: Probleme der Rechtsauslegung und Rechtsanwendung im 13. und 14. Jahrhundert* (Munich, 1997).

⁵⁴ James A. Brundage, *The Medieval Origins of the Legal Profession: Canonists, Civilians, and Courts* (Chicago, 2008), 77.

⁵⁵ *Ibid.*, 77–78. For a reconstruction of the gradual recovery of Justinian’s Digest, see Wolfgang P.

A significant figure in promoting the new methods for reconciling conflicting texts was Bishop Ivo of Chartres (d. 1115), whose treatise on legal interpretation and whose collection of church law, the *Panormia*, were once hailed for having anticipated the methods of scholasticism, in part because he explicitly acknowledged the problem of contradictory texts.⁵⁶ Modern scholarship on Ivo has modified this portrait: his authorship of the *Panormia* is no longer certain, and his method of handling contradictory texts is now being examined in a more theological and more local—less judicial and less papal—context.⁵⁷ Ivo is reported to have been a former student of Lanfranc at the Norman abbey of Bec, and if the twelfth-century source for this tradition is to be trusted, his application of dialectics to the legal tradition would owe something to the same pioneering circle that included Anselm. Ivo's continuators, and especially the "Four Doctors" associated with Bologna, further developed the method of probing contrasting opinions and "initiated a culture of juristic debate that was to become an integral part of medieval learning."⁵⁸ From simple antinomies in the sources to hypothetical cases, from real difficulties in interpreting a legal term to the didactic device of formulating statements as questions, the *quaestiones* of the glossators offer a broad example of the application of dialectic in the field of law.⁵⁹ They were sometimes clad in the dress of a Socratic dialogue, like the dialogues of Rogerius; sometimes presented as a more elementary question-and-answer catechism; and sometimes made into the structural elements of a *summa*, like the frequently copied *Summa decretalium quaestionum* by Honorius of Richmond (late 1100s).

The most famous canonical collection of the twelfth century, by an elusive master known to us simply as Gratian (ca. 1140), displays the centrality of this approach in the very title he gave his work: *Concordia discordantium canonum* (*Harmony of Discordant Canons*).⁶⁰ The structural resemblance to Peter Abelard's *Sic et non*, in which seemingly conflicting statements of the church fathers are placed side by side, has long intrigued scholars, even if the precise relationship between the two authors remains uncertain.⁶¹ The presumption had initially been that theological argumentation preceded legal argumentation, and that Gratian derived his knowledge of the scholastic method from Abelard. In the early twentieth century, legal historians were hard-pressed to place the influence in the direction from law to theology.⁶² The latest

⁵⁷ Building on the manuscript collations of Martin Brett, see Christof Rolker, *Canon Law and the Letters of Ivo of Chartres* (Cambridge, 2010), with a discussion of Fournier's thesis at 41–49, and Ivo's education at 89–91.

⁵⁸ Peter Landau, "The Development of Law," in David Luscombe and Jonathan Riley-Smith, eds., *The New Cambridge Medieval History*, vol. 4: c. 1025–c. 1198, Part I (Cambridge, 2004), 113–147, here 125.

⁵⁹ Stephan Kuttner, "The Revival of Jurisprudence," in Robert L. Benson and Giles Constable, eds., *Renaissance and Renewal in the Twelfth Century* (Cambridge, Mass., 1982), 299–323, here 314.

⁶⁰ A powerfully argued and technically convincing revisionist interpretation of this work that demonstrates multiple stages of authorship is Anders Winroth, *The Making of Gratian's "Decretum"* (Cambridge, 2000).

⁶¹ As but one example, see D. E. Luscombe, *The School of Peter Abelard: The Influence of Abelard's Thought in the Early Scholastic Period* (Cambridge, 1969), chap. 9, "Abelard and the *Decretum* of Gratian," 214–223.

⁶² See Hermann Kantorowicz's pioneering article "The *Quaestiones disputatae* of the Glossators,"

manuscript analysis once again argues the reverse, and theological texts other than Abelard have been suggested as sources of Gratian's method of argumentation.⁶³ The causal influence may never be solved, nor need it be, for what is at issue is the very spread of a culture of disputation that was not restricted to a single area of inquiry but rather pervaded the ideas, texts, and culture of the entire period. As Stephan Kuttner rightly cautioned, "It was a mistaken question, based on a search for 'influences' where the reality was that of an intellectual climate which became apparent at the same time but in different ways north, west, and south, wherever the need for organizing knowledge in a comprehensive, rational manner was felt."⁶⁴ This intellectual climate, an emerging culture of disputation, blossomed when a wave of translations broke on the shore of twelfth-century Europe in the form of Aristotle's New Logic.

THE RISE OF SCHOLASTIC DISPUTATION out of dialogue within legal and theological circles might have remained a minor byproduct of the new schools and scholars of the twelfth century had it not been for the recovery of Aristotle's *Topics* and *Sophistical Refutations*, works that dealt directly with the dialectical process of forming and refuting arguments.⁶⁵ The translation and transmission of this "New Logic" in the middle of the twelfth century had a profound impact on the direction that scholastic disputation would take, lending authority and guidance to the practice most characteristic of the medieval schoolmen.

An early witness to the importance of Aristotle for medieval disputation was Adam of Balsham. His logical treatise *Ars disserendi* of about 1132 (perhaps best translated as the *Art of Discourse*) survives incomplete and exists in two recensions, the second one appearing with important changes under the title *Dialectica Alexandri*, probably out of association with Adam's most illustrious follower in the second half of the twelfth century, Alexander Neckham.⁶⁶ Little is known about Adam's life, but over his career he circulated among the most prominent teachers and clerics in

Tijdschrift voor Rechtsgeschiedenis 16 (1939): 1–67, here 52: "Even in French theology which was, of course, much more closely connected with Aristotle than with Italian jurisprudence, disputations did not become a feature of the curriculum until well after the middle of the twelfth century, and it must therefore have been jurisprudence which influenced theology, Bologna which influences Paris, not *vice versa*." Cf. John W. Baldwin, *The Scholastic Culture of the Middle Ages, 1000–1300* (Prospect Heights, Ill., 1971), 75: "Originating from the contentious nature of legal science, the disputation passed from the Roman lawyers of Bologna to the canonists and the theologians."

⁶³ See the relevant conclusions reached by John Wei, "Gratian and the School of Laon," *Traditio* 64 (2009): 279–322, here 320: "Gratian must have learned the scholastic method for reconciling contradictory authorities from a contemporary theologian or contemporary theological work." Cf. Landau, "The Development of Law," 122, discussing Ivo of Chartres: "As regards procedural law, his attitudes towards the ordeal (*judicium Dei*) betray an incipient rationalisation, doubtless under the influence of early scholasticism."

⁶⁴ Kuttner, "The Revival of Jurisprudence," 310.

⁶⁵ Cf. Sten Ebbesen, "Ancient Scholastic Logic as a Source of Medieval Scholastic Logic," in Kretzmann, Kenny, and Pinborg, *The Cambridge History of Later Medieval Philosophy*, 101–127; and Ebbesen, "The Way Fallacies Were Treated in Scholastic Logic," *Cahiers de l'Institut du Moyen-âge Grec et Latin* 55 (1987): 107–134.

⁶⁶ *Ars disserendi* has also been rendered as *Art of Reasoning* (for example, by Daniel D. McGarry in *The Metalogicon of John of Salisbury: A Twelfth-Century Defense of the Verbal and Logical Arts of the Trivium*, trans. McGarry [1955; repr., Berkeley, Calif., 1962]).

Paris. A younger contemporary, John of Salisbury, met Adam probably between 1136 and 1138 in Paris and recorded his gratitude at having learned “a great deal from his explanations,” although he also said of Adam’s writing that he got so involved in verbal intricacies that his exposition was of very little use.⁶⁷ Indeed, it is probably the highly technical nature of the treatise that has caused it to be so often ignored in modern scholarship, even though it represents, as its modern editor states, the first time that “Aristotle’s *Topics* and *Sophistici Elenchi* were put into contribution [*sic*] in an original treatise by a Latin writing author.”⁶⁸

Adam thought that the language of the textbooks was antiquated and that the present revival of dialectic would change the understanding and practice of debate. With fresh translations of Aristotle in hand, and a considerable reliance on Boethian logic as well, he undertook to produce a handbook containing all that was essential for mastering logic. He mentioned the currency of disputes and the lack of any formal rules governing their procedure as one of his reasons for writing the treatise: “There was not yet the custom of disputing, for then there was only the beginning, not as yet an art of disputing, for one ought to dispute before an art can be made of it.”⁶⁹ Accordingly, his focus was on discourse in the form of questions and answers, for he believed that it was from *enuntio* and *interrogatio* that the principles of discourse were to be found. In underscoring the principles of debate, Adam illustrates the nexus between contemporary scholastic discourse and Aristotelian argumentation.

John of Salisbury, writing a generation later, offers an even more conspicuous example of Aristotle’s impact on the emerging practice of scholastic disputation. His celebrated *Metalogicon* (1159), dedicated to Thomas Becket, is a defense of the verbal and logical arts of the *trivium* against the charges of the pseudonymous Cornificius and his fellow opponents of a liberal arts education. In particular, the *Meta-logicon* reveals the growing divide among scholars over the nature of education, and especially what role should be played by the newly translated texts of Aristotle.⁷⁰ John wished that classroom disputation would rid itself of unnecessary verbiage and return to the systematic logic it aimed to uphold.⁷¹ Logic, as he defined it, was the science of argumentative reasoning.⁷² It was precisely on the subject of logic that he saw scholastic disputation and Aristotle merging, the latter benefiting the former.⁷³

John ranges widely in the *Metalogicon*. He addresses the question of genera and species and the philosophical issue of universals, and he offers precious and insightful commentary on the education and personalities of other masters of his day. Yet

⁶⁷ *Ioannis Saresberiensis Metalogicon*, ed. J. B. Hall (Turnhout, 1991), II.10, IV.3.

⁶⁸ Lorenzo Minio-Paluello, “The *Ars Disserendi* of Adam of Balsham,” *Mediaeval and Renaissance Studies* 3 (1954): 116–169, here 116–117.

⁶⁹ Lorenzo Minio-Paluello, ed., *Twelfth Century Logic: Texts and Studies*, 2 vols. (Rome, 1956, 1958), 1: 4: “*Nondum igitur disserendi usus, nam adhuc tunc initium, nondum disserendi ars, prius enim disseri oportuit quam de hoc ars fieret, prius enim de quo ars quam ipsa.*”

⁷⁰ Cf. K. S. B. Keats-Rohan, “John of Salisbury and Education in Twelfth-Century Paris from the Account of His *Metalogicon*,” *History of Universities* 6 (1986–1987): 1–46.

⁷¹ A similar plea was invoked later in the twelfth century by the satirist Walter of Châtillon, who complained in one of his poems that “scholars have become idle and unfruitful; they learn only in order to say ‘I have disputed.’” See Walter of Châtillon, *Felix Erat Studium*, in *Moralisch-satirische Gedichte Walters von Châtillon*, ed. Karl Strecker (Heidelberg, 1929), no. 11, 113–115.

⁷² *Ioannis Saresberiensis Metalogicon*, ed. Hall, 56: “*logica est ratio disserendi.*” Note that *disserendi* is the same word employed by Adam of Balsham.

⁷³ *Ioannis Saresberiensis Metalogicon*, ed. Hall, II.18, 84; *Metalogicon*, trans. McGarry, 117.

time and again he returns to Aristotle's work, citing its relevance to contemporary dialectic and especially the practical matter of disputation. Chapter 10 in Book III of the *Metalogicon* is expressly devoted to the "usefulness" (*utilitate*) of Book VIII of Aristotle's *Topics*, which addresses the methods of verbal reasoning. Seizing on the now-familiar metaphor of disputation as a form of verbal combat, John explains how Aristotle can best prepare the young scholastic:

[Aristotle], the drill-master of those who profess to be logicians, has in the foregoing books, as it were, provided the means of disputation [*instrumenta disputandi*], and stacked in the arena arms for the use of his students. This he has done by explaining the meanings of uncombined words and clarifying the nature of propositions and topics. His next step is to show his disciples how they may use these instruments, and somehow to teach them the art of engaging in [argumentative] combat.⁷⁴

John's explication of Aristotle was clearly meant to guide students (and perhaps masters, too) in the art of disputation as well as in its proper application. Others of his generation who were opposed to dialectic might well have found cause to disagree with his assessment, but there is no mistaking its relevance for contemporary masters; the return of Aristotle was catalyzing the practice most characteristic of the schools of his day, and the one most problematic for upholders of the monastic attitude toward learning: disputation.

The recovery of Aristotle's *Topics* in the mid-twelfth century marks a significant moment in the formative development of scholastic disputation. While knowledge of the later, and better-documented, university *disputatio* is necessary for a full appreciation of this contribution, John of Salisbury himself makes note in the *Metalogicon* of the dramatic changes brought about by the Aristotelian impact. "If what [Book VIII] teaches is both borne in mind and correctly observed," he remarks, "it contributes more to the science of argumentative reasoning than practically all the works on dialectic that our modern predecessors were accustomed to teach in the schools."⁷⁵ He then proceeds to examine point by point the ways in which Book VIII of the *Topics* can, and should, serve as a textbook for scholars involved in dialectic and the practice of disputation.⁷⁶ This aspect of logic constitutes the centerpiece of John's defense of the *trivium* as a whole, and it is well worth noting that his focus on the practical rules of disputation as outlined in Book VIII of Aristotle's *Topics* constitutes the second-lengthiest chapter in the entire *Metalogicon*.

What John of Salisbury needed to explain, defend, and correct, Peter the Chanter of Notre Dame (d. 1197), writing a generation later, plainly assumed: "The training of Holy Scripture consists of three exercises: reading (*lectio*), disputing (*disputatio*) and preaching (*predicatio*)."⁷⁷ As the choirmaster and second-ranking dignitary of

⁷⁵ *Ioannis Saresberiensis Metalogicon*, ed. Hall, III.10, 130–131; *Metalogicon*, trans. McGarry, 190.

⁷⁶ John, in the same chapter, defines dialectic as consisting "entirely in a discussion carried on between questioner and answerer" (*inter opponentem et respondentem*).

⁷⁷ *Petrus Cantoris Parisiensis Verbum abbreviatum*, ed. Monique Boutry (Turnhout, 2004), I.1, 9. A short version of the *Verbum* is printed in PL 205: 1–554. For a discussion about the differences between the short and long versions of the *Verbum*, see the introduction by Boutry. See also the review of Boutry's edition by John W. Baldwin, "An Edition of the Long Version of Peter the Chanter's *Verbum abbreviatum*," *Journal of Ecclesiastical History* 57, no. 1 (2006): 78–85.

the cathedral chapter of Notre Dame, Peter was at the center of a circle of scholars with wide-ranging views on contemporary society, and so his inclusion of disputation as one of the three cornerstone functions of a theologian is particularly revealing.⁷⁸ Without any sense that an apology might be necessary, Peter places disputation squarely within the duties of theological study. He likens the master of theology to the architect of a building, with reading providing the basement, disputation the structural walls, and preaching the roof.⁷⁹ To avoid the dangers associated with useless questioning (*inutilitate questionum*), he urges his fellow theologians to fashion their debates not into altercations (*altercationes*) but into more productive conversations (*collationes*), which will yield a common inquiry after truth.⁸⁰ Calm deliberation should be the order of the day, not theatrical debates.⁸¹ The pedagogical art of disputation that had been anticipated by Adam of Balsham and defended by John of Salisbury was now, for the first time, explicitly incorporated into the cultural practices of Parisian education.

Among the many issues during the twelfth century that would come to divide monastic theologians from scholastic theologians was this very practice of disputation, a concept that was still loosely defined but was increasingly central in the day-to-day activities of a liberal arts training. During the several generations from Anselm to Peter the Chanter, there was an unmistakable evolution in the meaning and use of *disputatio*, from the simpler spiritual conversation or investigation to the more intense debate—debates about new questions, debates about old questions, indeed debates about the very usefulness of debating. What is more, disputation and dialogue became a common currency for scholars and clerics in their struggle to define what constituted theology and what constituted education. Over the course of the twelfth century, the terms and methods of analysis gained greater meaning as well as greater precision. As Henri de Lubac pointedly remarked about this intellectual shift, “while monastic ‘lectio’ tended . . . toward meditation and prayer, scholastic ‘lectio’ tends towards the question and the disputation. It is directed toward a kind of disputation which, although it is not absolutely new, monopolizes the meaning of this word more and more. What we have here again is a fact of language that can serve as an emblem of the evolution which is in progress.”⁸² This cultural evolution took a decisive turn in the early thirteenth century with the institutionalization of disputation as a central component of university education.

⁷⁸ For a more recent and revisionist assessment of the Chanter’s contributions to logic and theology, but with attention focused on a different text, see Luisa Valente, *Phantasia contrarietatis: Contraddizioni scritturali, discorso teologico e arti del linguaggio nel “De tropis loquendi” di Pietro Cantore (d. 1197)* (Florence, 1997). For the Chanter’s contribution to preaching, see Nicole Bériou, *L’avènement des maîtres de la Parole: La prédication à Paris au XIII^e siècle*, 2 vols. (Paris, 1998), 1: 30–48.

⁷⁹ The architectural analogy of foundation, walls, and roof was a common device, often employed to describe the various senses of scripture. For a discussion of the examples of Hugh of St. Victor and Peter Comestor, see Beryl Smalley, *The Study of the Bible in the Middle Ages*, 3rd ed. (Oxford, 1983), 87, 242.

⁸⁰ Another theological work of Peter’s consists entirely of *questiones*: *Summa de sacramentis et animae consiliis*, ed. Jean-Albert Dugauquier (Louvain, 1954).

⁸¹ In part this reflects the more general twelfth-century transition of biblical exegesis from a synthesis of patristic wisdom to a separation of different schools of interpretation.

⁸² Henri de Lubac, *Medieval Exegesis*, vol. 1: *The Four Senses of Scripture*, trans. Mark Sebanc (1959; repr., Edinburgh, 1998), 52.

FIGURE 4: Two Paris masters of the late twelfth century: Alain of Lille (d. 1202) in dialogue with Peter the Chanter. Manuscript from the Abbey of Ottoburne (1228–1246). British Library, MS Cod. Addit. 19767. Used by permission.

THE ABSORPTION OF DISPUTATION within the curriculum of the medieval university marked the formal integration of contrapuntal debate at the intellectual level while also illustrating its turn toward a cultural practice. Having originated in scholastic circles, university disputation has been a hallmark of the Western intellectual tradition from the Middle Ages down to the modern *viva voce* dissertation defense.⁸³

Among the earliest examples of disputations held for the benefit of bachelors and students are the *Quaestiones disputatae* of Simon of Tournai, a master in Paris from ca. 1165 to 1201 who in his youth had attended the classes (and disputations) on law in Bologna.⁸⁴ Dating from the last decade of the twelfth century, on the eve of the formal recognition of the University of Paris, Simon's *Quaestiones* consist of 102 disputations containing 371 individual questions dealing with a wide, but standard, array of topics relating to Christian theology, including the Trinity, Christological problems, original sin, the morality of human actions, virtues and vices, and the sacraments.⁸⁵ Details about the conduct of these disputations are generally few, but some sense of the events can nevertheless be discerned.⁸⁶ Master Simon, seated in his chair (*Symon sedet*), directed each discussion by introducing the question of the day, supplying the necessary authorities (*auctoritates*), responding to objections, and finally offering the solution. The number of questions to be disputed varied from one day to the next, and sometimes Simon had to remind his audience that a certain topic had already been discussed (*alibi discussum est*). At other times he interrupted the disputation to postpone further discussion until another day.⁸⁷ His popularity as a debater is confirmed by the testimony of the English chronicler Matthew Paris (d. 1259), who pauses in his wide-ranging *Chronica majora* to tell us that even the largest lecture hall could scarcely contain the crowds of students who flocked to hear Simon. For if Simon lectured well, Matthew writes, he disputed even better.⁸⁸ Other figures of note in the Paris of King Philip II Augustus (r. 1179–1223) confirm this reputation: Henry of Brussels, Gerald of Wales, and Thomas of Cantimpré each remarked on how many students Simon seemed to attract with his disputations, speaking scornfully of his inordinate pride.⁸⁹ Not since the days of Peter Abelard had the disputations of a lecturer in theology provoked such sentiments of admiration, contempt, and even jealousy.

Scholars are in agreement that the University of Paris was not founded, but rather grew.⁹⁰ Many of the intellectual and even structural components of what would be-

⁸³ For general remarks, see the learned study by William Clark, *Academic Charisma and the Origins of the Research University* (Chicago, 2006), esp. chap. 3. See also Ku-ming (Kevin) Chang, "From Oral Disputation to Written Text: The Transformation of the Dissertation in Early Modern Europe," *History of Universities* 19, no. 2 (2004): 129–187.

⁸⁴ Joseph Warichez, *Étienne de Tournai et son temps, 1128–1203* (Paris, 1937), 17–22.

⁸⁵ Seven manuscripts of Simon's *Disputationes* are preserved. The standard critical edition of these texts is Joseph Warichez, ed., *Les Disputationes de Simon de Tournai* (Louvain, 1932). Subsequent notes refer to the individual disputations and page numbers contained in this edition.

⁸⁶ We learn, for example, that the audience consisted of not only students, but the entire teaching personnel as well.

⁸⁷ Warichez, *Les Disputationes de Simon de Tournai*, *Disputatio* LIX, 168; *Disputatio* LIII, 154; *Disputatio* XXX, 92.

⁹⁰ Cf. Stephen C. Ferruolo, "The Paris Statutes of 1215 Reconsidered," *History of Universities* 5 (1985): 1–14, here 1.

come the university were already firmly in place by the end of the twelfth century, including a lively controversy over the place of disputation in the lecture halls.⁹¹ The statutes of 1215 that gave recognition to the corporation of masters and students (*universitas magistrorum et scholarium*) also laid down teaching programs and procedures (including appropriate days and times for lecturing and disputing), regulated academic custom at official gatherings and clothing and occasions for mourning, confirmed the rules for examinations, set the minimum age for lecturing in the arts at twenty-one and for lecturing in theology at thirty-five, and repeated that masters should exercise jurisdiction over scholars.⁹² Over the next several centuries, the *disputatio* flourished in its new institutional home and became an essential ingredient in the basic organization of academic learning.⁹³

The formalized practice of disputation in Paris took root in the faculty of arts as well as in the faculties of advanced learning: theology, medicine, and canon law.⁹⁴ Several different forms of university disputations developed in the period following 1215.⁹⁵ The *disputatio ordinaria* was held at regular intervals, usually in the morning, for the benefit of bachelors and students.⁹⁶ It was presided over by a master, who announced beforehand the question that would be asked. One bachelor, the *opponents*, supplied arguments against the thesis, while another, the *respondens*, attempted to answer the objections that were raised and to demonstrate their weakness.⁹⁷ The master typically gave a summing-up or *determinatio* at the end, but not in all cases,

⁹¹ On the social context of the early history of the University of Paris, see Jacques Verger, "A propos de la naissance de l'Université de Paris: Contexte social, enjeu politique, portée intellectuelle," in Johannes Fried, ed., *Schulen und Studium im sozialen Wandel des hohen und späten Mittelalters* (Sigmaringen, 1986), 69–96. Important discussions are also to be found in Hastings Rashdall, *The Universities of Europe in the Middle Ages*, new ed., ed. F. M. Powicke and A. B. Emden, 3 vols. (Oxford, 1936), vol. 1; and Stephen C. Ferruolo, *The Origins of the University: The Schools of Paris and Their Critics, 1100–1215* (Stanford, Calif., 1984).

⁹² Henricus Denifle and Aemilio Châtelain, eds., *Chartularium Universitatis parisiensis*, 4 vols. (Paris, 1889–1897), 1: 78–79.

⁹³ An indispensable guide to the study of the medieval university is H. de Ridder-Symeons, ed., *Universities in the Middle Ages* (Cambridge, 1992), vol. 1 in the four-volume *History of the University in Europe*, ed. Walter Rüegg, published under the auspices of the Standing Conference of Rectors, Presidents, and Vice-Chancellors of the European Universities (CRE). An early and still very valuable guide to the basic patterns of learning is Charles Thurot, *De l'organisation de l'enseignement dans l'Université de Paris au Moyen-âge* (Paris, 1850). See also Olga Weijers, *Terminologie des universités au XIII^e siècle* (Rome, 1987), esp. pt. 3. Fresh perspectives on the subject can be found in John Van Engen, ed., *Learning Institutionalized: Teaching in the Medieval University* (Notre Dame, Ind., 2000).

⁹⁴ For the faculty of arts, see especially Weijers, *La "Disputatio."* For the development of the *disputatio* in the faculties of theology, medicine, and law, see Bazàn et al., *Les questions disputées et les questions quodlibétiques*.

⁹⁵ The basic structure and procedures of the university disputations are outlined in Bernardo C. Bazàn, "Les questions disputées, principalement dans les facultés de théologie," in Bazàn et al., *Les questions disputées et les questions quodlibétiques*, 21–49. Further information on the definition of the genre can be found in the chapters by Wippel, Fransen, and Jacquart. At the Italian universities and at Oxford and Cambridge, which began as offshoots of the University of Paris in the early thirteenth century, the documentation concerning academic practices is plentiful only from about the middle of the thirteenth century. See A. G. Little and F. Pelster, *Oxford Theology and Theologians, c. A.D. 1282–1302* (Oxford, 1934), 29–30.

⁹⁶ This basic form of disputation is also variously called a *disputatio solemn* or *disputatio publica*. In addition to *disputatio quodlibetalis*, these quodlibets could also be called *disputatio communis* and *disputatio generalis*.

⁹⁷ For a technical discussion of the art, see Ignacio Angelelli, "The Techniques of Disputation in the History of Logic," *Journal of Philosophy* 67, no. 20 (1970): 800–815.

and sometimes not at the time of the disputation, but rather at a later date.⁹⁸ The questions dealt with during any one disputation were usually all related to the same problem or type of problem, and the exercise was public in the sense that it was open to bachelors from different schools, in contrast to the *disputatio privata*, which the presiding master held in his own school and only for his own pupils.⁹⁹

A second kind of disputation, the *disputatio de quolibet*, soon gained currency in the university.¹⁰⁰ Once thought to owe its genesis to Thomas Aquinas, the quodlibet made its appearance sometime in the second quarter of the thirteenth century.¹⁰¹ In contrast to the ordinary disputation, which focused on specific topics announced beforehand and which was held for the benefit of students and faculty only, questions posed at these disputations were offered *de quolibet* ("about anything at all") and could cover any number of subjects, ranging across theology, metaphysics, canon law, and medicine. In addition, the initiative for the subjects debated lay with the audience, and the disputing master never knew beforehand what questions would be asked. Less frequent than the private disputations, these quodlibetical disputations generally took place in the Latin Quarter's rue du Fouarre (*vicus straminis*), and only during Advent and Lent. Most especially, they were open to the general public and attracted a diverse, even "international," audience.¹⁰² Masters and scholars from other schools might attend. All kinds of ecclesiastics and prelates, and even civil authorities, might have been present—indeed, all the "intellectuals" of the time who were attracted by skirmishes of this kind, and all of whom had a desire to ask questions and oppose arguments.¹⁰³ So great was the popularity of disputing that by the later thirteenth and early fourteenth centuries, the art and practice of debate evolved into newer forms, such as the *disputationibus de sophismatibus* and the *ars obligatoria*.¹⁰⁴

It is the early history of quodlibetal disputations that is most interesting from a cultural historical perspective. In addition to the fact that they quickly became a staple of the university calendar and spread beyond the faculty of theology in Paris where they began, there are other reasons why these ritualized spectacles should have been so popular. It has rightly been observed that the public gatherings at quodlibetical disputations recall the performance of drama, which was flourishing in

⁹⁸ There is some uncertainty as to exactly how long after the disputation the determination took place. Palémon Glorieux maintained that it occurred on the first reading day following the disputation. See Glorieux, "L'enseignement au Moyen âge: Techniques et méthodes en usage à la Faculté de théologie de Paris au XIII^e siècle," *Archives d'histoire doctrinale et littéraire du Moyen âge* 35 (1968): 65–186, here 126. But see also Little and Pelster, *Oxford Theology and Theologians*, 229, who are less certain about how soon after the disputation the determination might have been given. Bazàn, "Les espèces du genre," in Bazàn et al., *Les questions disputées et les questions quodlibétiques*, 61–62, has nothing further to contribute toward a solution.

⁹⁹ The *disputatio privata* is less well documented than the other types of university disputations. See Bazàn, "Les espèces du genre," 62.

¹⁰⁰ The most comprehensive treatment of this literature, even if it was intended only as a "first orientational study," remains Palémon Glorieux, *La littérature quodlibétique de 1260 à 1320*, 2 vols. (Le Saulchoir, Kain, 1925–1935).

¹⁰¹ The quodlibetical disputation (and its twentieth-century historiography) is explained in detail in the chapters by John Wippel in Bazàn et al., *Les questions disputées et les questions quodlibétiques*, 153–222.

¹⁰² Glorieux, *La littérature quodlibétique de 1260 à 1320*, 2: 10.

¹⁰³ Lawn, *The Rise and Decline of the Scholastic "Quaestio disputata"*, 16.

¹⁰⁴ These later forms of argumentation flourished especially in England. For context, see William J. Courtenay's important study *Schools and Scholars in Fourteenth-Century England* (Princeton, N.J., 1987).

FIGURE 5: University masters engage in scholastic disputation over the Aristotelian definition of happiness. Note the presence and participation of students. Mid-thirteenth-century Parisian copy of a commentary on Aristotle's *Nicomachean Ethics* by Eustratius (ca. 1120), the Greek bishop of Nicea. National Library of Sweden, MS Va 3, fol. 205v. Used by permission. For further discussion, see Mia Åkestam and Erika Kihlman, "Lire, comprendre et mémoriser l'Éthique à Nicomaque: Le rapport texte-image dans ms. Stockholm, Kungl. Bibl., Va 3," in Olle Ferm and Per Förmegård, eds., *Regards sur la France du Moyen âge* (Stockholm, 2009), 110–153.

France in the thirteenth century, and which also tended to efface distinctions between actor and audience, spectacle and daily life, ritual and representation.¹⁰⁵ The theatricality and indeed the entertainment value of these university events would not have been lost on a bustling Parisian audience that was witness to novelties in dramatic performance, innovations in polyphonic music, much of it emanating from the school of Notre Dame, and the growing popularity of a new genre of debate poems that featured human or anthropomorphic characters disputing on a multitude of topics.¹⁰⁶

THE PRACTICE OF DISPUTATION CAN be said to have entered the public sphere when it transcended the academic circles where it first developed and reached audiences who were not trained in the methods of schools and universities. The flowering of polyphonic composition offers an especially intriguing cultural manifestation of scholastic disputation because it emanates not only from the same time and place (late-twelfth-century Paris), but from the same circle of scholars and teachers.¹⁰⁷ As the eminent musicologist Richard Taruskin has noted, “the burgeoning of polyphonic composition followed the exact same trajectory [as scholastic education] . . . it reached its first great, transfiguring culmination in the cathedral schools of Paris, and in a new form it radiated from the cosmopolitan center throughout Western Christendom, receiving a special ancillary cultivation in the universities.”¹⁰⁸ We might go further. In cultural terms, polyphony is one of a group of tactics deployed

¹⁰⁵ Jody Enders, “The Theater of Scholastic Erudition,” *Comparative Drama* 27, no. 3 (Fall 1993): 341–363, here 344. On the general importance of audience participation, see Henri Rey-Flaud, *Pour une dramaturgie du Moyen âge* (Paris, 1980), 15–22.

¹⁰⁶ On medieval drama, see Richard Axton, *European Drama of the Early Middle Ages* (London, 1974); O. B. Hardison, Jr., *Christian Rite and Christian Drama in the Middle Ages: Essays in the Origin and Early History of Modern Drama* (Baltimore, 1965), who located the origins of drama in sacramental rituals of the Catholic Church; and Jody Enders, *Rhetoric and the Origins of Medieval Drama* (Ithaca, N.Y., 1992), who examines the interplay between legal rhetoric and dramatic practice in a broad array of sources from antiquity to the Renaissance and cites the university quodlibet as participating in what she calls the “aestheticization of rhetoric” (164). More recently, Carol Symes, *A Common Stage*, has undertaken a culturally oriented and methodologically sophisticated analysis of theatrical activity in northern France, positing the existence of a public and political sphere in which theater served as a site for the exchange of information and ideas and a medium for debate, deliberation, and dispute. For a discussion about the development of vernacular debate poetry, see the introduction in the anthology by Michel-André Bossy, ed., *Medieval Debate Poetry: Vernacular Works* (New York, 1987), xi–xxiv.

¹⁰⁷ The cultural-historical dimensions of medieval music are a topic of current scholarly attention. See, for example, Andrew Kirkman, *The Cultural Life of the Early Polyphonic Mass: Medieval Context to Modern Revival* (Cambridge, 2010); and Olivier Cullin, ed., *La place de la musique dans la culture médiévale* (Turnhout, 2007).

¹⁰⁸ Richard Taruskin, *Music from the Earliest Notation to the Sixteenth Century* (Oxford, 2005), 149. For a comprehensive study of the musical culture of Notre Dame within the context of the cathedral and the city, see Craig Wright, *Music and Ceremony at Notre Dame of Paris, 500–1550* (Cambridge, 1989), esp. chaps. 7–8. For the more embellished forms of Notre Dame polyphony (*tripla* and *quadrupla*), see Guillaume Gross, *Chanter en polyphonie à Notre Dame de Paris aux 12^e et 13^e siècles* (Turnhout, 2007). An up-to-date overview of what is known about the school and composers of Notre Dame by a leading authority in the field is Edward H. Roesner, “Notre Dame,” chap. 30 in *The Cambridge History of Medieval Music*, forthcoming. See also Janet Knapp, “Polyphony at Notre Dame of Paris,” in Richard Crocker and David Hiley, eds., *The Early Middle Ages to 1300* (Oxford, 1990), 557–635. On the university context for early polyphony, see Marion S. Gushee, “The Polyphonic Music of the Medieval Monastery, Cathedral and University,” in James McKinnon, ed., *Antiquity and the Middle Ages: From Ancient Greece to the 15th Century* (London, 1990), 143–169.

to enhance the delivery of liturgical song, the song being an enhanced reading of a ritual text, and hence it is an enhancement of the ritual act itself. Polyphony served to bring to the fore the *harmonia*—the *consonantia* implicit in the song—and thus to highlight the text that the song embellished. Since most polyphony from the twelfth century onward entailed responsorial chants either directly or indirectly, it threw into relief the relationship of the Mass (the gradual, the alleluia, etc.) with the scripture on which the chant commented, hence emphasizing the overall *harmonia* inherent in the body of scripture. Harmony, in simple terms, is counterpoint slowed down; counterpoint, like *disputatio*, is a cultural expression of dialectic and rhetoric. Broadly speaking, the principles that Abelard applied to theology and that Gratian applied to law, polyphony applied to music.

Closely affiliated with the early history of the University of Paris is another musical innovation that is even more explicitly a dialogue of voices: the motet. Simply defined as a piece of music in several parts with words (from the Old French, *mot*), it first appeared in connection with Parisian scholastic circles, and in particular with the career of Philip the Chancellor of Notre Dame, head of the University of Paris from 1218 until his death in 1236.¹⁰⁹ Very early on, the capacity of the motet to carry arguments *pro* and *contra*, to engage in dialectic and irony, began to be systematically exploited and used in increasingly sophisticated ways, so that by 1300, the motet (like the quodlibet) deployed these tactics in virtuoso fashion.¹¹⁰ Recently described as the least-studied major figure of thirteenth-century thought, Philip the Chancellor exemplifies the cultural fabric that braided music, poetry, and university administration.¹¹¹ His poem *Beata viscera* (“O Blessed womb”), in honor of the Virgin, was set to music by one of the most celebrated composers of Parisian polyphony, Perotin.¹¹² Philip is also credited with two well-known debates that are found in several manuscripts with their melodies: *Disputatio membrorum* is a debate between various parts of the body, and the even better known *Quisquis cordis et oculi* is an *altercatio* between heart and eye.¹¹³ Close examination of other elements of his monophonic

¹⁰⁹ See especially Thomas B. Payne, “Aurelianus civitas: Student Unrest in Medieval France and a Conductus by Philip the Chancellor,” *Speculum* 75, no. 3 (2000): 589–614; and Payne, “Philip the Chancellor and the Conductus Prosula: ‘Motetish’ Works from the School of Notre Dame,” in Terence Bailey and Alma Santosuosso, eds., *Music in Medieval Europe: Studies in Honour of Bryan Gillingham* (Aldershot, 2007), 220–238. A wealth of additional material can be found in Payne, “Poetry, Politics, and Polyphony: Philip the Chancellor’s Contribution to the Music of the Notre Dame School,” 5 vols. (Ph.D. diss., University of Chicago, 1991).

¹¹⁰ For a comprehensive overview of the motet, see E. H. Sanders, “The Medieval Motet,” in Wulf Arlt, Ernst Lichtenhahn, and Hans W. Oesch, eds., *Gattungen der Musik in Einzeldarstellungen: Gedenkschrift Leo Schrade, erst Folge* (Berne, 1973), 497–573. For a more recent and succinct overview of the motet literature, especially in comparison with other musical forms of the thirteenth century, see Mark Everist, “The Thirteenth Century,” in Everist, ed., *Cambridge Companion to Medieval Music* (Cambridge, 2011), 67–86, esp. 77–85.

¹¹¹ R. E. Houser, trans., *The Cardinal Virtues: Aquinas, Albert, and Philip the Chancellor* (Toronto, 2004), 42 n. 87. For Philip’s general influence on thirteenth-century thought, see Odon Lottin, “L’influence littéraire du chancelier Philippe,” in Lottin, *Psychologie et morale aux XII^e et XIII^e siècles*, 6 vols. (Paris, 1942–1960), 6: 149–169.

¹¹² The source for this information is the thirteenth-century musical treatise *De mensuris et discantu*, written by an unnamed Englishman and known to posterity as *Anonymous IV*. The story of the misnomer and of its contents is nicely summarized by Taruskin, *Music from the Earliest Notation to the Sixteenth Century*, 173–174. See also Gushee, “The Polyphonic Music of the Medieval Monastery, Cathedral and University,” 157–163.

¹¹³ John Stevens, “Medieval Song,” in Crocker and Hiley, *The Early Middle Ages to 1300*, 418. For discussion of the manuscripts, see L21 and K52 in Gordon A. Anderson, “Notre-Dame and Related

conductus repertoire reveals a composer who was highly attentive to vocabulary, logic, and the preaching power of the word.¹¹⁴ In a newly published edition of Philip's motets, Thomas B. Payne has observed that the correspondence of at least three attributable multi-texted polyphonic works operates explicitly as a debate, thus presenting the listener with a situation analogous to a scholastic disputation, particularly since the subject matter is the praise and criticism of the clergy.¹¹⁵ "Just as the two poems in the motetus and triplum contend, each taking sides in a disputation on the morality and corruption of the clergy, so do all the voices spar rhythmically."¹¹⁶ Not only are there simultaneous utterances on both sides of the debate, but in some instances there is the additional offering of a judgment by a third party, thus imitating the final determination that concludes a scholastic disputation.¹¹⁷ Philip the Chancellor well illustrates the penetration of scholastic ideas into multiple cultural spheres, and it is no minor coincidence that his innovations in song, poetry, and polemic coincided with a remarkable output in debate poems (in vernacular languages as well as Latin) during the early thirteenth century.¹¹⁸

Debate poems and polyphonic music offer tantalizing possibilities for extra-university manifestations of scholastic disputation. An even more illustrative example of the practice or application of disputation in the thirteenth century is the Church's confrontation with Judaism and Jews, longtime targets of ecclesiastical polemic, and often in works cast in the dialogue form.¹¹⁹ To be sure, there existed a long tradition of polemics *adversus Iudaeos* ("against the Jews") going back to the church fathers,

Conductus: A Catalogue Raisonné," *Miscellanea Musicologica* 6 (1972): 153–229, 7 (1975): 1–81. See as well the overview of Philip the Chancellor's poetry by Peter Dronke, "The Lyrical Compositions of Philip the Chancellor," *Studi medievali*, ser. 3, 28 (1987): 563–592.

¹¹⁴ Anne-Zoé Rillon, "Convaincre et émouvoir: Les conduits monodiques de Philippe le Chancelier, un médium pour la prédication?" in Cullin, *La place de la musique dans la culture médiévale*, 99–113. For further connections between scholastic life and music, see Jacques Verger, "La musique et le son chez Vincent de Beauvais et les encyclopédistes du XIII^e siècle," *ibid.*, 71–85.

¹¹⁵ *Ypocrite pseudopontifices / Velut stelle fimamenti / Et gaudebit; Anima iuge lacrima; and O quam necessarium / Venditores labiorum / Domino [or Eius]*. See Philip the Chancellor, *Motets and Prosulas*, ed. Thomas B. Payne (Middleton, Wis., 2011). Philip at the time was at odds with the bishop of Paris, William of Auvergne. Perotin sided with Philip and supplied the musical (and rhythmically oppositional) elements for the double motet *Ypocrite pseudopontifices*.

¹¹⁶ *Ibid.*, xxv.

¹¹⁷ According to Payne, *ibid.*, xix, the motets "adopt opposite stances in each of the upper voices, with the motetus dispensing an opinion on one side of the disputation, and the triplum taking the other. In each of these cases the disagreement between the texts is borne out ingeniously by their musical settings as double motets: each position is disclaimed simultaneously with the other, resulting in a verbal discord that, ironically, is offset by the harmonious musical setting that combines them."

¹¹⁸ Debate in one form or another was a staple of courtly and clerical entertainment even before the thirteenth century. There are debates between Wine and Water and Winter and Summer, as well as many love dialogues, including *De Ganymede and Helena* and, most popular of all, the Knight versus the Clerk, a debate about who is the better lover. Beginning in the late twelfth and early thirteenth centuries, there are debate poems in many of the vernacular languages. In Provençal they are called *joc-partit*, *partimen*, and *tenso*; in German, *Wechsel*; and in Old French, *jeux-partis* (or *partures*), in which some two hundred survive, many of them with their music attached. For a discussion of Philip the Chancellor's debate poems in this larger context, see Michel-André Bossy, "Medieval Debates of Body and Soul," *Comparative Literature* 28, no. 2 (1976): 144–163. On the use of dialectics among the Troubadours, see Michelle Bolduc, "Troubadours in Debate: The *Breviari d'Amor*," *Romance Quarterly* 57, no. 1 (2010): 63–76.

¹¹⁹ Music and anti-Judaism have traditionally been treated as entirely separate fields. An original and wide-ranging examination of the Christian musical attack upon Jews, opposing harmonious musicality to Jewish noise, is Ruth HaCohen, *The Music Libel against the Jews* (New Haven, Conn., 2011), who discusses the medieval period in chap. 1.

the development of which can be traced in the writings of medieval Christian authors.¹²⁰ A catalogue of these anti-Jewish polemics points to a typology in which an older style that paid particular attention to interpretations of the biblical text, such as Justin Martyr's *Dialogue with Trypho* (second century) and Augustine's *Adversus Judaeos* (fifth century), was distinguished from newer forms of argumentation in the twelfth century that were characterized by a focus on "reason" (*ratio*) and that targeted the Talmud and post-biblical Jewish literature.¹²¹ A sustained body of scholarship since the 1980s has illuminated the complex conceptions that underpin the medieval intellectual encounter with Jews and Judaism, what Jeremy Cohen famously dubbed "the hermeneutical Jew."¹²² Absent from this important field of historical analysis is an explanation of one of the most basic and fundamental features of this encounter: the fact that it was a dialogue, both metaphorically and literally a disputation.

While it may seem logical that Jewish-Christian encounters would have been given a new thrust by the formalization of disputation in scholastic circles and universities, there is in fact a paradox: throughout the thirteenth century, the Church was perpetually concerned with regulating interactions between Christians and Jews. The introduction of the "Jewish Badge" at Lateran IV in 1215 is the most obvious example of an attempt to maintain segregation between Christian and Jewish communities, but many other edicts of Church councils and missives of the popes specifically sought to forbid religious disputations of the sort mentioned in the dialogues of the twelfth century.¹²³ Thus in an addendum to the synodical rules issued around

¹²⁰ Cf. Jaroslav Pelikan, *The Emergence of the Catholic Tradition (100–600)* (Chicago, 1971), 15: "virtually every major Christian writer of the first five centuries either composed a treatise in opposition to Judaism or made this issue the dominant theme in a treatise devoted to some other subject." The two best treatments of the medieval Christian intellectual engagement with Jews and Judaism are Gilbert Dahan, *Les intellectuels chrétiens et les juifs au Moyen âge* (Paris, 1990); and Jeremy Cohen, *Living Letters of the Law: Ideas of the Jew in Medieval Christianity* (Berkeley, Calif., 1999). See also the important studies by Anna Sapir Abulafia, *Christians and Jews in the Twelfth-Century Renaissance* (London, 1995) and *Christians and Jews in Dispute: Disputational Literature and the Rise of Anti-Judaism in the West (c. 1000–1150)* (Aldershot, 1998).

¹²¹ Heinz Schreckenberg, *Die christlichen Adversus-Judaeos-Texte (11.–13. Jh.)* (Frankfurt, 1991). A leading advocate in arguing for a connection between the rational developments of the twelfth-century renaissance and the negative impact on the Jewish-Christian debate is Anna Sapir Abulafia (see fn. 120). The foundational brick in this line of inquiry was laid by Amos Funkenstein, "Changes in the Patterns of Christian Anti-Jewish Polemic in the Twelfth Century" (in Hebrew), *Zion*, n.s., 33 (1968): 125–144. An abbreviated and slightly reoriented version of the essay subsequently appeared in English as "Basic Types of Christian Anti-Jewish Polemics in the Later Middle Ages," *Viator* 2 (1971): 373–382.

¹²² Cohen, *Living Letters of the Law*, 2–3 n. 3. Cf. the expression "theological Jew" as described by Dahan, *Les intellectuels chrétiens et les juifs au Moyen âge*, 585. The importance of anti-Jewish sentiment in medieval Europe has not always been recognized. A landmark survey of historical writings that neglect the place and importance of Jews in medieval Western Europe is Gavin I. Langmuir, "Majority Historians and Post-Biblical Jews," *Journal of the History of Ideas* 27 (1966): 343–364, reprinted in Langmuir, *Toward a Definition of Antisemitism* (Berkeley, Calif., 1990), 21–41. For a recent summary of the subject and its historiography, see Alex J. Novikoff, "The Middle Ages," in Albert S. Lindemann and Richard S. Levy, eds., *Antisemitism: A History* (Oxford, 2010), 63–78. For the iconography of anti-Judaism in the Middle Ages, see especially Heinz Schreckenberg, *The Jews in Christian Art: An Illustrated History* (New York, 1996), esp. 222–235 for images of dialogue and debate; and Sara Lipton, *Images of Intolerance: The Representation of Jews and Judaism in the Bible Moralisée* (Berkeley, Calif., 1999), 3–4, who wisely cautions against direct causation between visual representations and contemporary events.

¹²³ The "veracity" of these Jewish-Christian dialogues that purport to be based on actual encounters has long exercised the minds of scholars interested in Jewish-Christian intellectual relations. In my opinion, the emphasis is at least partially misplaced, for it is a common literary device, and separating truth from fiction is highly problematic (cf. Schmitt, *The Conversion of Herman the Jew*, chap. 1). What

FIGURE 6: Jews disputing with bishops at the feet of enthroned Ecclesia, who personifies the Church and the Virgin Mary and possibly also Queen Blanche of Castile. The figure on the left points to a Torah scroll, while the crowned female figure looks approvingly in the direction of the bishops. Miniature in the *Bible moralisée*, Paris, ca. 1240. Bibliothèque nationale de France, MS Lat. 11560, fol. 87v. Image from Paul Weber, *Geistliches Schauspiel und Kirchliche Kunst* (Stuttgart, 1894), 113.

1200 by Odo of Sully, the archbishop of Paris (1197–1208), it is stated that “laymen shall, under pain of excommunication, be forbidden ever to dare to dispute with Jews about the articles of the Christian faith.”¹²⁴ The Council of Treves in March 1227 repeated the injunction that “ignorant clergymen shall not dispute with Jews in the presence of laity.”¹²⁵ Rising to yet higher levels of authority, Pope Gregory IX in March 1233 wrote to the archbishops and bishops and the other prelates of the Church in Germany to prohibit them “most stringently” from “at any time dar[ing] to dispute with Jews about their faith or their rites, lest under pretext of such dis-

is culturally interesting is the emphasis placed on giving the dialogue or disputation an air of realism, for by the early thirteenth century this became a matter of ecclesiastical and royal concern, not merely the personal preoccupation of a singular polemicist. For disputations involving merchants rather than clerics, see Ora Limor, ed., *Die Disputationen zu Ceuta (1179) und Mallorca (1286): Zwei antijüdische Schriften aus dem mittelalterlichen Genua* (Munich, 1994). For an iconoclastic interpretation of thirteenth-century disputations, see H. Kraus, “Christian-Jewish Disputation in a 13th Century Lancet at the Cathedral of Troyes,” *La gazette des beaux-arts* 72 (1968): 151–158, who argues for a “cordiality of relationship” and friendly intellectual discourse on the basis of the visual depiction of disputation. A more judicious appraisal of the iconography of debate is offered in Debra Higgs Strickland, *Saracens, Demons, and Jews: Making Monsters in Medieval Art* (Princeton, N.J., 2003), 101–104.

¹²⁴ Solomon Grayzel, ed., *The Church and the Jews in the XIIIth Century: A Study of Their Relations during the Years 1198–1254, Based on the Papal Letters and the Conciliar Decrees of the Period*, rev. ed., 2 vols. (New York, 1966), 1: 300–301.

¹²⁵ *The Church and the Jews* 19 (March 1, 1227): 318–319.

putation (*sub pretextu disputationis*) the simple-minded slide into a snare of error, which God forbid."¹²⁶ The concern to regulate debates stemmed at least in part from complaints about their outcomes. In the 1190s, the prolific man of letters Peter of Blois warned that "as a result of illicit and careless debates, a virulent crop of heresies runs wild."¹²⁷

Ecclesiastical decrees explicitly limiting both open and private exchanges between Christians and Jews represent one aspect of the papal monarchy's consolidation of power. The circumstances that led to the Paris disputation in 1240 represent another: the Church's sanctioning of properly controlled public disputations. Just as the Dominican Order's preaching activities demonstrated the importance of disputation as a weapon for combating heretics and non-believers, so too did the Paris disputation, or the "Talmud trial," as it is often termed, demonstrate the Church's attempt to manipulate disputation on an unprecedented scale.¹²⁸

The immediate cause for the events of 1240–1242 was a series of condemnatory bulls issued by Pope Gregory IX in 1239 ordering the rulers and prelates in Europe to impound the Talmud and other Jewish writings on the first Sabbath during Lent in 1240.¹²⁹ Gregory's call was a delayed reaction to a plea he had received in 1236 from an evidently embittered Jewish apostate named Nicholas Donin, who presented the pope with thirty-five accusations against the Talmud and its Jewish exponents.¹³⁰ There is little that can be said with certainty about Donin's Jewish background, or for that matter his motives.¹³¹ At least a dozen of the thirty-five articles condemned the Talmud for its perceived absurd homilies, in much the same way that Peter Alfonsi and Peter the Venerable had done a century earlier.¹³² Donin's accusations, however, were uniquely transformed into a staged event when King Louis IX (r.

¹²⁶ *The Church and the Jews* 69 (March 5, 1233): 200–201.

¹²⁷ *Contra perfidiam Judaeorum*, PL 207: 825. See John D. Cotts, *The Clerical Dilemma: Peter of Blois and Literate Culture in the Twelfth Century* (Washington, D.C., 2009), 237.

¹²⁸ On the role of disputation in Dominican education, see M. Michèle Mulchahey, "First the Bow Is Bent in Study": *Dominican Education before 1350* (Toronto, 1998), 167–175. For reasons of space, I do not here engage the use of disputation in the anti-heretical campaigns and the closely affiliated rise of the Inquisition, both of which present relevant avenues for further research on the culture of disputation.

¹²⁹ Nicholas Donin's original accusations about the alleged blasphemies contained in the Talmud were submitted to Yehiel ben Joseph, who was then forced to respond. According to the Christian account of the disputation, the discussion begins with Donin's announcement that he intends to question Yehiel about the Talmud, which he states is four hundred year old, and ends with a so-called "confession" in which Yehiel ben Joseph and Judah ben David admit that the Talmud passages were correctly quoted, but resolutely deny that they contained any blasphemies against Christ or Christians. See Isidore Loeb, *La controverse sur le Talmud sous Saint Louis* (Paris, 1881), 21–54; Joel E. Rembaum, "The Talmud and the Popes: Reflections on the Talmud Trials of the 1240's," *Viator* 13 (1982): 202–223; Robert Chazan, "The Condemnation of the Talmud Reconsidered (1239–1248)," *Proceedings of the American Academy for Jewish Research* 55 (1988): 11–30; Hyam Maccoby, *Judaism on Trial: Jewish-Christian Public Disputations in the Middle Ages* (Oxford, 1982), 19–38; Gilbert Dahan, ed., *Le brûlement du Talmud à Paris, 1242–1244* (Paris, 1999); and Cohen, *Living Letters of the Law*, 317–325.

¹³⁰ For considerations about Donin's background and motives, see Jeremy Cohen, "The Mentality of the Medieval Jewish Apostate: Peter Alfonsi, Hermann of Cologne, and Pablo Christiani," in Todd M. Endelman, ed., *Jewish Apostasy in the Modern World* (New York, 1987), 20–47, esp. 35–41.

¹³¹ But see Jeremy Cohen's attempt to reconstruct the motives of three other apostates of the High Middle Ages, *ibid.*

¹³² It seems reasonable to assume that Nicholas was familiar with these earlier works, or at any rate with the arguments contained therein. But whereas the works of Alfonsi and Peter the Venerable remained words on the page (or, in Alfonsi's case, an imaginary and autobiographical dialogue with his former self), here the dispute has become "public" by virtue of its live hearing.

1226–1270) responded to the pope's bulls by confiscating rabbinic texts and summoning leading French rabbis to his court in order to defend the charges.

Donin's decision to take his complaint directly to the pope may reveal a greater determination on his part than had been exhibited by earlier Jewish converts, but there is a larger cultural context that needs to be appreciated. Donin's move also reflects the new concerns of the papacy, whose authority was far greater in the thirteenth century than it had been in the twelfth. The same can be said of the French monarchy, which had grown measurably since the reign of Philip II Augustus.¹³³ Thus it was not the critique of Judaism and its texts that was new in 1240, or even the part played by a Jewish convert in launching the attack. Rather, it was that the institutional establishments were markedly more competent in handling (or presuming that they could handle) a public disputation with the most knowledgeable Jews of the day.¹³⁴ The overall appearance of the encounter as a "show trial" belies the efforts of the monarchy to present (we might even say to perform) the event in such a manner as to give the impression of a contrapuntal, scholastic debate that would reveal a deeper truth.¹³⁵ Most important of all, Paris in the mid-thirteenth century had become the epicenter of a culture of debate and disputation, one that King Louis IX himself actively promoted. In an intriguing passage in Joinville's *Life of Saint Louis* (completed in 1309), a story is told of "a great debate" between clerics and Jews at the monastery of Cluny.¹³⁶ The abbot reprimands the knight for reacting with violence, while the knight, in turn, chides the abbot for organizing such a debate in the first place. The moral of the story, the king explains to his biographer in language that echoes contemporary Church councils, is "that no man, unless he is a skilled theologian, should debate with Jews." In another passage in the panegyric, Louis presides at supper over a debate between Joinville and Master Robert de Sorbon (Louis's chaplain and the founder of the Collège de Sorbonne) on the respective merits of laymen and friars, pronouncing his judgment (or, in scholastic terms, determination) following the discussion.¹³⁷ In life and in legend, King Louis IX was a patron of the schools and a champion of organized and controlled disputation.

Some scholars have posited that the disputation of 1240 was in fact only an inquisitorial proceeding and involved no actual debate per se.¹³⁸ Careful analysis of

¹³³ For historical context, see William Chester Jordan, *The French Monarchy and the Jews: From Philip Augustus to the Last Capetians* (Philadelphia, 1989), who discusses the Talmud trial at 137–139.

¹³⁴ The inclusion of learned Jews as opposition has precedent. For example, both Gilbert Crispin (late eleventh century) and Walter of Châtillon (mid-twelfth century) claimed that their disputations were held with learned authorities of the Jewish community.

¹³⁵ See the astute comments of Karl F. Morrison, *Understanding Conversion* (Charlottesville, Va., 1992), 132, concerning public debates between Jews and Christians: "Insofar as they could be regarded as instruments of conversion, they belonged to a repertory of play that included theatrical performances, the spectacle of liturgy, and the visual arts." For a similar reading of dialogue as performance in the polemical writings of early-thirteenth-century Spain, see Lucy K. Pick, *Conflict and Coexistence: Archbishop Rodrigo and the Muslims and Jews of Medieval Spain* (Ann Arbor, Mich., 2004), esp. chap. 5.

¹³⁶ Jean de Joinville, *Vie de Saint Louis*, ed. Jacques Monfrin (Paris, 1995), §§51–53. For a recent English translation, see Joinville and Villehardouin, *Chronicles of the Crusades*, trans. Caroline Smith (New York, 2008), 155.

¹³⁷ Joinville, *Vie de Saint Louis*, §§31–32; Joinville and Villehardouin, *Chronicles of the Crusades*, 150.

¹³⁸ A precise chronology of the events that took place in Paris in 1240 is desirable but unfortunately is hampered by the limited and occasionally contradictory information contained in the Christian and Hebrew accounts.

Latin manuscript 16558 in the Bibliothèque nationale has established that the proceedings were in fact divided into two stages: the disputation between Donin and the French rabbis, principally Yehiel ben Joseph, and the more formal ecclesiastical inquiry that eventually led to the burning of the Talmud in 1242.¹³⁹ Thus the Talmud trial of 1240 bears witness to the confluence of two major and related developments: the formal public disputation as a method for demonstrating truth, and the inquisitorial trial as a method for legally proving that truth and convicting the guilty parties.¹⁴⁰ The principal Christian clerics who served as witnesses during the inquest were Archbishop Walter of Sens, William of Auvergne (bishop of Paris), Geoffrey of Belleville (chaplain to King Louis IX), Adam of Chambly, and Eudes of Châteauroux (chancellor of the University of Paris). Although the meeting took place on the king's direct orders, Louis IX did not personally preside over the disputation. That task was left to his mother, Queen Blanche of Castile, well known for her patronage of arts and letters. In addition to Yehiel ben Joseph, three other rabbis are known to have taken some part in the trial—"Jews who were regarded among themselves as experts," according to the Christian account.¹⁴¹ Excepting Gerald of Wales's dubious account of Abelard's debate with a Jew in the presence of King Philip I, the disputation of 1240 marks the first recorded instance of a Jewish-Christian disputation in the presence of royalty, the first instance of a Jewish-Christian disputation that was presided over by a university official, and the first recorded instance of university officials' pursuit of the characteristically academic *disputatio* in a non-academic context. As a result of the proceeding, the books of the Talmud were found guilty as charged, and an estimated twenty to twenty-four wagonloads of manuscripts—perhaps ten to twelve thousand volumes, according to Jeremy Cohen—were burned in the Place de Grève over the course of one and a half days in 1242.¹⁴²

The burning of the Talmud that resulted from the disputation and trial in 1240 proved to be the first in a series of large-scale attacks on rabbinic Judaism that emanated from the papal court and were carried out on the orders of the French monarchy and the Dominican friars.¹⁴³ Cohen has argued that the Dominican involvement with this event constituted a new thrust in the Christian confrontation

¹³⁹ Chen-Melech Merchavia, *The Church versus Talmudic and Midrashic Literature, 500–1248* (in Hebrew) (Jerusalem, 1970), 240ff., as cited in Cohen, *Living Letters of the Law*, 323.

¹⁴⁰ Dominican involvement in thirteenth-century inquisition is an area of lively current research. For a deft handling of these features in the context of the battle against heresy, see Christine Caldwell Ames, *Righteous Persecution: Inquisition, Dominicans, and Christianity in the Middle Ages* (Philadelphia, 2009).

¹⁴¹ See Maccoby, *Judaism on Trial*, 164. The three other Jewish witnesses summoned to the gathering were Judah ben David of Melun, Samuel ben Solomon of Château Thierry, and Moses of Coucy, whose *Sefer Mitzvot Gadol* (*Great Book of Commandments*) is one of the earliest codifications of Jewish law (*Halakhah*).

¹⁴² Jeremy Cohen, *The Friars and the Jews: The Evolution of Medieval Anti-Judaism* (Ithaca, N.Y., 1982), 63.

¹⁴³ In May 1244, Pope Innocent IV renewed Gregory's original injunctions and asked Louis IX to burn any copies of the Talmud that were found to have survived the first burning. When the Jews this time appealed the sentence to Rome, complaining that they could not practice their religion without the Talmud, the pope commissioned a legatine tribunal to reopen the inquiry. The person chosen to head that inquiry was Eudes of Châteauroux (now cardinal-bishop of Tusculum), and the verdict was upheld, this time with a list of more than forty illustrious signatories from the academic and clerical communities of Paris.

FIGURE 7: Christians and Jews in dispute. The gestures and finger-pointing recall the scholastic method of point and counterpoint. Woodcut by Johann von Armsheim (1483).

with Judaism, one that went beyond the earlier theological basis of a limited tolerance by attacking Judaism on the grounds of being heresy. As much as the events of 1240 testified to a new, and chiefly Dominican, engagement with Judaism, the trial also bore witness to the evolution of scholastic disputation as a cultural practice. For while the king's role in convoking the event and the setting for the disputation at the royal court were novel for the period, the presence of Eudes of Châteauroux, the chancellor of the University of Paris, strongly suggests that the disputation was conceived in accordance with academic principles, and in any case under academic scrutiny and approval. The two-part disputation and inquisitorial trial, followed by the official verdict, evokes the now-established pattern of the university *disputatio* and final determination. Furthermore, the dating of the Talmud trial is contemporary with the first appearance of the *disputatio de quolibet*, and while the topic of the disputation at the royal court was no surprise to the participants, the manner in which it has come down to us does present notable similarities to Paris's "agonistic" environment, and it is fully consistent with Joinville's memorialization of the king. In sum, the disputation of 1240 represents the confluence between the institutionalization of scholastic disputation in Paris and the age-old Christian polemic against Judaism.

IN FIVE DISCERNIBLE STAGES, disputation emerged from pedagogy in a monastic setting to become one of the defining features of medieval intellectual life, with formative cultural manifestations at multiple levels of society. First, Anselm and his circle pioneered a more dynamic and persuasive approach to articulating the tenets of faith, one that relied heavily on the dual power of reason and dialogue; second, the rise of new schools in Italy and northern France and the transference of dialogical writing and learning to these circles allowed disputation to be absorbed into a new “scholastic” milieu; third, the recovery of Aristotle’s New Logic helped to catalyze this new and controversial use of disputation by providing models of dialectic argumentation; fourth, the institutionalization of the university *disputatio* gave disputation a formal academic context that it would retain for centuries to come; and fifth, the application of disputation in the intensifying confrontation with Jews brought academic methods into the age-old Jewish-Christian debate and made public disputation a fixture of late medieval culture. The proliferation of dialogues, debate poems, recorded disputations, visual images of debate, and polyphonic music over the same decades points clearly in the direction of disputation’s evolution into a cultural practice. By the thirteenth century, a “culture of disputation” had taken root, centered chiefly in Paris, transcending the monastic origins from which it sprang, and extending to many facets of elite and non-elite society.

A cultural logic of disputation now emerges. Taking place on the frontier between learned and popular culture, between public and private spheres, between polemic and poetry, and between tragedy and comedy, the rise of disputation out of dialogue represents a cultural mutation in medieval society that can be fully understood only with a broad and interdisciplinary approach to cultural history, one that adequately accounts for the evolution of ideas into practices, and across both time and place. The acknowledged centrality of disputation in the Late Middle Ages and well into the early modern period, where dialogues and disputations abound, suggests that there are more areas to be explored and more connections to be found. A complete understanding of the history of disputation demands further analysis using an inclusive, not exclusive, approach to medieval culture.

Alex J. Novikoff is Assistant Professor in the Department of History at Rhodes College in Memphis, Tennessee, where he has taught since 2008. He specializes in medieval intellectual and cultural history, historiography, and Christian-Muslim-Jewish relations. His work has appeared in such journals as *Speculum*, *The Haskins Society Journal*, *Medieval Encounters*, *The Journal of Medieval Iberian Studies*, and *Pensiero Politico Medievale*. His book *The Culture of Disputation in Medieval Europe*, which builds on the arguments of this article, will be published by the University of Pennsylvania Press in 2013.

Commons and Enclosure in the Colonization of North America

ALLAN GREER

WHAT WERE THE BROAD PROCESSES by which settlers of European stock created new forms of tenure and wrested control of lands from indigenous peoples, first in the Americas and later across wide stretches of Africa and Oceania? Anyone interested in this basic question about colonization and dispossession in an Atlantic world setting may be tempted to think in terms of a great "enclosure movement" that took shape first in England and Western Europe and then extended overseas to the New World, bringing survey lines, fences, and legal rules fostering exclusive access and transferability. More than one historian has pointed in the direction of such an extended conception of enclosure, although none has so far made the case in detail. "When the English took possession of lands overseas, they did so by building fences and hedges, the markers of enclosure and private property," write Peter Linebaugh and Marcus Rediker.¹ In relation to the eighteenth and nineteenth centuries, E. P. Thompson has also pointed to a connection between enclosure within England and the imposition of private property across the overseas British Empire, notably in India, where the Permanent Settlement of Bengal (1793) represented a particularly brutal and doctrinaire attempt to establish unitary proprietorship over land. Thompson's argument about enclosure and colonization appeared in an essay published late in his life, and it touches on North America, New Zealand, and Africa as well as India.² Richly suggestive, it remains schematic and preliminary, pointing to a long-

Research for this article was supported by grants from the Social Science and Humanities Research Council (Canada) and the John Simon Guggenheim Memorial Foundation. I wish to thank Kate Desbarats, Rebecca Horn, and Virginia Anderson, as well as the audiences who commented on earlier versions presented as papers at the University of Toronto Legal History Seminar, Concordia University, the College of William and Mary, and the "Contested Spaces in the Americas" Seminar/Symposium, McNeil Center for Early American Studies, Philadelphia.

¹ Peter Linebaugh and Marcus Rediker, *The Many-Headed Hydra: Sailors, Slaves, Commoners, and the Hidden History of the Revolutionary Atlantic* (Boston, 2000), 44. ² E. P. Thompson, "Custom, Law and Common Right," in Thompson, *Customs in Common* (New

term global movement to privatize the commons that emanated outward from the British Isles. Certainly, there is an intriguing, if rough, coincidence of peak periods of enclosure in England—the Tudor period and the late eighteenth century—with times of imperial expansion and reinvigoration.³

Settlers did frequently erect fences, since “enclosure” in that mundane sense of the term played an important part in separating ruminants and crops, the two elements whose coexistence typified European agriculture. It is also true that commodified, individualized forms of property usually followed in the wake of colonization, although the transition may not have been as rapid as some imagine. While the long-run tendency may indeed have been in the direction of an enclosed private property regime that largely excluded natives, colonization was also accompanied by the establishment of commons. Evidence from seventeenth-century New Spain, New France, and New England can shed light on the interplay of enclosure and commons in the formation of colonial property regimes in North America.⁴ It shows that common property was a central feature of both native and settler forms of land tenure in the early colonial period and that dispossession came about largely through the clash of an indigenous commons and a colonial commons.

The contrary view, that enclosure rather than commons acted as the driving force in colonial dispossession, has been sustained partly through the lingering influence of John Locke, proponent of both enclosure and colonizing and preeminent philosopher of property in land. In the fifth chapter of his *Second Treatise of Civil Government*, a brief but powerfully argued essay titled “Of Property,” Locke has much to say about commons, enclosure, and, at least by implication, colonization.⁵ If the world and nature’s bounty were created for all of humanity, he asks, how can anyone claim exclusive rights to a specific portion of the earth? His answer is that labor provides the ultimate basis for legitimate property rights. Thus, the “wild Indian” who shoots a deer somewhere in “America” has a perfect right, by virtue of his hunting skill and efforts, to enjoy the meat and leather that its carcass provides, but he has no particular claim on other deer in the forest, much less on the forest itself. Property in land also derives from labor: in the state of nature, acorns are mine when

York, 1991), 164–175. See also Ranajit Guha, *A Rule of Property for Bengal: An Essay on the Idea of Permanent Settlement* (Durham, N.C., 1996).

³ On English enclosure, see R. H. Tawney, *The Agrarian Problem in the Sixteenth Century* (London, 1912); Joan Thirsk, ed., *The Agrarian History of England and Wales*, vol. 4: 1500–1640 (Cambridge, 1967), chap. 4; J. A. Yelling, *Common Field and Enclosure in England, 1450–1850* (London, 1977); J. M. Neeson, *Commoners: Common Right, Enclosure and Social Change in England, 1700–1820* (Cambridge, 1993).

⁴ Admittedly, the language of “enclosure” has a parochially English ring to it, but even though contemporaries rarely spoke of an “enclosure movement” in the context of continental Europe, historians find considerable evidence of developments not unlike the changes that transformed the English countryside in the early modern period. Marc Bloch, *French Rural History: An Essay on Its Basic Characteristics*, trans. Janet Sondheimer (Berkeley, Calif., 1966), chap. 6; Gérard Béaur, *Histoire agraire de la France au XVIII^e siècle: Inerties et changements dans les campagnes françaises entre 1715 et 1815* (Paris, 2000), 64–83, 300–302; Martina de Moor, Leigh Shaw-Taylor, and Paul Warde, “Comparing the Historical Commons of North West Europe: An Introduction,” in de Moor, Shaw-Taylor, and Warde, eds., *The Management of Common Land in North West Europe, c. 1500–1850* (Turnhout, Belgium, 2002), 15–31; Jesús García Fernández, “Champs ouverts et champs clôturés en Vieille-Castille,” *Annales: Économies, sociétés, civilisations* 20, no. 4 (1965): 692–718; Juan Diego Pérez Cebada and Felipa Sánchez Salazar, “Destroying the Commons: The Enclosure of Lands in Spain in the ‘Ancien Régime’” (paper presented to the International Association for the Study of Common Property, Brescia, Italy, 2006).

⁵ John Locke, *Two Treatises of Government*, ed. Peter Laslett (Cambridge, 1960), 133–146.

I take the trouble to collect them, and similarly land is mine when I clear, cultivate, and fence it. Once government and laws make their appearance, property rights and the distribution of property are subject to contractual agreements, but the original appropriation of the universal commons took place through the operation of labor.

Modern commentators note that this chapter of the *Second Treatise* was about property generally and not specifically *private* property, insisting that Locke's logic applies equally to collective and individual property.⁶ However, if we consider "Of Property" in terms of its rhetoric, the author's preference for enclosure and private property is abundantly clear. There are repeated references to the poverty of "commoners" and to the superiority of enclosures; the question is whether the productivity of one exceeds that of the other by a factor of ten or a hundred. "For I ask whether in the wild woods and uncultivated waste of America, left to nature, without any improvement, tillage, or husbandry, a thousand acres yield the needy and wretched inhabitants as many conveniences of life as ten acres of equally fertile land do in Devonshire, where they are well cultivated." A few pages later, an acre producing twenty bushels of wheat in England is compared to an acre of equally good American land; the former produces revenues of five pounds, the latter hardly a penny, "if all the profit an Indian received from it were to be valued and sold here." Quite apart from Locke's reasoning about original appropriation in the state of nature, the association of words gives his chapter a definite pro-enclosure rhetorical thrust. Linked together in consistently negative contexts are the words "commons," "waste," "commoner," "Indian," "America," and "poverty."

By referring to Indians as "commoners" living off the unenclosed bounty of the New World, Locke seems to assimilate them, as far as issues of productivity are concerned, to the cottagers and smallholders of the Old World. "The fruit or venison which nourishes the wild Indian, who knows no enclosure and is still a tenant in common, must be his . . . before it can do him any good for the support of his life."⁷ An impression is created: "improvement" is equally at odds with common fields in England and uncleared forests in America. Later pro-enclosure propagandists would take up this same equation, comparing poor fen-dwellers in East Anglia with American Indians who foraged for a living from land that ought ideally to be converted to private property.⁸ However, while he emphasizes similarity in the economic implications of commons and enclosure on the two sides of the Atlantic, Locke introduces a radical distinction between the village commons of the Old World and the open lands of the New when he turns to questions of justice and rights.

"Land that is common in England or any other country where there is plenty of people under government who have money and commerce" is perfectly legitimate,

⁶ James Tully, *A Discourse on Property: John Locke and His Adversaries* (Cambridge, 1980); Tully, "Differences in the Interpretation of Locke on Property," in Tully, *An Approach to Political Philosophy: Locke in Contexts* (Cambridge, 1993), 118–136. Tully's argument challenges C. B. Macpherson's view of Locke as the philosopher of capitalist property relations. Macpherson, *The Political Theory of Possessive Individualism: Hobbes to Locke* (Oxford, 1962), chap. 5; Macpherson, "Capitalism and the Changing Concept of Property," in Eugene Kamenka and R. S. Neale, eds., *Feudalism, Capitalism and Beyond* (London, 1975), 105–124.

⁷ Locke, *Two Treatises of Government*, 134.

⁸ "Forests and great Commons make the Poor that are upon them too much like the *Indians*," wrote John Bellers in 1714 (quoted in Thompson, "Custom, Law and Common Right," 165). See also Neeson, *Commoners*, 30.

collectively owned property, according to Locke. In this setting, unlike the state of nature, "no one can enclose or appropriate any part without the consent of all his fellow-commoners; because this is left common by compact, *i.e.*, by the law of the land, which is not to be violated. And though it be common in respect of some men, it is not so to all mankind, but is the joint property of this country or this parish."⁹ America represents a different sort of commons, wide open and available to all: not collective property, but rather the antithesis of property. Enclosure at home and enclosure overseas may be equally desirable ends, but they have to come about by very different means according to Locke. In England, voluntary agreement (and presumably compensation) is a must, whereas enclosure in America requires no one's permission.¹⁰ This procedural divergence over enclosure, critical to Locke's implied theory of colonial property formation, rests on the elision of two different criteria. Legitimate common property is local/particular, and it is instituted in law, whereas pre-colonial America knows no law, and its lands constitute a commons of universal scope: it corresponds to nature itself.

Scholars interested in the commons, both those who focus on the history of the agricultural commons and those who examine "the commons" in today's world (air, oceans, fisheries, the Internet, etc.), would agree with Locke on the need to distinguish particular commons from what they term "open-access resources." The former, specialists tell us, are jointly owned and, in most cases, collectively managed; the latter are portions of the environment that are not property. Yet there would be little empirical support for Locke's notion that particular commons somehow require the prior existence of "government," "law," and "money" in forms that would be recognizable as such by a European observer. Contemporary research on the commons has shown that common property does not necessarily depend on legal formalities, but is more typically an organic aspect of fishing, hunting, grazing, or wood-cutting communities.¹¹ That common property of this sort might be found in pre-Columbian North America, might even have been the norm, is a possibility that Locke never entertained. His reasoning rests too heavily on a basic ontological division between civil societies and their antithesis, natural humanity: on one side were civilized communities where land could be owned individually or communally, on the other uncivilized communities where land was open to all. In erasing the distinction, where American natives were concerned, between particular commons and open-access resources, Locke effectively disqualified them as proprietors.¹²

Common property was, in fact, a fundamental feature of landholding in both the New World and the Old in the early modern centuries. The commons came in myriad

⁹ Locke, *Two Treatises of Government*, 137.

¹⁰ Locke's insistence on the right of unilateral appropriation in the state of nature, appropriation requiring no one's consent, is a feature that, according to Barbara Arneil, distinguishes his theory of property from that of Hugo Grotius. forms, varying from one environmental setting and subsistence regime to the next, shaped in some areas by legal codes and customs, shaped in their particulars also by the factors cited by Locke: population density, government, and commerce. Although the commons is perhaps best apprehended in its local specificity, we might still venture some general observations. In Europe, where agriculture typically involved the raising of livestock and the growing of crops in close proximity, “open-field” practices developed in many (by no means all) regions, whereby land was held individually but managed collectively, and where the cattle and other animals of a given community grazed either in a special pasture or on portions of the arable land that were not currently bearing crops.¹³ The commons might be thought of both as a place—the village pasture—and as a set of access rights, such as gleaning and stubble grazing. This portion of the commons located in the tillage zone of a given community might be designated the “inner commons.” “Outer commons” can then be used to refer to collectively owned resources in the surrounding area beyond local croplands. This was called “the waste” in England: the zone of moor, mountain, marsh, or forest that rural folk used as rough pasture for their livestock as well as for cutting wood or peat for fuel, gathering herbs, taking rushes for basketry or thatching, felling timber for construction, and so on. A variety of rules and customs, some of them local, others regional or national, governed access to these common resources. In Spain, where the medieval law code, the *Siete Partidas*, had given particular attention to common property, outer commons were very extensive; elsewhere in Europe, they varied greatly in size and significance.¹⁴

WHILE OUR LANGUAGE OF COMMONS derives from European settings and practices, versions of common property, both the “inner commons” and the “outer commons,” were present right across indigenous North America as well. There was, of course, agriculture in the pre-Columbian New World—indeed, the majority of the hemisphere’s population subsisted primarily through cultivating the soil, although Locke’s “Of Property” gives a contrary impression—but it was purely crop-based: potatoes, maize, beans, squash, and other cultigens were grown without a significant component of animal husbandry.¹⁵ Because crops did not share space with domestic animals, fences and hedges were largely unnecessary, and in that literal sense, the land was not enclosed. However, individual families or lineages did have particular plots of their own, subject to varying degrees of community control. Around the great cities of Mesoamerica lay villages and hamlets with intensively cultivated fields, some of the latter belonging to particular households, others owned by temples, local chiefs, or urban nobles and worked by the community. Plots were carefully measured, marked, and recorded; tenure displayed some characteristics associated with “en-

closed" areas of England and some characteristics of what Locke would call legal, particular commons. Thus this can be viewed as a zone of enclosure and "inner commons."

Beyond the villages and cornfields lay a different kind of commons: the forest or mountains or desert terrain where local people went for firewood, wild herbs and berries, game, and other resources. Scholars have found little specific information on this Mesoamerican "outer commons" in the surviving sources, but in general terms they have no doubts as to its existence.¹⁶ For the most part, this was not the universal commons, but rather territory and resources that belonged to a particular person, lineage, or community. In that respect, the situation was roughly similar to the moors, mountains, and forests of Europe: common property, but neither unregulated nor open to the entire human race.¹⁷

North of Mexico lay a vast continent occupied by peoples who subsisted on various combinations of hunting, fishing, foraging, and agriculture. With the partial exception of the Pacific Northwest, where chiefs, and through them particular lineages, enjoyed a strong sense of exclusive control over sites and resources, especially aquatic resources, most land was held as a kind of commons.¹⁸ Maize cultivators of the northeast, including Iroquoians as well as the various Algonquian nations such as the Delaware and Narragansett, typically planted fields surrounding a village, relocating and clearing new lands every ten or twenty years. Tilled fields typically belonged to the women of a given family, although agricultural work and the distribution of the fruits of the harvest also had a strongly collectivist character (inner commons).¹⁹ Outside these small islands of cultivation, however, lay terrain that provided vital supplies of game, fish, fruit, and other useful resources to those who knew how to harvest them (outer commons). Modern historians sometimes describe such practices in terms of "usufruct," as opposed to genuine ownership.²⁰ The sev-

²⁰ William Cronon, *Changes in the Land: Indians, Colonists, and the Ecology of New England* (New York, 1983), 60–68. Creek land, says Claudio Saunt, "was not owned as much as used." Saunt, *A New*

enteenth-century missionary Gabriel Sagard, however, had no hesitation in drawing on the language of common property when he referred to Huron claims to land and resources:

It is their custom for every family to live on its fishing, hunting, and planting, since they have as much land as they need; for all the forests, meadows, and uncleared land are common property, and anyone is allowed to clear and sow as much as he will and can, and according to his needs; and this cleared land remains in his possession for as many years as he continues to cultivate and make use of it. After it is altogether abandoned by its owner, then anyone who wishes uses it, but not otherwise.²¹

Generally, North American territory was claimed and controlled by specific human societies (usually in cooperation with animal and spiritual entities), and these societies determined how they would be managed. Even non-agricultural hunting-gathering societies held land as a kind of outer commons without any inner commons. Writing of the Mi'kmaq of eastern Canada, the French Récollet friar Chrestien Le Clercq was emphatic:

It is the right of the head of the nation, according to the customs of the country, which serve as laws and regulations to the Gaspesians [i.e., Mi'kmaq], to distribute the places of hunting to each individual. It is not permitted to any Indian to overstep the bounds and limits of the region which shall have been assigned him in the assemblies of the elders. These are held in autumn and spring expressly to make this assignment.²²

Although he grasped a basic truth about hunting grounds—they were allocated to particular individuals (and their families)—Le Clercq describes Mi'kmaq tenure norms in European terms, exaggerating the authority of the “head of the nation” and implying that space was defined by outer “bounds and limits.” On the whole, hunter-gatherer tenure has to do with specific functions, such as hunting, fishing, and berrying; moreover, land was not necessarily defined by clear-cut outer boundaries, space being more commonly delineated in terms of central places, lines, and waterways.²³ Consequently, different groups sometimes lay claim to overlapping areas for distinct foraging purposes. On the Great Plains of North America, where wide-ranging bison herds were the land's most important resource, interpenetrating territories were common.²⁴ Overlapping was less likely in the eastern woodlands, but it was certainly not uncommon for people of different nations to share hunting grounds; however, outsiders who hunted without authorization risked violent sanctions.²⁵ Moreover, hunters and fishers have never been passive recipients of nature's

Order of Things: Property, Power, and the Transformation of the Creek Indians, 1733–1816 (New York, 1999), 40–42.

²⁵ There is a rich literature, most of it the work of anthropologists, on the northern Algonquian

bounty; as environmental historians have shown, they managed forests and waterways, burning underbrush, diverting streams, and generally altering the environment.²⁶

We can, then, speak of an “indigenous commons,” recognizing the wide variety of arrangements by which terrain and resources belonged to specific human collectivities in the real America where Europeans came to establish their colonies. Apart from cultivated areas, America was a quilt of native commons, each governed by the land-use rules of a specific human society. The notion of a universal commons completely open to all—Locke’s “America”—existed mainly in the imperial imagination.

To this pre-owned continent came Spanish, English, and French colonists, occupying space, appropriating resources, and developing tenure practices to suit their purposes. Cleared, plowed, and enclosed farms were a part of that process of appropriation, but so were varieties of what we can call the “colonial commons.” A settler version of the “outer commons” would prove most threatening to the existing indigenous commons, because of its expansive tendencies, but the pioneers of New Spain, New France, and New England also instituted “inner commons.” When the Spanish established cities in Mexico and elsewhere, these were always surrounded by extensive pastures and other common lands. Though townsmen received individual urban lots (*solares*) and could apply for grants of agricultural land in the vicinity, most surrounding territory, extending far into the countryside, constituted the *ejido*, or municipal commons. The *ejido* was the corporate property of the town, and each Spanish *vecino* (municipal citizen) was entitled to share its benefits.²⁷ Positive legislation in the form of a royal ordinance of 1573 on the founding of new settlements reinforced communal traditions; it required that any new town established on conquered territory must be provided with an *ejido* as well as ample *dehesas* (common pastures) for the grazing of residents’ livestock.²⁸

Agriculture at Jamestown, Virginia, began as a fully communal enterprise, although the experiment was admittedly short-lived, and individual lots quickly be-

hunting territories, both in the distant past and in more recent times. Highlights include Frank G. Speck, “Mistassini Hunting Territories in the Labrador Peninsula,” *American Anthropologist* 25, no. 4 (1923): 452–457; Eleanor Burke Leacock, *The Montagnais “Hunting Territory” and the Fur Trade* (Menasha, Wis., 1954); Toby Morantz, “Historical Perspectives on Family Hunting Territories in Eastern James Bay,” *Anthropologica*, n.s., 28, no. 1–2 (1986): 64–91; Adrian Tanner, “The Significance of Hunting Territories Today,” in Bruce Alden Cox, ed., *Native People, Native Lands: Canadian Indians, Inuit and Metis* (Ottawa, 1987), 60–74; Harvey Feit, “Les territoires de chasse algonquiens avant leur ‘découverte’? came the norm in the colonial Chesapeake.²⁹ In New England, on the other hand, commons formed an integral part of most early settlements. For practical reasons, as well as through a commitment to Christian solidarity, many townships, including Watertown, Massachusetts, began the process of clearing the forest and tilling the soil collectively.³⁰ Truly collective agriculture, without particular claims to territory or produce, did not last long, but communal pastures and open-field tillage, systems combining individual ownership with collective management, became an established fact in many towns. Sudbury, an offshoot of Watertown, apportioned individual strips of arable land within two great "general fields," fenced along the perimeter but without obstructions between each man's holdings. Here, as in Andover and many other early Massachusetts towns, people were housed in a compact village, often a long walk from their plowlands.³¹ Nucleated villages and open fields were by no means universal, even during the initial stages of New England settlements. David Grayson Allen proposes a differentiated analysis of Massachusetts towns, one that recognizes both open-field communities and fully enclosed, individuated landholdings (such as Newbury), as well as mixed townships with elements of both systems (such as Hingham). Allen attributes these variations to the influence of English regional customs by way of immigrants who settled a given locality and who hailed from either enclosed or open-field areas of rural England.³² While the incidence of open-field tillage varied across early New England, common pastures were closer to universal. Within a given township, cattle generally grazed together, as did sheep in a different enclosure, all under the watchful gaze of the local herdsman. The fact that they were collective, however, does not mean that common pastures were sites of universal access and economic equality. Access to the commons could be tightly controlled, as in Rowley, Massachusetts, where "gates" or "stints" determined the number of animals allowed to each resident; and since grazing rights could be bought and sold, the commons sometimes came to be dominated by wealthy livestock entrepreneurs.³³

Although common pastures proved quite durable in New England, open-field tillage and concentrated village communities tended to erode over the course of the seventeenth century as farmers bought, sold, and traded dispersed fragments of arable land to form consolidated holdings. At the same time, families showed an increasing inclination to build homes on their own farms, forming self-contained units of residence and production, even as nuclear settlements declined. In his study of Dedham, Massachusetts, Kenneth Lockridge found that the process was complete by 1686: "the common-field system was gone, taking with it the common decisions and the frequent encounters of every farmer with his fellows which it entailed."³⁴ Over the long run, even the common pastures came under pressure, leading even-

tually to a full or partial division of the land among stakeholders. However, Brian Donahue argues that village herds and common pastures remained a feature of agriculture in Concord, Massachusetts, until the time of the American Revolution.³⁵

Commons were also a feature of early settlement in New France. After early experiments in communal agriculture on the part of the Counter-Reformation idealists who founded Montreal in the 1640s, and in defiance of government policies favoring nucleated villages with outlying fields, the French settlers of the St. Lawrence Valley quickly established a pattern of "agricultural individualism," with each farm constituting a largely self-contained block of land with fields, a house, a barn, and a woodlot. Within each seigneurie, the lots were long and narrow, so they are sometimes referred to as "strips," but these were nothing like the small, scattered strips of arable land within the great fields of an open-field village in Europe; instead, each was a consolidated holding that combined both the residence and the agricultural enterprise of a rural household. Open-field agriculture never really took hold here. The movement to basically self-contained family farmsteads ran parallel to, but proceeded more rapidly than, a similar shift in early New England.

Yet, if this development recalls an aspect of Old World enclosure, fences and hedges seem to have been rather rare in the emergent countryside of seventeenth-century Canada. Here, as in New England, cattle, pigs, sheep, and goats shared the land with grain crops, although in the absence of any substantial market for livestock products, herds were never large. Custom consecrated by colonial "police" regulations required only that hay meadows be fenced. Otherwise, it was up to the owners of livestock to keep their animals supervised and confined to common pastures during the growing season.³⁶ After the crops were harvested, the custom of *vaine pâture* prevailed, meaning that animals could roam across the fields, grazing on the stubble and dropping their manure. Fences were incompatible with *vaine pâture*. The season of open grazing was short, however, as the onset of deep snow usually forced the habitants to resort to stall feeding through most of the winter. Then, with the coming of the spring thaw, plowing and sowing became urgent priorities, and animals were officially banned from the fields. In some localities, it was the seigneur who announced the dates on which animals could be turned loose in the harvested fields and when they needed to be confined. After the grain had been sown in the spring, however, it was up to the owners of livestock to keep their animals under control and out of the planted fields.³⁷

While French Canada generally parted company with the British colonies in requiring the owners of livestock to control their beasts rather than placing the onus on farmers to protect their fields with fences, there was some ambiguity in practice. Even though they had the right to impound marauding cattle and shoot pigs on their property, farmers began erecting fences across the fronts of their narrow farms to prevent incursions from the roadway. In 1725, the colonial administration called for

³⁵ Donahue, *The Great Meadow*, 117–127.

(Beauceville, Quebec, 1924), 1: 197. Similar arrangements prevailed across much of *ancien régime* France; Bloch, *French Rural History*, 46–47.

³⁷ Louise Dechêne, *Habitants and Merchants in Seventeenth-Century Montreal* (Montreal, 1992), 175–177.

habitants to fence their fields, although livestock owners remained liable for damages even on unenclosed lands.³⁸ More and more fields were fenced, but many lands remained unenclosed at the time of the British conquest of Canada.³⁹

Common pastures were a basic feature of stock-raising in many areas of New France. Commons were typically located in the marshy, low-lying areas adjacent to the river or on the many islands that dotted the St. Lawrence; the latter were particularly convenient, as the water helped keep the animals confined and safe from predators. Commons in Canada operated somewhat like those of colonial New England, except that here they were subject to seigneurial controls and exactions. Access was always limited, and sometimes it was contested. Ordinarily, a riverfront commons was available only to the owners of adjacent properties, not to more distant habitants, and it was usually inseparable from landownership (thus grazing rights could not be sold or leased to outsiders, as was the case in some New England towns). In some cases, the seigneur laid out the commons in advance of settlement and then charged censitaires an annual fee or *corvée* (labor service) for grazing rights; in other cases, the local settlers seem to have taken the initiative in establishing a common pasture.⁴⁰ Commoning rights proved to be a bone of contention among habitants, and they were also a focus of conflict between peasants and their landlords, as seigneurs struggled to impose their authority and extract revenue from the community pastures.⁴¹

If we can generalize about enclosures and the inner commons in the early stages of the European occupation of North America, it would be fair to say that settlers laid claim to land sometimes as individual families cultivating self-contained farms, sometimes as a community sharing a given space and its resources. Typically, there was a combination of "private property" and collective management. It is worth taking stock of settler commoning, if only to challenge the Lockean and neo-Lockean tendency to equate colonization, enclosure, and privatization. At the same time, it must be recognized that from the point of view of native dispossession, the balance of fully enclosed versus inner commons may not be of overriding significance. Where land was cleared and bounded for settler use, natives were generally excluded, open-field or no.

Still, the territorial extent of colonial assarts was actually quite limited during the early phases of colonization, and given the terrible depopulation occasioned by the spread of Old World diseases, they did not always cause great dislocation in and of themselves. In many places, natives welcomed settlers. "They doe generally professe to like well of our coming and planting here," wrote the New England Puritan Francis Higginson, "partly because there is abundance of ground that they cannot possess nor make use of, and partly because our being here will be a meanes both of reliefe to them when they want, and also a defence from their Enemies, wherewith (I say)

before this Plantation begun, they were often indangered.”⁴² This was not entirely imperialist wishful thinking; it was also a reflection of the fact that “plantations” could be integrated, at least in theory, into an existing indigenous commons as part of an extensive network of places and resources governed by recognized rules of access. Obviously, the “improvement” of the land tended to undermine native subsistence in the long run as settler populations grew and as the environment was progressively transformed. But running ahead of the enclosed *ecumene* in many parts of the New World was a colonial outer commons: an area of settler hunting, timbering, foraging, and above all grazing that was arguably a more significant agent of dispossession than the fields and fences commonly associated with colonial settlement.

WHAT USED TO BE KNOWN in the United States as “the frontier” can be redefined as the zone of conflict between the indigenous commons and the colonial (outer) commons. These two commons were not different places, but rather contending customs and rules regulating the use of a given space and its resources. Over wide areas of New Spain, the intrusion of a new colonial commons into, alongside, and over the preexisting indigenous commons was central to the dispossession of Indian peoples in the sixteenth, seventeenth, and eighteenth centuries. Initially, the Spanish conquest of Mexico left the native peasantry in possession of their lands under tenures that preserved many of their pre-Columbian characteristics. A *cédula real* of 1532 is categorical: “The Indians shall continue to possess their lands, both arable tracts and grazing lands, so that they do not lack what is necessary.”⁴³ The conquerors gravitated to the new Spanish cities, drawing produce, revenue, and labor from the native countryside through the operation of systems of tribute and labor service derived from the customs of both the Iberian Peninsula and Mesoamerica. The expansion of colonial property out into what had been the indigenous countryside began in earnest only a generation or two after the conquest, with the steep decline of native numbers and the burgeoning demand for agricultural products that accompanied the growth of silver mining. In these circumstances, it became very profitable to raise cattle, sheep, horses, and mules, leading enterprising Spaniards to invest in large ranching operations and to turn their attention to potential grazing lands far from the centers of colonial settlement.

Peninsular Spain provided a model of stock-raising practices to this American colony. In a country that, like Mexico, contained extensive zones of rough, dry terrain, much of it conquered from the Moors and consequently still part of the royal domain, cattle ranching and sheep-raising tended to rely on open ranges and transhumance. Not only was much of the country classified as open-access *montes* (mountainous and “wasteland” areas), but the charter of privileges granted to the *Mesta* (a kind of ranchers’ syndicate) “guaranteed the right to use ‘deserted and uncultivated lands’ without distinguishing between privately owned and public lands.”

⁴² Francis Higginson, *New-Englands Plantation* (1630; repr., New York, 1970), 4.

⁴³ *Recopilación de leyes de los reynos de las Indias*, 3 vols. (Madrid, 1681), 2: 103, libro 4, título 12, ley v, April 4, 1532, as quoted and translated in William B. Taylor, *Landlord and Peasant in Colonial Oaxaca* (Stanford, Calif., 1972), 67.

Around the time of the colonization of New Spain, the Habsburg monarchs were encouraging stock-raisers in the mother country with privileges allowing them almost unlimited access to water and pasture along transhumance routes. Spanish farmers complained constantly of the damage done by migrating herds.⁴⁴

Authorities in New Spain found it perfectly normal that sheep and cattle would range across the grasslands and mountain slopes of the colony, as long as they did not impinge on the planted fields of natives or colonists. Accordingly, they began granting broad tracts of ranchland, called *estancias*, lying within notionally unoccupied zones. These could be large—an *estancia de ganado mayor* (cattle or horses) was supposed to measure over 4,000 acres, while an *estancia de ganado menor* (sheep or goats) was about 2,000 acres—but they did not at first imply anything resembling “full” ownership of the soil.⁴⁵ For example, the Jesuit hacienda of Santa Lucia, a collection of several sheep *estancias*, was described in 1576 as comprising grass, springs, ponds, and watering holes scattered over 70 square kilometers. However, neighboring Indian pueblos, which had long used these areas to gather roots, grasses, and salt and to hunt wild ducks and geese, retained control over these particular resources.⁴⁶ Elsewhere, some pastures were granted as *agostaderos*, meaning that they could be used only between December and May, when natives living in the area supposedly were not growing crops.⁴⁷ The grant of an *estancia* thus gave little more than grazing rights, and only for a specific class of livestock; these property rights were exclusive only insofar as they kept out other ranchers. And even these restricted rights could be difficult to enforce, since *estancias* lacked clearly designated boundaries. “Mercedes [grants] invariably specified a place and stipulated a size. Borders, even in the rare event that recipients limited themselves to the terms of the grant, were often the painful result of the *practice* of occupation, the equilibrium point between two forces pushing in opposite directions. When the state formally conveyed a merced, the focus was on the site named in the document, where symbolic possession was given of land at best only vaguely delimited.”⁴⁸

Estancia grants were therefore more in the nature of licenses to make particular use of portions of the commons. And given the absence of fences and the expansive tendencies of grazing herds, the tracts granted by colonial officials served as a central base for ranching that depended on a broader commons. Writes William Taylor: “The Spanish custom of moving livestock between mountain and lowland pastures, and the principle of common pasturage, whereby unoccupied lands were open for all private cattle, meant that Spanish holdings were fluid and without specific boundaries. Often they were not confirmed in writing for a number of years.”⁴⁹ A Spanish version of the commons, one based primarily on ranging livestock, was being superimposed upon a preexisting native commons.

New Spain legislation on grazing and land grants always took the interests of

native peoples into account. From the earliest years of colonial rule, Indians were guaranteed not only their cultivated fields but also an equal right, along with Spaniards, to the resources of the mountains, waters, and forests that constituted the common wasteland of Mexico.⁵⁰ Again and again over the course of the colonial centuries, laws and orders came down calling on ranchers to ensure that their stock did not undermine native livelihoods and threatening to revoke grants that infringed on Indian lands.⁵¹ These regulations were not a dead letter—cases arose in which natives successfully pursued legal redress—but neither did they form a barrier sufficient to prevent wholesale dispossession of the indigenous population. Colonization created conditions favorable to the ambitions of ruthless ranchers who were determined to expand their enterprises at the Indians' expense. Attacked by successive waves of epidemic disease, native numbers fell dramatically over the course of the sixteenth century. To make matters worse, great herds of feral cattle and horses spread northward in advance of human conquerors, undermining the fragile ecology, and thus Indian subsistence, in northern New Spain.⁵² There was massive dislocation for the survivors, battered by the economic demands of tribute and forced, in some cases, to relocate in concentrated settlements called *congregaciones*, the better to administer and christianize them.⁵³ As a result, colonizers could plausibly claim that great tracts of land, until recently held by native communities, were now unoccupied and abandoned. Where Indians did remain, subjugation and poverty made it difficult (though by no means impossible) for them to resist the powerful. Furthermore, their very subsistence was undermined in some areas by the environmental effects of overgrazing.

With unlimited forage always available beyond the horizon, and with few predators to control their numbers, the cattle, sheep, and goats introduced by Spanish ranchers thrived and reproduced at an astonishing rate. Elinor Melville refers to the explosion of herbivores in such virgin environments as an “ungulate irruption,” and in a study of sheep-raising in the Valle del Mezquital, she charts the thoroughgoing ecological effects of this rapid ovine takeover of the landscape. The “before and after” contrast she depicts could not be more striking. “When Europeans first entered these wide, flat valleys and plains they saw a landscape that had been shaped by centuries of human occupation. It was a fertile, densely populated, and complex agricultural mosaic composed of extensive croplands, woodlands, and native grasslands; of irrigation canals, dams, terraces, and limestone quarries. Oak and pine forests covered the hills, and springs and streams supplied extensive irrigation systems.” Once *ganado menor* were admitted, the fragile flora was quickly decimated, the ground eroded, and the region was transformed into a semi-desert of cactus and mesquite, barely supporting a handful of destitute natives, “eaters of beetles, bugs, and the fruit of the nopal cactus.”⁵⁴ In other regions, the environmental effects of

grazing were less dramatic, but everywhere cattle and sheep wandered, the landscape changed and Indian livelihoods were affected.

Across the dry grasslands, and in some tropical forest regions as well, a colonial commons was taking form, and its spatial extent kept growing.⁵⁵ This commons was shaped by colonial legislation and land-granting practices, as well as by the effects of ecological change and demographic shifts. The wasteland commons was not supposed to be for the use of Spaniards alone: the law was explicit as to natives' right to the resources of the mountains and the *tierras baldías* (public lands). Of course, these areas beyond the intensely cultivated valley lands were already part of the commons of one indigenous community or another, the use of their timber, water, game, and medicinal plants and roots governed by local rules of access. The colonial commons did not necessarily nullify the indigenous commons, but it could undermine it very severely, not least because of the way it revolved around the open-range grazing of herbivores. Melville nicely sums up the crux of the conflict: "Then as today, common grazing only works when all parties agree to the rules governing the use of specified areas of land; but the Spaniards regarded all land not sown with crops as potential grazing lands, and, as conquerors, Spanish pastoralists could afford to ignore their own laws and customs when it suited them."⁵⁶ As Indians fought to protect their crops and their access to the dwindling resources of the rough lands, they were, in effect, engaged in an unequal struggle to preserve their indigenous commons against the aggressive expansion of the colonial commons.

In the wake of this unequal clash of commons came a process of private property formation that bore some resemblance to enclosure. This is the story of the rise and consolidation of the Mexican hacienda. The term "hacienda" originally had a financial meaning, and in sixteenth-century Mexico it came to be attached to commercial livestock-raising enterprises. Insofar as "hacienda" had a concrete object, it designated not a tract of land—ranching at the time being a matter of grazing rights and open ranges—but rather a herd of cattle or sheep. As stock-raising on a large scale became increasingly profitable, and as the grazing lands in a given region began to fill to capacity, ranchers took steps to assert control over portions of the colonial commons, by both legal and extralegal means, and frequently at the expense of local Indian communities. Crucial to the process of hacienda formation was the intensification of property rights and the progressive removal of land from the colonial commons. It was not simply a matter of accumulating land, but of transforming what had started out as little more than a collection of licenses to graze into something more like private property. At one level, hacendados' grip over the land seems to have tightened through a thousand and one small usurpations, most of them invisible to the historical record, that kept other ranchers at bay and infringed upon the established customs of Indian communities. For example, natives were supposed, by explicit decree of the government, to have the right to gather firewood from rough lands (*montes*) whether or not these were privately owned; however, numerous court cases attest to the fact that hacienda owners tried to bar access to this resource or

to charge Indians a fee to cut wood.⁵⁷ It was a classic case of the rich prevailing, regardless of formal regulations, over the poor, the weak, and the racially stigmatized. Reinforcing and legitimating such informal techniques of dispossession was a legal procedure instituted by a financially strapped Spanish crown.

Finding his finances in crisis in the dying years of the sixteenth century, and with reports indicating that land policy in New Spain was in disarray, Philip II decreed a judicial procedure, *composición*, that, for a fee, would legitimize current practice, regularize titles, and set boundaries. Over the course of the seventeenth century, *composiciones* were accordingly granted to applicants who had some claim to notionally crown-owned land, by virtue of actual occupation of the terrain, whether or not that occupation had been formally authorized. Given the importance of revenue in the whole process, magistrates could be quite broad-minded in accepting flagrantly illegal claims; and notwithstanding reiterated royal instructions to protect Indian property, *composiciones* were often issued for Indian lands that had been occupied by haciendas.⁵⁸ To complete the process of *composición*, the lands had to be formally demarcated by a magistrate through an on-the-spot survey (*vista de ojos*) that involved the planting of markers, the measuring of distances with a long cord, and the creation of a plan and deed. The upshot, according to François Chevalier, was to erase the distinction between different types of land grants that had prescribed particular purposes for the component elements of a great estate. "True property rights had taken the place of the original usufruct rights, as the latter had been exemplified in the early estancia grants."⁵⁹ At the same time, the requirement of the *vista de ojos* was a crucial step in establishing boundaries on the land and recording title. The vast dimensions of the larger haciendas precluded fencing in most cases, but in important respects, this was a process of enclosure of the commons.

Indigenous peoples were not passive victims in this process. They could and in some cases did obtain *composiciones* for their lands, and when a *composición* infringed on their commons, communities frequently resorted to direct action to defend their lands.⁶⁰ Nevertheless, the configurations of power were such that haciendas tended to prevail in many regions; entire native settlements were sometimes gobbled up, along with their fields and commons. As with classic enclosure in England, the creation of more exclusive claims to land undermined the subsistence of the poor (Indians in the present case) and hastened the emergence of a class of low-wage agricultural laborers. In Mexico, ranching latifundia both depended on and contributed to the creation of a workforce of dispossessed native peasants.⁶¹

⁶¹ In a late borderland variant on the New Spain pattern of dispossession through the instrumentality of the colonial commons, native populations of Alta California were driven, in the late eighteenth and

COLONIZATION PROCEEDED VERY DIFFERENTLY in the more northerly portions of North America, but here, too, a clash of commons was central to the dispossession of native populations. Extensive, market-oriented ranching was not economical in the wooded terrain of eastern North America, but forest foraging could still support enough domestic animals—hogs above all, but also cattle—to contribute significantly to colonial subsistence. Faced with the heavy demands of land-clearing and house-building, settlers tended to let their animals wander off and fend for themselves, trusting that they could round up those that survived when they were needed. Inevitably, some animals reproduced in the wild and went feral. Such practices were particularly widespread in the Chesapeake region, where the forests were comparatively open, the climate was mild, and the rewards for cultivating tobacco discouraged careful husbandry; however, New England settlers also allowed animals to roam.

As habits of open-range husbandry took root, the new colonies quickly passed legislation that overthrew a longstanding English legal tradition governing liability for crop damage due to livestock depredation. Since Western European agriculture was based on grain-growing and stock-raising in close proximity, its viability depended upon ensuring that the farm fauna did not destroy the flora. Human herders and village pastures were among the devices used to control grazing beasts, but if a cow did get loose in a cornfield, English law held that liability lay with the cow's owner. The latter was responsible for keeping his animals confined, failing which he could be sued for damages. In 1643, the Virginia House of Burgesses decreed that henceforth it would be up to the owners of croplands to erect fences to keep out marauding ruminants, effectively taking the onus off stock-raisers for keeping their animals fenced in. Similar legislation was passed in the New England colonies.⁶² This inversion of the Old World legal norms constraining stock naturally tended to encourage free-range husbandry, and by that means to transform the commons.

Whereas English observers of the time deplored as a kind of partial reversion to nature the American tendency to allow animals to wander while concentrating efforts on developing the arable land, Virginia Anderson demonstrates that this practice played a significant part in dispossessing natives along the edges of English North America.⁶³ Depending on the numbers of Old World animals at large, the effects on Indian subsistence could range from the merely annoying to the utterly devastating. Cattle sometimes ate standing crops; hogs stole stored food or dug up clam beds along the beaches. As in Mexico, trampling hooves and excessive grazing could bring about environmental changes that affected deer and other game populations, while spreading weeds and contributing to soil erosion; to make matters worse, livestock acted as a vector to spread Old World diseases among humans and other animals.⁶⁴

the early nineteenth century, to accept baptism and the Franciscan mission regime after ranging Spanish livestock had undermined their subsistence. Steven W. Hackel, *Children of Coyote, Missionaries of Saint Francis: Indian-Spanish Relations in Colonial California, 1769–1850* (Chapel Hill, N.C., 2005), 67–80.

⁶⁴ *Ibid.*, 185–190; Cronon, *Changes in the Land*, 141–150.

Natives complained bitterly of the injuries they suffered through casual settler husbandry. In New England, efforts were made in the early decades to assist Indians in fencing their fields, and courts sometimes awarded compensation for crop damage; although the effects of these measures may have been slight, they did imply a sense of settler responsibility, something that was almost entirely absent in the southern colonies.⁶⁵ Moreover, with the passage of time and the rise of native-colonist tensions in New England and the Chesapeake, settler regimes grew less and less concerned about the effects of their animals on native livelihoods, to the point where some actually directed their horses and cows toward Indian fields in a deliberate effort to drive natives away and take over their lands.⁶⁶

Allowing cattle and hogs to forage in the forest was clearly more than just a transaction between a settler and the natural environment. Crucial to the viability of this unsystematic system was the assumption that a cow or pig remained property wherever it might roam. In practice, identification of specific beasts could be uncertain, and theft was rife, in spite of the severe penalties prescribed by colonial laws; moreover, many animals went completely feral, creating uncertainty about the boundary between wild game and chattels. But these anomalies only made settlers all the more insistent on livestock's status as property, Virginia Anderson observes; she notes further that open grazing represented a claim to the land itself: "Colonists in effect appropriated Indian common lands to serve as their own commons."⁶⁷

This point deserves to be underlined. Colonists were claiming more than just the livestock that they themselves had introduced to this region. The territory where their animals ranged was already a commons of sorts; in an intricate geography that we catch only obscure glimpses of through European sources, indigenous families, bands, and tribes maintained access rights to the resources of this region. When settlers proclaimed, in effect, that the Indians' deer, fish, and timber were open to all, colonists included, yet the hogs and cattle roaming these same woods remained private property, they were indeed attempting a wholesale appropriation. Beyond the limited clearings that were occupied and farmed by the English, they were asserting control over a larger zone that would correspond to the "wasteland" of rural Europe. Indians were allowed to live here and to support themselves as best they could, but the rules governing access to resources would be those of the colonists. In practice, the margin of subsistence could shrink to the vanishing point for Indians living on the colonial commons. In Maryland, a native leader named Mattagund addressed authorities in these terms: "Your cattle and hogs injure us you come too near to us to live and drive us from place to place. We can fly no further let us know where to live and how to be secured for the future from the hogs and cattle."⁶⁸ Here, as in New Spain, the commons functioned as a prime instrument of dispossession.

One crucial difference distinguishing Europe's common "waste" of mountains and marshes from the colonial commons of America was the basic stability of the former and the relentlessly expansionist dynamic of the latter. Mattagund's sense of
